Rumors of a new Russian loan are rife. One is that the Czar's Government has practically arranged to borrow 500,000,000 rubles, or about $250,000,000, in Germany. It is added that, as might be supposed, the interest rate will be higher than on the last issue. Last spring Russia arranged for a large 5 per cent. loan in Paris at considerably less than par. Since then her arms have met with constant reverses, and her alleged financial strength has been discussed with keener and keener criticism in Berlin and London. The sharpest minds in European finance frankly confess that they are all at sea regarding the real situation. The distrust with which the optimistic statements emanating from St. Petersburg are received in foreign money centres is clearly indicated by recent press comments in Berlin. Not long ago the St. Petersburg *Official Messenger* declared that, on May 13, $150,000,000 was available for war purposes; that $128,750,000 had in the meantime been credited to the various departments of administration, and that the profits of the Paris loan of $160,000,000 had therefore not been drawn upon. In Berlin this statement is regarded as "unintelligible." It is considered incredible that only about $120,000,000 should have been spent during the first six months of the war; and it is also regarded as very curious that a new loan should be offered in the face of the Government's claim that it has at least $160,000,000 still in hand. Indeed, there has been a feeling in Berlin lately that the Russian State Rente bonds—it was said the new loan would be of this class—might be regarded "as nothing but a species of paper money."

The steady driving of Kuropatkin's army northward leaves even the chronicler breathless. The first blow in the strategic movement which has forced the Russians into their present harassed and contested retreat upon Mukden was struck more than a month ago, on July 31, when Kuroki stormed and held the positions which commanded Anping and the valley of the Taitse. On the second of August, Nodzu, after a stiff fight, took Simucheng, thus outflanking the Russian position at Haicheng. A prompt retreat to Anshantchan placed Kuropatkin's forces in a great semi-circle of about twenty miles radius, of which Liaoyang was the centre, Anping the northern, Anshantchan the southern node. This position permitted the junction of Nodzu, who had come from Takushan by way of Siuyen, with Oku, who had come from Port Adams. Nodzu naturally took the centre along the railway, Oku the left along the roads from Niu-Chwang to Liaoyang, leaving Kuroki as a widely detached right entrenched near Anping. The next important operation was the shifting of the Russian front. Their right at Anshantchan was vulnerable to an attack from Niu-Chwang. On August 5 the advance of Oku from Haicheng was the signal for the Russians to extend their right toward the northwest and the Taitse, making the semi-circle of defence face south instead of southeast. It was in this formation, with a much shortened radius, that they fought a great battle. In the early weeks of August Kuroki was constantly conducting small operations towards the Taitse. On August 17 he moved his right wing to a point still further north of Anping. On August 19 Oku and Nodzu pressed the Russian rear guard at Anshantchan. Then there was a pause of about a week.

On August 25 and 26 there were preliminary attacks by the two southern divisions of the Japanese—virtually outpost engagements, which forced the Russians out of Anshantchan to the ridge they had elected to defend ten miles below Liaoyang. On August 30 and 31 ensued the awful artillery duel along the whole front, which seemed to end with equal honors. That night Kuroki crossed the Taitse on pontoons, sent one division down the river, threatening the bridges over the swollen stream, and another towards the north, where a branch line to certain coal mines would give ready access to the Mantchurian railway. Kuropatkin's only possible course was precipitate flight across the Taitse. The certain consequence was the abandonment of Liaoyang, with large destruction of stores and material, and the resumption of the retreat amid the greatest possible depression of spirits. Will Kuropatkin still find his unresting and provident foes both clinging to his rear and cutting off his advance?

THE NEW VOTER.

This is the trying season for the first voter. Every self-respecting newspaper of either party thinks it a duty now to deliver to him a few appropriate words of warning and exhortation. In phrases which bring back only too vividly the baccalaureate addresses of an earlier season, he is reminded of the great responsibility that is his when he enters the polling-booth. Rival managers try to organize him into clubs, his morning mail begins to be filled with badly printed speeches under the caption, "Part of *Congressional Record*—Free," while the American Protective Tariff League, taking personal charge of him at once, tries gently to lead him beside the still waters of Dingleyism. The ingenuous young man naturally begins to regard himself as a prominent citizen.

So he is, in fact. His vote determines not only the remote, but the immediate, future of the country. In practically every election since the era of good feeling, the men who never cast a Presidential vote before have held the balance of power. It is computed from actuarial tables that approximately one-sixth of the national electorate is renewed in each four-year period between Presidential elections. When so many factors are liable to affect the total vote, the conclusions on this basis are necessarily rough, but it may be assumed that approximately 16 per cent. of the voters who choose between Parker and Roosevelt this fall did not have the chance to vote for McKinley or Bryan, while about 5 per cent. have never before voted at all.

The way to realize the importance of this 5 per cent. is to look at the proportion of voters who must be won over in each of the States necessary for a Democratic victory. Taking the total vote of 1900 in the States carried by McKinley as a basis, a change of 1½ per cent. would carry Utah for the Democrats, 2½ per cent. would carry Indiana and Nebraska, 3 per cent. Maryland, 3½ per cent. Kansas and Ohio, and 4¼ per cent. Illinois. Added to the votes of the States carried by Bryan in 1900, this makes, on the new apportionment, 259 electoral votes, or 20 more than is necessary to elect. Changed political conditions make Kansas and Ohio, at least, far more strongly Republican at present than these percentages would indicate, but a change of 4½ per cent. would add Delaware to the list, and 5 per cent. would carry New York and West Virginia, making 308 electoral votes. Thus in no State which is fighting-ground this year, except Wisconsin, does the percentage of votes which the Democrats need to win over exceed the probable percentage of voters who have come of age since the last election, though about half of the latter are presumably of Democratic antecedents and will merely fill the gaps in that party's ranks.

This calculation uses the total vote as a denominator. Figuring from the Republican vote alone, the importance of the new voters is just as clearly shown. Considering the well-known views of the head of the Administration, it is safe to assume that the rate of increase in Republican families is at least as great as the general average. Thus, the places of some 16 per cent. of the men who voted for McKinley in 1900 will be filled by new men, and about 5 per cent. by first voters. Now the Democrats must win over 2½ per cent. of the Republican vote in the last election to carry Utah, 3½ per cent. for Nebraska, 4 per cent. for Indiana, 5½ per cent. for Maryland, 6½ for Kansas and Ohio, 8 for Illinois, 8½ for Delaware, and 9 for New York and West Virginia. Experience shows that the shift of votes between elections, while very different in amount in different States, is generally in the same direction. Taking the country over, if the Democrats can make 32 converts among every 400 Republicans, they will carry enough States to win. And out of every such group of 400 presumptive Republicans there will be this year more than 60 who have never voted in a Presidential election, and about 20 who have never voted at all. This is the new voter's status in a nutshell.

There has been much speculation as to the probable disposition of the one-sixth of the electorate which has come on the stage since 1900. *Harper's Weekly*, in this connection, has offered the suggestion that, while Gold Democrats who voted for McKinley in 1896 and 1900 may return to their old allegiance this year, their sons, who started their political life by voting the Republican ticket, will stick to it. It is easy, argues that journal, to influence a boy's mind in the years just preceding his majority, but hard to change him back again after he has reached man's estate. Whatever force this ingenious theory may have, it applies less to the "brand-new" voters than to those who cast ballots in local or Congressional elections in 1901, 1902, and 1903. The little family drama, half a million times reënacted, on which the theory of parental influence is based, has been somewhat modified during its long run. The twenty-four-year-old son of a Gold Democrat left his father's guardianship, let us say, at a time when that father felt so strongly the momentary danger of his party's leadership that he had for a second time voted against the party of his choice. The twenty-one-year-old son, however, passed from under parental control at a time when the parent realized that the curse was off and was prepared to resume his old associations. It is risky to decide elections in advance by inferring what has happened at the voter's fireside, but if speculation is to be indulged in along that line it does not all point one way.

One thing, however, it is safe to assume: The voters who have grown up since the two campaigns in which free silver figured, come they of Republican or Democratic antecedents, are the last men to be frightened by the efforts of Roosevelt's managers to raise up again the bogies of those years.

LODGE AND REPUBLICAN "FLEXIBILITY."

Tolstoy, in describing a battle, relates that, when the officers came to recount their exploits, each narrated his part not as he played it, but as he would have liked to play it. That is the way Republican leaders are now discussing the gold standard. Senator Henry Cabot Lodge, for example, stated recently that "on the gold standard the people want no flexibility of opinion." In that case, Republican leaders should cry to the mountains and rocks: "Fall on us and hide us!" Charles S. Hamlin, Assistant Secretary of the Treasury under President Cleveland, has been incited by Lodge's statement to overhaul the records. The Senator rebuked the Democratic Vice-Presidential candidate because twenty-eight years ago his financial views were not the same as now. "But, surely," says Mr. Hamlin, "twenty-eight years is rather far back to go; we do not need to go so far to find many differences of opinion on financial questions by Republicans of good standing." The orthodoxy of the Home Market Club will not be questioned; the Club may honestly exclaim, "After the most straitest sect of our religion I lived a Pharisee!" And yet no longer ago than 1894 it passed resolutions to show the West that it looked on free silver with no special aversion.

But where was Lodge himself in 1894? Mr. Hamlin does not tell us, but the *Congressional Record* does. On May 9, 1894, the Wilson tariff was up for discussion in the Senate. Then occurred one of the most puerile scenes in the history of Congress. Lodge brought forward his silly resolution to club Great Britain into an international agreement for the coinage of silver. A grave debate on a question of great public importance was delayed while he pressed a measure for the maintenance of a double tax on goods from Great Britain until she should do something for silver. Lodge had no love for the Wilson bill, but it afforded him a means of drawing the attention of the coutnry to his fervid devotion to the white metal. In discussing his resolution he said: "The only question I desire to speak of is the practical question, What can we do to promote the bimetallism to which *we all profess to be devoted?* The one obstacle across the path of bimetallism is England." Did a more demagogical utterance than this ever fall from the lips of William Jennings Bryan: "The

only way in which we can reach England, the only way in which we can impress upon her the belief that we feel the necessity of some change in the situation, is by attacking her moneyed interests, by attacking her business, by closing to a certain extent our markets to her products and those of her colonies"?

No flexibility on the gold standard wanted! What, then, will become of Henry Cabot Lodge? Look at his record. He is credited with having drafted the Republican platform this year. The party, it runs, entered upon its present period of supremacy in 1897. "We then found the country after four years of Democratic rule in evil plight." Why was it in evil plight? Because of that silver agitation in which Lodge had played so conspicuous a part. Can any one review that period without recalling the heart of grace which the most fanatical of the silverites gained from his advocacy of bimetallism? "Boston bimetallism" was in those days a sharp thorn in the flesh to that band of sound thinkers who were striving by precept, as President Cleveland was striving by example, to educate the country to the danger of silver.

The Chicago platform declares: "We firmly established the gold standard." But what are the real facts? It is necessary to go back at least to 1890 for them. There is not a doubt that the price of the McKinley tariff was the Sherman Silver law. The protectionists in Congress had to pay this price, and a Republican President had to ratify the bargain by signing the measure that was to produce the panic of 1893. That is certainly not a record for any one who hates "flexibility" on the currency to look back to. The silver measure of 1890 became law by the grace of that party which now views with horror Mr. Henry Gassaway Davis's financial heresies of twenty-eight years ago. It required all the effort of a Democratic President to erase it from the statute book. But while he could get the law out of the way, he could not head off its results. He could not keep the wild speculation created by it from a frightful collapse; he could not save the industries of the country from prostration; he could not, therefore, prevent the public revenue from declining. Despite his every effort, the credit of the nation suffered; and when things were at their worst, when the creditors of the Government were demanding pay in gold and its debtors were settling almost exclusively in other kinds of money, such men as Lodge were making the situation worse confounded by their ill-considered talk about a larger use of the white metal.

It was an easy thing to "firmly establish the gold standard" after President Cleveland's long, thankless, up-hill struggle for its maintenance. The Republican party, as a party, started to fight the Presidential campaign of 1896 on another issue. It was actually forced by public opinion to recognize that silver was the only possible issue. Its leaders and campaign speakers, from Tom Reed down, had to go to school and learn what sixteen to one meant, and why too much silver was a peril. Many of them frankly admitted their ignorance of the whole subject. It was not choice founded on conviction that brought the Republicans to the defence of the currency in 1896. Senator Lodge upbraids Judge Parker because he voted for Bryan then and in 1900. But the Judge went with his party, just as the Senator did. Against their will, and to their great surprise, the Republican leaders had the task of defending the gold standard thrust upon them; and the man who two years before was anxious to bully England into abandoning the gold standard, and whose political philosophy may be summed up in the words, "My party, right or wrong," acquired a vicarious virtue which must have made him rub his eyes. In 1900, when time had killed the silver issue and it was safe to come out squarely for gold, the Republican party took that step. This is the party whose leaders will to-day tolerate no "flexibility" of opinion on the currency. They are trying to paint the last fourteen years, not as they lived them, but as they would now be glad to have lived them.

SAINT PAUL AND SING TUCK.

The case of the United States *versus* Sing Tuck, decided by the Supreme Court on April 25 of this year, suggests a curious parallelism to the case of St. Paul the apostle to the Gentiles, as recorded in the Acts of the Apostles. The way in which the claim of citizenship was treated by the officials of imperial Rome, and the way in which a similar claim is treated by the immigration officials under the Secretary of Commerce, present a contrast not flattering to our own system of Imperialism.

In many respects the two cases are very similar. St. Paul, though claiming the privilege of Roman citizenship, was a member of a despised race. Sing Tuck, though asserting that he is a native-born citizen of the United States, is a Chinaman. Both of these citizens alleged their right of citizenship before ministerial officers, and both finally prosecuted an appeal before a supreme tribunal. The claim was allowed presumptively in the first case, and denied peremptorily in the second. The right of appeal was conceded, and progressed to rapid determination in the former case, and was denied tentatively, if not finally, in the latter. The following transcript of record will suffice to bring out the salient points of the contrast.

In the Book of Acts, chapter 22, it is recorded that St. Paul, after having been rescued from the mob at Jerusalem, remarked to those who were binding him with thongs preparatory to examining him under torture: "Is it lawful for you to scourge a man that is a Roman, and uncondemned?" Thereupon Claudius Lysias, the centurion, came and said: "Tell me, art thou a Roman?" Upon receiving an affirmative answer, it is narrated that "straightway they departed from him which should have examined him: and the chief captain also was afraid after that he knew that he was a Roman, and because he had bound him." In the further account of the judicial proceedings it appears that at Cæsarea, whither the apostle had been conveyed under escort of an armed guard, the governor, Felix, "commanded a centurion to keep Paul, and to let him have liberty, and that he should forbid none of his acquaintances to minister or come unto him." Finally, incensed at the delay of a final decree by Porcius Festus, the successor of Felix, St. Paul declared (Acts 25: 10-12), "I stand at Cæsar's judgment-seat, where I ought to be judged. . . . I appeal unto Cæsar." "Then Festus, when he had conferred with the council, answered, 'Hast thou appealed unto Cæsar? Unto Cæsar shalt thou go.'"

The facts in the case of Sing Tuck are as follows: Seeking to enter the United States, he was detained by an inspector of immigration. The inspector informed him that, under the act for the exclusion of Chinese aliens, he was not permitted to enter this country. To this Sing Tuck made reply that he was not an alien, but a native-born citizen of the United States. The reply of the inspector, acting under the rules laid down by his administrative chief, the Secretary of Commerce and Labor, was that he must produce two witnesses to prove the place of his birth. The aforesaid rules also provide that no papers offered by a Chinaman are to be accepted as valid, unless substantial evidence is also forthcoming to show the identity of the person named therein and the person proffering such documentary evidence. After such preliminary detention of a suspect immigrant by the inspector, a hearing is given the accused by a star-chamber board of three, called a Board of Special Inquiry. By Rule 7 "the examination before the board is to be private, in the presence only of Government officials and such witnesses as the examining officer shall designate." It is further provided in the rules that no communication with counsel or friends is to be permitted. As Mr. Justice Brewer caustically remarked in his dissenting opinion (concurred in by Mr. Justice Peckham): "The most notorious outlaw in the land, when charged by the United States with crime, is by Constitutional enactment (Art. 6, amdts. U. S. Const.) given compulsory process for obtaining

witnesses in his favor and the assistance of counsel for his defence; but the Chinaman—although by birth a citizen of the United States—is thus denied counsel and the right of obtaining witnesses."

The Board of Special Inquiry after this mockery of a hearing—and the process takes place daily at Ellis Island—decided that Sing Tuck was not entitled to entry into his native land. The inspector graciously informed him that he could appeal to the Secretary of Commerce, provided the appeal was prosecuted *within three days*. At this juncture Sing Tuck secured the services of a lawyer, who sued out a writ of habeas corpus, alleging that his client was illegally deprived of his liberty, and the case was taken first to the Circuit Court, then to the Circuit Court of Appeals, and finally to the Supreme Court of the United States. The prevailing opinion, written by Mr. Justice Holmes, declares that "a mere allegation of citizenship is not enough" (*i. e.*, to warrant the grant of a writ of habeas corpus until appeal has been made to the Secretary of Commerce and Labor); and that "before the courts can be called upon, the preliminary sifting process provided by the statutes must be gone through with. Whether after that a further trial may be had *we do not decide*" (italics not in the original). On this liberty-breathing addendum, Mr. Justice Brewer remarks with fine irony that "the Court does not give to these petitioners encouragement to believe that there can be any judicial examination, even after the decision by the Secretary [of Commerce and Labor] against their claim of American citizenship. If a judicial hearing at this time is not denied, it is, at least like a famous case of old, passed to 'a convenient season.' Meantime, the American citizen must abide in the house of detention."

The legal and Constitutional aspects of this decision may be safely left to the opinion of the legal fraternity. But, solely on the score of administrative amenity and respect for the claim of citizenship in an imperial State, the contrast between the fearsome centurion, the courteous Felix, and the law-abiding Festus on the one hand, and the arbitrary minions and high-handed rule of the Administration on the other, is impressive, not to say depressing.

THE MANASSAS MANŒUVRES.

The manœuvres which began near the old battlefield of Bull Run on Saturday are by far the largest and costliest this country has ever witnessed. Fully 26,000 militia and regulars, divided into two forces, are waging mimic war for eight days under conditions as closely approximating those of actual service as is possible when the camps have been prepared months in advance, carefully laid out, furnished with good water, and when the commanding general expects all the officers and their wives and the guests at headquarters to dine in fresh uniforms and evening gowns at the headquarters mess soon after the close of the day's hostilities.

These manœuvres are, of course, an outgrowth of the increased interest in matters military which has marked our plunges into Imperialism. A press dispatch has already assured us that, while his body is at Oyster Bay, Mr. Roosevelt's soul will dwell on the field of Mars until the exercises are over. His active sympathy has done much, of course, to bring about this period of field training, as has also the liberality of Congress, but the demand for manœuvres dates far back to the early eighties. Several thousand regulars were assembled in the Department of the Missouri in 1886 under Gen. John R. Brooke, and Gen. Miles utilized the opportunity afforded by the gathering of troops at Chicago in 1894 to drill them *en masse* after the Debs strike-rioters were dispersed. But the need of manœuvres was not keenly felt until the war with Spain. Then colonels who had never drilled a whole regiment found themselves called upon to handle brigades and divisions under fire. Shafter, the commander-in-chief, had never in his life manœuvred as much as a brigade, except for parade purposes, before the command of the Fifth Army Corps was bestowed upon him. In the Philippines, when the unfortunate Filipinos were run to earth by the Eighth Army Corps, most of the officers learned their brigade, division, and corps duties only by experience in the field.

In several of the States, notably in Pennsylvania, the militia had encamped from time to time as a whole. Only rarely, however, were other than regimental drills attempted—not only because few militia generals were competent to do more than head their brigades on parade, but because of a well-founded belief that extended-order drills are likely to be of little or no value to troops whose main duty, when called into State service, is to deal with mobs or to defend railways against belligerent strikers. There are still so many militia officers who hold to this view that the first joint manœuvres with regulars, held in Kansas last year, were watched with peculiar interest. Despite the passage of the Dick law, the fact remains that no militia regiment entering the service of the United States on a sudden call tomorrow would take 50 per cent. of its present enrolment into the volunteers. This is because not even the militia of this State can enforce the physical standards of the regular army and keep up its enrolment. If, therefore, a large number of green officers and men must in any case go to the front in the event of war, as witness 1898, the value of advanced manœuvres for the trained minority is materially decreased.

It was clearly shown at Fort Riley last year that the problems set were far beyond the grasp of the militia. It is as idle to expect citizens who drill indoors one evening a week for thirty weeks to step out and undertake reconnoissances, outpost and brigade-guard duty, as it would be to require a beginner in Greek to give a metrical rendering of Homer. What the militia gained, aside from the object-lesson of the way in which professional soldiers care for themselves, was experience in camping and cooking, such as is acquired equally well in a State camp like that at Peekskill. This putting together of two differently educated bodies of men will always detract from the military value of joint manœuvres, particularly as the regular officers are without disciplinary authority over the militia. One or the other body, if not both, will be wasting its time. The real excuse for manœuvres in the regular army is the need of educating our officers, particularly the generals; for a more ignorant and inexperienced lot than is suggested to the military critic by the names of Funston, Wood, Grant, Carter, and Baldwin could be found in few armies. Hitherto, in our service, a general has been a general though he sat at his desk 300 days in a year. The only time our division and department commanders see troops is once a year, on their inspection tours, unless they are assigned to manœuvre duty.

So far as the education of these and other officers is concerned, it can be carried out by assembling a division or two for five months every year on some Government reservation, like that at Fort Riley, and drilling them with something of Continental thoroughness and diligence. This would be far more valuable for the army and far less costly than assembling a force of even 100,000 for ten days. It is the expense of experiments like this at Manassas which will, we believe, speedily check similar war games. The ammunition to be fired away during the week will cost $30,000. It is expected that the militia pay will take $200,000 out of Uncle Sam's pockets, in addition to subsistence at the rate of 18 cents a day for 26,000 men. The land has been leased at the rate of 30 cents an acre; thirty wells have been sunk at a cost of $30,000, and the Government must pay the Southern Railway for twenty miles of spur and side tracks. The damages to crops, buildings, and lands will, it is estimated, mount to between $50,000 and $100,000. Scores of colleges and universities the country over would deem themselves blessed if they could add to their endowment funds what will be spent on the transportation of men, animals, and supplies. A million dollars is the total sum required, according to semi-official opinion in

Washington—all for ten days of marching and countermarching!

THE INTERNATIONAL CONGRESS OF SCHOLARS AT ST. LOUIS.

Among the numerous enterprises associated with the St. Louis Exposition there is one the outcome of which will be awaited with great interest by the scholars of every country. At an early period in their preparations the directors of the Fair considered the practicability of assembling a general congress of men of science, learning, and progress, whose discussions should cover a broader field and be of more permanent value and wider interest than the proceedings of such bodies usually are. Nearly two years ago correspondence was opened with leading educators and others, and several committees were appointed to outline a programme of proceedings. Three propositions were submitted, having the same general object in view, but differing in their ideas. One proposed a congress which might be called universal in the sense of including almost every question of wide human interest within its scheme. Another proposition was to assemble a few leading men of every country in the various branches of endeavor, to set forth the problems which confronted their respective peoples, and their methods of dealing with them. A third proposition was to include the entire realm of knowledge with its main applications. In view of the wide extension of research in recent time and the great number of specialties into which it branches, such a suggestion might have been supposed to emanate rather from the brain of an enthusiast than from one fitted to deal with human affairs. A practical form was, however, given to the scheme by Professor Münsterberg, whose plan was at length adopted, with occasional modification of details as the preparations progressed.

A limitation obvious from the beginning was that the discussions could not include the details of all the specialties in scientific research. The fundamental idea was rather to introduce a corrective of the tendency to specialization by discussions the aim of which should be to bring the sciences together, by setting forth their mutual relations, the unity of their fundamental conceptions and methods, and the general problems now confronting specialists in their several departments. It was obvious that it would be impossible in a single week to present all the necessary discussions in one series of meetings. The Congress must therefore be divided into branches. One of its novel features is the system on which the subdivision is carried out. After a single general meeting of the entire Congress, at which it is expected that a single address on the evolution of scientific thought will be read, the Congress will separate into seven "divisions," each including a large but fairly well-defined class of sciences, pure or applied. In each of these divisions one address will be delivered on the unity of the sciences included in the division. Next, the Congress will break up into twenty-four departments, each holding a single meeting, at which the themes will be the fundamental conceptions of the special group of sciences treated, and its progress during the past century. On the third day these departments will again subdivide into about one hundred and twenty-five sections, each holding a session of half a day for the discussion of the present problems of the section, and the relation of its special science to cognate branches of knowledge.

A necessary condition of success was that the addresses should all be delivered by scholars of the widest reputation in their several fields. This required a thorough canvass, not only of our own country, but of the principal European countries, with the view of securing the services of the required speakers, who, on the adopted plan, numbered about three hundred. It would doubtless have been easy to collect this number of eminent men if no regard had been paid to the subject; but the task of securing a fixed number of scholars and men of the highest eminence, and no more, in each subject involved difficulties which will appear in stronger outline the more carefully one looks into the problem.

The directors of the Fair showed their appreciation of the situation by placing the consideration of the subject in the hands of an administrative board, comprising several leading educators, of which President Nicholas Murray Butler was the chairman. This board met, decided upon the general plan which has just been outlined, perfected its details, and confided its execution to an organizing committee consisting of Professors Newcomb of Washington, Münsterberg of Cambridge, and Small of Chicago. This committee spent the summer of 1903 in Europe, consulting with and extending invitations to leading investigators and specialists, most of whose names had been previously selected. It is not wonderful that they found scholars in Europe (as here) busy men, and not generally willing to take a trip across the Atlantic for the purpose of attending meetings and delivering a discourse. But the outcome of the visit was that about one hundred and twenty of the most eminent men of science and learning in Europe engaged to visit St. Louis during the week beginning September 18, 1904, and take the several parts assigned them. The adhesion of Americans was, of course, easier to secure, yet in many of the sections the task required time.

The members of the organizing committee, having its headquarters in Washington, have now come to a substantial conclusion with the following results: About one hundred Europeans of the highest distinction in the various branches of intellectual endeavor are on their way to us, or will sail within the next few days. It would be tedious to give a list of names; let it suffice to say that the universities of Oxford, Cambridge, Paris, Berlin, Leipzig, Vienna, and Rome will all be represented. They will be joined by three hundred Americans of similar standing as speakers and chairmen in the various departments and sections. The resources in professorial material in all the universities in the United States have been heavily drawn upon to complete this organization.

The arrangements made by the Fair for enabling our scholars to avail themselves of this remarkable assemblage are of the most liberal kind. Professors in universities and colleges, members of all our scientific societies and learned professions, and, in fact, all interested will be welcomed as attendants at the meetings. No entrance fee of any sort is required. It is unfortunate that the time of the meeting (September 19-24) had to be so fixed that European professors could get home for the opening of their terms of instruction, and thus falls near the opening date of many of our own institutions of learning. But the organizing committee, and all concerned in the enterprise, earnestly hope that American professors will make whatever sacrifices may be necessary to enjoy the benefit of this unique assemblage. A desirable but not necessary preliminary is to advise Mr. Howard J. Rogers, the Director of Congresses at the Fair, that the writer intends to present himself for enrolment as an attendant at the meetings of the Congress.

THE MEXICAN MACHINE.

MEXICO, August 29, 1904.

There being no other candidates, the recent election of Porfirio Diaz as President and Ramon Corral as Vice-President of Mexico for a term of six years, beginning December 1 next, was not a surprise to any one. The surprise had come some two or three months earlier, in the selection by President Diaz of Minister Corral as the man to fill the newly created office of Vice-President, thus marking him as the most probable successor of Diaz in the Presidency six years hence, supposing that Diaz lives out the coming term.

It had been supposed that the succession to the Presidency (which, by the way, in all press discussions of the subject in this country, is always assumed to depend upon the beck and nod of Diaz) lay between Finance Minister Limantour and the former Secretary of War, Gen. Bernardo Reyes, Diaz's personal friend. Some talk there has always been of the Secretary of Foreign Affairs, Mariscal; but quite generally his age had come to be recognized as a bar to his accession six years hence. Limantour represents naturally the younger party of

Progressives in the country, and his combination of railroads under Government control, and project for the stabilization of the currency, are the chief topics before the public. Gen. Reyes more nearly stands for the "old school," for the element whose memories are still in the days of warfare, and whose ideals are those of a country of landed estates. The partisans of these two had more to do than had the men themselves with a break in the Mexican Cabinet, resulting in the withdrawal of Reyes. The younger party of so-called "Liberals" (really, Liberalism proper has ceased to be an active force in Mexican politics, and the younger party is better denominated one of "Progressives," favoring modern industrial progress and the concentration of the control of it in the hands of the Government) were only waiting for the word of permission from Diaz, or even a sign that an active campaign of sentiment in favor of Limantour throughout the country would not be actually frowned upon, to promulgate formally his candidacy. He himself, however, suddenly announced that he would not be a candidate, preferring to remain where he could carry on his work with regard to the railroads and the currency.

At the same time, there came, from a dozen different sources, the at first very mysterious announcement that Ramon Corral, but a year or so before called to the Ministry of the Interior from the post of Governor of the State of Sonora (far in the northwest of Mexico, cut off from the rest of the country by the Sierra Madre, and related commercially rather with the United States than with Mexico), a man comparatively unknown to the country at large, though with a record entirely in his favor, was the most "likely" candidate for the Vice-Presidency. Newspapers in the capital which are in the confidence of the Administration began to talk of Corral as if by inspiration, and were followed by similar organs of the "powers that be" in the various States of the Republic. Governors of States, or other inspired missionaries, returned from visits to the capital, and soon after in the provincial towns there followed the organization of clubs, mostly commonly called "Clubs Porfirista," which proclaimed the candidacy of Diaz and Corral. A meeting of the so-called Liberal party in Mexico City resulted in the nomination of Corral by a large majority. Diaz had decided not to take sides in the Limantour-Reyes contest, and had picked out a comparatively young man, not identified with factions hitherto, who has been a noticeably good administrator, and is credited with much vigor and determination. Apparently, Diaz had said, "Here is my successor," and at once all other candidatures faded from sight. A word from the throne is sufficient in this country.

Whether the "machine" which now controls things in Mexico, and which is Porfirio Diaz—nothing more—can effectually provide thus for the succession to the throne, is not perhaps altogether certain. General Reyes will hardly come to the front again; his candidacy was possible only on condition of his receiving the nomination as a legacy from Diaz. But, in case of the latter's death before the end of his term, it is not altogether certain that Corral can be elected in 1910 for a regular term. Much will, of course, depend upon the man himself. But Limantour's claims upon attention bid fair to become greater instead of less; and, supposing him to be ambitious for the Presidency, his candidacy can hardly be suppressed even by the dictum of Diaz. It is ordinarily conjectured that the latter will retire before the end of the coming six-year term, or will go on a trip to Europe, which will leave Corral in charge, and give the people a chance to become accustomed to seeing some one else in supreme power.

Now that the likelihood of revolution has receded into the background in Mexico, and a rivalry for the Presidency would probably not degenerate into a civil war between two claimants, it would probably be a good thing for the country to have something like a chance to test its Constitution in a real election. Those like that held this year are the merest mimicry of constitutionalism, and, if long persisted in, will inevitably tend, not towards implanting a real constitutionalism, but towards a total incapacitation for the exercise, even by the limited number of educated Mexicans, of the rights supposed to belong to the citizens of a republic. The old dictatorship, the one which in the nature of things must soon reach its end, has rested upon the vigor and the will of one man, whose prestige in the first instance was that of a military conqueror; the new dictatorship, unless indeed there be a sufficient leaven of patriotism and intelligence in the country to prevent it, will be a dictatorship of powerful commercial interests. The boast of the admirers of Diaz is that, by rigorously reëstablishing order and maintaining it, he has given opportunity for the development of the country, especially by foreign capital; and, by the diffusion throughout the country of railroads, the telegraph, and industrial enterprises generally, has made a return to the old days of revolution impossible. These great interests, coming, as stated, in large part from outside, have now set their stake upon a continuance of the policy under which they have been established. They will not leave that policy to chance, but will seek to insure their own future, and, if necessary, will exercise the tremendous power they now have in the country, even to the point of making the office of President one of their assets.

"Elections" were held throughout the country in June, for both Federal and State officers. In all cases, the slates previously prepared by the machine in power were confirmed, practically without opposition—indeed, quite generally without oppposition candidates at all; but the empty forms of the Constitution were as scrupulously followed as though the contests were real and the interest of the people at large was keen. Election boards were organized and proclaimed by executive authority beforehand, and polling-places carefully specified. In the majority of cases, it is doubtful if these polling-places were even open; however, there was no offence in this, for no voters except a sufficient few to cast a show of ballots for the precincts in question knew of the election or paid any attention to it. A prominent Mexican banker, for instance, asked if he attended the election, replied that he had forgotten on just what day it was held, and it "was not necessary" to bother about it, as everything was fixed and would be attended to in due form by the officials and employees of Government concerned. Some so-called "popular meetings" were, to be sure, held; but, beyond gathering in small crowds to hear the music and perhaps lend a non-understanding ear to the speeches of the organizers, the proletariat had no interest in what was described by the Government press as "spontaneous demonstrations of the masses." The poll lists and election returns were, in general, arranged in the capital of a district covering from two to nine hundred square miles, sometimes more.

The Federal officers, executive, legislative, and judicial, are supposed to be chosen by the electors designated in the popular vote by electoral districts, into which each State is divided, at the ratio of one such district to forty thousand inhabitants, the number entitled to a Deputy in Congress. These electors, according to the slate arranged and confirmed by "popular vote," gather at the stated time, the second week in July, in the designated municipality, the seat of a *partido* or county, as a rule. There the forms are gone through with in all solemnity and stateliness. It will be worth while to describe the action of one such electoral college, published afterwards at length in the official Gazette of the State. At the first meeting, the *jefe politico* of the district presided, until the meeting, composed of sixty-odd electors, had chosen its officers, after which he withdrew and the meeting adjourned for the day. At the second meeting, the "credentials" of the members elected with scrupulous fidelity to the slate were all proclaimed correct, and the meeting adjourned. At the third meeting, a Deputy for that District and a Senator for the State were chosen, by unanimous vote, together with a substitute for each. The fourth meeting brought out the vote for President and Vice-President. Diaz was unanimously chosen, after which a telegram of congratulations was sent to him, and felicitations were exchanged with the Governor of the State during an informal recess; then Corral was voted upon for Vice-President, receiving fifty of the total of sixty-six votes, the rest being a few scattering expressions of individual choice. At the last meeting the two justices of the Supreme Court named on the official slate received formal approbation. Thus, five days, with sessions of an hour or less each, were consumed in the process.

The State officers are, ostensibly, chosen by popular vote at the time the Federal electors are designated in the districts. Nothing is heard about the results, however, nor is even a hint published in the newspapers (which, as a rule, have forgotten to mention beforehand the date of the election in the various precincts), until the results are canvassed and proclaimed, from one to three weeks later, by the Legislature of the State. This is done in the form of a law, which is promulgated by executive decree. The members of the State Legislature will, almost unfailingly, be found to consist of executive officers of the State Government, or lawyers addicted to the Administration, all resident, as a rule, in the capital of the State, though representing the various legislative districts thereof. The same sort of procedure prevails as to the representatives in the upper and lower houses of the Federal Congress, who are elected according

to the slate, and are, more commonly than not, unknown, or very little known, in the States which they represent. They are residents of the capital, as a rule, some of them being officials in subordinate posts in the Federal Government, others professional men. The Government employees are permitted to take their seats by special dispensation of the Congress, waiving the Constitutional prohibition. Three States under the writer's cognizance are represented by Senators and Deputies not one of whom is or ever has been a resident, and only two or three of whom have even been in the States they represent.

The proclamation by the Legislature of the election of a Governor is made the occasion of considerable formality. The main plaza will probably be the centre of a band concert, attracting the idle portion of the populace, while a detachment of Federal troops and State constabulary, led by buglers, will parade the streets. Inside the legislative hall, the result having been announced amid cheers, the "choice of the people" will be sent for, and speeches will follow, after which may come toasts with champagne, a champagne lunch, or even a regular banquet. Banquets are the order of the day, given by various interests in the capital and in other cities of the State which wish to stand well with the new executive. These are wont to be very pleasant, social, withal formal, affairs, and are often the occasion of much splendor and display. An instance is a banquet recently held in one of the smaller towns of a State, where some ten thousand pesos were spent in properly entertaining the Governor-elect for three or four days. The same town has no school worthy the name beyond the primary grade, and the money thus spent in establishing a good secondary school would have made a most fitting memorial for the new Governor, if a suggestion from him had indicated a preference for being honored in that way.

Such an election, running its peaceful course until the final outburst into the banquet stage, has, it must be said, some advantages. "Business" is not in the least disturbed during election year in Mexico, at least so far as any dependence upon the results of election is concerned. No one could think of suggesting that the economic policy of Government had any relation with the pending election; indeed, economic questions are not so much as mentioned in this connection, though Mexico has now on her hands the most remarkable essay at Government intervention in railroad management that has yet been attempted on this continent, and the reform of the currency is the most important question now confronting her. However, Mexico does not entirely escape dependence upon elections. There is always a suspension of activity on account of the Presidential election in the United States. This was very noticeable in 1896 and 1900, but is less noticeable this year, and it is doubtful if the influence of the neighboring election would be felt to any great extent at all, were it not that there has been considerable suspense in business circles for more than a year past on account of the talk about "stabilizing the peso." This is natural, considering that business in the United States is apparently to be much less disturbed than usual by the impending election. Mexico's dependence in this respect arises naturally from the amount of American capital invested here in large undertakings, and from the fact that, owing not a little to proximity, the United States now sends Mexico nearly one-half of her imports, and takes about three-fourths of her exports.

THE NESSELRODE PAPERS.

PARIS, August 22, 1904.

The name of Chancellor Nesselrode is well known. He lived ~~ninety~~ 82 years, and died as recently as ~~1890~~ 1862. Count A. de Nesselrode has undertaken to publish his letters and papers, and we have before us the first volume of this publication. I will say at once that the contents relate not to the famous Chancellor, but to his father, Count Wilhelm von Nesselrode; nevertheless, they possess great interest *per se* and a real historical value. As the editor says: "This correspondence shows, in the light of precise details, of characteristic sentiments and appreciations, the portrait of the man whom the Chancellor liked to call his best master in the science of life, the lofty and sympathetic figure of this cadet of a great German family, who was, after the fashion of his time, to make his fortune a little anywhere, and who was in the service of the great and the lesser courts of Europe, by turns soldier, courtier, and diplomat." Wilhelm von Nesselrode began his career as a subaltern officer in the armies of the German Empire; he went afterwards to the court of the Elector Palatine, and became a favorite of the Electress. The correspondence leaves no doubt of this. She calls him, in an undated letter of 1760, "My very dear and tender friend," and asks—

"Is there no way of tearing your fatal passion from your heart? . . . Must I become the ceaseless torment of your whole life, by continuing to kindle in your heart a flame which will in the end destroy you? Your parents are still talking of their plan of marrying you, and they will execute it, I am sure. I will prove to you, dear and adorable friend, by putting an end to my union with you, that nobody in the world has loved you more than I have. . . . The person who has been so happy as to love you has not the heart to become your tormentor. You have excited in me I do not know what tender, respectful, and grateful feelings, which will never be denied; but do become my friend, I beg of you, and cease to be my lover."

No wonder Nesselrode could not remain long at a court where he had excited such a warm passion. He had to quit his post, and, under the protection of Choiseul, who was all-powerful at the time, he was appointed colonel in the Royal Allemand Regiment.

At Paris and Versailles he found the society for which he seemed to have been born. He was essentially a man of the world; his personal charm, his manners, were fully appreciated, and he forgot his "malheureux roman" with the Electress. There is a curious letter of his to her which shows that she urged him to come back to the Electorate; he very sensibly refused. His correspondence indicates that he was acquainted in Paris with the Prince de Soubise, the Soubise who distinguished himself at the battle of Fontenoy, and was beaten at Rossbach by Frederick the Great. We see him on intimate terms with Mademoiselle Dubois of the Comédie-Française, and making her presents. The Duke de Choiseul, his patron, was exiled to Chanteloup, and Nesselrode, with much regret, left the brilliant society of France. He remained but a short time at the Court of Hesse-Darmstadt and at Weimar, and, not finding the small capitals of Germany a sufficiently large field for his activity, offered his services to Frederick the Great. "I consent," writes Frederick to him from Potsdam, August 10, 1769, "to leave you to choose your place of residence, whether here or at Berlin, provided that I find you here on my return from Silesia."

Frederick was seduced by the eminently French *esprit* of Nesselrode, amused by his confidences respecting the little German courts, French society, the French philosophers, the French actresses. He named him one of his chamberlains and admitted him to his intimacy. Nesselrode grew tired of the life of a chamberlain, and, in 1775, asked Frederick's permission to leave his service. "The only regrets," he says, "which I shall have will be at having spent six years of my life in a country governed by the greatest of kings, without having found occasion to use my feeble talents in his service." Frederick granted him his request, and three years afterward a ukase of the Empress Catharine, dated St. Petersburg, September 13 (25), orders the entrance into her service of the "Gentilhomme allemand Count Guillaume de Nesselrode," and sends him to the Court of Portugal as envoy extraordinary and minister plenipotentiary.

Before going to Portugal, he married Madamoiselle Louise Gontard, and writes to his brother: "She is neither handsome nor young, nor noble, but she is worthy of my fullest esteem." She justified his choice, but gave him only two years of happiness in Lisbon, where she died after a short malady. He was at Lisbon when the terrible earthquake of 1755 took place, which ruined this capital and created such a sensation all over Europe. Having lost his wife, and feeling very despondent and discouraged, Nesselrode asked for another post, and was sent to Berlin, as minister of Russia. He had a young child, a son, whom he thought with reason could be better educated in Germany than in Portugal. In Berlin, Nesselrode was occupied with very important affairs and negotiations for a long period. The volume just published gives us many letters of the Emperor Paul, the Empress Marie, the Prince-Primate Dalberg, addressed to him. There are, unfortunately, many important letters wanting, which the editor believes were lost during the numerous journeys. He remarks, also, that all the letters, with very few exceptions, are written in French, though they came from German or Russian correspondents.

"This," he says, "is significant. What an eloquent proof of the place which the French language made for itself in the worldly and the literary Europe do we find in the fact that these Russians and Germans exchange correspondence (not only official but personal) in a language not their own. In a period when all these little German courts were so often at war with France, sometimes even its deadly enemies, they remained nevertheless, in whatever concerned science, letters, arts, fashion, its faithful and warm admirers, and tried in the measure of their means to imitate. At the same date, whoever came from Paris and Versailles was considered in Europe as belonging to the élite of society, as a model of grace and of taste. France was

at the height of its éclat; and though it sometimes succumbed in the pursuit of its policy or the endeavors of its arms, it still remained conqueror by the admiration which it inspired in its adversaries."

Dalberg, whose name often occurs in this volume, and who was in correspondence with Nesselrode, was the Prince-Primate of the German Catholic Church. He was born near Worms, of a very old family. He was successively Civil Governor of Erfurt and Bishop of Constance; he became in 1802 Elector of Mainz, Bishop of Ratisbon, and Arch-Chancellor of the Empire. He prosided over the last reunions of the German Bund, and opposed the projects of Napoleon. Afterwards he attached himself to Napoleon and was named by him President of the Confederacy of the Rhine, and Grand Duke of Frankfort. He remained faithful to Napoleon in his misfortunes, and was deprived by the Allies of his estates, with the exception of the bishopric of Ratisbon.

The letters written by various correspondents and by Nesselrode after 1789 have a peculiar interest. There is one, unsigned, addressed to him on July 31, 1789, and describing the arrival of Necker at Versailles, his triumphant reception, the first movements of the Revolution. The death of Joseph II., in February, 1790, is the subject of two letters; in one his last moments are described with great minuteness; in the other Count Vorontzoff writes to Nesselrode:

"Headlong, inconsiderate, and violent as he was during his unfortunate reign, he showed himself wise, moderate, firm and great during the last six weeks of his life. He recognized all his faults, repented them, tried to repair them, and died as the most virtuous Stoic might have died. It is the only period in which he showed that he had the soul of the great Maria Theresa. . . . He repented too late, not having followed the advice of Prince Kaunitz, and of his brother, who has just succeeded to this vast and utterly confused monarchy."

We find a very interesting letter written to Nesselrode by Count de Mérode, from Paris, on the 26th of July, 1790. He first congratulates Nesselrode on the choice he made of M. Gedike for the education of his son (the future Chancellor); he develops his views on the French Revolution and upon its first effects. "The impulse once given, people are not masters of the movement. This happened all the easier in France on account of the vanity and levity of this nation. . . . However, with all its defects, the new Constitution has superb aspects." Mérode took a rather optimistic view of the situation in France; he saw, however, the prodigious disorder of the finances, the urgent necessity of re-establishing social and political order. He saw obstacles "in the national character, in the unhappy mania of all the semi-capacities in France to aspire to genius." In another letter, he gives a very curious portrait of Mirabeau. He says that he took particular care to study a man who inspired him with the greatest interest.

"In vain," he continues, "have I tried to find proofs of the vile actions, the low vices, which are attributed to him. Without taking him for an angel or a devil, I consider him to be the man in France who best understands men and things in his country, and who has best understood the theory of political liberty. Add to this that he unites to the talents of a great orator the talent, rare in this country, of knowing where to stop. . . . Also, though he was the principal promoter of the most decisive actions which have consummated the destruction of despotism, you have seen him lately oppose on some crucial occasions—even quite recently, as in the debate on the war and peace prerogative—at the peril of his life, the measures proposed by the false apostles of liberty, who, in their democratic frenzy, think that one can never abate sufficiently the executive power."

This first volume of the Nesselrode papers is only a sort of preface; it shows in a very favorable light the man who gave to his son, the future Chancellor of Russia, the first practical and political lessons which he received. It is also interesting as furnishing proofs of what we may call the international or rather cosmopolitan character of the best society of the eighteenth century. The Mérodes, the Nesselrodes, are typical in this respect. Our time, notwithstanding the increasing ease of communication, is perhaps more narrow-minded; and less humane, in the sense of the word applicable to international relations.

Correspondence.

THE GREAT GOD "GOVERNMENT."

To the Editor of The Nation:

Sir: The very doleful view of public life in America as shown in Steffens's 'The Shame of Cities' and in similar publications ought to be salutary reading for the average American citizen. The ignorance of the actual facts of politics among our "good people" is appalling. Not long ago I was in a seminar (postgraduate work) at a certain university. The class consisted chiefly of clergymen of various denominations, professors of smaller colleges, and some resident postgraduates. Their combination of acquaintance with political theories of government of cities with profound ignorance of actual practice, was at once amusing and disheartening. The lesson of a century of political experience in America had never been learnt. These "good people" were leaders of thought in their respective communities.

After all, it is doubtful whether, as a people, we have advanced very much beyond the stage indicated by the old theory of the divine right of kings. Whenever our "good people" get a glimpse of the horrid corruption of our Government, they call on the Government for aid. A government must somehow possess miraculous, supernatural powers. Why? Because it is the Government, and, being the Government, it must have—well, somehow, in some way, it should possess the attributes of a deity. Sifted to the last analysis, this notion is at the bottom of the cry for municipal ownership to cure municipal corruption. The principle is that he that boodleth in a few things, shall boodle in many; if a thief steal thy doormat, open to him the front door and shew to him thy silver closet and thy wardrobe! Advocates of good government who know the seamy side of political life will welcome the experiment of municipal ownership, if necessary, for an object-lesson to our "good people." If the people cannot trust the evidence of their eyes and noses as to the existence of the rottenness of our present system of government, and if it be necessary for absolute certainty that they should plunge into the seething pool, bathe in it, and wallow in it, let no good man lay a straw in their way.

The truth is, that the fault lies not so much in the weakness and depravity of human nature as in the unfitness of our political system to human nature such as it is, has been, and probably will be for centuries to come. The bed does not fit the occupant, and the lopping-off and stretching-out process produces painful experiences; but we are very loath to admit that the fault is the bed's. The occupant really ought to be self-denying, public-spirited, and altruistic enough to put up with such personal inconveniences. Thomas Jefferson and his school—whether they ever got the notion from French or English philosophers is immaterial—said that it was the best possible bed. Of late years there has been no lack of men who have said boldly, and even coarsely, that there is something wrong with the bed. But no man, or at least no party, has yet dared to say openly that the framework of our political system is wrong, and that we can never find comfort until it is adapted to human nature. Slaves to a formula, hypnotized by a phrase, we weep, wring our hands, and cast imploring eyes to the Most High for aid, but we have not the courage to apply the one remedy necessary for political salvation—purification of the electorate by the elimination of the profligate, irresponsible, and ignorant. In the meanwhile, "on with the dance, let joy be unconfined"; let everybody dance (and vote)—more offices, more powers, more boodle, more graft!

E. L. C. Morse.

Chicago, August 27, 1904.

GERMAN NOTIONS OF AMERICA.

To the Editor of The Nation:

Sir: Mr. Stille's letter which appeared in your issue of August 18 was of interest to me because his observations correspond to my own. Being in Berlin last spring, I asked a German bookseller what he thought of Münsterberg's new book. "Oh," he said, "it is a great deal too favorable to the Americans." The Germans are so prejudiced against America that it looks as if they had no patience to read a book which praises us.

Moreover, the ignorance of American life which prevails in Germany is something surprising. It would not be so surprising in France, where Hamerton says educated people where he lived had never heard of Tennyson. But in Germany it is more remarkable because there are so many Germans in this country. Perhaps your readers will be interested in two examples of this. A German student once asked me whether we had any literature in America. This may sound incredible, but it is a fact. This young man belonged to the more industrious class of German students, and I met him last year at the University of Grenoble, where he had gone to learn French. Very likely he had heard of some of our poets, like Longfellow, but imagined them to be Englishmen.

Last October an article on contemporary English literature appeared in a paper published at Frankfort-on-the-Main. The writer asserted that only five English authors of the present day are at all known in Germany. Here is his list, which seemed

to me a rather singular one: Rudyard Kipling, G. B. Shaw, Oscar Wilde, J. K. Jerome, and Mark Twain. According to this, Mark Twain is the only living American writer who is much known in Germany. His story, 'Tom Sawyer,' is even read as a textbook of English in some of the German schools.

It is, then, much to be wished that such books as 'Die Amerikaner' and 'Das Land der Zukunft' (by the late Wilhelm von Polenz) may have a wide circulation on the Continent of Europe.—Yours respectfully,

HERBERT M. CLARKE.

SYRACUSE, N. Y., August 30, 1904.

PROF. MUENSTERBERG'S VIEW OF AMERICAN PERSONALITY.

TO THE EDITOR OF THE NATION:

SIR: Perhaps you will permit me to add a few words to the careful and painstaking review of Professor Münsterberg's 'Die Amerikaner' which appeared in your issue of August 25. It seems to me that in one fundamental point your reviewer gives a wrong impression of what Professor Münsterberg sets out in his book to do. Your reviewer says: he constructs an imaginary American. I should rather say: he singles out and brings into full and striking relief one particular side of American character, its individualistic side. One may take issue with such a method; one may prefer a method better fitted to bring out the variety of conflicting tendencies which make national character. But it is clearly unscientific to call such a method fanciful and unavailing, for all scientific experiment proceeds upon this very method of elimination and selection.

For my own part, I cannot help expressing my admiration for the penetration and breadth of mind with which Professor Münsterberg traces the ramifications of American individualism in every part of national life, in politics and commerce, in education and science, in literature, art and religion, in home and society; and it seems to me entirely natural and proper that a book whose avowed purpose it is to bring out the positive and abiding qualities of national character should pass rather lightly over its temporary shortcomings and frailties.

Very respectfully, KUNO FRANCKE.

"COMMANDABLE" ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: Does not the Frenchman who has had the courage to compose the subjoined circular, in spite of the difficulties which the English language presents to him, deserve to have his name and address, as well as his composition, preserved in the columns of the *Nation*?

L. M. N.

SIR,

I keep, in Paris, 59, rue Vaneau, an hotel, family house, which is recommandable by his good déportment and his aristocratical connexion.

But these persons deserting, during fine weather, our town to go to country, I want your aid.

I will be very obliged to you for recommanding my house at the students which go in France during the months of July, August and September in order to improve themselves in our language.

If, however, it was agreable to these gentlemen, they will be found in saloon, during an hour a day, a person speecking well french language wich will be able to talk with them.

I annex to this letter my card with cursory view of quite moderate prices, as you can see.

Thinkirg sir, my letter will have a favorable reception, I send you my good and respectful salutations.

Yours truly, F. L.————.

Notes.

J. B. Lippincott Co.'s preliminary fall announcement contains the second volume of Marcus R. P. Dorman's 'History of the British Empire in the 19th Century'; a 'Life of Thomas H. Benton,' by Wm. M. Meigs; 'The True Henry Clay,' by Joseph M. Rogers; 'True Republicanism,' by Frank P. Stearns; a second series of Charles Morris's 'Historical Tales of the United States: American,' and 'Historical Tales: Spanish America,' by the same compiler; translations of Waliszewski's 'Ivan the Terrible,' and of Max Rooses's 'Rubens'; Urquhart and Motteux's translation of Rabelais's Works, in a new and illustrated edition; the 'Reminiscences of Harry Angelo,' now first illustrated after famous artists; 'Modern Industrial Progress,' by C. H. Cochrane; 'Diseases of Society,' by G. Frank Lydston, M. D.; 'Loves and Lovers of the Past,' from the French of Paul Gaulot; 'Shakspere's Town and Time,' by H. Snowden Ward and Catherine Weed Ward; and Dr. Horace Howard Furness's variorum edition of "Love's Labor's Lost."

McClure, Phillips & Co. will publish during the present season 'The History of the Standard Oil Co.,' by Ida M. Tarbell; Prince Kropotkin's 'Russian Literature'; Mrs. Garnett's translation of Tolstoy's 'War and Peace'; Prof. Münsterberg's 'The Americans,' in English; 'French Home Cooking,' by Berthe Julienne Low; 'The Secret of Popularity,' by Emily Holt; 'The Courtship of Queen Elizabeth,' by Martin Hume; 'Monsieur Dupin,' Poe's mystery tales, illustrated; and 'Blazed Trail Stories,' by Stewart Edward White.

Benjamin H. Sanborn & Co., Boston, will bring out directly a single volume of 'Poets of the Nineteenth Century,' of a thousand pages, giving "all the material needed by students in the nineteenth-century English poetry courses."

Henry Frowde announces, for the Oxford University Press, that Mrs. Boole is to follow up her 'Lectures on the Logic of Arithmetic' with a book on 'The Preparation of the Child for Science.'

Attentive little ears will readily be found for Lenore E. Mulets's 'Stories of Little Animals' (Boston: L. C. Page & Co.), which introduces in familiar conversation with "Phyllis" the Hare, the Rabbit, the Gray Squirrel, etc. Each confidential talk is generally followed by a story (real or mythical) in which the animal appears as an actor, and at the end is given a brief syllabus of a nature-lesson. Sir Edwin Arnold is drawn upon in a prose adaptation, and Browning in the essential parts of his 'Pied Piper.' Sophie Schneider furnishes interesting illustrations on a green ground. The author has a decided knack for narrative, and possesses a bright humor. The parental reader will, we hope, conclude to omit the account of the rabbit's vicarious vengeance upon the badger. Our infant savages are but too prone to be amused by cruelty, and to practise it.

The three latest volumes to appear of the series of historical reprints in translation entitled 'The Philippine Islands, 1493-1898' (Cleveland: Arthur H. Clark Co.) are of unusual value and interest. Volume xiv. reproduces a wide array of documents from 1605 to 1609, covering questions of trade, Chinese rebellion, government, conquest, and missionary work. They are all drawn from original manuscripts, mostly in the Seville archives, but also from the historical archives at Madrid and Simancas, and from the British Museum. Volumes xvi. and xvii. contain a translation in full of Morga's 'Sucesos de las Islas Filipinas' (Mexico, 1609), a standard source on the history of Spanish conquest in the Pacific from 1565 to 1606, and perhaps the most valuable early authority on primitive customs of the Filipinos. The notes of José Rizal's Paris reprint of 1890 have been drawn upon extensively, also those of Lord Stanley's English translation of 1868. Morga declared that, at the time of the Spanish conquest, there were very few Filipinos who did not write in their dialects. Volume xv. contains also an abstract of the expedition of Thomas Cavendish and of the early voyages of the Dutch to the East Indies, and volume xvi. contains an abstract of the passages bearing on the Philippines in B. L. de Argensola's 'Conquista de las Islas Malucas' (Madrid, 1609), and a valuable though brief account of the customs of the Pampanga natives in their lawsuits, now brought to light for the first time and ascribed to Father Juan Plasencia by the editors. There are reproductions of title-pages and of pictures of early Dutch, Spanish, and native vessels.

'Japan in the Beginning of the 20th Century' is a portly volume of 828 pages, in English, silk bound, and published by the Imperial Japanese Commission to the Louisiana Purchase Exposition, its preface bearing date May, 1904. Its eight divisions treat of the empire and administration, of primary industries, manufacturing industries, foreign trade, army and navy, communications, and education, with a supplement on Formosa. Besides the tables and figures, there is much descriptive text, with historical notes, and the information is fresh and exact. There is the usual assumption of Japanese writers as to the trustworthiness of the ancient traditions which are called history nowhere else than in Japan, and it is a real pity that native conceit of the knowledge of English seems to be so profound, for few Japanese have as yet mastered the correct use of the definite or indefinite article, or understand clearly the sequence of tenses. Besides, there are rather too many repetitions and overlappings. Nevertheless, the volume is of sterling value. We note that the number of Japanese abroad in 1900 was 123,971, an increase from 18,688 in 1889; the number in the United States and colonies being 90,146, in Korea 15,829, and in England and her colonies 8,215. Other authorities show that, at the breaking out of the war with Russia, there were about 10,000 Japanese in Manchuria, and 30,000 in Korea. Under forestry we have a paragraph, not statistical, indeed, but true, concerning the influence of the forests "which occupy more than one half of the area of the Island Empire" upon

the mind of the people, who "are instinctively aware of their duties—so to speak—toward the forests." We note that Fuji San, long the "No Two Such" of Dai Nippon, is overtopped by Mt. Morrison, the "Jewel Mount," in Formosa, to which the Japanese have given the name Nii-taka San, or the New High Mountain. The rather full chapter on protection of industrial property (patents, designs, and trade marks) has a section of great interest entitled "Provisions that especially concern foreigners." Chapters on the army and navy, in full detail, are timely. Formosa, though not yet paying its own expenses, has, judging from the proofs here furnished, a bright financial future.

The 'Annuaire Financier et Économique du Japon,' fourth year, 1904, is a very creditable piece of typography from the Government Printing-Office in Tokio. Within its 153 pages is a well-digested mass of information, very clearly expressed, concerning finance, agriculture, industry, and commerce, foreign trade, banks and the money market, railways, telegraphs, steamship companies, and Formosa. There are seven plates of graphic representation, showing to the eye in color and diagram what the figures and text set forth in detail. There is probably no handy map of Japan equal in value to the folding map, 28x17 inches, here given, which exhibits all the railways, whether owned by the Government or by private companies, projected, in progress and completed; while two other maps on the same page show the countries neighboring to Japan as well as the sea routes and submarine cables. The usual table for the conversion of weights, measures, and money accompanies the constants, both geographical and concerning the population. The estimates of 1903 show that there are now more than 50,000,000 subjects of the Mikado. Besides the budget for 1904-5, the financial programme for the war is given in outline, while under the different headings are tables displaying receipts, expenses and general financial history from the beginning to the present time—the state of the national treasury, for example, from 1870, when Japan emerged from feudalism and became a nation; while under the head of railways the history begins only with 1879-80, and of Formosa only from 1896. So far as we can gather, this is a very clear, full and satisfactory statement of the resources of Japan and one worthy of the closest inspection and most critical study.

The fourth and fifth parts of volume iii. of the 'Catalogo Generale della Libreria Italiana, 1847-1899' (Milan; New York: Lemcke & Buechner) fall but a little short of completing the letter R, which is swollen by a considerable tale of *Raccolta, Racconti, Regolamenti, Relazione, Ricordo,* as Q is eked out by *Questione.* We remark that Pushkin has been kept in view in Italy since 1856. His drama "Boris Godunoff" was translated in 1883, and again in 1896, with two collaborators, one for the prose, the other for the verse. Down to 1880 Edgar Quinet retained his popularity, for patriotic reasons. His complete works were translated as recently as 1871. Renan and Racine may also be said to be alive in the peninsula. Ricardo, for all his Italian-looking name, was done with in 1855, when his 'Principles of Political Economy' was translated. Gabriel Rossetti is still in vogue, and his son Dante's poems were translated in 1899. Mrs. Radcliffe holds her own in Italy. So does Giovanni Ruffini, particularly with his 'Doctor Antonio.' And there is still a call for Rosmini-Serbati.

From Barbèra's press in Florence issues a vest-pocket edition of Tasso's 'Gerusalemme Liberata,' filling 500 pages of diamond type on thin paper. To read it for long is not the privilege of any but the strongest eyes; but this vade-mecum may serve to refresh the memory or to assist in memorizing.

The August-September number of the *Zentralblatt für Bibliothekswesen* is largely taken up with the proceedings of the annual meeting of the Verein Deutscher Bibliothekare, in Stuttgart. The topics selected for discussion were this year of a more practical and technical character than has usually been the case, namely, Travelling Libraries, Interlibrary Loans, and the Dusting of Books. The paper on interlibrary loans was read by Dr. P. Hirsch, who has charge of this work at the Royal Library in Berlin, and contained many practical suggestions in its description of the business routine worked out at that library. Following the custom at the meetings of the Verein for the director of the largest library in the city where the meeting is held to give an account of the institution under his charge, Dr. Steiff, director of the Landesbibliothek in Stuttgart, delivered an address describing that library; he dealt particularly with modern developments, and described quite fully the recent reforms in the regulations for interlibrary loans. These are certainly most liberal, as books are sent without any expense whatever to the borrower. Since this rule was adopted, the number of loans to out-of-town students has increased from 1800 in 1896 to 7,200 in 1903. The library authorities regard the reform as fully justified by the results, chiefly by the increased furtherance of studies in the country at large (the majority of these loans are naturally made to residents of Wirtemberg). As the speaker expressed it, "The furtherance of studies is the most important and beautiful part of our duties," and he added, "We see [in these reforms] the first step towards such relations between libraries as are alone worthy of a time that stands *im Zeichen des Verkehrs.*"

In the same number Dr. G. Zedler continues his researches into the history of Gutenberg's types, and shows that, while the types themselves which had been used in printing the 36-line Bible went to Albrecht Pfister in Bamberg, the matrixes must have been acquired by Peter Schöffer, presumably at the death of the inventor. Prof. B. Hasselberg in Stockholm, who in 1901 issued a facsimile reprint of the 1598 edition of Tycho Brahe's 'Astronomiæ Instauratæ Mechanica,' describes a *de luxe* copy of the original, now in the possession of the archiepiscopal library at Kalocsa in Hungary, and which may have been the author's presentation copy to the Emperor Rudolph, to whom the work was dedicated. We also learn from this number that the manuscript collections of the late Karl Dziatzko, consisting of notes for his lectures and materials for his studies in the history of books and libraries, have been presented to the University Library of Göttingen.

The intelligence of the German workman is revealed, not only by the excellence of the products of his industry, but by the character of his recreative reading. The ten most popular authors among the workingmen of Essen, the seat of the Krupp works (and they formed 76 per cent. of the borrowers from the public library), were, in the order of their popularity, Schiller, Lessing, Kleist, Hans Hoffmann, Gotthelf, Dickens, E. T. A. Hoffmann, Scott, Goethe, and Anzengruber. Translations from the classics were also in steady demand. Free libraries in Germany are fewer in number and much smaller than those in England or this country—their comparatively small size being due in part to the fact that they are more select, especially in relation to fiction; but they are supplemented by many others. More than 10,000 people's libraries have been founded by the Home Mission. School and travelling libraries provide for the rural districts, and the Society for Promoting Popular Culture supports libraries, as do various workingmen's organizations. To these should be added the increasing number of libraries attached to works and factories. In this connection it may be noted that the number of newspapers published in the industrial towns is much greater than in England or the United States. In Essen, for instance, there are 22 daily and weekly journals, in Düsseldorf 29, while, in England, towns of the same size and class never have more than four or five, and often fewer.

—The Ruskin-Norton correspondence closes in the September *Atlantic.* Dark as the clouds were which hung around Ruskin during his later years, there were continual gleams of light, and Professor Norton is to be thanked for letting them shine out upon the public, where many another would have been tempted to repress them for the sake of the tragic climax which might easily have been constructed. Besides these letters, announced for publication in book form, an appreciation of Oliver Cromwell from the competent pen of Goldwin Smith stands out in special prominence. In certain circles of society at the national capital, the article will doubtless be considered fatally defective in its failure to make any use or acknowledgment of a recent biography of Cromwell by a distinguished American writer. Mr. Smith attributes to Cromwell noble aims and a high measure of success, foiled of permanence by a premature death and an unfortunate succession. Turbulent ambitions beyond Richard's power of control brought about a period of military anarchy, "and it was from the military anarchy, not from the Commonwealth or Protectorate, that the Restoration was a recoil." After citing Bancroft's favorable comment on Cromwell's colonial policy, he adds: "Had this policy been afterwards pursued, there would have been no rupture, no War of the American Revolution, no War of 1812." R. L. Bridgman maintains with a great deal of confidence that the world is progressing very rapidly towards world-peace by the route of world-organization. This organization is to be based on the great fact of essential world-unity, thus avoiding the evils of federation, with its seeds of nullification or secession, and its implication that the conditions were created by men and may be destroyed by men at will. Just what change of human nature is to free bodies of human beings from the occasion-

al determination to overturn any human conditions whatever, is not sufficiently explained. Mr. Bridgman looks hopefully to the work of the organizations for the promotion of peace, but one cannot forget that the American Peace Society still seems perfectly contented to carry the name of Lyman Abbott prominently on its roll of officers.

— M. Anatole Leroy-Beaulieu entitles his "conférence," recently published in the *Réforme Sociale*, "Le Christianisme et la Démocratie." What he beholds is not a conflict between Church and State, between Pope and civil ruler, but between two hostile principles. This conflict filled the century that has closed, and it grows more embittered as the present century advances. Is it to be permament? Is it irrepressible? Or is it due to circumstances and causes of a local or temporary character, to claims that are not essential, to pretensions that cannot be justified? These questions he considers thoughtfully and broadly. The conflict in France, he asserts positively, is not merely between the Catholic Church and democracy: religion itself is involved. Such conflict does not take place at all times or in all countries. Democracy has prevailed for centuries in the most Catholic cantons of Switzerland, and we know the spirit in which the republics of New England were founded, and which has so influenced our own Government as to make it incomprehensible that it should manifest hostility to Christianity. It would seem, therefore, that the conflict is not between the essential principles of Christianity and democracy, but between particular manifestations or perversions of these influences, appearing especially in Europe. The essential doctrines of both are equality and fraternity; the causes of conflict must be temporary and accidental. These causes, M. Leroy-Beaulieu finds in the manner in which modern democracy was presented to the world, and the opposition which it encountered at its birth in the Christian churches or their clergy. European democracy springs from the French Revolution, and the Revolution was a product of the philosophy of the eighteenth century. Even if religion did not seem to be pure imposture, yet the philosophers of the eighteenth century could not help regarding it as a political institution, bound up with monarchy and aristocracy. Religion had an official place, its ministers were sustained by the Government. When privileges in general were attacked, those of the Church could not escape. The clergy, constituting the first of the orders of the State, even if they consented in the beginning to surrender some of their privileges, could not submit to degradation, and were infuriated by persecution. The historic antagonism between the Church and democracy in France is consequently natural, and the spirit of both is not very different from what it was a century ago. The clergy showed their disposition when the Bourbons were restored; the democracy has shown its feeling since the republic was established. Of course, the temporal sovereignty of the Pope has always been a stumbling-block. So long as this dogma is maintained, there must be danger of friction with the civil authority.

—A number of the *Figaro* published late last July contains "A Trip to Oxford: Paul Hervieu and the English Theatre." How these two topics hang together is not at first quite clear. The bare existence of such a thing as a theatre at Oxford is due to one of Jowett's boldest innovations, while the immemorial attempts at acting by Oxford undergraduates have no more bearing on the English theatre than undergraduate performances elsewhere. And yet the notable stage career of Mr. F. Benson, whose company has now for several years not only had great successes, but also has served as a school of acting in England, began with the performance of the "Agamemnon" of Æschylus at Balliol College in 1880. Thus a reader might have settled down to this interview in the *Figaro* expecting in a puzzled sort of way to hear Paul Hervieu's opinion of Mr. Benson. As a matter of fact the interviewer, M. Coudurier, gives nothing of the kind. Oxford serves him only as a sort of Platonic setting or frame for the dialogue of his theatrical interview with M. Hervieu, whom he joins in the Oxford morning express, finding the *Times's* theatrical critic, Mr. A. B. Walkley, in his company. M. Hervieu, having been induced to talk of the dramatic season just closing in London, said he had not seen Mr. Forbes Robertson at all. The vaudeville "Saturday to Monday," by Messrs. Fenn and Pryce, as interpreted by Mr. Vane Tempest and Miss Braithwaite, he admired, noting especially an irresistibly comic scene, in which appears "un trio bien anglais," consisting of a country clergyman and two old maids, his zealous coadjutors in good works. He greatly admired the novel plan and general *coup d'œil* of the Haymarket Theatre, especially its suppression of all "loges et baignoires" except those next the stage. A caricatured Frenchman in Mr. Henry A. Jones's "The Liars," and one in another play, impersonated by Mr. Cyril Maude, leads M. Hervieu to remark that a year or two of the *entente cordiale* must transform alike the ridiculous Frenchman of the English stage and the red-haired Englishman with long teeth dear to French playrights. Both these types he pronounces to be "d'un comique peu nécessaire," and goes so far as to predict their speedy disappearance. One more fundamental difference between the English and the French point of view came out in M. Hervieu's further account of "The Liars." He speaks of certain sentimental hints, such as the very obvious sympathy which the playwright wishes his audience to feel for the husband as opposed to the lover," and declares all this to be flatly opposed to the tendency of the French theatre. No length of duration for the *entente cordiale* is likely to bring the French point of view nearer to the English, it would seem. The stage setting and costuming of Mr. Beerbohm Tree's "Darling of the Gods" M. Hervieu praised enthusiastically, especially noticing his management of stage crowds. But soon he lights upon the constant recurrence of red in Mr. Tree's various settings, and attributes it to a national and traditional instinct.

—Dr. Claes Annerstedt, who has just retired from the position he has filled for twenty-one years as librarian of Upsala University, may be considered the real creator of his institution in the likeness of a modern library. During his incumbency the books have been reclassified and recatalogued after scientific methods, the building remodelled and stacks and galleries introduced, as well as a reading room, the latter provided with a special collection of reference books. The book fund has been increased, the staff enlarged, and the salaries raised. Everything possible has been done, with the small funds at the Library's disposal, to make the rich collections of books and manuscripts available to students, particularly to those connected with the University. One of Dr. Annerstedt's most important undertakings has been the development of the Library's exchanges with other institutions, in which work he has been most ably assisted by Dr. Aksel Andersson, for many years an amanuensis at the Library, now one of the vice-librarians, till now more than 1,300 universities and learned societies in all parts of the world regularly exchange publications with Upsala. Outside of Sweden and of library circles Dr. Annerstedt is best known as the historian of the University. The first volume of his 'Upsala Universitets Historia,' with its accompanying volume of documents, was published on the occasion of the four-hundredth anniversary in 1877. The author's official duties as librarian have hitherto prevented him from completing the work, but it may be hoped that he will now have leisure to do so. Among his other writings may be mentioned a history of the University Library down to 1702, and the editing of Olof Rudbeck's correspondence regarding the University, accompanied by a very interesting introduction. At the two-hundredth anniversary of Rudbeck's death, in 1902, he delivered the official oration in the name of the University. His eminent capacity as a writer and orator was recognized by the Swedish Academy when that body, a couple of years ago, elected him one of its eighteen members.

THE MOORISH EMPIRE IN EUROPE.

History of the Moorish Empire in Europe. By S. P. Scott. In three volumes. Philadelphia: J. B. Lippincott Co. 1904. Pp. xlii., 762; x., 686; x., 696.

Estudios Críticos de Historia Árabe Española. Por Francisco Codera de la Real Academia de la Historia. Colección de Estudios Árabes, VII. Saragossa. 1903. Pp. xvi., 376.

One of the most absolute gaps in the history of mediæval Europe lies across the Spanish peninsula. Scarcely is there any other European country the history of which is so uncertain, obscure, and practically unwritten during so long a time. From the Arab conquest at the beginning of the eighth century, through the Muslim domination, which may be said to have lasted till the defeat of the Almohades at Las Navas in 1235, and down through the lingering reconquest which ended only in 1492 with the fall of Granada, the student is still groping in a darkness that is but slowly clearing. Separate studies of periods, incidents, localities, personalities, are the need of to-day; of connected history, still more of the popularizer, it is still absurd to speak.

The cause of this is simple enough. The Gothic civilization went down before the Arab and Berber lances. For at least five centuries the most trustworthy records were made and histories written in Arabic

and not in Latin or Spanish. In Arabic they still remain, inaccessible save to the Arabist. The student of Spanish history must be able to use Arabic as easily as he uses any European language; all his most weighty documents are in that tongue. Of course it is a blunder for the student of any part of mediæval Europe to think that he can leave out of his reckoning the Muslim civilization, but in the case of Spain the blunder would seem simply impossible were it not for the existence of such a book as that whose English title stands above. The course, then, of the writing of Spanish history has been that of a gradual awakening to this fundamental fact and necessity—how gradual will be plain in the following details.

Not unreasonably, if somewhat unthinkingly, the first renaissance of European Arabic studies might have been expected in Spain, and not, as was the fact, at Rome, Leyden, and Oxford. But the heat of the long conflict, and especially of the last struggle for Granada, had been too intense; the ecclesiastical and theological bitterness had become too keen; above all, the grip of the Inquisition—the most astounding and effective single fact in Spanish history—was too crushing for Spanish scholarship, and that in the patriotic field of the national life, to take any cognizance of the unclean and diabolic letters of the Moors. So it turned to chronicles, lying too often, if authorized by time and of a splendid picturesqueness; to royal records, fragmentary and biased; to plain romances, like that of the Cid; and to monastic charters—a mass of poetry, legend, and history with no clue through its labyrinth. Yet all the time the Arabic records were lying there, plain, straightforward, full, and fairly truthful. To these, then, in 1760, Casiri opened the way, in his ponderous, labored, and detailed but untrustworthy and badly planned catalogue of the Arabic MSS. in the library of the Escurial. The beginning was feeble, but still his was the honor of that first step which counts. In 1787 came a second advance, but in another direction. The great twenty-volume critical history of Masdeu appeared, and a destructive attack on the authenticity of many fundamental Spanish and Latin documents began. To this over-skepticism on one side was now to be added on another an enormous mass of reputed facts which very emphatically were not "so." In 1820 appeared the 'Historia de la Dominación de los Árabes en España' of Conde, epoch-making in a most unhappy sense. Published posthumously, it is in great part a compilation from the fragmentary and uncorrected materials of the author. This can be the only defence of his memory; as to his book, Dozy's verdict cannot be impugned, "Quidquid attigeris, ulcus est!" Yet after him all followed; to his words all swore. Although his knowledge of Arabic seems to have gone little beyond the alphabet, and his translations are simple guesses, for thirty years he represented for all, and still does for very many, the sum of the contribution which Arabic could make to the history of Spain.

At last the air was cleared and the way finally opened by the labors of a Dutch scholar and Arabist, Rheinhart Dozy. His work consists roughly in the publication of a number of Arabic texts bearing on the history of Spain, of 'Recherches sur l'Histoire et la Littérature de l'Espagne pendant le Moyen-Âge,' first published in 1849, and of a four-volume 'Histoire des Musulmans d'Espagne' (1861), which, for its period (A. D. 711-1110), is still the only trustworthy treatment in a Western language. Yet all of these, it has to be remembered, are purely pioneer work, though of the first quality, and the 'Histoire' is a delightfully written popular sketch. Since Dozy's time, a small group of native Spanish Arabists have been zealously at work following in his traces. At first, as was right, they gave themselves more to the publication of Arabic texts, and ten volumes of a "Bibliotheca Arabico-Hispana" have appeared; one hundred would not exhaust those bearing directly on Spain. But of late, feeling apparently the necessity of popular interest and support, they have turned to the use of these materials, and little volumes and shorter studies are constantly appearing, blazing new paths through that tangled period. With it all, it is strange to observe against what odds this little band of Arabists has still to contend, and how the centuries of warfare with the Moors have hardened into other centuries of silent indifference to their remains. Not even yet is it necessary that the holder of a Spanish chair of history should know some Arabic, and the unhappy influence of Conde is still a force to reckon with. But the work begun by Dozy is going on, although we are still far from the time when any scholar, however learned and laborious, can essay a complete history of the Muslim period in Spain. Far too many texts are still to publish; too many preliminary investigations are still to carry out. And, whenever his time may come, the first necessity in him will be a thorough knowledge of Arabic and familiar acquaintance with Muslim life and thought. He must be, as was Dozy, that almost impossible compound, a student of mediæval Europe and an Orientalist.

How stands it, then, with Mr. Scott? His book covers over twenty-two hundred large octavo pages. It has a sparsely printed index of twelve pages. At the head of each chapter two bounding dates are given; these are almost the only ones in the whole book. From beginning to end there is not a single note or reference to source or authority. In the case of a popular handbook dwelling with a well-trodden field, on which there are standard reference books easily accessible to any one, such a course may be excusable. But in the case of a professedly authoritative history written in the grand style and dealing with the most obscure and unworked field in all the history of Europe, such a course means suspicion in the reader and second-hand incompetence in the writer. Mr. Scott, throughout the book, writes as though his history had been "sent down" to him, like the Qur'an, through the angel Gabriel. But at the beginning we are given twenty-six pages of "Authorities Consulted." These are arranged according to language, and a reading knowledge is asserted of English, French, Spanish, Portuguese, Italian, German, Dutch, Danish, Swedish, Langue d'oc and Langue d'oil, Limoisin and Catalan, Latin, Greek, Hebrew, Arabic. This is excellent and is undoubtedly a competent equipment. The list itself, however, is hardly so satisfactory as the linguistic display. In the first place it has been compiled and printed with the most astonishing carelessness. It absolutely swarms with misprints; its proof has evidently been read by someone totally ignorant in Mr. Scott's array of tongues. And, in the second place, the "authorities" are of a mixedness quite peculiar.

On the first page of this list stand: Anderson—History of Commerce, London, 1789; Arnold—Ishmael; Beattie—Castles and Abbeys of England; Cutts—Scenes and Characters of the Middle Ages; Davenport-Adams — Witch, Warlock and Magician; Davenport—An Apology for Mohammed; D'Israeli — Curiosities of Literature; and several others whose claims to be authorities on this or any other subject are much less than doubtful. The list, in fact, is absurd throughout, and any undergraduate who ventured to give it as "literature" with his thesis might look for a very bad quarter of an hour. Yet with the Hebrew and Arabic the matter becomes more serious. When an edition of the Talmud Babli in the original Hebrew is quoted—it must be that of Amsterdam, 1644-8, by Imman Benveniste, though it is put impossibly under Surenhusius—a claim to first-hand knowledge of Hebrew is made; and when Arabic editions and MSS. are given—it is a detail that one is said to be a MS. of the twelfth century and is ascribed to Ibn Khaldun, who died in 1406—we look for Arabic scholarship. So it is not seemly that the title of Maimonides's great work, 'The Teacher of the Perplexed,' should be rendered 'The Guide of Lost Spirits' (iii, 143), with a mistake besides in the Hebrew, that "Hebrew and pilgrim are derived from the same root" (iii, 125); and that Abu Harushma (?), a name given to Nachmanides, is translated "Father of Wisdom" (iii, 147). Nor is it well for an Arabist to explain Almoravides as meaning 'Wearers of the Veil' (ii, 199); to give a string of names so variously transliterated, contorted, and misprinted as at iii, 506; to derive mulatto from *muwallad;* to spell "lonilion" and render it 'pearl' (iii, 654); to transform "jami'a" into Djalma, *passim* (the origin of this form is mysterious; in Spanish it would be "Aljama" and in French "Djame'a," but whence "Djalma?); to write "Al-Nassir-al-Din-Allah" (i, 586) and "Madhi" for Mahdi (i, 581), and "Muraddin" for Murtaddun; not to recognize "Ajem" (i, 538); to continue "Abd al-Ruf"—probably for Ra'uf (i, 485); to make out of *Harami,* a robber, the proper name of a "famous brigand" (i, 21); to discover "that the words altar and talisman are practically synonymous in Arabic" (i, 37).

Nor, when we turn from linguistic matters, is our feeling of confidence increased, Mr. Scott makes grave use of the Gospel of Barnabas (i, 77), that very mediæval apocryphon, and takes occasion to explain that Mohammed means "illustrious." He conjectures that because the Qur'an begins with its longest chapters and ends with its shortest, "the reverse order in which they were revealed"(?), "it may have been at first written in some language other than Arabic, and in which the characters were read from left to right" (i, 105)—a sequence of thought which is more than mysterious. He tells us that the Hijra as an era was not publicly authorized till the tenth century (what he means by this is out of guessing; it raises the question whether he

has ever read an Arabic chronicle); that cards were known to the Arabs long before the Hijra (iii, 662); that there are no women saints in Islam (i, 119); that it was the philosophical ideas of India that Averroes had mastered and embraced (iii, 466, 474)—we can imagine with what indignation he would have rejected this slight to his great teacher, Aristotle.

But most characteristic of all for Mr. Scott's historical equipment and insight is the wholeheartedness with which he has accepted Dozy's fantastic hypothesis of the Hebrew origin of the Ka'ba and its ritual. This he takes as "proved" (i., 32, 37-40), and all the other investigations of the origins and history of the Hebrews and of early Arabia have gone past him like the wind. "Not improbable" for him, too, is it that a certain "northern division" of migratory population, of which we are said to learn from the Himyarite inscriptions, "were the Canaanites expelled by the sword of Joshua" (i., 18). All this must make the historical student gasp, but it is an exact sample of Mr. Scott's method. Anywhere, in a multifarious reading, mostly in antiquated and useless books, he finds a statement which suits him. It he promptly draws out and incorporates. So, he has discovered the idea of Arabic influence on the Book of Job. That becomes, in his large language, "The Book of Job, which has no apparent connection with the rest of the Scriptures, has been pronounced by competent critics a translation of an Arabic poem" (i., 50). But this method itself is ruled by the dominance of certain fixed ideas. The word Arab produces an ecstasy of wonder and admiration; the word monk, a fit of stately fury. "How lofty is the genius of the Arab race," we hear again and again; they studied and translated all literatures, "Persian, Chaldaic, Hebrew, Chinese, Hindu, and Sanskrit" (Mr. Scott delights in such beadrolls of names); "their energy exhausted every source of knowledge" (iii., 465); "modern science unquestionably owes everything to their genius" (iii., 532). But the monks! These unfortunates are not responsible for palimpsests only; they invented also the Hellenistic Greek of the New Testament. "The ancient manuscripts of the Gospels—perhaps destroyed for sinister reasons—have left no data for speculation as to their contents; but it is not unreasonable to at least surmise that the originals did not offer the glaring examples of inelegant diction and barbaric idiom that deface the modern versions" (i., 122; cf. 74). And so the trail of the monks brings all mediæval Christendom under the ban. Mr. Scott fairly revels in that remarkable myth—or, at best, survival in folk-lore—the *jus primæ noctis* (iii., 387), and Pope Joan has, with him, the most respectful treatment (iii., 330, *ff.*).

After this, it may seem hardly necessary to deal further with Mr. Scott's history. Yet one thing has to be said for him: he follows his Dozy faithfully. For the period with which it deals, Dozy's 'Histoire' is his guiding thread, although he adds to it an enormous mass of very dubious material from other sources, and adorns the whole with characteristic outbreaks on Arabs and monks, and with diverse flowery passages. Of these one specimen—*ex pede Herculem:*

"The prelate sighed for the cloister, reluctantly abandoned for the camp at the command of the Holy Father, and longed to return to the scenes of wassail—to the gay hunting parties in the forest; to the festive board, with its convivial and unclerical guests, its appetizing dishes and sparkling wines; to the embraces of those beautiful companions who, chosen for their rare fascinations, whiled away, behind the walls of palace and monastery, the leisure of the epicurean bishop with Oriental dances and with the lively notes of lute and castanet" (ii., 327).

Considering all which, the reader had better take his chance with Dozy's charming sketch; there he knows the ground on which he stands.

Yet again it may be said for Mr. Scott that he has perceived, though dimly and with most perverse solution, the three great problems for us in the history of Islam. First, why were the raids of the Muslim Arabs followed by so magnificent, if ephemeral, outbursts of civilization, literature, and science? Mr. Scott replies, The Arab genius. With that we need not trouble. These civilizations, beyond the first century or so, were not Arab. Secondly, why the decay and downfall in every case? Mr. Scott's solution—apart from Christian malignity, which would insist on recovering the territory of which it had been robbed (ii., 596, etc.)—seems to be that the Muslims quarrelled too much among themselves. That is true; but it is also a pretty severe arraignment of this glorious civilization that it was lacking in the one essential of good government; nor does it by any means adequately explain what is a persistent phenomenon throughout the Muslim world. Thirdly, what did the Muslim civilization do for Europe? Mr. Scott says Everything. We may seek a less sweeping solution.

Towards that solution, and on the kindred problems, Professor Emeritus Francisco Codera and his pupils have been working for several years. Notice has already been taken in these pages of the work of this school, and especially of one product, the suggestive and promising 'Algazel' of Sr. Asín Palacios, the successor of Sr. Codera in the chair of Arabic at Madrid. Now, in the present little volume, Sr. Codera has collected sixteen studies—reviews and independent notes—on the Arabic history of Spain, with a pointed but somewhat sorrowful prologue on the future of such investigations in that country. The studies are precisely of the kind needed; they correct much that has been falsely stated, and clear up much that has been obscure; to the historian in the broad, when he comes, they will be invaluable. Naturally, there is little to say of such a book as compared with Mr. Scott's remarkable performance. All it calls for is hearty commendation and good wishes to its author and his pupils and followers in their hard fight. They will have large part in the solution of the three problems.

The Letters of Horace Walpole, Fourth Earl of Orford. Chronologically arranged, and edited with notes and indices by Mrs. Paget Toynbee. Vols. V.-VIII. Oxford: Clarendon Press; New York: H. Frowde. 1904.

These four new volumes bring Walpole's correspondence up to May, 1774, and the number of letters to 1,539, against 1,435 in Cunningham's edition. The number of the letters in these later volumes now printed for the first time is twenty-two. None are of first-class interest, although one, addressed to Madame du Deffand on July 16, 1766, and relating to the quarrel which Rousseau vainly tried to force upon Hume, would be a document of much value if the particulars were not already notorious. It is incomplete, existing only in the copy made by Madame du Deffand's secretary, who transcribed merely the part relating to Rousseau. The Newcastle and Hardwicke papers, recently acquired by the British Museum, have been laid under contribution. There is an interesting letter to the second Lord Hardwicke, declining to show a proof of the continuation of 'Anecdotes of Painting,' for a reason honorable to Walpole:

"There is an unfortunate page or two in my book which would hurt a person now living, though I thought I had guarded with the utmost care against any such case. My dread of offending even near relations of very indifferent artists has long obstructed the completion of the work, and has kept it back, though printed off for some time."

Two letters to Walpole's constant butt, the Duke of Newcastle, exhibit him on civil terms with that nobleman, and making a promise which a companion letter to Lord Hertford proves him to have redeemed. Another letter, probably to Lord Egremont, shows him as actually doing something for his country, by forwarding a passage he has met with in Lord Sandwich's letters from Lisbon in Charles the Second's time respecting the influence of climate on military operations in Portugal, where England (1762) was sending an auxiliary force. It would appear that April and May were then considered the only months in which it was possible for an army to keep the field—a happy dispensation for the Portuguese! The most interesting of the new letters, however, are perhaps the four addressed to Sir Horace Mann, which have somehow escaped the collection hitherto, though one exists in a transcript by Walpole himself. This is remarkable for a consolation on disappointment with respect to an inheritance, conveyed with infinite grace and *esprit*. The other three relate to the vexations brought upon Walpole by the insanity of his nephew and the consequent dilapidation of the family estate. A gleam of Walpolian humor breaks out even here: "Justice Fielding has revived the hypothesis of the 'Beggar's Opera' making all our rogues. Garrick has in a manner given it up, but they continue it at Covent Garden—so we shall have but half the number."

On the whole, the attentive study of this correspondence must raise Walpole's character. His very limitations help him; had he been cast in a more heroic mould he would have been a less competent representative of the society which it was his especial mission to depict. He represents the culture of the eighteenth century, as it appeared to itself, with such spirit and cleverness that we forget for the time what a contracted world is his, and how much is going on around him and working beneath him of which he has not the faintest suspicion. But if he cannot appreciate Franklin or Watt, or comprehend the American Revolution or foresee the French, he is quite at home with what after all it most concerns him to apprehend—his own circle. This he not only

understands but incarnates; to know one is to know the other. What Chesterfield sets forth didactically, Walpole exhibits in action. There is a remarkable harmony and completeness in his figure, as the representative not of a period of transition, but of one which after long struggle had arrived at what it finally deemed a period of perfection, an age of settled views and approved maxims, whose political and social codes were made up. The period when he was chiefly productive has been characterized by Matthew Arnold as the golden age of the British aristocracy; and we find Walpole saying in 1762 that he has long beheld the increasing power of the press with concern, and that nothing but the Crown can reduce its exorbitance. His letters, in so far as they relate to politics, give perhaps as lively a picture as can be found of a country governed by good society, tempered by the right and power of the people to bring in a dictator, as in Chatham's case, when aristocratic inefficiency became too scandalous. Walpole himself formulates this idea when he says, speaking of Oliver Cromwell, "If we must be ridden, let it be by one who knows how to ride."

Next to social gossip and politics, the most prominent element in this portion of Walpole's correspondence is the antiquarianism which has been ridiculed as mere dilettantism, but was in reality no unimportant sign of the times. The reaction towards styles in both literature and art which the reigning taste had long pronounced obsolete, indicated, no less clearly than the direct utterances of thinkers and reformers, the consciousness that the age needed regeneration. It is not likely that Walpole had any definite ideas on this subject, and neither his Gothic architecture nor his Gothic romance contributed greatly to the Gothic revival. But the large share which similar interests occupied in his mind appears from the ample space allotted to them in his letters; the more remarkable as the correspondence does not proceed from one tied down to write upon particular topics, but from one wandering at pleasure over an ample field, and, with rare exception, touching upon those subjects alone which he finds entertaining to himself.

We have remarked already upon the necessity for a fuller annotation to this edition than the editor has as yet thought fit to bestow upon it. There is a salient instance in the letter to Lord Hertford of March 18, 1764 (vol. vi., p. 33):

"I forgot, too, to answer your question about Luther; and now I remember it, I cannot answer it. Some said his wife had been gallant. Some, that he had been too gallant, and that she suffered for it. Others laid it to his expenses at his election; others, again, to political squabbles on that subject between him and his wife—but, in short, as he sprang into the world by his election, so he withered when it was over, and has not been thought on since."

Ordinary readers will hear with stupefaction of Luther's matrimonial misadventures, his election to the English Parliament, and the decay of his credit and reputation with the British public. Mrs. Paget Toynbee could have told us, an she would, that the reference is to John Luther, an Essex squire, who obtained temporary notoriety by ousting the ministerial candidate from the representation of the county.

The Topography and Monuments of Ancient Rome. By Samuel Ball Platner. Boston: Allyn & Bacon. 1904. Pp. xiv + 514; 9 maps and plans, 95 illustrations.

A few years ago there was hardly a college or university in America where formal instruction was given in the topography of ancient Rome. Now we have changed all that. The foundation of an American School of Classical Studies in Rome has quickened the call for proper preparations for study on the spot of extant remains and earlier conditions; the discoveries made by recent excavations have aroused popular interest; and bright young students who have worked in Rome under the auspices of the new School have returned to this country eager to teach others the rudiments of the subject of which they have begun to learn something themselves.

This new awakening is doubtless responsible for the publication of Professor Platner's work, which is, we believe, the first handbook of the subject written by an American, though Professor Lanciani's five books in English have found a wide acceptance from their publication in this country, and the treatises of a number of Englishmen are well known. Of work in other languages we are not now speaking. Mr. Platner's book follows in general scheme and scope the 'Topographie der Stadt Rom' of Otto Richter, and in many respects his conclusions, though he has corrected sundry errors made by Richter even in his second edition. He professes also his great obligations to Professor Hülsen of the German Archæological Institute in Rome, though, it may be remarked, he does not follow Hülsen, or even mention his views, on all points; as, for example, in the identification of the gate at the summit of the Clivus Argentarius as the Porta Fontinalis, and in the suggestion that not the two-feet-square tufa blocks of the fragmentary "muro di Romulo" at the western corner of the Palatine, but a structure of smaller stones within them, may be part of the earliest Palatine wall. Another important point in which Mr. Platner differs from Hülsen is in accepting without question (p. 13) the statement that the Alban hut-urns were found under a layer of peperine. We notice, also, no mention of the theory that the existing remains of the Servian wall and *agger* all date from a restoration of the fourth century B. C. (Liv. vi. 32, 1, 2: vii., 20, 9), though this theory is mentioned for the Palatine fortification.

Richter's plan was exceedingly clear and constructive, and Mr. Platner has probably done well to follow it in a summary work like this, though it involves some repetition. The care with which all the most recent literature of the subject has been examined and cited up to the time when the book went to press, and the helpfulness of the plans and illustrations, is worthy of all praise and gratitude. Of course the excavations in and about the Forum and the Ara Pacis have marched ahead since the copy was completed, but it is a necessary corollary of advancing knowledge nowadays that scientific books should be in some details out of date about as soon as written.

It is a matter of some little surprise to us that Richter's theory of a Palatine-Septimontium-Four Regions-Servian development, in that easy chronological order, should have been so readily accepted as seems to have been the case. Mr. Platner follows it without a suggestion of the complex difficulties it creates. But it has the merit of being very straightforward and easy to grasp (if only the *advocatus diaboli* is not allowed a hearing), and, after all, no other theory can any more reasonably hope to reconcile all the questions of doubt. May we suggest here that as the organization of the city as four tribes, together with the construction of the first great ring-wall, is ascribed by tradition to the same period, there may be a possibility that the original "Servian" wall did not include the Aventine at all? Its long exclusion from the *pomerium* would thus be no puzzle. The inclusion of both Aventine and the wedge-shaped area on the northeast of the Four Regions within the fourth-century wall and *agger* would be due to the later conditions of settlement. (Even Mr. Platner holds that the Aventine had originally fortification-walls of its own.)

Mr. Platner, with many others, believes in the existence of *opus incertum* as a definite sort of wall-facing. But we are inclined to think that Vitruvius (our sole authority) understood nothing more by it than what we should call unfaced concrete. Yet we are bound to admit that certain early concrete walls show a more careful and uniform arrangement of the stones (at least on the outer surfaces) than in the usual stratified structure, and yet do not approach *opus reticulatum* in character. Mr. Platner also perpetuates an oft-repeated error in his remark (p. 23) that Gabine stone "withstands fire excellently." But Tacitus says this of peperine in general, Alban as well as Gabine (Ann. XV. 43: *saxo Gabino Albanoue solidarentur, quod is lapis ignibus imperuius est*), and, furthermore, says it clearly in contrast to not only wood (cf. *sine trabibus*), but a common building-stone of the time, travertine, which was readily calcined by fire. Nero was anxious to secure a slow-burning construction, and his direction was that not wood, but stone, should be used in certain parts of the new buildings, and that this stone should not be the sort that would crumble at the touch of flame. Neither Gabine nor Alban stone need, then, be characterized particularly as "fireproof," though it might well be pointed out that the great destruction caused by fires in imperial Rome was largely due to the use of travertine and marble.

Now and then we find, as almost of necessity, some slight inconsistencies. It is not easy to see how Sulla's *pomerium* can be said (p. 68) to have "coincided in general with the Servian wall," when Aventine and pseudo-Aventine were still excluded from the *pomerium*. Since Mr. Platner accepts Wissowa's doctrine of the Sucusa, he probably should not say (p. 437) that the *turris Mamilia* was in the Subura. On page 71 Mæcenas is said to have converted into a public park the Esquiline cemetery; on page 51 he is said (doubtless on the authority of Horace, Sat. I., 8, 14, 15) to have so transformed the Servian *agger*. It might have been well to make it clear that only one region and operation is referred to. The *agger* became an airy and sunny promenade, like the walls of Lucca, perhaps with *Anlagen*, while much of the adjacent district was turned over to residences (Hor. *l. c.*; Vit. Elag., 30, 4). On page 119 it might have been well to mention that

the gate in the wall of Aurelian just south of the prætorian camp was closed before the time of the Einsiedeln itinerant; otherwise the interpolation of the mention of it among gates built up in the sixteenth and later centuries might lead the beginner to infer that it also was open through mediæval times. Furthermore, the trumpets from the temple at Jerusalem, figured on the Arch of Titus, were of silver, and not of gold (Numbers 10, 1 ff.).

Such a book as this is one of the most difficult to keep free from typographical errors, especially in the numberless citations of literature; but it seems to be unusually excellent in this respect. We have noticed only a few such errors, and they not of a seriously misleading character. "Above," on page 112, line 14, is doubtless a slip of the pen for "below," since the author surely does not mean that the cliff was scarped above the wall-shelf. Just beneath we notice the frequent, but unjustifiable, use of "perpendicular" for "vertical."

In a book of such complexity of subject we might find much more material for discussion, but none that would impair our gratitude to the author for an extremely laborious, painstaking, and useful piece of work.

The Heart of the Orient: Saunterings through Georgia, Armenia, Persia, Turkomania, and Turkestan, to the Vale of Paradise. By Michael Myers Shoemaker. G. P. Putnam's Sons. 1904.

In a gossiping but interesting style the author of this volume takes us from Constantinople through the Black Sea and Transcaucasia along the beaten paths to Baku, and thence over the less familiar way leading to the south end of the Caspian Sea, and to Teheran, the capital of Persia. Returning to Baku, we cross the Caspian Sea, and follow the Transcaspian road to Andizhan, stopping at the most important places, and thence cross the mountains to the vicinity of Kashgar. Thus little ground is covered that has not repeatedly been gone over by other travellers. Nevertheless, the volume is of special interest at the present time by reason of the many observations of the author bearing upon the relations of Russia to the complicated affairs of Central Asia.

It is now only thirty years since Russia occupied Western Turkestan, but the transformation which has already taken place within that time is marvellous. The older portions of Askabad, Merv, Samarkand, Tashkend, and numerous smaller cities are, indeed, still unkempt and filthy in the extreme; but in every case there has grown up beside them a Russian settlement which is a model of neatness and order, where trees, watered by the irrigating streams, line the carefully laid-out streets, while churches, schools, museums, bathhouses, and tasteful residences combine to make the conditions of life exceedingly attractive. The strictness with which the Russian officials insist on seeing one's passports, instead of causing annoyance, should rather give the traveller a sense of relief, since it is an assurance that all suspicious characters are carefully looked after. Thirty years ago it was at the imminent risk of life that any European visited this region, while now, thanks to the Russian Government, nowhere is life safer than here.

The typical case of Russian cruelty in warfare occurred in the taking of Geok-Tepe by Skobeleff, in 1880. The importance of the occasion is kept in remembrance by means of a military museum close by the railroad station, in which are found many paintings descriptive of the terrible scenes of the capture. From all accounts it would seem that the slaughter was indiscriminate; several thousand of both sexes, including even children, being put to death, both outside and inside the walls. Altogether the scenes were such as to inflict an everlasting stigma upon the Russian name. On the other hand, it is proper to note that Gen. Skobeleff, in a remarkable degree, retained the respect of all the tribes of Central Asia, and was indeed the most successful of all Russian generals in governing the people and securing their general good will; so that even these Turkomans who were the object of the slaughter have been the first of the native races to be trusted with arms by the Russians. Preëminently in an irrigated country, a strong and just government is necessary to protect the rights of the various classes of people dependent upon the limited supply of water. Merv was ruined by the Khivans by the diversion of the water of the Murgab from the oasis which supported the city; tens of thousands of Persians, held in slavery, were liberated by the advance of the Russians when Khiva was taken. The Tekke Turkomans were ruthless in their disregard of the rights of others, and fanatical in their opposition to everything which would interfere with their despotic sway. Skobeleff's method of dealing with them was certainly effective, and all the people have rejoiced ever since; for the Russians, when their enemies are once subdued, do not rule with a specially heavy hand.

The Collected Mathematical Papers of James Joseph Sylvester. Volume I. Cambridge (Eng.) University Press; New York: Macmillan.

We receive with delight this first instalment, a beautiful and comfortable volume closely matching in outward appearance Forsyth's 'Theory of Functions.' It contains Sylvestor's work from 1837 to 1853. At this moment, when the chill of senility begins to be perceptible over the very formalistic mathematics that has been and still is in vogue, the virile genius of Sylvester needs to be more fully appreciated. Doubtless there are many memoirs more significant than his and of broader conceptions; but we doubt if there be any whose thought has the peculiar mathematical quality in a higher degree. There are more flawless gems of mathematical workmanship, there are papers of more perfect polish in their execution; but we are strongly inclined to think that there are none quite so instructive in the heuretic art, partly for the very reason that these have not been so finished as to conceal the brush-marks, partly because of the personal originality and singularity with which they are stamped, and partly because Sylvester's garrulity led him almost constantly to tell how he came by his ideas. It would be well worth the while of a student of methodeutical logic to take up the theory of invariants, just for the sake of comparing the ways of thinking of Cayley and Sylvester as exhibited nowhere so well as in this volume, with those of Clebsch, Gordan, etc.

Sylvester's habit of throwing his whole being—or only sparing to poetry and sentiment their strictly necessary aliment—for long year after year into the development of a single system of ideas, while recording his progress every two or three months (every month, in his most active years), renders this collection instructive beyond measure. Nor is the interest exclusively mathematical. Logical remarks of value are constantly occurring, and other philosophical suggestions are not rare. In one place we read, "Universal geometry brings home to the mind with an irresistible conviction the truth of the Kantian doctrine of locality." Verily, metaphysics is the Paris of the intellect: no sooner do the most scrupulously severe reasoners find their feet on this ground than they give the loosest reins of license to their logic. Universal geometry can testify concerning no other Space than its own, which is a space, not of three, but of an indefinite number of dimensions; and nothing is more striking in this generalized geometry than that it is decidedly easier for the human mind to comprehend a space of four dimensions than one of three. Give a higher geometer sixty days to accustom himself to a four-dimensional space, and he would be ever so much more at home there than he ever can be in this perverse world. Meantime, the dynamics of rotations asserts downright that the rotational part of motion, at least, is not relative; and as for the body alpha, the epistemological difficulties of this disguise of the reality of space are too serious; and if the fixed stars, or the whole universe, be identified with the body alpha, the difficulties become downright absurdities. The only body alpha that epistemology can admit is the body of space itself. Meantime, even if one were to prove that three-dimensional Euclidean space is native to the mind, that would be no argument in favor of Kant's position that it is *merely* an affair of the mind. On the contrary, the proper presumption would be that, in view of the unity of the universe, if such space is native to the mind, probably it is native to the outer world of reality also.

The volume is not without glimpses of human nature. Lagrange's so-called demonstration of the principle of virtual velocities "is contrary alike to sense and honesty"—yes, that is the color of it, "albeit sanctioned by the powerful oral authority of an ex-Cambridge professor." One wonders how its case would have gone without that orally powerful sanction. As for Lagrange's proof, it appears to us that cavillers mistake the purpose of it. At any rate, it does convince all reasonable living doubters, for the reason that every man's experience has given him an instinctive and virtual knowledge that work always has to be paid for, which the proof of Lagrange either tacitly takes for granted, or, as we interpret it, supposes to have been expressly admitted for the case of one pair of blocks and tackle. But we must confess to not having looked into the immortal book for many a year.

In every way this publication is a precious benefaction to mathematical students,

especially to those who have been treading too exclusively the boulevard of dominant ideas. The four earliest papers relate to the mathematics of physics. Then, for five years, from 1839 to 1844, Sylvester was occupied with elimination and multiple roots. Between 1844 and 1847 the editor, Mr. H. F. Baker, has found nothing. Has he searched Adrain's Diary? Three papers of 1847 relate to the integer equation—

$$x^3+y^3+z^3 = Dxyz$$

The two following years are blank; but from 1850 to the end of the volume (1853) papers follow one another at an average rate of one every month. Here we find the Essay on Canonical Forms, well-known discoveries in Determinants, the "law of inertia," and the great memoir on syzygetic relations and Sturm's theorem, which last was the first of Sylvester's papers to be ushered in with a poetical motto. It is those lines, "How charming is divine philosophy," in which the Lord Chancellor so successfully disguised his detestation and disgust of all the philosophy of his day.

We shall endeavor to keep our readers apprised of the appearance of future volumes, and we hope to find fewer clerical errors in the next. A chronology of Sylvester's changes of place, travels, and, if possible, of his forming of mathematical acquaintances, would be of advantage.

The Religion of the Universe. By J. Allanson Picton, M.A. Macmillan & Co. 1904.

It is now more than thirty years since Mr. Picton published 'The Mystery of Matter,' a book of very great ability, for which many readers were profoundly grateful because it seemed to show them a way through materialism in company with Science, never letting go her hand. Mr. Picton was then an Independent clergyman. Since then he has written a life of Cromwell, has been a member of Parliament, and has seemed to detach himself from his original ecclesiastical associations and religious interests; but it would appear from his present work that these are as vital for him as ever, and the voice which he obeys at eve is that which he "obeyed at prime," the voice of Herbert Spencer, as audible in that part of his writings which has been subjected to more adverse criticism than any other, the "Reconciliation of Religion and Science," introductory to his 'First Principles.' It gives a spice of special interest to Mr. Picton's book that it is based so confidently and cordially upon that part of Spencer's system which has been most generally decried, and about equally by those who have found his Unknowable Absolute a too negative denial, and those who have found it a too positive affirmation. For Mr. Picton it is a positive affirmation of a Reality whose finite phases may be known to both science and religion, but whose absolute totality is beyond the conception of either. He regrets, as many others have regretted, that Spencer took over from the orthodoxy of Hamilton and Mansel a term—the Unknowable—that was sure to subject him to wide misconception and abuse, and wishes that he had anticipated or adopted Matthew Arnold's favorite designation of "the Power not ourselves that makes for righteousness," which was "the Eternal."

Whatever the importance of Mr. Picton's 'Religion of the Universe' as expounded in the middle and later portions of his book, he has certainly in one of the earlier chapters wrought an effective protest against those lucubrations of Messrs. Balfour and Mallock which, from the watery coldness of a universal skepticism, confidently extract the sunshine of comfortable acquiescence in the traditional creeds. In his rejection of these Mr. Picton is perfectly frank, while at the same time he contends that the ideal and spiritual implications of those creeds are not dissipated by a construction which is opposed to supernaturalism in every form and manner and degree.

His tone is not without occasional severity, when he is characterizing those who retain "the form of sound doctrine" from which the substance has been wholly taken away; but it is conceivable that certain critics of more sternly scientific temper than his own may find his difference from those whose honesty he questions one of degree only, and inconsiderable at that. Though denying personality to the Unknowable (which may, as Spencer said, be "more than personal"), he still prefers to name it God, to name his religion Christianity, and to find values corresponding to revelation, inspiration, etc., and properly so called, in the actual or possible conditions of the spiritual life. He writes pertinently of "that hereditary habit which provides a mould into which all our interpretations of the Bible run," a habit which "becomes set in early life"; and it is impossible to avoid a grave suspicion that some habit of this kind is illustrated by the conduct of his own mental processes. Is not the real energy of these more bent on saving from the wreck of opinion as much traditional sentiment as possible, rather than on freely working out the religion of the universe from the data of scientific acquisition?

What this religion means for Mr. Picton is more generally exhibited in three chapters, "The Unknowable or God," "Revelation," and "What may be Known of God," and more particularly in others, "Evil" as suffering and sin, "The Everlasting Gospel," "Christianity," "Experimental Religion," "Eternal Life," "Worship and the Church." "That being whom we name God," he says, "is not a greatest person separate from the universe, but the Universe itself." The obvious defect of this definition is that it is a roundabout way of saying nothing in particular; like Omar Khayyám, he comes out "at the same door wherein he went." The universe, by being deified, is merely named, not known; and its qualities remain, for distrust or admiration, exactly what they were before. In the chapter "What may be Known of God," he—that is, the universe—appears such that he might be described "as unknown though well known," and to be worshipped as known, not as unknown or unknowable. Mr. Picton's procedure here is more rational than his main contention, for it is only what we know of the universe or of God that justifies us in extending to either, as unknown, the favorable or unfavorable sentiments of our hearts. It is true that Mr. Picton insists that his God is not the Unknown or the unexplored, but the Unknowable, the illimitable atmosphere of ignorance which invests everything that is, or can possibly be, known. But this Unknowable, as well as the Unknown, must take all the color of its significance from the soil of that field of cultivable knowledge in which we are appointed to work our whole lives long.

Particularly in the chapter on "Experimental Religion," but in many other places, Mr. Picton contends for the reality of a "cosmic emotion" of no paler hue than that excited by the traditional conceptions of the evangelical pietist. But while his own fervor is beyond question, it is hard to understand. The mere word "unknowable" seems to act upon him as a kind of charm, and to stir him to an exalted pitch of emotional satisfaction. In a yet more questionable shape appear his efforts to resolve the tragic side of life into agreement with an optimistic apprehension of God's "everything and more." He does not make the mistake so common with the pantheist and rhapsodist, and treat as negligible every painful aspect of the world, while recognizing every sweet and pleasant thing. But his disposition to think well of "things as they are" makes for too much complacency in his view of animal and human suffering. His special pleading, his minimizing of the tragic element, if more religious than the passionate revolt of others against this, is less human, and at certain points less moral. He does not compare favorably with Mill insisting, "I will call no being good who is not what I mean when I apply that term to my fellow-creatures," or with Whittier crying plaintively,

> "The wrong which pains my soul below,
> I dare not throne above."

Apart from his optimistic pantheism Mr. Picton is evidently a man of generous sympathies and admirations, setting his face against the arrogant and selfish imperialism of the time. But he conceives that in such things mortal man may be more just than God without prejudice to God. "Against civilized races and their rulers the Tasmanians had certainly a claim for consideration, which was, we fear, too often cruelly ignored. But that does not in the least imply any injustice or cruelty in the laws of the universe which permitted their extirpation, for as towards the Infinite they could have no claim," etc. Surely here is another theophany of that convenient *deus ex machina* which, under the name of Destiny, has been so often invoked of late by bland apologists for public wrong.

Theodore Roosevelt the Citizen. By Jacob A. Riis. Illustrated. The Outlook Company. 1904.

The reception which a campaign biography such as this meets with is a fair gauge of the reading public to which it is addressed. It is as different from the old typical campaign biography of the *ante-Bellum Hispanicum* period as Mr. Roosevelt himself is from the typical candidate of that time. It is strenuous, it is loud, it is fervid, it is unmeasured, it is not logical. It is hoarsely enthusiastic, and is all pitched in one high, monotonous key of laudation, which, were there anything in literary or rhetorical tradition applicable to such an effort (and Mr. Riis clearly thinks that there is not), would be a rhetorical blunder. It seems sometimes as if the megaphone rather than the pen were being used. Granting everything

that Mr. Riis says, it is over-emphasized to the point of exhaustion.

It is painful to observe that disrespectful critics, instead of carping, have contented themselves with laughing. We have wondered, in reading the book, whether it is destined to prove adapted to the prevailing American taste, for if it is, it is highly important, and helps to mark the beginning of a new politico-literary era. Mr. Riis, if his candidate is elected, will be the successful biographer of the dominant political set (or "push," we should perhaps learn to say), of which Mr. Roosevelt will be the great patriot, Mr. Lodge the leading statesman, and Mr. Shaw the financier and economist. Let the issue be what it will, Mr. Riis may congratulate himself on having done his work completely—he stands alone in the literature of an era, and can never be replaced or outdone.

What he says of Mr. Roosevelt as police commissioner is practically Mr. Riis's thesis throughout—"every rascal" is "his implacable enemy; the honest, his followers almost to a man." Consequently, the chances are at least ninety-nine in a hundred that any hostile critic is a rascal. The impenitent reader often feels, less that he is being enlightened or reasoned with, than that his cerebellum is "in chancery," and that Mr. Riis is pounding it for the sin of disagreement. If, after a little of this ministration, he falls to recognize in Mr. Roosevelt the great exemplar of the latter's "life-rule"—"It is better to be faithful than to be famous"—he may be sure that the fault is not the biographer's. It should not be overlooked that Mr. Riis was originally a Democrat. The zeal of converts is proverbial, though sometimes dangerous to those whom they join.

The Policy and Administration of the Dutch in Java. By Clive Day. The Macmillan Co.

In this book we have a shining example of conscientious and honest scholarship. It is a work that shows its limitations on the surface, for, so far as we can glean from its pages, the author has had no acquaintance through personal experience with the Javanese or their Dutch masters, nor does he seem to be at all familiar with the currents of thought and the atmosphere of reform in Holland. He has, so far as we can see, taken simply the testimony of the printed documents in the case, and from these has written a most interesting work. This is to be welcomed and appraised all the more by the seeker after facts, because, along with its unquestionable scholarship, there is the modesty of the true man of science, who will make no random guesses, and, when lacking proof, ventures on no positive assertions. Professor Day stands on the simple ground of trustworthy testimony. He has read long and carefully, and sifted the evidence as given in the Dutch literature, from the earliest works to the magnificent monograph of Dr. P. J. Veth, of which the third volume is now before us. He has not hesitated to read carefully the English books on Java. Indeed, it was the wide divergence between the descriptions of the Dutch policy in Java as current in English, and the facts as they appeared in the writings of Dutch historians and in the original documents, that prompted the author to write this book, which bids fair to be very useful to students of colonial affairs. He has read the famous novel 'Max Havelaar,' in which "Multatuli" exposed the iniquities of the coffee culture and trade and the severities practised on the Javanese by agents of the Dutch Government, and he makes merry over J. W. B. Money's 'Java; or, How to Manage a Colony.'

Dr. Day's text adheres closely to his purpose in view, which is simply to tell of the policy and administration of the Dutch, although he furnishes an introductory chapter on the native organization, giving therein a good account of the island and its people. He confesses the need which students have felt, even after Pierson's and Veth's masterly works, of an exact knowledge of Javanese conditions before the Dutch came, and of the native economic organization. It was not possible for the native rulers to preserve peace, and in many ways the state of society was like that of mediæval Europe, the general situation making a grand opportunity for the exercise of European influence. Yet the Dutch East India Company, which is described so fully and in such detail, had no intention at first of political conquest, and was led into expansion, both political and economic, against the desires of the directors. In only one part of the seventeenth century was the Company really prosperous, and the decline of its trade was due not merely to corruption among its officials, but also and chiefly to the competition of foreigners.

The Company succeeded better as a ruler than as a trader. After it fell it was but a few years before the British rule began, which, in turn, after a few years more, gave way to the Dutch restoration. Although King William I. of the Netherlands had interviews with Sir Stamford Raffles, who explained his reforming methods, a reactionary policy was followed, and the "culture system" of forced labor, which became such an engine of oppression to the natives, was begun. The home Government wanted money, and, like the rest of the European peoples, the Dutch considered that colonies existed only for the benefit of the mother country. The rich revenues obtained by grinding the Javanese were appropriated, without any disturbance of public or private conscience, to the building up of the Netherlands railway system. Briefly stated, the culture system was one of credit bondage, an exchange of future labor for present good. The Dutch found it in use as a native institution, and they utilized it to solve the labor problem. Yet the culture system was not only a moral wrong, inflicting unnecessary suffering upon millions of people, but in the long run was like African slavery with us, economically bad. Its reform was one of the great moral triumphs of our age.

In his concluding chapters on recent fiscal policy and the modern government and provincial administration, the author is clear and informing, sticking closely to his one purpose. Yet so far as he touches on recent home sentiment, he is hardly just to the facts in the case, and it is evident that a nearer acquaintance with the Dutch people and with the political history that led to the triumph of the Kuyper Administration in July, 1901, would have made his book more satisfactory. Rare qualities are needed in the Dutch officers who share with the Javanese the government; but though the administration is still far from having reached the ideal of perfection, yet the keystone of the government of Java is coöperation between the Dutch and native officials. Vast improvement has taken place within the past decade and notably within the last two years. This has happened because the conscience of the nation has been thoroughly awakened, and the idea established that the Javanese are the wards, not the serfs, of the nation. This happy result has been achieved not alone by statesmen and politicians, or by the writings of Douwes Dekker (whose book, 'Max Havelaar,' must not be too closely compared with Mrs. Stowe's 'Uncle Tom's Cabin'), but through the direct and constant agitation of the subject of colonial reform by men of intense moral earnestness. The more humane treatment of the native of Insulinde, and especially of Java, has been insisted on by the people of the non-political or Independent churches, the "Christian Reformed" (from which come so large a proportion of our Dutch American immigrants) and the "Doleerende" churches led and organized by Dr. Abraham Kuyper, now the Premier of the kingdom.

Professor Day has not only made critical and scholarly use of his authorities, but has in quotation and proofreading shown remarkable accuracy. So far as we know, this is the only book in English treating of this subject which is worthy of entire praise. Nor does anything on the plan and in the spirit of this book exist in Dutch, so that Dr. Day's studies, being free from insular British prejudices, are sure of a welcome also in the Netherlands.

Business Documents of Murashû Sons of Nippur. By Albert T. Clay, Ph.D. Philadelphia: Published by the Department of Archæology and Palæontology of the University of Pennsylvania. 1904.

In May, 1893, there were discovered at Nippur 730 inscribed tablets, unbaked, but made of a peculiar clay which dried almost as hard as ordinary baked tablets. These tablets proved to be business archives of a commercial family, extending over three generations, and dated in the reigns of three Persian kings—Artaxerxes I., Darius II., and Artaxerxes II. (only one in the reign of the last named). A selection of the tablets of the time of Artaxerxes I., 464-424 B. C., edited by Hilprecht and Clay, was published by the generosity of Mr. Eckley Brinton Coxe, jr., in 1898, as Volume IX. of Series A of Cuneiform Texts of the Babylonian Expedition of the University of Pennsylvania. A similar selection of the texts of the reign of Darius I., 424-405 B. C., 132 in all, copied in facsimile by Prof. Albert T. Clay, appears as Volume X. of the same series. This makes three volumes (I., IX., and X.) of the texts of the Babylonian expedition which have been published in eleven years, at which rate, considering the amount of material, it is not likely that the bulk of the inscriptions found by the American expedition to Nippur will be made accessible to scholars within half a century.

As in the preceding volumes of this series, each inscription is copied in facsimile with infinite labor, the effort being made to represent each peculiarity of writing on each tablet. In the present volume

these copies are reproduced in seventy-two plates, in addition to which we have seventeen plates containing photographic reproductions of selected tablets, seal impressions, and Aramaic dockets, Babylonian wine jars, water wheels, etc. A transliteration and translation of selected texts, twelve in number, is furnished by Dr. Clay. Six years ago the general editor of the publications of the University of Pennsylvania expedition to Babylonia wrote: "A complete transliteration and translation of the texts here published will be found in Series C"; and the editor of this volume writes: "A complete transliteration and translation of these texts . . . are expected to appear in Series C." Up to date no volume of Series C has been published, and, so far as outsiders can judge, the prospects of immediate publication are not good. In the interests of scholarship, it is to be regretted that arrangements could not have been made by which texts might have been rendered accessible to scholars more rapidly, and transliterations and translations of the officially published texts furnished approximately at the same time with the texts themselves. The French expedition to Susa has shown what is possible in the rapid and scientific publication of results.

The peculiar interest of the Murashû texts lies in the light which they throw on the daily life of the people through the commercial transactions recorded in them. The proper names of officials, witnesses, and places contained in these tablets give curious evidence of the great mixture of populations in Babylonia in the fifth century B. C., and hence in the introductory text especial attention has been given to the study of those names. We learn that there were settlements or colonies in or about Nippur of Ammonites, Hittites, Jews, Edomites, men of Hamath, Gaza, Ashkelon, and Heshbon. A large number of the names are of West-Semitic, and in many cases specifically Hebrew, origin. A concordance of these names is furnished, with notes on their origin and nationality. West-Semitic (that is, Aramæan and Canaanite) influence was very pronounced in the names on the tablets of the time of Artaxerxes I., published in Volume IX.; there is a marked increase of that influence in the tablets of the reign of Darius II., published in this volume. There is likewise an increase in the number of Aramæan dockets attached to the cuneiform tablets, showing, in the judgment of Professor Clay, that Aramæan was supplanting Babylonian as the language of general use in Babylonia itself, as it had already supplanted the various local languages and dialects in Palestine and the neighboring regions. With this conclusion the general editor, Professor Hilprecht, is not in agreement. He also differs from Professor Clay in regard to the formation of certain proper names, especially the interpretation of the suffix *iâma*. Professor Clay believes that this quite common suffix represents Yah or Yahu, a frequent component part of Hebrew proper names, standing for the special Hebrew name of God, Yahaweh—*m*, as often in Babylonian, representing a West-Semitic *u* or *w*. Hilprecht, on the other hand, regards this ending as practically meaningless, intended merely to give emphasis or extension to the word. Both find numerous Hebrew names on these tablets, evidence that a large colony of Jews was located at Nippur from the Captivity onward.

Rec'd SEP 16 1904 B.P.L.

VOL. LXXIX—NO. 2046. THURSDAY, SEPTEMBER 15, 1904. PRICE TEN CENTS.

ADMIRAL SCHLEY'S *Own Story*

FORTY-FIVE YEARS UNDER THE FLAG

Illustrated. 8vo, gilt top. $3.00 net. Postage additional.

In times of danger and duty, the writer endeavored to do the work set before him without fear of consequences. With this thought in mind, he has felt moved, as a duty to his wife, his children and his name, to leave a record of his long professional life, which has not been without some prestige, at least for the flag he has loved and under which he has served the best years of his life.

There is also an autographed *Edition de Luxe*, limited to 100 numbered copies. It is printed on a fine quality of paper with uncut edges and gilt top, handsomely bound in half-morocco and enclosed in a box. $7.50 net; postage additional.

THE TAR BABY and Other Rhymes of Uncle Remus.

By JOEL CHANDLER HARRIS. With 28 Illustrations by A. B. Frost and E. W. Kemble. 8vo, gilt top. $2.00 net. Postage additional. Will appear September 23.

Twenty-five new poems by Uncle Remus. Twenty-eight animal pictures by E. W. Kemble and A. B. Frost. The famous "Tar Baby Story" is given in verse, and there is a colored frontispiece by Mr. Kemble. Besides the eight full-page illustrations and the smaller drawings, decorative borders will run through the entire book. To be published immediately.

BETHANY; A Story of the Old South.

By THOMAS E. WATSON. Author of "The Life and Times of Thomas Jefferson," etc. Illustrated. 12mo, $1.50. Will appear October 7.

The Populist candidate for President has endeavored to picture the life of the people of Georgia during the anti-slavery controversy and the war itself. In doing so he has written a book that throbs with life on every page. It is a book from a man's heart, if ever there was one.

MY LITERARY LIFE.

By MADAME ADAM. (Juliette Lamber.) 8vo, gilt top. Portraits. Cloth, $2.50 net; postage additional. Will appear October 14.

Since the time of Madame de Staël Madame Adam has, perhaps, been the most interesting literary woman that Paris has known. She tells her story as only a brilliant French woman could do it.

KATE OF KATE HALL.

By ELLEN THORNYCROFT FOWLER. Illustrated. 12mo, cloth, $1.50. Will appear in October.

The most fascinating heroine who was ever illogical.

LITTLE, BROWN & CO. - BOSTON, MASS.

THE FALL ANNOUNCEMENT NUMBER

OF

The Nation

WILL BE ISSUED ON OCTOBER 6TH

A copy of this issue will be sent to every bookseller of known importance in the United States and Canada. For advertising rates and other information address

THE NATION, 206 Broadway, New York

FOR STUDENTS

A companion work to Bryce's "Holy Roman Empire."

A HISTORY OF MEDIAEVAL POLITICAL THEORY

By R. W. CARLYLE and A. J. CARLYLE.

To be completed in three parts, sold separately. Part I. Octavo. 500 pages. Net $3.50.

"The most systematic and in many respects the most valuable work in the English language on the history of political thought. . . . The author furnishes us in this volume with a clear analysis of the opinions and most important writings from Cicero down to Hincmar of Rheims. He emphasizes the difference in political theory between Aristotle and Cicero. . . . The book is one of the most important results of historical research that has as yet been brought into print, and no student of the middle ages or of politics can afford to disregard it."—*London Athenæum.*

A JOURNEY IN THE SEABOARD SLAVE STATES

1853-54. With Remarks on their Economy. By FREDERICK LAW OLMSTED.

Reprinted from the original issue of 1856, with an introduction by Prof. W. P. Trent. Two volumes. 8vo. With Portrait. Net $5.00.

"The reader who cares to understand the American Civil War should certainly read Mr. Olmsted's 'Seaboard Slave States.' His volume presents as interesting a picture of the South on the eve of its great catastrophe as is given by Arthur Young of France on the eve of its revolution."—*John Morley in the "Life of Gladstone."*

"A volume of importance for students of social conditions, and of the history of our country. It must possess continued value and interest because of the light thrown by the narrative upon the problems connected with slavery, problems which involved, and which to some extent still continue to involve, the interests not only of the colored people, but of their old time masters, and of the successors of these masters and of the nation as a whole."—*New York Times.*

THE WEALTH OF NATIONS

By ADAM SMITH. Edited, with Introduction, Notes, Marginal Summary, and enlarged Index by Edwin Cannan, L.L.D., Instructor of Economic Theory in the University of London. 2 Volumes. Octavo. Net, $6.00.

This famous work by the father of modern political economy, has been accepted for more than a century as a continued authority on the first principles of the subject. It is the belief of the English and of the American publishers, that Prof. Cannan's edition will be accepted by instructors and students of to-day as both definite and authoritative.

A MEDIAEVAL PRINCESS

The True Story of Jacqueline, Last Independent Sovereign of Holland, Zealand, and Hainaut—1401-1436.

By RUTH PUTNAM, author of "William the Silent," etc. With 38 Illustrations. 8vo. Net $2.25.

"A heroine who lived through enough for a half a dozen heroines of modern historical fiction. Miss Putnam is one of those agreeable historians who has the art of writing history which is not only authoritative and trustworthy but dramatic. Here is a real woman and a real princess and her experiences are as fascinating as if they had been shaped for fiction."—*Boston Literary World.*

THE ENGLISH PEOPLE

A Study of Its Political Psychology.

By EMILE BOUTMY, Member of the Institute. Authorized American Edition. Octavo. Net $2.50.

"With the higher authority attaching to his name since the publication of his great work on modern France, Mr. Bodly commends the monograph of Boutmy as valuable, thoughtful and scholarly."—*London Times.*

"The work of a competent critic who has ample knowledge of England and especially of the English constitution. . . . His book is certainly clever, a *tour de force.*"—*W. L. Courtney, London Telegraph.*

"A book that counts."—*Westminster Gazette.*

THE SOCIETY OF TO-MORROW

A Forecast of Its Political and Economic Organization.

By G. DE MOLINARI. Translated by P. H. Lee-Warner. Net $1.50.

"An economist's treatment from the purely economic point of view of a problem which is not only economical but philosophic and political. It is the thesis of the author that the need of society is a régime of absolute liberty, unincumbered by the despotism and interference of the State and open to free competition."—*N. Y. Times.*

"It is the contention of the author that, like certain other institutions, war has outlived its usefulness. M. Molinari's picture of the free institutions of nationality under which the population of to-morrow will live, is most interesting and suggestive. . . . A book that appeals to thinking men."—*San Francisco Bulletin.*

MATTHEW ARNOLD

An Exposition and a Criticism—Culture—Religion—Politics.

By WILLIAM HARBUTT DAWSON. Octavo. Two Portraits, net $1.75.

"It is because the voice of Arnold still cries in the wilderness that Mr. Dawson's volume will be welcome for its endeavor to give unity to the ideas and theories, the admonitions and warnings of one of the clearest and sanest thinkers of the age."—*London Spectator.*

"A volume which, as well from the continued importance of its subject matter as from the common sense and literary quality shown in its treatment, is fully deserving of consideration."—*London Literary World.*

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 15, 1904.

The Week.

Students of that fascinating subject —Roosevelt psychology—should not neglect to read the President's letter of acceptance entire, inordinately long though it be. It is indeed wordy, and in some parts bestows all its tediousness upon the reader relentlessly; but it reveals character. Self-confidence is said to be one of the requisites of the statesman, and that at least Mr. Roosevelt possesses. With what pitying condescension does he expound the common law to Judge Parker! And there is not a tinge of false modesty in his calm assertion that "no other Administration in our history, no other Government in the world," has stood for humanity more heroically than his own. Furthermore, "nowhere else in recent years has there been as fine an example of constructive statesmanship" as that shown in the Philippine Islands. His sole reference to the race question is in the shape of a retort. "Can our opponents deny that here at home the principles of the Fourteenth and Fifteenth Amendments have been in effect nullified?" Well, if so, why has he done nothing about it? Why did he not, as it was his sworn duty, call the attention of Congress to the matter, and ask for appropriate legislation? The Republican platform speaks of reducing the representation of the South. Is the President for that, or for doing anything? He does not say. If we were to apply to himself the method he uses in denouncing the Democrats, we should have to say that his failure to speak out shows that he is either insincere or afraid. His attitude falls in with the theory that the platform was merely such a trick as Hanna's in Ohio to catch the negro vote, while intending to do nothing whatever for the negro's political rights. Either way, the President shrinks from joining issue on the violated Amendments. So far as he is concerned, they are to have no prominence in this campaign.

"By direction of the President, officials will neither discuss nor give out any information regarding the annual estimates until further orders." This notice, issued on Friday to the heads of departments at Washington, comes at an appropriate time. Judge Parker has called attention to the growing recklessness and extravagance of the Republican Administration, and no one knows better than President Roosevelt that at this point the Republicans are exceedingly vulnerable. Take the single matter of naval expenditures, President Roosevelt's perhaps favorite way of spending money. In 1884 the appropriations were $15,980,437, and in 1885 less than ten millions. By 1890 the sum appropriated was $22,456,113; in 1898 it was $32,574,082; and in 1901, $55,623,422. But this enormous amount is modest compared with the expenditures since the present Administration has really warmed to its work. In 1902 the naval establishment called for $67,803,128; in 1903 for $82,618,034; and the last appropriation was $98,005,140. These figures speak for themselves.

The delegates to the American Bankers' Convention seem not to have heard of the Chicago platform, the Roosevelt letter of acceptance, or Senator Fairbanks's speeches. They have more pronounced feelings about the gold standard than anybody else, and would be the first to cry out against further "flexibility" on this issue. But though that high priest of muscular bimetallism, Henry Cabot Lodge, is now frightened almost out of his wits lest Judge Parker's election may accomplish what he himself was striving so hard for in 1894, the visiting bankers are absolutely unruffled. Any number of them are declaring that, though they voted for McKinley—or at any rate against Bryan—in the last two elections, they are now going back to their old resting-place in the Democratic fold. A former president of the American Bankers' Association says, indeed, that he is now going to vote the Democratic ticket because Judge Parker is "absolutely sound" on the money question. Another banker asserts that "there is a general feeling that the country will be safe whichever candidate is elected." These are typical statements.

Pickled sheepskins have become a factor in Massachusetts politics. A large amount of these skins have to be imported every year, and nearly half of them are consumed by the factories of Salem and Peabody. It would be cheaper to import them in their native state, but pickling is necessary for preservation. In handling, the first step is to get rid of the brine. In the past the skins have come in free, in accordance with a decision of the General Board of Appraisers, but on August 25 the Treasury Department sent out word that henceforth they were to be treated as partly manufactured goods, and taxed at 20 per cent. The manufacturers declared that this would demoralize their business, and in their heat some of them alleged that the Administration was trying to "stand pat" with the great packers of the West, who are large sellers of domestic sheepskins. This affair threw one more burden on the shoulders of Senator Lodge. The manufacturers promptly called on him to extricate them from their difficulty. In reply he wrote: "I had noticed in the papers the dispatch about pickled skins with surprise and annoyance. I am writing to the President about it." And he added that the decision of the General Board of Appraisers was an "eminently wise one."

The President responded nobly. If it was a question of pickled or no pickled sheepskins, it was also a duty to get the Senator out of *his* pickle as promptly as possible. So the tariff is "revised by its friends" in orthodox Republican style. The offending order is now suspended by telegram from Oyster Bay, and no action whatever is to be taken under it until the President returns to Washington (after the election?) and can "personally go over the matter with the Secretary of the Treasury." Thus do we see the power of the just President, how bravely he stands by his friends when it is merely a question of interpreting a law, and how the virtuous Lodge triumphs over all enemies. To-day he is exulting over those who would decry him for laboring hard for free sheepskins while denouncing free fish. Of course, this victory will not put a stop to the reciprocity agitation in his State. But it does illustrate how quickly our hair-trigger President shoots in campaign-time, when it is a question of saving or losing votes and the Senatorial orders have been received.

Aside from the fact that the population of Vermont has somewhat increased since 1890, the large Republican vote last week seems chargeable to Democratic indifference. No organized effort was made to press the real issues, although the Republicans gave more attention than usual to the State by sending into it the Vice-Presidential candidate and other national celebrities. The Democratic managers were content to let the State go by default. They apparently lacked the courage to bring forward the Canadian reciprocity arguments which have stirred Massachusetts so deeply, or to start an educational campaign on the tariff, and this is all the more striking since there was practically no State issue under discussion. Thus the policy of drift has borne its first fruit. Per contra, the Maine Democrats made gains in Monday's election, increasing their vote 30 per cent. over that of 1900, and, in a total poll much greater, cutting down the Republican majority by 3,000 or more. The marked

Democratic gains in Portland, Lewiston, and other cities seem to us peculiarly significant, coming as they do on the very day of President Roosevelt's careful explanation that all "good Americans" should vote the Republican ticket. He must have been pained to learn how many bad Americans there are in Maine. Meanwhile, impartial political observers will set down the result for just what it is worth—a clear sign, namely, that the Democrats are not the disorganized and dispirited crew their opponents delight to make them out; that the Presidential campaign is yet to be fought; and that no man can tell what the decision of 14,000,000 electors will be in November.

The Connecticut Democrats united last week on a strong candidate and on a platform which, while it renews its faith in "the historic system of local government," and commits the party to its preservation, urges the bestowal of "a just and adequate representation" in the House of Representatives on the populous communities. For years past one-sixth of the population, dwelling in the small towns, has controlled the Legislature, determined the taxes, robbed the cities of revenue, and chosen the United States Senators. Twelve years ago the Democrats elected the Governor and carried the State Senate, but the House of Representatives has never permitted any reform in its membership. Still, the movement for a change has grown, and the Democrats do well to bring it to the front again, since it is certain to win them votes—as will the admirable speech of the temporary chairman of the convention, Henry Wade Rogers, dean of the Yale Law School. The candidate for Governor, Mr. A. Heaton Robertson, now Corporation Counsel of New Haven, is far superior to his unsuccessful rival, Mayor Thayer of Norwich.

Utah has only three electoral votes, yet Mormon influence is strong in several of the neighboring States, and might turn a block of votes worth either party's having. Senator Smoot was warned months ago that if he persisted in his fight to control the State Republican party, it might upset the party balance. He did persist, controlled the convention, and landed his candidate for Congress. Now the consequences begin to appear, though the ultimate result is not at all clear. The exodus of Republican Gentiles from their party because Mormons dominate it, should, in the ordinary course of politics, be followed by an influx of Mormons from the other party. That is to say, when any issue is recognized as dominant, voters tend to align themselves on that issue, and let all others go. But the Mormon influence does not make itself felt in that way. It is able to-day to protest innocence of the charge of controlling politics because it never throws all its vote to either side. It is very likely true that it could not if it would deliver a perfectly solid vote. This year it appears a rather hard choice for the Church. On one side it sees a rallying of Gentiles around a Republican nucleus. On the other is a party which declares in its national platform for "the extermination of polygamy" and "the complete separation of Church and State in political affairs."

Tempering the oratorical wind to the Down East lamb, Senator Fairbanks spoke, at Brunswick, Me., on September 6, on the present decadence and future possibilities of American shipping. It was a congenially sepulchral theme, and he quite warmed up to it, assuring his hearers that the $150,000,000 we pay to foreign shipmasters is so much money out of our pockets. He reminded them also that a Congressional Commission had the whole matter of the merchant marine in hand, and that the Republican party would solve the problem "in a way to promote American industry and in a manner consistent with national honor." Brave words these, yet the solution remained a bit vague, and the shipbuilders of Bath would probably have preferred the single word "subsidy" to a hundred on the national honor. But the word "subsidy" no longer comes trippingly off Republican lips. Support, encouragement—all such innocuous synonyms are preferred. Consider only this jewel from Secretary Shaw's Oregon speech: "I am not talking for a ship subsidy, but I am willing to pay the price that will give us ships to carry our trade." As one should say, "While reluctant to admit the perhaps excessive claims of Tweedledum, I will cheerfully contribute to Tweedledee's support."

The accounts of the Bull Run manœuvres show plainly that the officers who planned them made the mistake of considering the militia efficient campaigners like the regulars. As a result, the programme was far beyond their strength, and we read of many men falling by the wayside, utterly exhausted, and of their inability on reaching camp to stay awake long enough to eat. The Twelfth New York is one of the sturdiest regiments of the National Guard, yet it had had only five hours for sleep in a stretch of forty hours when it was forced to "fight" all Thursday night and march thirty miles before returning to camp. To ask that men who lead sedentary lives or are, at least, wholly unaccustomed to marching should be put to such exertions, is to expose them to serious physical injuries. Moreover, it may be magnificent, but it is not good training. The men would be far better State soldiers if their eight days had been spent in regimental, brigade, and division exercises, winding up, perhaps, with one sham battle. Unquestionably, the generals and staff officers have profited, but we are inclined to think that the National Guard officers who have been opposed to joint manœuvres have been furnished with some additional arguments in support of their position.

Radium is the latest article of import to baffle the Treasury Department experts. If it is a precious metal, it comes in free; but if it is a "crude metallic mineral substance," it pays 20 per cent. ad valorem. If it is a crude mineral, it comes in free; while if it is a chemical it pays 25 per cent. The exegesis of the Dingley schedules has rightly become one of the most important branches of theological study for the high priests of protection. They have given us within a year decisions that frogs are dressed poultry, and snails are wild animals. They will not be daunted by a new element. There is a preëstablished harmony between the tariff and the visible universe. As the Philadelphia *Record* remarks, "Radium was not discovered until six years after the passage of the Dingley act, but the inspired authors of that law had their eyes on the future as well as present emergencies." Let not vigilance be relaxed. Already scientists are speculating whether a twelve-mile shaft into the earth would not bring forth enough radium to run the sewing-machines and steam heaters of the world. If that be true, cannot our own workmen dig as deep holes and bring up as much metal as those of Europe? The dutiability of radium is almost an academic question now, but when the time comes that we compete with Bohemia for the radium market of the world, we may venerate Secretary Shaw as the man who first barred the door against a product which pauper labor brings down to the unprofitable figure of $800,000 a pound.

There are signs of a reaction in the South from the sudden outbreak of lawlessness against the negro. A joint meeting of white and black citizens has been held in Tallahassee, Fla., to secure better feeling between them and discuss means of avoiding race conflicts. The pledge of negroes and whites to coöperate in the discovery and capture of criminals of every kind touches one of the vital points of the race question. Sympathy of the white man with the lyncher, and the alleged unwillingness of the negro to move against criminals of his own race, are among the most powerful agencies in stirring up bad blood. Acting Governor Cunningham of Alabama has been prompt to move in the Huntsville lynching case. Besides having a special grand jury summoned, he has called for an explanation

of the conduct of the militia. All this activity, however, will come to nothing unless somebody is really punished for the outrages. They are the inevitable results of a policy of distributing responsibility and punishing nobody. Such newspapers as the Charleston *News and Courier* are telling the South that the old apologies for mob rule should no longer be listened to, that lynchings took place long before Booker Washington dined at the White House, and that the only way to suppress lawlessness of any kind is to deal with it with a strong hand.

The ending of the Chicago meat strike could not have been more inglorious. President Donnelly of the butcher workmen, the man chiefly responsible for the trouble, made a striking exhibition of despair in announcing to the Allied Trades that he should put a formal end to the affair. "The strike has been lost. Our unions are rapidly being smashed to pieces, and, by the eternal, we are going to call the strike off and let as many of our men return to work as possible." "Smashed" is indeed the only word to describe the condition in which the labor unions at the stockyards now find themselves. Their members have been reduced to destitution, none of the ends for which they engaged in the nine-weeks' disturbance has been gained; the men go back to work as individuals, but the strikebreakers will not be discharged to make room for them. The "closed shop" has suffered a disaster which portends its ultimate extinction. Repugnant to every instinct of self-respecting human nature, and at variance with the great laws of trade, it is the device of ignorance, cupidity, and laziness. In this case ignorance has been coupled with audacity, and the result is ruin.

The Tibetan treaty, for which Col. Younghusband crossed the Himalayas, was signed on September 7 in the Dalai Lama's palace at Lhasa. The Oriental imagination has been impressed in one of its last retreats; some hundreds of half-armed mountaineers have been killed. Whether the game is quite worth the candle, we can not yet know. The diplomatic victory, in any case, is more or less incomplete, for the treaty has been approved, not by the Lama, but by more or less irresponsible representatives. More interesting than this expression of Lord Curzon's pride of place and zeal for the India tea trade is the question, Do the British mean to keep the self-sacrificing ordinance Mr. Balfour has solemnly made in Parliament? He assured the Commons that the Government wanted only satisfaction for Tibetan insolence, entertained no territorial ambitions, and would withdraw as soon as the treaty was negotiated. But already there is talk of British control of Tibet. In the place of the fugitive Lama, whose influences are vaguely understood to be pro-Russian, a rival pro-British Lama is to be set up. That is, Tibet is apparently to be made a feudatory dependency of the Empire. It would be strange, indeed, if Great Britain, having taken the first step towards annexation, should halt or retreat. One may expect to see a new, embarrassing, and by no means profitable responsibility added to the staggering burden of an over-extended Empire.

That the Chamberlain plan has made practically no progress among working-people is shown in a hostile resolution of the Trades Union Congress at Leeds. This vote represents the sober sentiment of the most intelligent class of artisans. The trades-union delegates are free from any suspicion of doctrinaire Cobdenism; they are interested very practically in such every-day matters as wages and cost of living. If they believed that under protective duties "the foreigner pays the tax," while a happy country "pays to itself," they would not scruple to take advantage of the foreigner's liberality or of such miraculous multiplication of wealth at home. As a matter of fact, these shrewd leaders of labor see that a tariff is a tax levied upon almost everything the common man buys. Accordingly, they condemn Mr. Chamberlain's tariff proposals in words which have a distinct application to our conditions in America. Premising that any departure from free trade would be detrimental to the interests of the working classes, on whom the burden of indirect taxation would fall most grievously, and to the prosperity of the nation as a whole, the Congress resolved:

> "That protective duties, by increasing the cost of the people's necessaries, are unjust in incidence and economically unsound, subsidizing capital at the expense of labor; and that a system of preference or retaliation, by creating cause for dispute with other countries, would be a hindrance to international progress and peace."

It is unquestionably a heavy blow to Mr. Chamberlain to find his scheme repudiated by the very people for whose defence against foreign competition it was ostensibly put forth.

That Kuropatkin has imitated Napoleon in one respect is quite evident. "I have never had a plan of campaign (*d'opération*)," said that Emperor. Moltke, writing in the German General Staff's history of the war with France, declared that "only the layman believes that a campaign takes place and is being carried to its end according to a plan worked out in every detail in the beginning. Certainly a commander will always keep in view his great objective, unaffected by changes in conditions and circumstances, but the roads by which he hopes to reach it can never be written down very far in advance." If the Russians have had to improvise plans and policies, it cannot be attributed to any conviction similar to Moltke's. The more the campaign is reviewed, the more evident become the blunders and some blighting influence like that divided control which the St. Petersburg newspapers are now hinting at more or less openly. The Japanese, on the other hand, have had a definite strategical problem before them, and so have been able to plan pretty well in advance the successive steps, granted the victory of their arms, of which they rightly felt so confident. It is to be hoped that the Japanese General Staff will follow its Prussian exemplar by publishing a frank history of its aims and accomplishments. In it the Japanese will have to justify the terrible loss of life at Liaoyang and at Port Arthur. They will probably have to admit that the absence of well-mounted and equipped cavalry reserve was responsible in good measure for their slowness in developing the campaign and their inability to follow up the success at Liaoyang.

The arrival of the Russian warship—for such the *Lena* is—at San Francisco raises a number of interesting questions, and has incidentally thrown some light on the *Ryeshitelni* incident at Chefoo. There, it will be remembered, the Japanese boarding lieutenant demanded to see for himself whether the disarmament of the Russian destroyer had or had not been carried out effectively. On Monday the Japanese consul tried to insist upon a similar right of inspection, to ascertain if the alleged disabilities of the *Lena* were figments of her officers' imagination or not. Quite properly, the collector informed him that that was the business of our Government, and not of his. It has never been claimed, hitherto, that a belligerent has the right to supersede the action of a neutral in enforcing neutrality. So far as our Government is concerned, no criticism can lie against it. It promptly inspected the warship and ascertained that her boilers were defective. According to the accepted law of nations, the *Lena* can now make such repairs as are necessary, provided that these repairs in no way increase her powers as a fighting vessel. Repairs to machinery are not included in this category. When the time comes for the *Lena's* departure, she will undoubtedly be allowed to take all the coal she wishes, whether her "nearest home port" be deemed Vladivostok or Libau. Once she has passed the three-mile limit, she will be free to intercept any American or foreign vessels bound for Japanese ports with contraband. But her return to San Francisco for more coal would then be impossible, since this would be making that port a base for hostile raids upon the enemy.

RE-ENTER THE ROUGH RIDER.

"Provided that lasts," wrote the wary Bismarck when King William commented apprehensively upon the successes of Napoleon III.; and "provided that lasts" was the thought of every sagacious observer on reading the speech of acceptance of "the new Roosevelt" last July. The September letter of acceptance comes to show that it was not to last. The rôle of cautious moderation, of whispered humbleness, has proved repulsive to Mr. Roosevelt. He seems to have been gazing upon the picture of himself which Secretary Taft and Attorney-General Moody have so laboriously painted—the portrait of a patient thinker, slow to wrath, and acting only after painful deliberation—and to have determined to stamp all such presentments as counterfeit. The letter gives us the old Roosevelt again. He is aggressive, scintillating, cocksure. He lays about him with words like clubs. His manner is that of punching heads rather than arguing. The imaginary Roosevelt of apologetic orators is, in short, impatiently kicked aside by the real Roosevelt, and the Rough Rider dashes to the head of the Republican column.

His letter being, in both form and substance, a half-dozen stump speeches rolled into one, calls for more detailed attention than can be given in a single newspaper article. But its main drift is easily characterized. Mr. Roosevelt's very defence of himself is of a sort to confirm the charge that he is an impetuous Executive who looks about for the law to validate his deed after the deed is done. He hotly asserts that his famous pension order was issued under the authority of "existing law." How unlucky for him that the solid Republican vote of the House sustained the point, when the order was later offered by the Democrats as an amendment, that it was "contrary to existing law"! The President also stoutly affirms that his action in the Panama affair was strictly in accordance with the Constitution. He does not say that it was not in violation of a treaty. But why argue on these points with a man who goes on frankly to avow such an extraordinary view of the Constitution? It is to be "observed positively as well as negatively," Mr. Roosevelt writes, and adds: "I should be derelict in my duty if I used a *false* [query, strict?] construction of the Constitution as a shield for weakness and timidity, or as an excuse for governmental impotence." Nothing could be plainer. The one part of the Constitution which President Roosevelt takes seriously is the "general welfare" clause. He regards himself as the judge of that welfare, rushes ahead and does what he thinks best, and then tells you that any Constitutional objection to his course is a "false construction" by which he will not be bound!

On the tariff, President Roosevelt has made a complete surrender to the most besotted protectionists. He writes like the most abject groveller before the tariff fetish. His own words he eats without choking—not alone his statement in his Life of Benton that protection is wrong in theory and vicious in practice, but even his declaration in 1902 that any tariff duty sheltering a monopoly should be at once abolished. And then this scholar, this college man, this sitter at the feet of them that know, sneers at the trained economists, the lifelong students of finance, as "professional counsellors who have confined themselves to study in the closet"! No one knows better than he what unworthy nonsense it is. Why, he himself, a little farther on, is betrayed into speaking of the "certainty of an economic law." Is Roosevelt also in the closet? Where else does he get his economic law; and what economic law is more certain than those which demonstrate the folly and social injustice of protective tariffs?

The President's meek submission to the high-tariff wing of his party lays him open to strong attack. He deprecates the use of any word implying that the tariff has moral relations. Let us think of it, he says, as pure "expediency." He does not know what is in the minds of the best men in his own party. Even in the Union League Club, old-fashioned Republicans are saying that their party is in danger of standing no longer for a cause, but for special interests. What is Aldrich in the Senate, they ask, but an agent of great corporations to see that they receive their tariff favors in due season? What is Depew but a whited lobbyist? Theodore Roosevelt knows how tariff bills are framed. He knows how their details are shaped by greedy schemers striking hands in secret; and yet he thinks it so extremely impolite of the Democrats to say that there is anything immoral in allowing a privileged few to buy the right to tax the whole people.

Weak and retreating on the tariff, the President is positively alarming when he comes to talk about the finances. What would cause a true statesman the gravest concern—namely, the coincidence of falling revenues with mounting expenditures, the certainty of a deficit and of the need of new taxes—he dismisses with a snap of his fingers. Far from urging retrenchment, he promises new lavishness. The public, he writes, desires the Government to incur still greater expenses, and incurred they shall be. The costly free rural delivery is to be extended all over the country, at an outlay of many millions; pensions are to be increased; to cap the climax, the President commits himself to the scheme of millions more for ship subsidies. Where is he to find the money? It never occurs to him to ask. "We do not stand still," he boasts of his party. Exactly; and that is why sober men are afraid of it and of him. They see him profoundly discontented with the routine work of giving a good administration, and eager to launch upon unknown seas. "We do not stand still." No; neither do the expenditures; neither does corruption; nor does the creation of monopoly and wealth based upon unequal taxation. And if you ask President Roosevelt how he is going to meet the vast expense of his spendthrift policies, he can only tell you that it will be done by inventing fresh methods of unjust taxation.

In effect, Mr. Roosevelt's letter is an offer of gigantic bribes. Elect me President, he says to the beneficiaries of the tariff, and you will be undisturbed in your purchased right to tax your fellow-citizens; elect me, he says to the pension-grabbers, and you may fill all your pockets at the Treasury; elect me, he says to the subsidy-hunters, and the Government will pay you handsomely to sail your ships; elect me, he says to the politicians, and you may fatten on the graft of the rural delivery; elect me, he says to the army, and your numbers, your privileges, your pay, and your opportunities to glut your warlike passions shall be increased; elect me, he says to the navy, and your smoke shall blacken the air on every coast and your guns be heard in every sea.

What is to be the country's answer to these bids for power in order to carry out grandiose but dangerous schemes? The answer which ought to be given may be found in that historian whom some of Mr. Roosevelt's friends have found him reading and reported the fact in their awe-struck way. Thucydides gives us in his Sixth Book an account of the lures which, to gratify his own ambition, Alcibiades held up before the Athenian people; and also gives us the warning speech which the old general, Nicias, made to the assembly. One sentence of his might well have been addressed to the American people, in connection with *their* brilliant young man and his glittering programme:

"Do not you give him the opportunity of indulging his own magnificent tastes at the expense of the state."

A CRITICAL PERIOD FOR LABOR.

This has been a test year for organized labor. Two years ago, wages were on an ascending scale, the movement culminating in the demands of railroad hands in all parts of the country for a larger share of the profits resulting from the great industrial boom. They obtained their end, but the inevitable effect was not long in asserting itself. Higher railroad wages meant greater burdens to shippers, and thus the circle was in a fair way to completion. Of course, the advance in the wage accounts of the railroads was not the cause

of the succeeding industrial depression, but it was unquestionably one of the concomitants of the backward movement. The analogies between labor and capital are close. From 1898 to 1903 the profits of the latter were astonishingly large, and no one had time to reflect seriously on the means employed to secure them. A year ago, however, it began to be seen that many of these methods had been extremely vicious. It was then discovered that inflation of nominal capital, struggle for monopoly, and payment of unearned dividends had resulted in losses which in very great measure offset the apparent profits of previous years. To-day, labor is in very much the same position. It, too, has struggled for monopoly, for an arbitrary rather than a natural wage scale, and it is now confronted by the necessity of carefully overhauling its methods.

Those who are giving serious thought to this situation will derive assistance from a paper on "Some Aspects of the Labor Question in America," presented at the recent meeting of the British Association by Mr. C. J. Hamilton of University College, Cardiff. As Great Britain has her special labor problems, Mr. Hamilton's views cannot, in their American applications, be construed entirely in accordance with the dictum that the voice of the intelligent foreigner is the voice of posterity. Still, his statements regarding our conditions have a detachment not easily acquired this side of the Atlantic. He plainly sees that this is an anxious time in the United States. He recalls President Hadley's declaration of last fall that "within two years there will be the greatest conflict between organized labor and organized capital that the United States has yet seen," and says that it is now in process of verification. The immediate cause of the conflict is the depression of trade, bringing with it wage reductions and an increase in the number of the unemployed.

The labor unions, which, it is asserted, have probably doubled their membership since 1900, are ostensibly fighting against the downward tendency of prices and wages. But this is not the real cause of the struggle. The closed shop is what organized labor is actually contending for. In developing this idea, Mr. Hamilton points out many of the features which distinguish our problem from that of the Old World. He finds here, for example, a great lack of equality in industrial conditions; the difference between one part of the country and another being as great as that between Lancashire of 1845 and of to-day. The prevalence of child labor at the South, defective factory laws, the large foreign element in our industrial population, and the negro are touched on in passing. But it is the labor union and the character of its management that receives most attention. No one familiar with conditions here and abroad can dissent from the statement that our labor leadership is far behind that of Great Britain. We have a few men of great spectacular attainments; in their sphere as noteworthy and as harmful to public interests as some of the more reckless "barons of finance" and "captains of industry" about whom we heard so much prior to 1903. But the high efficiency of many of the British trades unions is not the result of playing to the galleries, but of patient, unremitting, unobtrusive effort on the part of the leaders to familiarize themselves and those whom they have represented with the facts which make for the solid and permanent advantage of British labor.

The closed shop has not come. If it were possible to introduce it, the means employed have so far been wrong in their very essence. As our English critic declares, "It must come, not by coercion of employer nor of employee, but by establishing the union's claim to be necessary to the worker and not injurious to the employer or the public." This is a large programme, but can it be carried out? There is a strong belief that combined capital has more to gain than lose from a perfected organization of labor. Great employers have repeatedly said of late that they were glad to have their men join the unions, as it made bargaining with them easier. Such optimism is, however, to be regarded lightly at this stage of the game; present conditions have existed too short a time to admit of their bearings being seen with any clearness. Any benefit to combined capital from organized labor must spring from more stable conditions in the unions than are yet evident. So far, the injury to the employer and public has greatly outweighed any benefit which they may have secured. As yet the public feels that both capital and labor often aim at illegitimate ends. The former frequently strives to restrict output, crush competition, and artificially raise prices; the latter fights for the degrading of the efficient workman to the level of the lazy and incompetent, and the restricting of the number of apprentices—both with the intent of thwarting the natural law of production and wages respectively. Fighting on such lines can never result in permanent victory.

OUR "NEW POLICY" WITH THE RED BROTHER.

How to support the Indian has been a troublesome problem for the Government ever since it changed its policy toward the red man from war to peace. It made the mistake of passing at a single bound from one extreme to the other. In its zeal to prove the sincerity of its repentance, it beat the sword into a pap-spoon instead of stopping halfway with a ploughshare. Now it is compelled to take the backward track, and in the name of humanity is trying to lift the disarmed Indian from the cradle where it has been confining him for a quarter of a century, set him on his feet, and teach him to walk alone.

The so-called "new policy" has so much common sense underlying it that the only wonder is that it is not already an old policy. But the question when it ought to have been begun is academic: the practical question is, how to get the machinery of the reformed system into good running order. The idea is to give the Indian, not food, but the means of obtaining food by paying the price for it. To this end, a year or two ago, orders were issued at Washington to notify the younger and able-bodied members of the several tribes that the issue of rations would be suspended after a certain date, and that they must prepare for the change. At the same time, all practical means were studied for providing work for those Indians who wished a chance to earn something. If an Indian had any knowledge of agriculture or stock-raising, he was encouraged to turn it to account; if he had not, the Government sought to devise some form of bread-winning labor that he could pursue. Now and then the method employed was as crude as that described in the old story of the beggar who was directed to spend his whole morning carrying a pile of bricks from one spot in his patron's garden to another, and his whole afternoon carrying them back again.

But a more rational scheme was gradually evolved when it was discovered that a people reared to war or the chase could not be turned into farmers or laborers overnight. The authorities of the Indian establishment perceived that they must reckon for a good many years to come with the question of giving their wards something to do. So they looked about for possible improvements which would not ordinarily have been considered necessaries, yet which it would distinctly benefit the Indian to have at command. An irrigating ditch here, a better highway to market there, a fence to enclose a tribal cattle-pasture in another place, was started with Indian labor under white supervision. Those Indians who had no facilities for raising crops or lacked the wherewithal to procure livestock, could get a job at day-wages by applying for it, provided they did so before the rolls were full; their compensation came, as a rule, out of the funds, or the interest on the funds, held in trust for them by the Government, so that the process suggested taking money from one pocket to put into the other. But the trust funds were by law designed to promote their education and civilization, and to spend this income upon labor which would at once fill their stomachs, train their hands, and strengthen their characters,

seemed like killing a number of birds with one stone.

Still, all this was providing only for the able-bodied class, young enough to do something for their own maintenance. The older generation, whom it was hopeless to try to bring into relations with their changed environment, must be cared for as long as they lived. They were too feeble to labor, too old to be taught. They belonged, moreover, to the historic stratum which had resisted the Government's encroachment upon the open hunting-grounds of the West, and had laid down their arms with an implied understanding that their conquerors would provide for them virtually as for prisoners of war. The Government has continued to recognize this obligation on the theory that the old people cannot last very much longer any way, and that their treatment as objects of charity will establish no embarrassing precedent. But behold the result. If the Indian has one trait more firmly seated in his nature than another, it is generosity in material things. He will give away the last object he owns to any friend who asks him; and accordingly, now that the bulk of the Indians receive no gratuities from the Government, no sooner does an aged red man draw his periodical issue of rations than he is surrounded by all the loafers in the reservation, and, before he can reach home with his prize, they will have stripped him of it. This is a wrong, indeed, which the authorities appear powerless to abate unless the system be radically changed. Orders issued against the spendthrift practice are so much wasted ammunition; the spongers ignore them, of course, and the victims are too good-natured to refuse an appeal. As a consequence, this doubly harmful extravagance bids fair to be indefinitely continued, and the aged and infirm people whom the Government desires to supply with some comforts may have their end hastened by hunger in spite of benevolent intentions.

Only one practicable solution of the difficulty has been proposed thus far. That is, the foundation by the Government of a central soup-kitchen or free eating-house in every area inhabited by a considerable number of old and feeble Indians, around which they can camp, and where they can be fed twice or three times a day, on presentation of a ticket, being allowed to carry nothing away. This would insure their protection from the harpies. The soup-kitchen could, moreover, in cases of extreme emergency like a sudden crop blight or an epidemic of disabling disease, be used for dispensing a little temporary relief to the sound and youthful members of a tribe, who would otherwise be forced to fast through no fault of their own. From any point of view, the free-meal dispensary system would be only a makeshift of a few years' duration; for as soon as the now decrepit generation passes away, there would be no more use for anything of the sort.

With such an addition to the equipment of the Indian establishment, we should see the "new policy" in full blast, and its effects upon the reservation Indians at large could be philosophically studied. As matters look now, its results will amply justify its adoption. It will be a blessed day for the red race and for the whole country when the last vestige of the reservation system disappears; but meanwhile the new policy will afford a bridge from the conditions of the last twenty-five years to those of independent Indian citizenship and self-support.

THE WAR POWER OF JAPAN.

The extent and the cost of the victory at Liaoyang are still in doubt; no such doubt invests the sudden coming of Japan to her military majority. Indeed, the war power of Japan has already been admitted with a premature if prophetic readiness. The mildly dismayed *Spectator* constantly reminds its readers that the traditional balance of power in the Far East has been upset, openly grudges the ascendency of Japan, and fears it. Russian critics, instead of resting their case on the marvellous success of Russia as a colonizer in Asia, invoke the Yellow Peril, and bid the world shudder at what may be the reflux of the great Mongol invasions. That dithyrambic and very able correspondent, Mr. A. G. Hales, of the London *Daily News*, continuously warns his placid Cobdenite readers that the Japanese rifle, the Japanese ship, and the Japanese factory are equally menaces to the predominance of Europe in the Far East. In America, so far, the old sting of Russian diplomatic subterfuge and a chivalrous sympathy for the Yankees of the East have kept most of us from this gloomy sort of prognostication; but already people are beginning to find something uncanny and a little formidable in the continued success of a people with whom at bottom we seem to have so little in common.

So far as these apprehensions are based on a belief in the military prowess of Japan, they are abundantly justified. Today it is doubtful if England and her colonies combined could put into the field an army equal to Oyama's. And certainly no other nation can match that combination of fanatical indifference to death with perfect coolness in battle, that command of the higher strategy with regard for the minutiæ of tactics and logistics, which have made the armies of Japan for their numbers perhaps the best in the world. Fully warranted, too, is the surmise that the war record of Japan—whatever the final result of the long contest—must powerfully work upon the imagination of all Mongol Asia. It may mean the awakening of China to national consciousness and military emulation. The thrill must pass into Burmah and India. In the long run the East may wish to take its destiny into its own hands, and then Japan will have shown the way either to the most alluring triumph, or in any case to splendid defeat. In short, the imagination is not likely to exaggerate the probable effects of the war.

But why should any one deplore the military ascendency of Japan unless he believes that power is to be ruthlessly employed, and why should any one entertain such a thought? History has not taught that either the Chinese or the Japanese belong to the class of invading Mongols. In fact, the kind of material from which is recruited the hordes of Genghis Khan and the Mantchu conquerors has almost disappeared. The military capacity of Japan by no means implies an insatiable desire for conquest. To-day she wages under extreme provocation, and to the brink of financial exhaustion, what is for her a defensive campaign. There is no reason to believe that the immemorial wisdom and self-restraint of the samurai and the newly learned lesson of science have suddenly been converted into some Napoleonic madness. Nor need we fear that a China aroused to the point of throwing off foreign control would wreak her new-found forces against the tundras of Siberia, the inhospitable sands of Turkestan, and the barrier of the Himalayas.

It is time for large views on these subjects; and instead of large views we see everywhere the sullen attitude of the functionary whose sinecure is to be abolished. For two centuries and more, Europe has got into the way of considering the East as its own. Behind the gentle deprecation of such papers as the *Spectator* lies the unavowed conviction that China is made for treaty ports, and trade concessions and to afford ports of call for British shipping. In this comfortable assurance the European mind has hardened until it is a wrench to think any other way. Now, brave thinking on the subject is wanted. Chancellors are needed who will have the courage to admit that China's present condition of tutelage is anomalous and should be temporary. England particularly must be brought to eschew the manners of a discharged officeholder, and assume the benignity of a valued trustee happily relieved of a burdensome charge. And, speaking more broadly, Western civilization seems likely to be put to a shrewd test: Can it adapt itself to impending changes in the Far East as skilfully as feudal Japan transformed itself into a modern military State?

It is because they make against such hopefulness that our ancient journalistic voices prophesying war do substantial harm. It would be better cheerfully to admit that the Japanese child will no

longer come to its European grandam, and that the Chinese infant may also lose its love of diplomatic apples and figs. In fact, it would lead to kinder and clearer thinking on the subject if it were realized that the Yellow Peril must be most acutely felt in Japan. Can that nation withstand the glamour of her success; can she conduct her vast war expenditures without peculation; will her expanding commerce establish itself in honesty and permanency; will the conversion of her beautiful small industries into great manufactures leave the peculiar merit of her social order intact?—these are challenges far more urgent for the leaders of Japan than any surmises of new Tartar invasions for the arbiters of waning overlordships in the Far East.

THE DEFENCE OF A CASTLE.

When a mediæval castle was close beset, a motley crowd of defenders rallied against the last assault. Beside the noble chatelain and his men at arms stood the chaplain and the factor, the scullions and turnspits and all the *rascaille* of the cellar and stable; maid and mistress dropped feminine acts of mercy and sped the dropping of boiling oil from the walls. As near a replica of this picture as our unromantic times can afford is presented at Heidelberg, where all manner of men and women are leagued together in defence of the unrestored—as they would say, undestroyed—portion of the historic castle. In this cause are united grave professors with capped and booted students; with both—in Germany a surprising alliance—the blue-stockings of the women's clubs. Stalwart aid comes from the Social Democrats of the Palatinate, who have promised, if the Grand Duchy insists on its plan of restoration "against the will of the entire civilized world," to do battle against the desecration with the formidable weapon of the strike. Still stranger reinforcement, the official poet, Wildenbruch, adds his protest against the misguided zeal of the officialdom of Baden.

And this parade of defenders is not without cause. Unsparing restoration has already disfigured the graceful ruins of the Friedrichs-bau: now it is proposed to rebuild and roof-in the still more precious remains of the Otto Heinrichs-bau—the finest monument of the Renaissance in Germany. Taking advantage of the alleged instability of the famous façade, the Government of Baden has tried to gratify that insensate grudge which bureaucracy always bears to the beautiful. A dozen high privy architects stand ready to destroy the design which legend has rashly but not so unreasonably attributed to Michelangelo, and to put up in spick-and-span perfection their notion of a fine Renaissance castle-palace. On this propensity of officials to destroy the beautiful objects confided to their charge a lamentable, in some ways a laughable, chapter might be written. The mere tourist is competent to curse the hideous polychromy which in the name of restoration has profaned the stately corridors of Blois; all sensitive persons feel the affront when a single meddlesome hand reduces all the pictures of a gallery to a common vulgarity of repaint and glaring varnish. And the evil lurks in more occult forms. At Washington a zealous engineer proposed modestly to make three White Houses grow where one grew before; in the famous museum of a not very distant *Weissnichtwo* a careful curator has furtively "restored" even borrowed pictures with his own willing hand. Universally, the sight of a great work of art provokes in a certain order of mind an irresistible desire to make it over into a dull copyplate facsimile, and one may hazard the opinion that the wreck caused by war and religious fanaticism is probably less than that deliberately contrived by Ministries of Fine Arts.

Evidently those who could not keep their fingers off the Otto Heinrichs-bau forgot to reckon with the sentiment of the Heidelbergers. The town lives by sentiment, and incidentally by boarding students and the English. Sentiment fills the Neckar vale from the Philosophenweg to the Schloss. And surely the love of the mouldering castle as it is, is reasonable enough. Utility no longer has any lien on those deserted halls. Why a supererogatory roof over a castle whose only lawful occupant is the Heidelberg Tun? Such in effect is the cry, from the gay assemblies of the Hirschgasse to the solemn conclaves of Herr Bebel's Social Democrats.

Nor is there any deficiency of rationalistic support of the sentimentalists. Herr Privy-Over-Buildings-Councillor Hermann Eggert shows that the tooth of time for two centuries has worn down the sandstone only from a half to two millimetres, and maintains that the present façade will last for centuries with a little quite unobtrusive buttressing from behind. Herr Paul Garin, in the Munich *Allgemeine Zeitung*, erects the defences of the castle "from the ground out." Architecture, he opines, differs from all the other arts in that it supplies two pleasures, separated in time; namely, you may enjoy the outside or the inside of a building. The most concentrated and artistic impression is that of the interior, which, unless the circumstances are uncommonly favorable, lasts but for a little time. The effect of the exterior, on the other hand, is mixed and diffused. The building is effective in regard to its site, adjacent buildings, the enveloping light and air, the entire landscape, in short. So the treatment of ancient buildings which have found their permanent place in the landscape is to be dictated, not by the principles of archæology or architecture, but by broader considerations of the picturesque. Or, to reduce Herr Garin's somewhat complicated reasoning to epitome, a beautiful building in ruins is no longer, properly speaking, an object of art, like a picture or statue. To it neither the science of curators nor the pedantries of restorers has any application. To preserve it means not to restore it, but simply to retard its crumbling, to keep its quality as a ruin—a problem in engineering, not in architecture. To rebuild it in its imagined perfection is a stupidity analogous to that of erecting artificial ruins.

Such, indeed, seems to be the rule. And we have no doubt that Herr Garin's certainly heavy battery of æsthetic distinctions will notably inspire the stalwart garrison of professors and Social Democrats, as well as the light volunteers from the Hirschgasse and the women's clubs. Tourists, both sentimental and rationalistic, will wish them godspeed in their defence of the castle at Heidelberg, for if it is further to be archæologized, there is no reason why Melrose Abbey should not be converted either into a museum specimen of decorated English Gothic, or into a very passable free library.

Correspondence.

THE CONTINUITY OF PARTIES.

To the Editor of The Nation:

Sir: The question of the continuity of parties raised by a correspondent in your issue of September 1 is an interesting one. One party is stated to be that of the collectivists and of the believers in a centralized government. One wonders, when he observes some current political tendencies, whether this doctrine is about to receive a considerable extension. We have had within recent years the cases of Congress placing in President McKinley's hands autocratic power during the Spanish-American war, and in President Roosevelt's hands the settlement of the Isthmian Canal question. We have seen later the acquiescence by Congress in the Executive encroachment through the service-pension order.

Now all this is bad enough, but what shall we say when we see conditions shaping themselves in such a way that the people will be themselves led to increase Executive power at the expense of Congress? What, for instance, is to be the outcome of teachings such as William Allen White's in a recent magazine article? If the Republican Congress is so thoroughly corrupt and the President so aggressively honest as Mr. White makes out, what is left for the people to do but to pounce on their representatives and make them disgorge their dishonest power, and turn it over to one the people can trust?

By the way, it is reported in the newspapers that it is Cortelyou's plan to use the magazines this fall as one medium by which to reach the people. Is Mr. White's article one of the inspired series? Certainly the concluding paragraphs and the Presi-

dent's picture are introduced with dramatic (political) effect.

On second thought, one naturally asks himself what species of political acumen it is that goes to the length of traducing the rank and file of a party in order to exalt its head? Alas, what a multitude of popular idols must be shattered in order that one great one may stand out in stronger relief! J. V. C.

STEVENS POINT, WIS., September 8, 1904.

TOUCHING GERMAN AFFAIRS.

TO THE EDITOR OF THE NATION:

SIR: I have often wished the excellence of your periodical might extend itself also to matters relating to German affairs. Sometimes I notice your statements are not based on impartial evidence, and are apparently inspired by the German weekly *Die Nation* or the *Berliner Tageblatt*, both of which represent only a small minority of German public opinion.

In your issue of August 11 you state that the German Chancellor, last winter, expelled from Berlin Russian students of both sexes who had participated in mass meetings criticising *their own Government*, and you called this *dirty work*. The fact, however, is that these students, who, most of them, happened to be Jews, violently and tactlessly attacked the German Government and the Chancellor of the Empire. One may or may not believe in expulsion of this sort, and I, for one, do not believe in it, yet you will admit that this cannot justly and fairly be called "dirty work." Or would you, for instance, apply this term to the practice of the United States, sanctioned by a majority of the American people, of turning out immigrants, even after a somewhat long stay in the country, for reasons for which they, in a great many cases, cannot be morally blamed? And as to the cause of the whole affair connected with these Russian students —the close supervision of nihilistic suspects hailing from the Czar's dominions—everybody interested knows that the Russian Government entertains a network of political detectives in these United States; furthermore, that Mr. Cleveland's Administration ratified a treaty of extradition of political criminals between the United States and Russia; lastly, that public sentiment in the United States favors an international organization of detective and police work against radical revolutionary movements and persons. Right after the assassination of President McKinley the call for such organization was, naturally, loudest and most insistent in the United States. Of course, conditions in Russia are very unlike those of a civilized Western country, as we take this term, but in such a case the principle of non-interference is to be absolutely upheld. Nations must work out their own destinies. Meddling with internal Russian (or Rumanian) affairs would justify interference from outside with the grave problem of the status of the negro and negro lynching in the United States. Moreover, the German Empire is the next-door neighbor of Russia, and nothing can alter this fact and the probability that a great political and social conflagration in Russia would endanger her neighbors. Germany's policy, therefore, must recognize this fact and act accordingly.

I just happen to remember another erroneous editorial statement of yours made some time ago. It related to the German Social Democrats, and Paul Singer and Eduard Bernstein were named as the only prominent and sober-minded intellects the German Socialist party had to show. The flagrant mistake is in the coupling of these two names—the one of which stands for the most irrational, senseless radicalism, while Bernstein represents "revisionism" such as Jean Jaurès's in France. Bernstein and a great many other keen minds of the younger socialistic generation (such as Schippel, David, Von Vollmar) have done their very best (and no doubt they will succeed) to turn the German workingmen to the realities of life, to interest them in the vital economic problems of the day; in a word, to turn them away from the senseless and iconoclastic revolutionary radicalism represented by August Bebel and Paul Singer. Dr. Benedict Friedländer, in his work 'Die vier Hauptströmungen der modernen sozialen Bewegung,' shows how men like Bernstein have taken up the work where the blind and aged philosopher-economist Eugen Dühring left it a generation ago.

This, I think, you will not consider too trifling to be corrected, or deem it smacking too much of German "Gründlichkeit," which some Americans, in these days, like to put in vituperative quotation marks.

Yours, KARL DETLEV JESSEN.

CAMBRIDGE, September 11, 1904.

[At this moment we cannot verify the facts in the case of the expulsion of the Russian students. As regards the Socialists, our words were (Vol. 77, p. 457): "For the creation of parliamentary Socialism in Germany, credit is due largely to such leaders as Singer and Bernstein—men who have pinned their faith rather to evolution than to revolution."—ED. NATION.]

Notes.

Further announcements by G. P. Putnam's Sons are 'The United States, 1607-1904,' by William Estabrook Chancellor and Fletcher Willis Hewes, in ten volumes that may be had separately; 'History of the Civil War in the United States,' by W. Birkbeck Wood, A.M.; 'The Constitutional Decisions of John Marshall,' in two volumes, edited by Joseph P. Cotton, jr.; 'Ralph Waldo Emerson,' by Elizabeth Luther Cary; 'Narragansett Bay,' viewed historically and picturesquely, by Edgar Mayhew Bacon; 'Scientific Aspects of Mormonism,' by Prof. Nels F. Nelson; an illustrated "Asiatic Neighbors Series," beginning with 'Indian Life in Town and Country,' by Herbert Compton; 'The Kingdom of Siam,' edited by Cecil Carter, M.A.; 'Jiu-jitsu Combat Tricks,' by H. Irving Hancock; the remaining three volumes of Tarver's translation of Hanotaux's 'Contemporary France'; 'The Expansion of Christianity in the First Three Centuries,' from the German of Adolph Harnack; Sainte-Beuve's 'Portraits of the Seventeenth Century,' translated by Miss Wormeley; 'The Letters and Speeches of Oliver Cromwell,' edited upon Carlyle by S. C. Lomas; 'The Kaiser [William II.] as He Is,' by Henri de Noussanne; Adam Smith's 'Wealth of Nations,' edited by Prof. Edwin Cannon; 'A History of Yachting, 1600-1815,' by Arthur H. Clark; 'The Tuition of Time, and Other Poems,' by the late Guy Wetmore Carryl; 'Earthquakes in the Light of the New Seismology,' by Major Clarence E. Dutton, U. S. A.; 'A Dictionary of the Targumim, the Talmud Babli, and Jerushalmi and the Midrashic Literature,' by Morris Jastrow; 'Miniatures,' by Dudley Heath, and 'Porcelain,' by Edward Dillon.

The sixth volume of "Early Western Travels" (Cleveland: Arthur H. Clark Co.) is, as the editor, Dr. Thwaites, points out, companionable to Lewis and Clark's Journal. It reprints Brackenridge's 'Journal of a Voyage up the River Missouri,' in 1811, and Huntington's translation of Franchère's 'Narrative of a Voyage to the Northwest Coast of America' in 1811-14—*i. e.*, close upon the pioneers at the beginning and at the end of their transcontinental progress. Brackenridge notes passing under the bluff on which Sergeant Floyd was buried beneath a marking cross, which the river would one day menace with undermining, and cause the grave to be removed. Among the Mandans he was on George Catlin's old ground. His observations of the Indians are valuable and in accord with those of contemporary travellers. His narrative is that of a highly cultivated man; Franchère's, that of an obviously humane man, whose story deals with Astoria, the Columbia River, etc., and also paints the Indians as they were, but with more sympathy than Brackenridge.

"Macbeth" is the latest and fifth volume in the Crowell 16mo series of reproductions of Shakspere's First Folio, edited by Charlotte Porter and Helen A. Clarke, whose conscientious labors double in pages the text of the play. Literary illustrations, a glossary, variant readings, and select critical appreciations combine to enhance the value of the scrupulous reprint itself.

The late Wilbur J. Chamberlain's 'Ordered to China,' which we reviewed a year ago in the American edition, now comes to us from London with Methuen & Co.'s imprint. In its new form it is light to the hand, and the type is large if condensed. Its racy journalistic impressionism reads equally well in English or American dress, and in what relates to the Boxer rising and the siege of Peking these letters have an historical value.

There is good and good-natured fooling in verse in Harry Graham's 'Misrepresentative Men' (Fox, Duffield & Co.), his gallery embracing all ages from Adam, Diogenes, Nero, Joan of Arc, Bacon, Marat, to Paderewski, Sir Thomas Lipton, and Theodore Roosevelt, of whom we are told

> "In winter he will work all day,
> But when the sun shines he makes Hay."

Strothmann's illustrations are a fair match. Those of Florence Wyman in the 'Fusser's Book' of Anna Archbald and Georgina Jones (same publishers) are much more interesting than the smart Rules. They show a woman's eye for costume and are cleverly drawn.

Drawing on the larger work of J. R. Walbran, Dr. George Hodges of the Episcopal Theological School at Cambridge, Mass., has given in convenient form the history of Fountains Abbey (E. P. Dutton & Co.). He tells how it was founded by Cistercians in 1132 in the valley of the Skell, Yorkshire; how within twenty years eight colonies

went forth from it; how in 1146 or 1147 it was sacked and partly burned by misjudging adherents of an archbishop; how, through ups and downs of fortune, and even in the great enlargement which came to it, the original purpose of strict discipline, clean living, and high ideals was at least measurably maintained; and how, when the religious houses had had their long day, and their wealth had roused the greed of king and nobles, this abbey shared in 1539 the general spoliation. Of its physical aspects a fair idea is afforded by the researches of W. H. St. John Hope and a ground plan drawn by Harold Brakspear, reproduced in this volume. Seven photogravures justify the reputation of the ruins as among the most beautiful in England. However injured in the past, they are now carefully preserved by the owner, the Marquis of Ripon.

Messrs. Scribner send us the well-designed Baedeker, 'Italy from the Alps to Naples,' with an eye to the hurried traveller who cannot "do" everything. It is compiled from the familiar three volumes for Northern, Central, and Southern Italy, and has the merit of the standard series of handbooks. The advertisement shows that even this abridgment is published also in four sections—Northern Italy; Liguria, Tuscany, Umbria; Rome and its Environs; Naples and its Environs. This for the pedestrian's advantage in particular.

On the initiative of Hermann Wagner, the Royal Academy of Sciences in Göttingen has arranged for the systematic cataloguing of all the older geographical and cartographical material found in the different universities of Germany. For the present, at least, the year 1570 is the later limit. The material is to include (1) manuscript portulans and world charts; (2) printed charts of separate countries or of the world; (3) reports of exploring expeditions; (4) cosmographies and similar handbooks; (5) manuscripts containing geographical material; (6) globes. The current issue of the Göttingen *Nachrichten* contains the first specimens of this work, being the report of two tours among the libraries of North Germany by Walter Ruge of Leipzig, who makes a systematic report of his finds. These were unexpectedly rich, especially in the old university library of Helmstedt, of which a preliminary report was given in *Petermann's Mitteilungen* last year. Here were found a number of original charts and not a few reprints of valuable charts now lost. Unfortunately, many are in a bad state of preservation.

The second volume of Postgate's 'Corpus Poetarum Latinorum' (London: Bell; New York: Macmillan) is nearing completion; we have received the second part, and the third and final one is promised for the end of this year. In this issue the procession of poets of the Silver Age continues; Schenkl contributes a second edition of his text of Calpurnius, and Postgate follows it up with Columella's poetical book, "ut Maronis imitatores hic Georgicon, ille Bucolicon ordine se exciperent." Summers is responsible for the whole of Silius, Wilkins for the 'Thebais' and 'Achilleis' of Statius (with a fresh collation of the Codex Puteanus and other MSS.), Davies and Postgate together for his 'Silvæ.' In this portion of the work, therefore, we have a set of authors who are more often consulted than actually read, for there are dreary wastes in them which none but an editor would willingly try to cross; but scholars will be only the more grateful to the projectors of this 'Corpus' for making consultation so easy, and to the general editor and his assistants for providing sound and sane texts and a critical apparatus full enough to satisfy the needs of all except special students of these matters. The work has already taken an important place among the productions of classical scholarship, and the present fascicle is fully up to the high standard which its predecessors have obtained.

The *National Geographic Magazine* for August contains an informing article on Peru, by A. A. Calderon of the Peruvian Legation. The impression conveyed is of a country with great natural resources, undeveloped from lack of population and of transportation facilities and because of an unstable government. Peru is divided into three well-defined zones—the coast, of which the chief products are sugar and cotton; the sierra, with vast pastures and mineral wealth; and the Montaña, or forest region, abounding in rubber trees. The population is about four inhabitants to the square mile, by far the larger part being native Indians, who cultivate small tracts of land in the Sierra and work in the mines. The difficulties of transportation may be illustrated by the fact that till recently "it was not uncommon for persons wishing to go from Lima to Iquitos to travel via New York, Pará, and up the Amazon." A Government road, called the Via Central, has been built across the Andes to the head of navigation, by which Iquitos, a town of ten thousand inhabitants, can now be reached in twenty days. The completion of the Panama Canal will make the world-market 3,000 instead of as at present 9,000 miles distant.

It is reported from Milan that an earnest attempt is to be made to restore Da Vinci's mural painting of the Lord's Supper. The work is to be done by the enthusiastic artist and experienced restorer Luigi Carenaghi, and his method will be to fasten to the wall by means of a colorless glue the color flakes that have peeled or are threatening to peel from the wall. The work, from its perishing condition, will require an extraordinary measure of patience, and doubts are entertained if the venture will be successful.

—"Transactions of the Department of Archæology" is the title of a new publication of the Department of Archæology of the University of Pennsylvania, intended as an official organ to convey information to subscribers and elicit interest in the work of exploration, of which Parts 1 and 2 of Volume I. have just appeared under one cover. There is no foreword or introduction of any sort, nor any statement of periods of publication. The Department of Archæology appears on the cover as the publisher, and the names of the officers of the department are printed within. Two-thirds of Part 1 consist of the "Report of the American Exploration Society's excavations at Gournia, Crete, 1901-1903," by Miss Harriet A. Boyd, plentifully illustrated by half-tones, cuts, sketch maps of Crete and the Isthmus of Hierapetra, and a plan of the central acropolis of Gournia, so far as excavated, with one colored plate. (Miss Boyd herself in the text designates her article as an "introduction to the Report.") Gournia is the modern name of an unknown ancient town, either Minoa or in the neighborhood of Minoa, on the north shore of the isthmus connecting the eastern end of the island with the main part of Crete. The excavations at this spot up to date have revealed "a well-preserved town, dating from the earlier period of the great palace at Knossos (about 1800-1500 B. C.), and containing a large quantity of tools, pottery, and other articles of daily use." Miss Boyd also describes, briefly, her explorations and excavations in the same neighborhood in 1900, prior to her engagement with the American Exploration Society of Philadelphia. Another article, by Professor Bates, describes a black-figured amphora, now in the Free Museum of Science and Art of the University of Pennsylvania, containing scenes from the Aethiopis, supposed to be the work of the well-known Attic painter, Amasis, a contemporary of Pisistratus. Mr. William H. Furness, 3d, with a keen sense of humor, and lovely tropical pictures as illustrations, tells about the extraordinary stone money of the Island of Uap in the Caroline group; and Mr. George Byron Gordon discusses "Chronological Sequence in the Maya Ruins of Central America." Part 2 is a reprint in English of a lecture delivered before the German court and university circles by Prof. H. V. Hilprecht, entitled "In the Temple of Bel at Nippur." It is entirely of a popular, not scientific, character, and practically a reprint in both text and illustrations from his recent book on the excavations at Nippur, which has already been reviewed in these columns.

—The August *Library Journal* contains one article that might interest readers outside the craft, namely, Dr. Flügel's appreciation of "Henry Bradshaw: Librarian and Scholar," read before the Library Association of California. It cannot fail to awaken a desire to know more about this remarkable man, and they should be referred to Mr. Prothero's 'Memoir of Henry Bradshaw' (not 'Life' as Dr. Flügel calls it) (London, 1888), and to Bradshaw's 'Collected Papers' (not 'Letters and Papers') (Cambridge, 1889). When Bradshaw, in 1867, accepted the librarianship of Cambridge University, he gave up all hope of ever being able to make independent use of the vast amount of information in regard to manuscripts and early printed books, which he had accumulated during years devoted to research in Cambridge and elsewhere; he was truly a martyr to his own ideal of a librarian as "one who earns his living by attending to the wants of those for whose use the library under his charge exists—his primary duty being, in the widest possible sense of the phrase, to save the time of those who seek his services." By a happy coincidence, the July number of the *Library* publishes the first instalment of Bradshaw's correspondence with Mr. Winter Jones and other officials of the British Museum—inquiries about early printed books in the Museum Library, bits of information in regard to his own researches and discoveries, which he always felt in duty bound to report to headquarters, collations of rare books, and the like. It is a pity that the volume of Bradshaw's letters on scientific and literary subjects mentioned in the preface to Mr. Prothero's 'Memoir' has not been published. Even a selection from

his notebooks might find a small circle of readers.

—Bradshaw was the founder of what may be called the "natural history" school of bibliography, the most successful exemplar of which was Robert Proctor, whose untimely death in the Alps was an irreparable loss to his science. More successful than his master, he had found time to complete his *magnum opus*, the 'Index to Early Printed Books in the British Museum.' Its first volume, dealing with the incunabula, was published in 1898, and gave its author at once reputation as one of the foremost bibliographers of the time; of the second volume, covering the period from 1500 to 1520, the part describing the productions of the German presses was in the printer's hands at the time of Proctor's death, while the material for the remainder was found to be in such shape that Mr. A. W. Pollard hopes to be able to complete it. Mr. Pollard will also issue in a separate volume Proctor's scattered papers on bibliographical subjects. The January and April numbers of the *Library* contain a biographical sketch of Proctor, and an estimate of his work, both by Mr. Pollard.

—Dr. Hugo Ganz of Vienna gives an interesting account in the *Frankfurter Zeitung* of an evening he recently spent with Count Tolstoy, who discoursed with him for six hours on a variety of topics. He spoke, among other things, enthusiastically of a great enterprise for benefiting the masses which was started at his suggestion—the Posrednik. The Moscow publisher Gorbunoff prints annually several millions of good books, principally stories, which are sold at about cost price and take the place of the trash with which the markets used to be flooded. The Count looks on this as a continuation of school education and of even greater importance than that. He also spoke of his own reading, saying that at present he was entirely under the influence of two Germans, Kant and Lichtenberg. He admired the wit as well as the philosophy of Lichtenberg (who was one of Schopenhauer's favorite authors), and expressed his astonishment that the Germans should neglect him and go mad over a mere trifler and feuilletonist like Nietzsche, who is no philosopher at all, no searcher for truth. When his visitor ventured the opinion that the German-speaking countries have produced no really great author since Gottfried Keller, the Count expressed surprise, and said he had never heard of him. He declared his preference for Heine's poems over Goethe's; maintained that Shakspere as well as Goethe wrote only for æsthetic reasons, without shedding their heart blood, as Schiller did. Shakspere he spoke of as being coarse, immoral, a flatterer of the great and despiser of the small, a calumniator of the people, tasteless in his jokes, unjust in his sympathies. His art, too, is overrated, for he took all that is best in him from other writers. But the world is blind on this subject, owing to a species of hypnotism—"Massensuggestion." Concerning the Dreyfus affair, Tolstoy said that he had received probably a thousand letters at the time urging him to raise his voice, but that he did not care to, as he thought that altogether too much fuss had been made over the matter, which had degenerated into a newspaper epidemic.

—The 'Chronicon Adæ de Usk' was edited for the first time in 1876 by Sir E. M. Thompson from a unique manuscript in the British Museum. But this manuscript is incomplete, stopping at the year 1404. In 1885 the missing portion, which continues the record till 1421, came to light at Belvoir Castle, the seat of the Duke of Rutland. The discovery was made by agents of the Historical Manuscripts' Commission, but, through a misunderstanding of its true character, they did not communicate the fact to the editor, who had already published the earlier portion of the chronicle. Thus nearly twenty years have elapsed between the recovery of the text and its publication in conjunction with the manuscript of the British Museum. We make this bibliographical statement because, while the volume now issued by Sir E. M. Thompson is a second edition, it is far from being a second edition in the ordinary sense of the word. It contains matter which is essentially new in respect to both text and comment. Adam of Usk cannot be called a chronicler of the higher class, like William of Malmesbury or Matthew Paris, but the character of the information which he furnishes is rather distinctive. A native of Monmouthshire, he was born about 1352, and owed his first promotion to Edmund Mortimer, third Earl of March. Through this patron he received an exhibition at Oxford, where he took the doctor's degree and eventually filled the chair of civil law. Owing to his legal acquirements he gained considerable prominence, but soon fell into disgrace through a singular act of brigandage. "Grievous is it," says Sir E. M. Thompson, "to have to relate that Adam of Usk, a doctor of laws of Oxford, a clergyman of standing, and one who enjoyed the protection of the great and powerful, . . . had, on the 2d November, 1400, taken to the road in Westminster and stolen a horse, color black, saddle and bridle, value one hundred shillings, together with the sum of fourteen marks in cash, all the property of one Walter Jakes; and that Adam and his servants, Edward Usk and Richard Edoyn, were convicted as common thieves." For this offence our author was driven into exile, but by no means lost his influence in the world, since he went to Rome and became chaplain to Pope Innocent VII. Eventually he returned to England, though not before he had seen enough of ecclesiastical affairs during the Schism to improve the quality of his chronicle. It is for social and ecclesiastical history rather than for politics and war that this narrative is valuable. Adam was not a monk, but a very active clerk, who saw a good deal of life in England and abroad. Hence his chronicle, though brief, has a note of its own and deserves such an editor as it has found.

LEWIS AND CLARK IN PURIS NATURALIBUS.

The Original Journals of the Lewis and Clark Expedition, 1804-1806, for the first time published in full and exactly as written. Edited, with introduction, notes, and index, by Reuben Gold Thwaites. Seven volumes, with Atlas. New York: Dodd, Mead & Co. 1904.

Are we getting too much of Lewis and Clark? The Germans are said to have complained because the Goethe admirers have edited the very shaving-papers of their idol and even the contents of his waste-baskets. Is there no danger that in a similar way Lewis and Clark will be "written to the dregs"? We have here presented every scrap that can be gleaned coming from the Captains and their men. Some certainly will declare that there is no time for this. For our part, we are not so minded. In the coming of these heroes the eyes of intelligent men first beheld the nobler features of the beautiful land that is our mother when at last the veil of mystery began to depart from them. From no achievement of our history have flowed consequences more important; no exploit has been put through with more manful efficiency, or better deserves to be set forth with all fulness of detail.

Dr. Thwaites, who puts these volumes in order for us, has now for some time been rising upon the world as a worker in Western history until at the present moment he may properly be regarded as our foremost authority in that field. Though born in Boston and educated in New England schools, his fate early threw him into the Mississippi Valley, with the conditions and development of which he has become intimately, indeed rather oddly, familiar. Though a scholar and writer, he has had a hankering always for the backwoods, and has explored the trails and streams as eagerly as the books. He has traced the course of the pathfinders, paddling his canoe down many of the historic waterways, hunting, camping, portaging in the ancient fashion, reproducing for himself so far as possible the old *voyageur* life. His most noteworthy exploit in this kind has been on the Ohio, down which he coursed in aboriginal fashion from its headwaters to its mouth for a thousand miles. Thus imbued with wilderness tastes, and at the same time thoroughly up in the books, Dr. Thwaites possesses precisely the equipment for editing such a series as the "Jesuit Relations," and now Lewis and Clark.

The story of the original records of the expedition is as follows. Jefferson, whose conduct of the whole matter of the expedition was most judicious, directed that not only the Captains but the men, if any of them were competent to do so, should make records, to be preserved as the most precious thing they carried. Such records were accordingly kept by the Captains, by the four sergeants, and, by two, possibly three, privates. On the return, Jefferson desired that an account based on these documents should at once be published. But before the publication could be managed, both Lewis and Clark had become absorbed in other ways. They had received, together with commissions as brigadier-generals, important assignments—Lewis to the governorship of Louisiana, and Clark to the office of Indian agent. The manuscripts waited; the sole authentic source of information concerning the enterprise meantime being the journal of Sergeant Patrick Gass, which appeared in 1807, a few months after the return.

Jefferson continued to press, and in 1809 Lewis set out for Philadelphia (where the documents had been put into the keeping of the American Philosophical Society), with the design of superintending the preparation and issue of the story already so

long delayed. On the road came the tragedy of his death, which occurred at a lonely spot in Tennessee; probably a murder, though long believed to be a suicide. Jefferson now turned to Clark, who, having no taste or training for such work, after a time engaged Nicholas Biddle, subsequently famous and even then remarked for his brilliant gifts, to prepare a suitable narrative.

The data from which Biddle now set to work to make his digest consisted, first, of the journals of the Captains, together with papers in looser shape; second, the journal of Gass, as well as those of the Sergeants Ordway and perhaps Pryor, still in manuscript—journals which afterwards disappeared; and, third, the oral communications of Clark, who met Biddle in Virginia and elsewhere, and also of George Shannon, a bright boy who had been in the rank and file, and who was now brought on from Kentucky to give what help he could. Dr. Thwaites estimates that the memoranda in Biddle's hands amounted to a million and a half of words, from which, incorporating the oral suggestions of Clark and Shannon, he produced at last a digest of three hundred and seventy thousand words. This saw the light in 1814, eight years after the expedition returned. The Biddle digest took its place at once as a work of high and authoritative character. The fact that it was merely an abstract and not the veritable record of Lewis and Clark, was soon wellnigh forgotten. The mass of documents from which it had been derived was returned for the most part to the keeping of the American Philosophical Society, of which Jefferson was president; he earnestly asserted that every scrap relating to the enterprise belonged rightfully to the Government, and, with a wise appreciation of their value, demanded that all papers should be scrupulously guarded. He particularly regretted that the volume of scientific records did not appear. Dr. Barton, to whom the editorship was entrusted, died with the data in his hands, and, in spite of Jefferson's urgency, nothing was done to secure a successor.

The original records thus committed to the vault in Philadelphia were lost to sight for seventy-five years, and the story of their re-discovery is interesting. Dr. Elliott Coues of Washington, a scientist of eminence in Government employ, engaged about 1890 in preparing an annotated reissue of the Biddle text of Lewis and Clark, which had become a tolerably rare book. Though a man of incisive intelligence, likely to be informed as to all sources from which help might come, he was quite unaware of the existence close at hand to him in Philadelphia of the collection which Jefferson had protected. His work was finished and in the printer's hands, the galley proofs in fact undergoing inspection, when by chance he heard that possibly a treasure might lie concealed in the American Philosophical Society's vaults. Furnished with a letter from a son of Clark, he applied for permission to examine, and saw at once the importance of the find. He forthwith set about a complete revision of his work, incorporating with his notes many extracts from the original documents, and making very plain their value as imparting interest and accuracy—and flavor—to the story. Thus enriched, the work long withheld appeared in 1893, in four volumes, and takes rank in the first class in the literature of scientific travel.

As the centenary of the Lewis and Clark Expedition drew near, perhaps by some occult incitement from the spirit of Jefferson, the guardians of the documents became impressed with the appropriateness of publishing them in full in celebration of the occasion. Messrs. Dodd, Mead & Co. undertook the publication; and Dr. Thwaites was fitly engaged as editor. Dr. Thwaites had an experience quite similar to that of Dr. Coues. He, too, had advanced far in his labors when he was startled and disconcerted (agreeably, we may well believe) by a most unexpected find. The documents at Philadelphia had been studied, annotated, and largely made ready, with the thought that nothing besides existed; the work was announced, the printers already engaged, when the revelation came in the following manner: Biddle, as we have said, is known to have used the journal of Sergeant Ordway, but it could not be found at Philadelphia. Thinking it possible it might be preserved by the descendants of Clark, to whom Ordway had sold it, Dr. Thwaites entered upon a correspondence with them, as a result of which the fact came out that the Philadelphia collection by no means contained all the relics of Lewis and Clark. Though Jefferson had pressed to have everything surrendered, Clark had retained much which the Voorhis family, descendants living in the city of New York, still carefully cherished and were willing to surrender. Dr. Thwaites hereupon recast his work so as to make it include the New York material, and, thus supplemented, it is now offered to the world. Dr. Thwaites presents: (1.) The Philadelphia deposit, consisting of eighteen carefully prepared note-books and a large mass of loose papers. (2.) The Voorhis collection, comprising four more careful note-books; an orderly book, in less formal shape, kept for the most part by Ordway, who was first sergeant, but in which there are entries by other hands; a field-book of Clark's, enclosed roughly in elk skin, carried in his pocket during the fall and early winter of 1805, as they were making their way down the Pacific slope; many letters of high interest; and finally sixty maps. (3.) To the documents left by the Captains are added the journal of Sergeant Floyd, never until now correctly printed, and the journal of Private Whitehouse, just discovered. The journal of Ordway, the hunt for which led to the finding of the Voorhis collection, still eludes the search, as do also those of Pryor, Frazier, and Shannon, if they ever existed.

It cannot be claimed that the "Original Journals" bring to light any new fact of importance. Biddle's good judgment saw to it that nothing essential should escape mention in his digest. The Originals contain more details, though occasionally Biddle gives something omitted in them, and presumably obtained from the oral communications of Clark or Shannon. But there is a personal quality about the Originals which makes them far more vivid and interesting than the digest; and in many a description there are touches, pruned away by Biddle, which make the picture graphic. It seems to have been proper etiquette in that generation to suppress the rank and file. Instead of giving the name of the actor in a deed, both Biddle and Gass are apt to put it "one of our men." In the Originals the name appears much more often, sometimes with a bit of racy comment, and the interest is greater. Touches of character, often quaint and amusing, appear in the Originals which the arranger cut out, so that as "human documents" the gain is vast. Lewis and Clark really stand out now for the first time clearly revealed in their individuality, contrasting and sharply marked types of manhood, yet both souls of heroic mould, supplementing each the other as they move among their perils. Lewis, of the two, is more a man of the pen, portraying at length with real zest plants, animals, phenomena, that come up to be described. His temperament is poetic, with eyes open to the beauty of nature; now and then appears a dash of humor. Some of his records are marked by delicacy, indeed by high spiritual refinement; and if now and then they are a bit sentimental and overstrained, the naïve and ingenuous confidence only endears the writer to us the more.

"June 18, 1805, I determined to give the river a name, and in honor of Miss Maria W—d called it Maria's River. It is true that the hue of the waters of this turbulent and troubled stream but illy comport with the pure celestial virtues and amiable qualifications of that lovely fair one, but, on the other hand, it is a noble river."

Here is the entry for August 17, 1805:

"This day I completed my thirty-first year, and conceived that I had in all human probability now existed about half the period which I am to remain in this sublunary world. . . . I viewed with regret the many hours spent in indolence, and now sorely feel the want of that information which those hours would have given me had they been judiciously expended. But since they are past and cannot be recalled, I dash from me the gloomy thought and resolved in future to redouble my exertions, . . . and in future to live for mankind as I have heretofore lived for myself."

Contrasting with Lewis, the records of Clark are often characterized by a frontier roughness. No doubt his diary was a sore trial to him, kept only because Jefferson had commanded it. The beauty of nature receives small attention. He drives bluntly at his topic without sentiment, introspection, or tautology, and is a law unto himself as to grammar and spelling. Though the appeal of nature awoke no vivid response in him, he was quick to recognize human worth. Of a starving tribe, he writes: "Those people are not begerley, but generous. Only one has asked me for anything, and he for powder." And of Sacâga-wea, the Bird-woman, the heroine of the expedition, he says: "To her I ascribe equal fortitude and resolution with any one on board." As woodsman and waterman, Clark was undoubtedly the superior; and in dealing with the tribes, though Lewis was in a high degree tactful and intrepid, Clark probably was the more dexterous. In the annals of the frontier, in fact, the great brothers Clark, George Rogers and William, are beyond all others past masters in the art of Indian management. William was, too, the surveyor and draughtsman of the enterprise. Although entirely untrained, he made numerous maps, which, with all their shortcomings, are still excellent cartographic examples. The Atlas containing the more elaborate of these, sixty in number, we have already noticed (*Nation*, April 28, 1904), and shall not here dwell upon. As remarkable as the maps are the many drawings of men,

beasts, birds, plants, and natural objects, lavishly interspersed throughout the documents, on separate sheets, and also about the margins and within the text—off-hand sketches, charged with vigor and life.

Lewis and Clark had each their particular gifts, and each in his way was a fine type of manhood. How brave, humane, and high-purposed they were is now for the first time made plain in these Originals. The manly affection that bound them together, now also for the first time revealed in correspondence brought to light by Dr. Thwaites, and the momentous development flowing from their connected effort, make their friendship, as the editor declares, one of the most memorable in history.

It is a story most creditable, but, like all things human, it has its shadows—shadows now first made plain in this full unfolding. The rank and file were, to be sure, picked men and composed a most courageous and serviceable company; but they were gathered from garrisons and frontier communities where license and not law prevailed, as the rule, and had the vices of their station. As the rough edge of advancing civilization cuts into barbarism, it is the barbarian women who suffer first, and the Lewis and Clark expedition is only another illustration of the fact. Little restraint seems to have been put upon the men. As regards the subordination, moreover, to which the party was brought, we know now for the first time clearly the drastic and old-fashioned methods employed by the commanders to subdue their following. In great part it was at the start a body of turbulent and ill-disciplined youths. George Shannon was only sixteen when he enlisted, and others probably were not much beyond boyhood. Some of the best were at first unpromising. In the camp at Wood River, John Shields, Reuben Fields and John Colter, the very flower of the rank and file, gave trouble. For offences grave and light, floggings were inexorably administered. Read and Newman were not only whipped, but discharged. John Collins and Hugh Hall, for getting drunk on stolen whiskey, were whipped but not discharged. The case of Alexander Willard awakens sympathy—a young New Hampshire man of superb physique, who was picked as the best out of a hundred men. He afterwards lived in St. Louis as the friend and neighbor of Clark, but at 75 tramped across the continent again to Oregon. There he lived, in patriarchal dignity, the progenitor of twelve children, fifty grandchildren, and thirty great-grandchildren, till the age of 88. His breaking-in with Lewis and Clark grew out of the fact that, being accused of sleeping on guard, he pleaded guilty to lying down but not to sleeping. He was, however, adjudged to receive a hundred lashes "on the bear back," which were forthwith administered. Bratton used to tell his children that on such occasions the agents of the punishment were afraid to lay on mildly lest they themselves should suffer; and on one occasion a Ricara chief who was present wept at the sight and begged that mercy might be shown. It was the way of the world—a slaveholding world, in those days, and both Captains were Virginia-born. Moreover, flogging then prevailed in our army and navy. Strangely enough, the sufferers seemed to bear no rancor. After the first, the need for discipline apparently disappeared, and perfect harmony and obedience prevailed to the end.

As regards the work of Dr. Thwaites in arranging the vast and chaotic mass of material, and in providing it with proper introduction and notes, it is all that could be expected from a scholar so able and painstaking. Now and then a better word might have been chosen. We think it absurd to call Clark's spelling "phonetic." If the sounds the good Captain uttered answered at all to the strange combinations which he sometimes set upon his page, the very wilderness would have had a grievance. July 4, 1805, the party being then high up the Missouri, Lewis "witnessed a nois," a strange rumbling from the mountains like cannon fire. He speaks at other times of something similar. So far as we know, this has never been explained. The trenchant Dr. Coues in a note, after declaring the passage to have been much misconceived, denounces the "dunces" who have referred to it, but vouchsafes no solution of the mystery; nor does Dr. Thwaites, though the phenomenon well deserves to be accounted for. But oversights are rare, the friendly commentator being at hand for every difficulty. The bibliography of Mr. V. H. Paltsits is a marvel of minute accuracy. We shall take occasion later to notice the scientific memoranda, making volume six of the series, and also the Floyd and Whitehouse diaries, and the full appendix making volume seven. The Original Journals will appear also in an *édition de luxe*, sumptuously appointed, and embellished with the illustrations of Bodmer. These magnificent pictures of the Indians of the time of Lewis and Clark, prepared for the work of Maximilian, Prince of Wied, the early traveller, are held to surpass all others in interest.

WAGNER'S MOST INTERESTING LETTERS.—I.

Richard Wagner an Mathilde Wesendonk. Berlin: Alexander Duncker.

In one of these letters to Frau Wesendonk, Wagner declares that whereas Goethe was *ein ganzer und vollkommener Augenmensch*—a man who lived entirely in the world of sight—he himself was "too much of an ear-man" (*zu entschieden Ohrenmensch*). Nevertheless, Goethe shared with Wagner and Schopenhauer a distressing sensitiveness to noise. Wagner suffered untold agonies, loss of sleep, and interruption of labor from the din incidental to city life, and this volume contains some amusing illustrations of the measures to which he resorted to escape it. His residence in Zurich being opposite a smithy, he paid the blacksmith to keep quiet during the morning hours which he devoted to composition. But the pianos in the neighborhood multiplied till he had to take to flight. At another time, when he was staying at the Hotel Schweizerhof in Lucerne, he tried in vain to preserve peace by paying, as long as he could afford it, for the rooms adjoining his. His maid did all she could to help him; "Vreneli," he writes, "is here my guardian angel; she intrigues and does her best to keep away troublesome neighbors; children are not tolerated on our story. Joseph has, moreover, stopped up the door to the adjoining room with a mattress and hung a portière over it, which gives my room a quite imposing theatrical appearance."

What Wagner always wanted, and what he could not afford to pay for, was an "Asyl"—a secluded retreat where he would hear nothing save the song of birds and other sounds of nature. It was, therefore, a stroke of good fortune that, at the most creative period, such an "Asyl" was provided for him. His friend, Otto Wesendonk, a wealthy associate of a New York silk house, owned a luxurious and beautifully situated villa on an eminence near Zurich, of which a picture is included in the present volume. A stone's throw from it, Herr Wesendonk erected a small building which he placed at the disposal of Wagner, who occupied it with his wife for sixteen months, during which he was engaged on his "Tristan and Isolde." He had first become acquainted with the Wesendonk family at Dresden in 1852, five years before he accepted their hospitable offer of the "Asyl"; in 1853 an intimate friendship was established between them at Zurich. Wagner read his poems to Frau Wesendonk, played Beethoven and his own music for her, initiated her into the philosophy of Schopenhauer, and otherwise wrote his wisdom on her mind, which, in her own words, he had found "like a white sheet of blank paper." Her husband gave him an American gold pen, with which he wrote the whole of the orchestral score of "Die Walküre"; and subsequently, when Wagner needed money, bought this score of him, and afterwards presented it to the King of Bavaria. He further advanced a large sum on the unwritten parts of the Nibelung Tetralogy, without asking or expecting restitution. He may be classed, in short, with Liszt and Ludwig II. as one of Wagner's leading benefactors. "But Otto must really be awfully tired of me," the composer wrote to Frau Wesendonk in 1863; "always ready to help me, how often he has thought that now at last I must be able to get along; yet we always come back to the old spot—nothing seems to avail—it is all thrown away."

In his Swiss asylum Wagner would have been happy to spend the rest of his life; but it was not to be. In a long letter which he wrote to his sister Kläre on August 20, 1858, he explained why he finally felt constrained to leave. This letter is included in the present volume, but the editor injudiciously omitted a paragraph which throws an interesting light on the situation. In this paragraph (printed in the Berlin *Tägliche Rundschau* of September 23, 1902) Wagner says that his intimate friendship with Frau Wesendonk aroused her husband's jealousy, but that she succeeded in allaying this feeling to such an extent that he not only remained on the best of terms with his guest, but continued to assist him materially. A volume of letters ('Briefe R. Wagner's an Otto Wesendonk'), the last of which is dated 1870, gives eloquent evidence of the cordial relations that continued to exist between the two men. The trouble came from Wagner's wife; she looked on the friendship between her husband and Frau Wesendonk as a common intrigue, and acted accordingly; the upshot being that Wagner took her away from the "Asyl," to which he never again returned.

It is impossible to read this volume of letters without concluding that Frau Wagner (the composer's first wife, of course, is here in question) did him as great an injustice in thus doubting his conduct as she

did him harm in driving him away from a place so ideally suited for creating operas. To his sister, Wagner wrote: "Since our union was out of the question, our deep affection took on the sad, melancholy character which wards off all that is common and low, and finds its sole source of joy in the other's happiness." The very fact that Frau Wesendonk (who died in 1902) gave orders that this correspondence should be printed verbatim, without omissions, evinces her conviction that it would silence all doubt and malicious gossip. It might be said that Frau Wagner's character had the natural effect of intensifying the intimacy against which her jealousy raged. Frau Wesendonk was in all these respects the reverse of Frau Wagner. To her he played in the afternoon what he had composed in the morning, sure of her sympathetic appreciation. With her he could talk over his plans, his hopes, his disappointments, and his moods, whether *himmelhoch jauchzend* or *zum Tode betrübt;* and when he had left the "Asyl," letters had to take the place of conversation. "Once on a time," he writes three years after the separation, "I found the heart and the soul that in such moments understood me completely, and which I loved because of this perfect appreciation. . . . You are the angel of my repose, the guardian of my life." On another occasion he tells her about the deep impression made on him by a perusal of "Lohengrin" and of his plans for a new opera, "The Victor," which was to be a sort of sequel to "Lohengrin." "I cannot write you anything but such gossip"; he adds, "that alone seems worth while. And you are the only one with whom I love to gossip about such things; and when I do, time and space, which encompass naught but torture and distress, are annihilated." He tells her that he is more sincere with her than with himself; that it would be impossible for him to communicate his thoughts to a man in the same way as to her; that he always felt safest when he allowed her feelings and suggestions to guide him. But the most striking proof of his devotion to this remarkable woman is that, after he left the "Asyl," he wrote a special diary for her, in which he confided to her his inmost thoughts almost daily for several months. The preface to the present volume states that he wished this diary as well as his letters to be destroyed; but Frau Wesendonk ignored this request—most fortunately, for this book contains many pages that are more fascinating even than Wagner's letters to Liszt, both musically and personally. Nowhere else, indeed, does Wagner show his character in such a favorable light; the late Dr. Hanslick himself might have here learned to pity and love his old foe.

Musically, too, this friendship bore valuable fruit. Frau Wesendonk was not only able to appreciate her poet-musician, she herself had a poetic gift. "You have become a poetess in the noblest sense of the word," he once wrote to her; and every singer is familiar with the five poems of hers which he set to music. Two of these —"Träume" and "Im Treibhaus"—he himself designated as Studies to "Tristan and Isolde." "I have never done anything better than these songs," he wrote to her; "few of my works can be placed beside them." On a subsequent occasion he goes so far as to say concerning "Träume": "God knows, I now like this song better than the scene in the opera. Heavens, this is more beautiful than anything I have done. I quiver in my deepest nerves when I hear it." The personal element enters into this judgment, to be sure, but so it does in the case of the opera. "Tristan and Isolde" is largely autobiographic. In a letter dated December 21, 1861, he exclaims: "That I wrote 'Tristan' I owe to you, and thank you therefor from my deepest soul to all eternity." The first act of the opera was composed in the "Asyl," and the situation in it is not unlike that of Wagner and his friend as described in that letter to his sister: "We at once recognized the fact that we could never think of being united; hence we became resigned, gave up every selfish wish, suffered, endured, but—loved one another."

The second act of "Tristan" was composed in Venice, whence the letters to Frau Wesendonk contain many interesting details regarding the progress and process of composition and Wagner's life in that romantic city, which seemed like a dream:

"For the first time I breathe this invariably delicious pure air; the faery-world aspect of the city keeps me as by magic in a melancholy-joyous condition. When I take a gondola ride in the evening to the Lido, I seem to hear a long-drawn-out soft violin tone such as I love and once compared you to; now you can imagine how I feel here on the sea by moonlight."

Of course this mood did not continue any more than the fine weather, but his opera absorbed him more and more; early in October, 1858, he resumed work on it, and on December 8 he writes: "I feel as if I should like to devote all the rest of my life to this music. Oh, it will be deep and beautiful. . . . Anything equal to this I have after all not written before." By the tenth of the following March he had completed the second act, and pronounced it the summit of his art up to that time. "For my art I need the world less and less; so far as my health permits, I should be capable of working on always in this way even if none of this music should ever be performed." "With such care do I compose everything that the shortest phrase assumes as much importance as a whole act." "The other evening Ritter and Winterberger succeeded in persuading me to play the principal things, and a fine state of mind was the result! All my former works, poor things, were cast aside for this one act. Thus do I rage against myself, and always assassinate all my offspring but one." The last act followed close upon the second. On August 27 he writes joyfully: "Don Felix [Draeseke] asserts that the third act of 'Tristan' is even more beautiful than the second. But concerning this matter I beg you to set him right thoroughly. Am I to tolerate such things?" When he began this act, in April, he wrote: "I see clearly that I shall never more invent anything; that one highest period of bloom started such a multitude of germs within me that I now need only to resort to them to raise my flowers with ease." A little later: "Child, this 'Tristan' will be something terrible! This last act!!! I fear the opera will be forbidden—unless a poor performance should make a parody of it; only a mediocre performance can save me! Really good ones must make the hearers insane." "Child, child, I have just shed tears while composing. . . . It is enormously tragic! All overwhelming!"

Frau Wesendonk was not only the actual heroine of this, the most Wagnerian of operas; it was also her good fortune to be made the first recipient of the detailed plans for "Parsifal." At the time when her acquaintance with Wagner began, the "Parsifal" had not yet been differentiated from "Tristan"; ultimately he transferred to it not only some things that he had intended for the last act of "Tristan," but also some of the material for two operas which he never wrote: "Der Sieger" and "Jesus von Nazareth." We see from these letters that while he was in the midst of the "Tristan" composition the "Parsifal" story was gradually shaping itself in his mind. In the Diary, on October 1, 1858, he refers to the Good Friday scene in the third act of "Parzival" (the spelling Parsifal was not used till 1877); in the following January he says that his mind is filled with presentments of Sawitri and Parzival. On March 2 he writes: "The 'Parzival' has occupied me much of late; particularly does a peculiar character, a wonderfully world-demonic woman, the Grail messenger [Kundry], appear before me more and more vividly and fascinatingly. If I should ever succeed in finishing this poem it would be something very original. Only I fail to see how I can live long enough to carry out all my plans." On May 30 he begins to show alarm at the evocations of his own fancy. Referring to "Tristan" he writes:

"This last act is a real fever—the deepest, unprecedented suffering and longing, followed at once by unprecedented exultant joy. Heaven knows, no one has ever taken his art so seriously, and Semper is right. It is this that has quite recently prejudiced me against the 'Parzival.' It became clear to me that it would be a most onerous undertaking. Accurately considered, Anfortas [*sic*] is the principal and central figure. But that makes a stupendous story. Try to imagine, for heaven's sake, what it means! To my mind it became clear suddenly with a terrifying effect; it is my 'Tristan' with an inconceivable intensification."

He proceeds to sketch the tragic situation, and adds: "Am I to carry out such a thing, and even compose music for it? No, thank you very much! Let who will do that; I shall keep it off my shoulders." Then three more pages about the drama, and again the exclamation: "Am I to assume such a task? God save me! This very day I take leave of this senseless project; let Geibel write the poem and Liszt the music," he adds playfully. But in August, 1860, he writes again, from Paris: "Once more my mind has been quite busy of late with 'Parzival'; it is becoming more and more lucid; when once all the details have ripened, the writing of this poem must prove an unheard-of pleasure to me. Before that is done, however, many years may pass. I should like, too, in this case, for once, to let the poem stand without music." Five years later, at the urgent desire of Ludwig II., he wrote out a complete sketch of the "Parsifal" drama and sent it to the King with the words: "The time has come; the greatest, most perfect works remain to be created."

LOGICAL LIGHTS.

Ch. Renouvier, Membre de l'Institut: Les Derniers Entretiens. Recueillis par Louis Prat. Paris: Armand Colin. 1904. Pp. 107.

Studies in Logical Theory. By John Dewey.

With the Coöperation of Members and Fellows of the Department of Philosophy. (The Decennial Publications, Second Series, Volume XI.) University of Chicago Press. 1903. 8vo. Pp. 378.

The metaphysical and logical philosophy of Charles Bernard Renouvier, who died on the first day of last September, aged eighty-eight years and eight months, is the most highly esteemed of any by the average Frenchman of to-day; or, as Renouvier himself perhaps more accurately put it, "il est entendu que Renouvier est très fort, mais on ne le lit pas." Considering that the proper date of it is 1848, or earlier, its style and method being those of that period, and its determinative elements having been fixed not long after that date, its reasonings must be praised for their strictness, in comparison with those of metaphysicians generally. Indeed, had their author, instead of coming from the arena of political journalism to take up philosophy when the *Coup d'État* had shut his mouth to the socialism he had been talking, only received a sound training in any successful branch of scientific research, his native vigor of intellect would have shaped those reasonings to rise above the level of other metaphysical argumentations, and would have caused them to prove something—or, at any rate, to go towards proving something. He himself maintained that the fundamentals of his system were as perfectly demonstrated as the theorems of mathematics, if not more so. When, at last, he came to perceive that a senile ossification of his tissues had advanced so far as to leave him now but a few days more to live—a week or a fortnight, he imagined—with a tremendous effort he gathered all his forces in order to pour into the ear of his devoted disciple and bosom friend, M. Louis Prat, some last philosophical injunctions that to him seemed precious above rubies.

Beginning appropriately (though he may not have noticed the coincidence) on the feast of St. Augustine, August 28—it fell upon a Friday—he spoke continuously from one o'clock till three, and then, after half an hour's intermission, for near two hours longer, M. Prat taking notes, stenographic or other. On the morrow, a very long forenoon discourse was supplemented by a shorter one before sunset. Sunday brought another lecture; Monday two—one in the afternoon, the other from nine to eleven in the evening. At 8:45 the next morning he expired. So undeniable was his earnestness. Apostle and martyr of the gospel of work, he was determined to expend his energy to its last grain in doing his duty. Another philosopher in his place might have thought that, since his doctrine was capable of demonstration, it must eventually be acknowledged, no matter with what contumely it was received at first, and that his business should be confined to presenting once for all a demonstration of it that any vaporous supplement could only mar; decency, indeed, forbidding that a priest of divine philosophy should put her into a position of mendicance for a lodging. But (singular scepticism!) this continuator of the great optimist, Leibniz, had no confidence in his own doctrine's ever coming to be generally received, for all its scientific and demonstrative truth. He had reckoned up the chances and found them adverse.

He hated to die; and in these talks—not "*entretiens*," by the way, since there were no interlocutors, nor any subject agreed upon at the outset—we cannot detect any marked falling off of intellectual powers as compared with the 'Essais de Critique Générale,' the 'Science de la Morale,' and 'La Nouvelle Monadologie,' to say nothing of last year's 'Le Personnalisme.' Being in such possession of his faculties, and in no great bodily pain as long as he kept still, it would have seemed unnatural if he had relished the idea of death. He said: "Je m'en vais. Il me semble que je glisse sur une pente, et je dois, par moments, faire un effort pour me retenir. C'est étrange! ce glissement dans l'inconnu a comme une espèce d'attrait pour moi." He was interested in his own interesting personality; and the little volume is far better worth reading for its human elements than for any utility to a scientific philosophy. It gives two portraits.

The volume of which Professor Dewey is the father forms a part of the University of Chicago's exhibit of an impressive decade's work, and is a worthy part of it, being the monument of what he has done in his own department. Here are eleven essays, four by himself, defining his conception of the business of the logician, seven by the students whom he has helped to form and set upon their own intellectual legs. It affords conclusive proof of the service he has rendered to these accomplished thinkers and, no doubt, to others; and they in their turn will render to another generation services of the same nature. Whatever there was to be gained by contact with a sincere student of philosophy, as such, they have manifestly gained. Are there any further services that logic could be expected to perform? Are any logical questions now being agitated in the different sciences? Is there any such question as to the constitution of matter, the value of mechanical hypotheses, now open in physics? Are there any methods as to more or less statistical methods of philological and historical criticism? If there are such questions, has past experience gone to show that there was any help to be had from broader sweeps of study than specialists can make? Is it worth while to examine at all into the questions here asked; and if it be, is it best to carry to them vague impressions, or the exactest conceptions that studies specially directed to them have been able to evoke?

There are specialists who are disposed to think any inquiries from the outside into their methods are impertinent. They say, with perfect justice, that they understand fully their own business, and wish to be let alone. Unquestionably, they must be right. There is, however, another class of specialists whose aims are of such a nature that they can sometimes make good use of ideas which have grown up in other studies. Such specialists, when they have created, say, physical chemistry, the new astronomy, physiological psychology, stylometry, etc., have sometimes gained a certain measure of esteem even from those of straiter sects. It has often happened that general studies of logic have resulted in such applications of one science to another. Analytical geometry was first conferred upon the human race as an illustrative example of the 'Discours de la Méthode.' The group of writers whom, abandoning all attempt at finding a descriptive designation, we may roughly call the English school of logicians, meaning, for example, Boole, De Morgan, Whewell, J. S. Mill, Jevons, Venn, Pearson, MacColl, etc., while pursuing studies often purely theoretical, are nevertheless taking a road which may be expected to lead to results of high value for the positive sciences. Those whom we may as roughly call the German school of logicians, meaning such writers as Christoph Sigwart, Wundt, Schuppe, Benno Erdmann, Julius Bergmann, Glogau, Husserl, etc., are engaged upon problems which must be acknowledged to underlie the others, but attack them in a manner which the exact logicians regard as entirely irrelevant, because they make *truth*, which is a matter of fact, to be a matter of a way of thinking or even of linguistic expression. The Chicago school or group are manifestly in radical opposition to the exact logicians, and are not making any studies which anybody in his senses can expect, directly or indirectly, in any considerable degree, to influence twentieth-century science.

Prof. Dewey regards himself as radically opposed to the German school, and explains how he is so. We must confess that had he not put so much emphasis upon it, we should hardly have deemed the point of difference so important; but we suppose he must know what his own affiliations are and are not. He seems to regard what he calls "logic" as a natural history of thought. If such a natural history can be worked out, it will undoubtedly form valuable knowledge; and with all our heart we wish the Chicago school godspeed in their enterprise of discovery. But their task will call for such extreme subtlety, precision, and definiteness of thought that we hope their new science will not disdain to take a lesson, if not from any of the older logicians of the country, nor from that American thinker who first essayed to use his great powers of observation to establish a natural history of mental products—we mean Dr. James Rush—at least from the well-established natural history of Nature, chemistry, botany and zoology; the lesson, to wit, that a natural history can hope to begin a successful course of discovery only from the day when it abandons altogether the trivial language of practical life, and sets up a thoroughly new glossary of words exclusively its own, thereby not confusing our meagre philosophical vocabulary with the burden of added meanings to old words. If calling the new natural history by the name of "logic" (a suspicious beginning) is to be a way of prejudging the question of whether or not there be a logic which is more than a mere natural history, inasmuch as it would pronounce one proceeding of thought to be sound and valid and another to be otherwise, then we should regard this appropriation of that name to be itself fresh confirmation of our opinion of the urgent need of such a normative science at this day.

The Life of Horace Binney. With selections from his letters. By Charles Chauncey Binney. Philadelphia: J. B. Lippincott Co.

Horace Binney was a great lawyer in a generation of great lawyers; in fact, professionally he was a leader among the eminent men who have made our law famous.

The Girard will case, when almost lost, was won by him against Webster; he might, had he chosen, been a judge of the Supreme Court; in his old age, his modesty obliged him to disclaim the titular headship of the American law. But, as his grandson's volume shows, he was a remarkable man in many other ways, and the public owes the author a debt of gratitude for this record of his life.

The preface explains why no complete memoir has been before published (Mr. Binney died nearly thirty years since); and the explanation throws a light upon two strongly marked traits of his character, his modesty and his delicacy of feeling. The first made him averse to the idea of becoming the subject of a biography; it was apparently owing to an extraordinary sensitiveness to his correspondents' "right of privacy" that he made a habit throughout his life of destroying all the letters he received:

"Had his oldest son survived him, this lack could and probably would have been made up for by personal knowledge, but it was not known until a few years ago that many of Mr. Binney's letters had been preserved by the families of those who had received them. This discovery made it possible to prepare a fairly connected account of his whole life, but, owing to lapse of time, it has been left to one whose personal knowledge is only a memory of boyhood to attempt what could have been much better done by those of a generation ago."

Thus it is that we have been hitherto without any proper life of a man very distinguished while alive, who was born while the war of the Revolution was still going on, who belonged to the generation and professional rank of Webster and Story, whose active professional life came to an end twenty years before the civil war opened, and who died ten years after that war ended, at the venerable age of ninety-five.

Of New England ancestry, Mr. Binney was born in Philadelphia. He entered Harvard at the age of thirteen, and throughout his life saw much of the world; but it was as a citizen of Pennsylvania that he made his mark. His relation to public life was a simple one. He cordially detested American politics, but felt himself at the same time obliged to discharge any public duty that he might be imperatively called upon to undertake. He allowed himself to be elected to Congress, where, in the contest over the removal of the deposits, he played an important part, vehemently attacking Jackson, though without the venom which distinguishes much of the political controversy of that time. It is not too much to say that Mr. Binney was, and felt himself to be, handicapped in the political career of that day because he was a gentleman. Born a Federalist, he came of age just at the time when that party was passing forever from power. For one who could not be a Democrat, and to whom "Whig" never meant anything, the country, through the gradual democratization of its institutions, and especially through the democratization of the judiciary, seemed to have been delivered over to the Evil One; and Mr. Binney lived and died without ever being a party man. He was, as his grandson suggests, a "Mugwump" before mugwumpery as a political force was organized. It was only when the civil war broke out and all good citizens united to save the country that he was able to take sides with hearty good will, and help to vindicate in his old age the Federalist ideal of his youth.

Mr. Binney was a man who united in a remarkable manner sturdy common sense with a high degree of sensibility. A man less egotistic or more delicately alive to obligations it would have been hard to find during his lifetme. On the other hand, his thoroughly healthy, virile character saved him from all illusions and morbidness. There is not much to quote from him, but we may except his reflections on a lawyer's life (given at some length in chapter v.), which show what an extremely sane view he took of his profession and its limitations.

In gaining his position as a leader of the bar, we are told that his greatest strength lay in his thoroughness and sincerity. Of the former, some of the evidence is preserved in Binney's Reports of the decisions of the Pennsylvania Supreme Court. It was the combination of both traits which early won him the confidence of the bench. So much nonsense has been written on the subject of a lawyer's duty to sacrifice everything to his client's interest, that it is interesting to see what he thought about it.

"I may say to my children," he wrote, in reviewing his career, "that I never knowingly committed an injustice towards a client or the opposite party. I never prosecuted a case that I thought a dishonest one, and I have washed my hands of more than one that I discovered to be such after I had undertaken it, as well as declined many which I perceived to be so when first presented to me."

It must be observed, too, that in mentioning his avoidance of stratagems, tricks, and artifices, he does not claim any special virtue, but very candidly dwells upon this course of conduct as having been highly advantageous to him in gaining the confidence of court and bar. Like Franklin, he never forgot that honesty is the best policy; but this was not the reason why he was honest.

When a lawyer is gone, it is often difficult for the next generation to make out in what his professional force chiefly lay. In Mr. Binney's case we suspect we should not be far wrong were we to guess that he most nearly resembled lawyers like Kent and Story; and that, in not securing him, the bench lost the services of one who would have been a very distinguished judge. He does not seem to have been a great jury lawyer, though we get the impression of one who had considerable command of language and force of expression. "Eloquent" in conversation he is called by one of his last visitors. Strikingly handsome he must have been, to judge by the reproductions of Sully's and Stuart's portraits and the photograph taken at the age of eighty—and in the forensic career the presence of the man always counts for something.

He saw within his own lifetime the rise and spread of democracy throughout the world, and in his own country the destruction by it of that colonial aristocracy which, when he was born, was in control of government and society. He sympathized with no feature of the movement, except that it involved the abolition of slavery. Otherwise he detested democracy, chiefly because it represented to him a species of tyranny over the individual conscience. He really remained to the end what he had begun—a follower of Hamilton in believing some species of constitutional monarchy, combined with representative institutions, to be the best form of government in the world. How far he was right in the belief that it is the inevitable effect of democracy to lead us to undervalue integrity, and to put at the head of all the virtues the low art of gaining power by pandering to the prejudices and passions of the populace, is a question which carries us back two generations. So thoroughly has democracy won the day that we have ceased even to be interested in the question. But on one point Mr. Binney was so clearly right that his opinions here recorded have been already vindicated by time. He foresaw much of what short elective judicial terms would lead to, and foretold it. We, who have lived to see judicial nominations put up for sale to the highest bidder, can now perceive without difficulty how right the old conservatives were in their views of this subject.

Okoubo. Par Maurice Courant. Paris: Félix Alcan. 1904.

Those who insist that the Japanese are not only a young nation, but in origin a "white" race, find the best illustration of their theory in Okubo, "the brain" of the Restoration of 1868 and the chief builder of the new Japan. His mind worked like that of a European, and in dress and carriage, in personal appearance and action, with full mustache and luxuriant side-whiskers, he seemed so much like one that it was hard to believe that he was a pure-blooded Japanese. Maurice Courant, already known for his scholarly work in Korean bibliography, has with keen insight and literary charm presented a vivid picture of this native of Satsuma, who lifted the Mikado out of myth and mystery and set his feet on the solid earth. Courant shows that the great minister was a Japanese of the Japanese, and that the spirit impelling him was that of the native *bushido* and not imported from the Occident, while his blood for untold generations past had run in the veins of the Satsuma clan, out of which so many of the leaders of modern Japan have sprung.

In the Japan of 1830, into which Okubo was born, there were mobs of figureheads but few men of light or leading. Yedo was then, as Tokio is now, the chief centre of power. Of the two or three hundred feudal barons or daimios, only five or six were of any personal importance. Yet in the capitals or castle towns of these few were groups of scholars, reformers, and earnest men waiting for the salvation of the nation and ready to achieve it. Nominally a despotism ruled Japan, but in reality it was a democracy of the cultured samurai or gentry. These able men of inferior rank purposely let their nominal masters live in luxury and even debauchery, so that they themselves, lying low and hidden, could rule while screening their larger purpose. All the moral forces were in Confucianism, for Buddhism was hopelessly impotent in the dry rot of superstition. Around the ancestral temple of the Satsuma clan gathered the men whose aim was to ruin the work of Iyeyasu and make a new, or rather a revived, nation.

Yet in curious, almost amusing, contrast to those Japanese of to-day who ostentatiously, almost blatantly, ascribe all victory and success to "the virtues of His Ma-

jesty," the good theocrat in Tokio, and who tell us that the spring of all power and the secret of Japan's renascence lie in the (quite recently expanded) theories of imperialism and the exaltation of the Emperor, the early "Mikado-reverencers," even to 1850, knew not the theory formed later. The purpose of Okubo and of Nariaki, his master, was not at first the supremacy of the Mikado, but the union of the two governments of Kioto and Yedo, and the practical fusion of the Court and landed nobilities (*kugé* and *daimio*). Not until the advent of foreigners did Okubo and his fellow-workers conceive and plan for the supremacy of the Emperor and for absolute imperialism.

With profound political sagacity, Okubo divined the force and trend of the invisible currents in both the air and the ocean of the world's politics, and his home and foreign policy was directed to the one end of a unified Japan able to resist even Russia. Whether a game of war or peace, Okubo was resolved on the subordination of China in the Oriental, and the humbling of Russia in the Occidental world, while he toiled to make Japan great and to bridge the chasm between the East and West. He swept away feudalism, crushed the Korean war project of 1874, personally appeared in Peking to settle the Formosa affair, resisted the agitation of the Liberals for a Parliament, and strenuously drove forward economic development and railroad-building. Having broken with his old comrade Saigo, now become the reactionary, he met with unquailing courage and put down the Satsuma rebellion of 1877. Then, with the élan and joyous welcome of the willing martyr who already beholds the transfiguration of his ideal, he met the assassins and death. His work was done, and he knew it. The ability of Japan to face Russia today results, in a vast degree, from the prescience and tireless practical genius of Okubo. He among the first had the vision. His was the service also to actualize the dream.

To have lived such a life in forty-seven years (1830-1877) is granted only to the elect sons of men. How Okubo's memory, even in his opposition to a Parliament before Japan was ready for it, seems already amply vindicated in the history of the fifteen years of the Diet's existence! Nominally governed, in constitutional imperialism, as a limited monarchy, with upper and lower houses of Parliament, Japan is in reality ruled, as Holland is, by a Council of State, composed of the sovereign and a few elect elders, with a nominal legislature that votes supplies, but is bowled down by the premier whenever it is hostile or shows "unreasonable opposition."

Securing his data from original sources, with illustrations in sidelight gathered from a mighty wealth of Japanese authorities of the first order of value, M. Courant has given us a glowing picture, of which we know not whether to admire more the vividness or the accuracy. The portrait, both in text and in photogravure, is wonderfully like the Okubo whom we knew and talked with. In this series of "Ministres et Hommes d'état," we wonder if any of the other volumes contain two hundred pages of more fascinating biography. Amid the hill ranges of books on Japan, this rises like a peak.

The Gems of the East (The Philippine Islands). By A. Henry Savage Landor. New York: Harper & Brothers.

We are informed that this book is the "most complete work yet published on the topography, ethnology, civil and political conditions of the Philippines to-day," and it is also given to us as the most interesting and valuable descriptive book of travels in the islands. Most space is devoted to the author's "observations" upon the characteristics, physical and other, of some of the Philippine people. He inserts many photographs meant to illustrate these observations, and likewise tables of measurements ostensibly of value. In only one case, however, do these tables indicate how many individuals were measured to form the basis of his averages, and, when we find that his Moros are frequently taller than the members of the hill-tribes of Mindanao (the so-called "Indonesians"), as are also the stunted Mangyanes of Mindoro (of whom he must have seen but a handful, if any at all), we pass the measurement tables by without further attention. Mr. Landor is continually finding likenesses between the most diverse types in the Philippines and the Papuans or the hairy Ainus of the Japanese northland; one wonders if he has ever seen the Papuans or the Ainus. He rehearses to us the stale stories about human sacrifices and cannibalism among the hill tribes of the Davao region, but throws no light on the subject. He would have us believe that he, alone and unarmed and not speaking their language, put a large band of supposedly very bloodthirsty headhunters in the Cordillera of Northern Luzon to rout by the firmness of his presence—or, perhaps, by the flash of his eye. Similarly, in eastern Mindanao, where he thinks he found a "white tribe," he, single-handed, stormed the tree-houses of the savages who make human sacrifices, and who, he cautiously hints, may be cannibals. Then he calmed the denizens of these aerial perches, which he had reached on strips of bamboo and over the waving tops of bamboo clumps, by gently rubbing them and stroking their hair, as one would a cat; we are not informed if they purred. Every one knows there are headhunters in Luzon, though they are mostly a pretty good sort of fellows to meet, after all, and headhunting is a kind of ceremonial custom among them, which they long since ceased to practise upon white men, unless a white man is deliberately looking for trouble among them. It is reasonably sure that there are occasional human sacrifices in the interior of Mindanao, but if there is cannibalism in connection with it (as is by no means proved as yet), it is of a ceremonial character and is rare.

Mr. Landor's observations on native languages are utterly worthless. In the first place, he has no conception at all of the formation or the grammar of the principal Philippine dialects, nor does he seem to have any fair understanding of what agglutinative languages are like in general. If he had taken the pains to post himself in this particular, he might have made some contributions to knowledge during his brief and hasty trip; at any rate, he might have avoided falling into ridiculous errors. We discover from his frequent misspellings that he has little or no knowledge of the Spanish language, though he quotes a long sentence or two indicative of fluency in it. For communication with the natives everywhere, he did not therefore have even this assistance to successful interpretation, and was dependent on hearsay, yet he never distinguishes between what was told him in a given district and what he is supposed to have learned for himself; in fact, is chary of giving credit at all. He aimed first for the island of Palawan and its many smaller neighbors, where he might have done some interesting work. Instead, he has brought forth only a hodge-podge of information and misinformation. He is continually talking about the Tagbanuas (which word he persistently misspells, to suit his English taste for "Tagbanoua") as if they were a separate and distinct tribe, instead of various bands, both of mixed and of rather pure ancestry, badly classified under one imperfect designation by the Spaniards ("Tagbanua" meaning "people of the place," or "aborigines"). He tells us gravely that no words in "Tagbanua" (which is not the name of a dialect at all) begin with w, h, v, x, y, or z; inasmuch as there is no h, v, x, or z in the Malay dialects. this will not seem unduly strange.

Mr. Landor tells of gutta percha being obtained on Tawi-tawi from the *Ficus elastica*, which is a rubber-tree—something altogether different and distinct. He says that the little swift which builds the edible nests so prized as a delicacy by the Chinese, builds them with gum from a tree (one would infer he meant by bearing this gum for the purpose as other birds bear twigs, hair, etc.); and he calls the *ipil*, the solid, iron-like wood of the Philippines, which will sink in water, a "porous" wood. One might get the impression from his "topographical notes," which are most frequent and generally impertinent, that he had been in many places which he actually saw only on the map; these notes in such cases read suspiciously as if derived from the Government publications, Military Notes on the Philippines, or the Philippine Gazetteer, neither of which, by the way, is to be depended upon for accuracy. He puts Basilan in the Sulu archipelago; he repeatedly confuses in his writing the east and west shores of bays, east and west coasts of islands, etc.; finally, he caps the climax, for a "topographical authority," by stating that he came to Manila from Santa Cruz on the Laguna de Bay by passing through Bataan and Zambales provinces. Just why he made this trip at all, or why he mentions those provinces as visited by him, it is hard to explain on any other ground than that he was seeking to be able to say he had been "all over the Philippine archipelago." This it was, apparently, which led him to merely walk across Sebú island, and to do the same by night across Negros (never seeing at all, by the way, the curious primitive mountaineers of Negros, whom an ethnologist might well be expected to hunt out). He pooh-poohs the difficulties of exploring the interior of Mindoro; but it is noteworthy that he refused its challenge, and simply reports upon its people from hearsay (and inaccurately). He foots up 16,000 miles of travel in his 250 days in the archipelago; one would like to see an itinerary, even though almost all his mileage was by sea.

He did, however, spend almost all his time on land in the out-of-the-way places.

For this reason he should have been more cautious in giving information and passing criticism on the vastly more important and more populous districts of the Christian Filipinos. Modern sanitation and its methods are especially abhorrent to him, and he loses no chance for a fling at the efforts of the military and civil authorities in the islands to fight the spread of cholera. He has no patience with the American attempts at establishing an educational system in the islands, which he is sure is all wrong, because it does not consist entirely of manual training. If he had read more of the history of the Spanish régime in the authorities which he contemptuously disregards, he would go a little more slowly in praising Spain for having done wonders in public works for the islands, whether or no he liked the present American methods of building roads, schoolhouses, barracks, etc.

Is there nothing good to be said about the book? We hoped so when we came to the descriptions of Mr. Landor's experiences among the Moros of the Lake Lanao region, which he had the good fortune to visit when Pershing was engaged in his expedition of 1903 against Fort Bakolod and other strongholds. We get several rather interesting pictures of this expedition, which the author accompanied, and a few details that are of value, but no real insight into the situation that exists there, into the policy that was pursued by the Americans up to the break which came under Baldwin and Chaffee in 1902, leading to the present rather turbulent conditions. The author took no trouble to find out anything more than the few facts here and there upon which he could base wise-sounding criticisms and attempts to be "smart." As for his experiences among the Moros generally, he assumed, as with the "Indonesians" and the Igorrotes, that he was nearly the first white man who ever really saw them, and was telling the listening world some entirely new things; a reading of the more important of the voluminous Spanish sources would have saved him the pains of making these errors (indeed of visiting the Moro country at all).

To make a book of nearly six hundred pages out of such stuff is the merest vanity on the part of the author, and is strange judgment on the part of the publishers.

The English People: A Study of their Political Psychology. By Émile Boutmy. New York: G. P. Putnam's Sons. 1904.

When Burke declared that he did not know how to frame an indictment of a whole people, he exposed a fallacy which vitiates myriads of books. Nothing, indeed, delights men more than to generalize from insufficient evidence; we seem to increase our own importance by laying down propositions of magnificent size. *Ex uno disce omnes* is the maxim according to which judgments covering whole races are pronounced, and he who has perchance met a single Chinaman will tell you what are the characteristics of the other four hundred millions.

Even Mr. J. E. C. Bodley, the author of 'France,' who contributes a very discriminating introduction to the book before us, allows himself a little loose generalization. Not one in 500 of the educated Englishmen who go to France for their pleasure, he tells us, takes the opportunity to gain any acquaintance with the people and their institutions. It was not always so. The journals of Arthur Young "were only, in an extended form, what every English traveller brought back from his foreign tour." This proposition Mr. Bodley proceeds to fortify by a story of a party of English legislators who made a tour in France at the invitation of some members of the Government. At Bordeaux "the historic Château Laffitte opened its gates to the visitors. From the sacred recesses of its cellars were brought forth precious vintages not offered to mortal palates twice in a generation. But the British guests, unmindful of the unique privilege, demanded whiskey." We confess incredulity as to the facts; and the suggested inference that good French wines are not appreciated by Englishmen is absurd. The statistics of the wine-trade dispose of the suggestion.

The beam in his own eyes, however, does not prevent Mr. Bodley from regarding the mote with which Mr. Boutmy is afflicted. M. Boutmy has constructed an English people in accordance with his idea of what it ought to be. Many years ago, when he brought out his famous 'Essai sur Tite-Live,' he wrote: "The difficulty which I experience in an investigation is to discover a characteristic and dominant feature from which everything can be geometrically deduced—in a word, what I need is to have the formula of my subject." So here M. Boutmy has made out his formula for the typical Englishman; and if the facts do not fit the theory, so much the worse for the facts. We do not deny that the theory is interesting. It is sometimes even plausible, and many of the observations of the author are keen and enlightening. We feel, after reading the book, not that we have a correct view of the English people, but that our views have been to some extent corrected. At the same time we cannot help being struck by observations which are true only to a limited extent, and are occasionally false altogether.

Thus, M. Boutmy thinks it necessary to begin by attributing to climate a powerful influence on national character. The climate of the United Kingdom, he remarks, does not vary to any great extent. But no one can ignore the differences between the Irish people and the English; even M. Boutmy is compelled to admit that his typical Englishman has no likeness to the inhabitant of Erin. Obviously, when a difficulty like this is encountered, it is necessary to explain that circumstances alter cases; and, after a time, the number of supplementary and contradictory theories becomes confusing. The climate, we are told, compels men to subsist chiefly on animal food—a statement which an English peasant as well as an Irish one might read with pathetic astonishment. But the inconsistency is explained by the qualifying proposition that there are two types of Englishmen, as distinct as the greyhound and the bulldog. The one is

"slender, vigorous, agile, with fresh coloring and animated physiognomy; the other cadaverous, with leaden eyes, and concentrated or rather sunk, in himself; the first maintained, with infinite care, thanks to an abundant and wholesome diet, continuous exercise and habits of decorum and restraint; the second, deformed, wasted, and ruined in less than a generation by insufficient nourishment and the abuse of strong liquors, unrelaxing labor and insufficient recreation, and finally and chiefly by a self-abandonment and a sort of callous indifference, which are vices common to all the wretched, and allow man to succumb without an effort to the destructive operation of natural causes."

Hence, whenever the reader encounters a generalization that is palpably untrue, he must remember that Englishmen are of many types, and that what is untrue of one may very likely be true of another. We might multiply instances of these half-true generalizations, along with many brilliant and suggestive passages. But, for the reasons given, we cannot regard the book as a safe guide for those who wish to study England. It may be read with a certain pleasure by those who have some acquaintance with English history, and who are able to form their judgments with regard to the laws of evidence. Nor, in view of the severe disability of almost total blindness under which M. Boutmy has labored, can we help admiring the courage with which he has attacked one of the most difficult of problems, and the skill, if not the correctness, with which he has drawn his picture.

The Associative Processes of the Guinea Pig: A Study of the Psychical Development of an Animal with a Nervous System Well Medullated at Birth. By Jessie Allen. (Contribution from the Departments of Psychology and Neurology of the University of Chicago. Reprinted from the *Journal of Comparative Neurology and Psychology.* Vol. XIV., 1904.)

While the philosophers are disputing about the relation between mind and body (with meagre results, so far, it would appear), exact facts regarding their relations in man and lower animals are slowly accumulating. The latest contributions are joint products of the Departments of Psychology and Neurology of the University of Chicago. Dr. John B. Watson's study on the psychical development of the white rat, entitled 'Animal Education,' was noticed in these columns earlier in the year. Miss Allen's paper both controls and enlarges that research in very interesting particulars. The rat is born blind, naked, and helpless, and requires twenty-three days to reach psychical maturity, as measured by Dr. Watson's ingenious method. That is, twenty-three days is the earliest age at which the young rat is capable of learning the most complicated trick which the adult is capable of learning. At birth the rat has not a single medullated nerve fibre in its brain, though such fibres make up nearly all the nervous pathways of the adult brain. The guinea pig, on the other hand, has nearly perfect use of all of its senses and most of its instincts from birth, and is active and well clothed with fur. Miss Allen's problem was to determine the course of psychical development of the guinea pig and the parallel development of the nervous pathways within the brain, and to correlate both of these with the data for the white rat.

The animals are closely related, both being rodents, and similarity of habits and instincts was to have been expected. The adult guinea pig, however, when tested in detail, is found to be far less ingenious than the rat and incapable of learning any but the simplest tricks. The guinea pig is

constantly running about and can solve problems, such as finding his way to food through a labyrinth of passages fenced off with wire netting. He remembers well the true path, and soon learns to take the shortest course, avoiding blind alleys and unnecessary turns. But he cannot solve problems requiring ingenuity at which a rat is very adept, such as opening the door of a box of wire netting containing food by means of a latch. The rat gradually acquires this ingenuity parallel with the development of the nervous pathways until it is fully perfected at twenty-three days of age.

"The guinea pig stands in complete contrast to the white rat. Though no experimental records of memory were obtained from the guinea pig during its first day, a simple path was learned upon the second day, and upon the third day the most complex problem was solved, being a complicated labyrinth.

"No experiments were made with the rat to determine how early a complicated labyrinth could be learned, but Watson's rats solved a simple labyrinth at nineteen days.

"When the guinea pig has found his way through a labyrinth he has reached the end of his psychical powers. He cannot pull a latch nor push a bolt, he will not depress an inclined plane, he will not chew a string nor stamp his foot. All the ingenuity which the white rat acquires after he has solved the labyrinth is a *terra incognita* to the guinea pig, who thus pays the penalty of his early maturity.

"The experience of the white rat extends to strange combinations of wires and springs, and all the delightful surprises revealed by secret doors. But when the guinea pig has turned the proper number of corners, his dinner must be waiting for him or he does not get it.

"The rat at three days is just learning to crawl, has never seen an object, and remembers nothing. The guinea pig at that age has triumphantly recalled a complex path, at the end of which he is eating his well-deserved carrot.

"At twenty-three days the rat is lifting latches neatly, and forming what Hobhouse calls 'practical judgments' as to the value of an inclined plane in a situation at the centre of which is his food—a desired thing, an end. The guinea pig is still wearing out the floor of the same labyrinth."

Our chief interest in this comparison grows out of the fact that we have accurate knowledge of the development of some features of the nervous systems of these animals, permitting a very definite, even though meagre, correlation of mental with corporeal function. Dr. Watson found in the rat at birth no medullated nerve fibres, and that in general the psychic functions anticipate in development the appearance of medullary sheaths in the nerve paths which must serve those functions. That is, these nerve paths are able to perform their functions before their fibres are fully supplied with medullary sheaths, as they are in the adult. Even at twenty-four days old, when the rat's ingenuity seems to be at its maximum, its central nervous system has far less than half as many medullated nerve fibres as the adult. This is correlated with the fact that the older rat is constantly learning, *i. e.*, forming new associations, though he is not increasing in ingenuity or the ability to solve an entirely new problem, and again illustrates the appearance of mental function in advance of the complete medullation of the corresponding nerve centres.

The young guinea pig's brain offers as complete a contrast to the rat's brain as does its behavior. The spinal cord of the guinea pig at birth is as far advanced in development as that of the rat at twenty-four days, and the same is in general true of the rest of the nervous system. At birth no important cerebral pathways of the guinea pig are unmedullated. In short, the guinea pig's early neural maturity is purchased at the price of mental plasticity and educability, and we have here a very graphic illustration of the principle of the value to the race of a prolonged infancy.

The Domesday Boroughs. By Adolphus Ballard, B.A., LL.B., Town Clerk of Woodstock, Clerk to the Guardians of the Oxford Incorporation, Author of Histories of Chipping Norton, Woodstock, and Chichester. Oxford: Clarendon Press; New York: Henry Frowde. 1904.

This work is a comparative study of the financial constitution of the boroughs of 1086, based wholly upon the analysis of the Domesday evidence. It furnishes a good lexicon and primer for this cross-section of early economic history. But it is not a book for the general reader. Unless one already has some knowledge of Domesday or is willing to make a laborious assault thereon, it is not a book to attempt. For the adept in early English industrial matters, however, it is of interest as a painstaking and thoroughgoing comparison of local peculiarities in matters of finance. Mr. Ballard evidently believes with Jowett that "real uncertainties are better than imaginary certainties," and in his preface modestly claims not that he has made any new discoveries of importance, but only that his "conclusions throw doubts on several points that have hitherto been regarded as settled." Of these the most important is connected with the jurisdiction of the borough court in 1086. Except in a few isolated cases Mr. Ballard inclines to question whether the borough was a hundred of itself. While the borough court existed from Anglo-Saxon times, "there is nothing to lead us to suppose that its existence excluded the jurisdiction of the hundred court; otherwise we should not find so many charters of later date granting that the burgesses should not be impleaded without the borough. . . ." (p. 53).

No attempt is made by the author to reconstruct the life of the citizen of the Domesday borough, but he furnishes raw material in abundance for such a sketch. His study inclines him to reaffirm Professor Maitland's theory that the borough originated in the need of a garrison into which the rural inhabitants could occasionally retire, when menaced by foes like the Danes, whose incursions the scattered country dwellers could but feebly resist. Confirmatory evidence is found in the fact that in the boroughs where there were other householders than the King, the town houses with their complement of burgesses to defend the wall were "contributed" by the country manors to which the town houses were appurtenant. The curious "welter of jurisdiction" is seen in the different persons in whom various kinds of jurisdiction vested. The landlord of a borough house commonly received not only rent (*gablum*), but sac and soke, or the penal fines incurred by his tenants. The market dues and other customs went in one place to the King, in another to the Archbishop, and in many others were curiously divided among a number of recipients. "The vast majority of the burgesses were landless men, and therefore must have had to earn their living by trade or handicraft" (p. 61). The annual renders in kind made by boroughs to the King are sometimes curious. Thus, Norwich furnished each year a bear and six dogs for bear-baiting, until, the bear supply becoming low, the borough was allowed to substitute a race-horse (p. 79). Almost every borough had its own mint. A burgess at Ipswich, it appears, might be a slave (*servus*), although the distinguishing mark of the burgess was that he paid geld only as distinguished from a number of other payments made by the non-burgess. "It would seem from indications at Colchester, Oxford, and Norwich that women could be burgesses" (p. 57). The evidence for communal property held by and for all burgesses alike is "sparse and scanty" (p. 112). The importance of various kinds of toll, or franchises, as we should now call them, discredits the notion that land was the one form of wealth.

The author can hardly be charged with losing the forest in the trees, because he resolutely confines himself to the study of individual trees, but we have to thank him for upsetting many of the easy generalizations which a superficial study of the period is only too ready to inflict upon us.

Methods and Aims in Archæology. By W. M. Flinders Petrie. With 66 illustrations. Macmillan. 1904.

A cook-book may be duller reading than the unabridged dictionary to an ordinary mortal, but may rival the latest popular novel in the eyes both of the *gourmet* and of the *cordon bleu*. The first ten chapters of Mr. Petrie's work are somewhat like the cook-book. They give in precise detail a systematic statement of the practical problems that confront a scientific excavator in Egypt, and the way in which these problems are met and solved by Mr. Petrie himself. It thus corresponds to, and supplements, on the side of field-work, that very useful little volume published a few years ago by MM. Blanchet and Villenoisy, 'Guide Pratique de l'Antiquaire,' which concerns itself chiefly with museum work. Mr. Petrie discusses everything, from the management of the fellahîn laborers to the details of the bargain that the archæologist should make with his publishers. As an exposition of the methods developed and followed by the prince of excavators, the book of some two hundred and twenty-five pages could not fail to command the zealous attention of any persons who are, or hope hereafter to become, actively concerned in archæological excavations.

Many of the details, to be sure, apply to Egypt alone, but the principles are as applicable elsewhere as there. Others than present or future excavators, moreover, will find these pages of deep interest, and others even than readers technically interested in Egyptology. Few will perhaps care to master the writer's suggested method of conducting surveys for archæological purposes; but any man who is interested in the historic results of such work as Mr. Petrie and others have been carrying on for years in Egypt, will find somewhat of the same pleasure in reading Mr. Petrie's book as in standing by his side on the edge of some buried town emerging in slow resurrection from the sands of centu-

ries, to watch the chains of grinning boys passing their baskets of earth up from one to the other out of the shadows of the deepening pit. For Mr. Petrie has the happy faculty of writing brightly on dusty themes, and the illustrations of his volume, taken for the most part from photographs on the spot, add much to the illumination of his discussion.

The concluding chapters of the book touch upon wider aspects of the theme—the need of systematic archæology in place of the present desultory and scattered study, the nature and judgment of archæological evidence, the ethics of archæology; and, his serious work finally accomplished, the author concludes with a little dithyramb on the fascination of history. Under the heading of systematic archæology he pleads the urgent need of the publication of a *corpus* of archæological finds, classified according to form and to ascertained data, by reference to which new discoveries could be defined; and urges the construction of a proper archæological repository instead of mere show-museums.

"Let us hope," he says, "that if we are too hide-bound in England to grasp the new conditions of research, that [*sic*] at least in America some one will provide such a storehouse for all time; where some day the history of the world may be studied, when we have hopelessly lost the chance of preserving what might at present be had for the asking. If we are to make up our minds to ignore and lose what is now being lost and destroyed every year owing to our ignorance and blindness, we must look to the New World to rescue from our misuse the material we now throw away, and so preserve the history of mankind."

Perhaps the most striking (and the least conclusive) passage in the chapter on the ethics of archæology is that in which the writer passionately declares that to destroy the work of the men of past ages is as much a crime as to murder them. More practical is the rest of his vigorous plea for all possible wisdom and care in excavation and in the conservation and publication of finds. It will surely startle some timid minds when they hear Mr. Petrie declare that, sooner or later, all gold work will disappear from our museums into our melting-pots, and that (as a counsel of perfection) it would be well to make, and to disperse over all countries, twenty electrotypes of every bit of ancient gold and silver work, and then to sink the original gold in the ocean, where it will require a national undertaking to recover it in future ages when only a few wrecks of the electrotypes will have survived. But not only gold and silver are destined to vanish from our museums in years to come: "bronze," this woful prophet tells us, "is sure to disappear in warfare sooner or later, especially as metals grow scarcer owing to exhaustion of mines." But before we shudder at the approach of Armageddon, let us comfort Mr. Petrie with the thought that new processes for the extraction of metals from their less tractable combinations are fast coming into being, along with other processes of tempering. It is possible that any chance lump of clay may equip Gog and Magog with keener and more enduring blades than that of Saladin, and our museum bronzes yet be safe. But, we might ask, what is the use of laboring for their conservation in behalf of such a brute world as Mr. Petrie's second-sight foretells?

Let us close with a spirited passage from the last chapter of the book, which may well illustrate the vigor, as well as the tendency toward exaggeration, of the writer:

"If past loves and hopes seem thus to give their life to the lasting walls, how fearful is the breath of terror that clings round every stone of the Colosseum. One single mangled death there made ten thousand fiends of men who sat on those benches; and every year had its thousands of such agonies, through all the centuries. The mass of horror beyond all thought that dwells in that arena is only exceeded by the thousandfold fire of cruelty that has burnt on those seats around. The place is hell petrified."

Eleanor Ormerod, LL. D., Economic Entomologist: Autobiography and Correspondence. Edited by Robert Wallace, Professor of Agriculture and Rural Economy in the University of Edinburgh. With portrait and illustrations. London: West, Newman & Co.; New York: E. P. Dutton & Co. 1904. 8vo, pp. xx, 348. 30 plates and 76 text figures.

This book will be read with interest by all who knew Miss Ormerod or her work, and it deserves to be read more generally, because it portrays an utterly unselfish, modest woman whose only ambition was to so carry on her chosen life work as to benefit the agriculturists and horticulturists of Great Britain; and this she accomplished.

Well born and with ample means at her disposal, this lady, whose tastes led her to the study of nature and especially of the life histories of the commoner and injurious insects, gradually came to devote all her time to the work, not for her own gratification merely, or to form a collection, or even to add to technical scientific knowledge, but to publish broadcast the practical results of her researches. To that end she prepared and, at her own expense, published annually from 1877 to 1900 a report of the season's work with injurious insects, upon the best methods of dealing with these, etc. Twenty-four annual reports in all, besides four volumes of more systematized observations, were all offered at a price barely sufficient to pay for the mere printing. Further, she frequently replied to a question by sending a Report, and all her correspondents were annually remembered; so, to say the least, she derived no pecuniary profit from her labors. That these were finally appreciated is indicated by the fact that in April, 1900, only about a year before her death, the University of Edinburgh conferred upon her the degree of LL. D.; and she was the first and is thus far the only woman so honored by that University.

Mr. Wallace's volume is fragmentary in character, consisting of autobiographical notes, strung together, systematized and supplemented by the editor; extracts from some of Miss Ormerod's writings and (rather voluminously) from an extensive correspondence on entomological and personal matters with students and friends in all parts of the world. Miss Ormerod wrote well, and her letters are as carefully worded as her other writings. A kindly humor and a disposition to make the best of even the greatest misfortunes are evident throughout, and are quite in keeping with the cheery presence so well remembered by those who had the pleasure of her personal acquaintance. As a memorial, therefore, the volume will be valued. It will hardly be bought, in this country at least, for the information it contains.

The text illustrations are introduced for typographical reasons and are not really necessary; yet they are good, well selected, and applicable to the matter dealt with. The plates belong to the more strictly biographical portion, and are generally good. Print, paper and index can all be praised.

Greek Sculpture; Its Spirit and Principles. By Edmund von Mach, Ph.D. Boston: Ginn & Co.

The elusive character of the so-called "spirit" of art or literature is nowhere more clearly shown than in the writings of those who seek to separate it from an historical survey of the artistic and literary productions which constitute the embodiment of the "spirit." Dr. von Mach, in his introduction, complains that other recent works on Greek sculpture are really histories of Greek art or sculpture, or histories of ancient artists, and that such an historic treatment of the subject makes a clear understanding of the spirit of Greek sculpture impossible. One might, perhaps, reply to these rather extreme strictures on recent archæological work by calling attention to the author's sound advice at the beginning of his opening chapter, where he urges a thorough acquaintance with the monuments. How such a thorough acquaintance is to be obtained without a fair notion of historic development as a foundation, is difficult to see, and many will feel that there must be something the matter with the "artistic public" and the "intelligent layman," if certain of the histories of Greek sculpture cannot "legitimately appeal" to them. However, there is no doubt a place for the study of æsthetics as illustrated by the monuments of Greek art, and an attempt to deal with this side of the subject might be of great value.

The author of the present work divides his book into two parts, the first of which contains what are termed "the lessons drawn from Greek sculpture." The second has in it more discussion of specific works of art and of the tendencies of given artists; but the division is vague, and it is not always easy to see why it was made at all, since some portions of the second part might appropriately be included in the first, and vice-versa.

Dr. von Mach shows throughout an easy mastery of English idiom; English might well have been his mother tongue. About the only verbal peculiarity noted is his use of the word "eclecticism," on pages 9 and 26, which seems a little strange, but this is apparently due to his holding closely to an etymological signification, and the meaning is plain enough. He has an excellent knowledge of the facts of his subject; his training has clearly been admirable, and it has been supplemented by much observation and study on his own part. This makes it somewhat difficult to understand certain of the defects of his work, which, as a whole, lacks the reserve and sobriety of taste that are characteristic of Greek feeling. Here, for example, is a comment on the Niké of Samothrace: "The head is gone, but one never fails to see in the glorious breasts and in the beautiful abdomen the

hilarious joy with which the swift motion through space has imbued her." A somewhat "sophomoric" rhetoric and a tendency to introduce elementary and obvious moral truths are so frequent as to make the judicious grieve. Such terms, too, as "Hermes the Dreamer" for the statue at Olympia, and "Autumn Days" (see page 339, note) for the works of the Hellenistic period—employed that is, as definite designations—give the rather unpleasant effect which is always produced by the misplaced use of poetic phrases. In the spelling of classical proper names it is hard nowadays to follow any satisfactory system, but such a form as Rhamnos (Pl. xl, Fig. 2) had surely better be avoided.

The criticism of the book is strongly subjective, and a brief remark in connection with the discussion of the Apollo Belvedere seems to throw some light on the reason for this: "Almost sneeringly the Belvedere Apollo is watching—perhaps the flight of an arrow. Let one look in his face and study his features, and then analyze one's own emotions. They are hardly of the nobler sort." This is far too much the method which has constantly been followed; but the analysis of the critic's emotions is surely only the beginning of criticism, if, that is, there is such a thing as objective truth. The question whether the emotions themselves are in accord with sound artistic judgment must not be forgotten. Somewhat the same "subjectivity" appears also in the constant tendency almost to identify ethical and artistic excellence: "Truth, faith, moderation, patience, and diligence are the cardinal virtues of good men, as they are the chief characteristics of the best Greek sculpture." Phidias must have been wrongfully accused, because a man who knew how to portray the gods could not be other than noble and honest. So certain does this seem that one authority for his exile must originally have written ἀποφυγών, "acquitted," instead of φυγών. Phidias may indeed have been without guilt, but such text criticism is hardly convincing. Nor is it clear that the theory of the "mental image" or "memory picture," of which much is said, can be very helpful to the student who seeks to gain an appreciation of Greek art. Dr. von Mach, of course, does not intend to say that such a theory was consciously held by the artist, but his insistence on it is such that one almost comes to think of the sculptor as bravely working at his "mental images," and wondering how soon his skill will enable him to present them accurately. The whole argumentation appears to amount to little more than some such simple statement as this: The Greeks for some time, like other artistic peoples, did not acquire the necessary skill to represent what they saw; like other good artists, too, they appreciated the fact that the reality does not always appear real, and so they did not represent it; furthermore, their best work shows the ability to employ artistic "conventions" with great skill. In a popular work especially a discussion which seems unnecessarily learned is unfortunate, since it leads untrained minds to believe they are doing profitable thinking when they are not. The "educators" are a warning here.

The author is at his best in the discussion of relief sculpture. Here there are many good and suggestive observations, and the chapters are well worth reading. The account, too, of the Parthenon frieze is simple and straightforward. The constant insistence upon the rapidity of artistic development among the Greeks will perhaps seem to some rather overdone. This is, of course, old doctrne, but recent years have so greatly increased our knowledge of the development of Greek art that we can now see much the same degree of difference, let us say between the early art of the Acropolis and that of Scopas and Praxiteles, as may be observed between the work of Giotto and that of Michael Angelo. In each case the period of time which elapsed is approximately the same. When the impulse to artistic production once gathers headway, is its course not always rather rapid? It is easy, too, in laying emphasis upon the intellectual stimulus which came to the Greeks after the Persian wars (see pages 143, 157, 159) to forget the stimulating social changes of the previous century. We, of course, know much less in detail about this period, but the literary and political developments and the general spiritual activity of the time were certainly marked, and, however crude its artistic achievements may appear in the light of later performance, the vigor of youthful promise is to be seen on every hand. The beginnings of iambic and lyric poetry and the remains of plastic art which antedate the Persian wars are as instinct with the spirit of freedom as anything which the men of later day produced.

Dr. von Mach and his publishers are to be congratulated upon the general appearance of this book, and upon the high average of excellence attained in the numerous and well-selected illustrations. Most of these are conveniently grouped on forty half-tone plates, at the end of the volume, which is furnished with a good index.

VOL. LXXIX—NO. 2047. THURSDAY, SEPTEMBER 22, 1904. PRICE TEN CENTS.

NEW PUBLICATIONS **SCRIBNERS**

THE THEORY OF BUSINESS ENTERPRISE

By THORSTEIN B. VEBLEN, Ph.D.

Assistant Professor of Political Economy in the University of Chicago

Cr. 8vo. $1.50 net. (Postage extra.)

AN inquiry into the nature, causes, and economic value of business enterprise, marked by a wide knowledge and observation, and a clear, attractive style. The author's point of view is that given by the business man's work—the aims, motives and means that condition current business traffic. His chapter headings show the scope of the inquiry.

Introductory—The Machine Process—Business Enterprise—Business Principles—The Use of Loan Credit—Business Capital—The Theory of Modern Welfare—Business Principles in Law and Politics—The Cultural Incidence of the Machine Process—The Natural Decay of Business Enterprise.

A PARODY ANTHOLOGY

By Carolyn Wells. Companion to "A Nonsense Anthology." Cloth, 12mo, $1.25 *net* (postage 6 cents. Leather, $1.50 *net*.

With the same rare discretion that characterized the preparation of the Nonsense book, Miss Wells, from the large number of parodies accessible, has chosen the significant and amusing.

THROUGH SCIENCE TO FAITH

By Newman Smyth, D.D. Author of "Christian Ethics." "The Place of Death in Evolution," etc. A new edition with new preface. 12mo, $1.25 *net*.

The clearness and fairness with which Dr. Smyth states the great practical problem of the day makes this book one of which the popularity is likely to continue for years to come.

A NEW BOOK OF "LITERARY LIVES"

JOHN BUNYAN

By W. Hale White. Author of "Clara Hopgood," "Pages from a Journal," etc. Illustrated. $1.00 *net* (postage 10 cents).

The success of the two initial volumes of this valuable series of illustrated biographical and critical studies exceeded our best expectations, and we take pleasure in continuing it with a book of such interest and worth as Mr. White's monograph of Bunyan.

PERSONAL REMINISCENCES OF THE FIRST DUKE OF WELLINGTON

With Sketches of Some of his Guests and Contemporaries. By the late George Robert Gleig, Chaplain-General to Her Majesty's Forces, etc. Author of "The Subaltern." Edited by his daughter, Mary E. Gleig. $3.75 *net*.

Contains a large number of new anecdotes about the great general, and by its vivid characterizations throws a great deal of light on his remarkable personality.

DAR-UL-ISLAM

A Record of a Journey through Ten of the Asiatic Provinces of Turkey. By Mark Sykes. With Appendix by John Hugh Smith, and Introduction by Prof. E. G. Browne, Adams Professor of Arabic at Cambridge. With Maps and Illustrations. $5.00 *net*.

Full of acute observation, and singularly free from the prejudices which obscure the outlook of so many of even the most intelligent and conscientious travellers in the East.

Sir HENRY RAEBURN, R.A.

By Edward Pennington. Illustrated with Photogravure Portraits and Twenty Plates.

New volume in The Makers of British Art Series. 12mo, pp. xx, 275, $1.25 *net*.

TITIAN

By Georg Gronau. New volume in the Library of Art Series. With numerous illustrations. 12mo, pp. xv, 322, $2.00 *net*.

The work of a celebrated authority who has spent in preparation for it, many years of preparatory study and of a wholly independent criticism of the paintings.

IN ENGLISH HOMES

The Internal Character, Furniture, and Adornments of some of the most Notable Houses of England, Historically Depicted from Photographs specially taken by Charles Latham. $15.00 *net*.

A HISTORY OF AMERICAN LITERATURE

By Professor Barrett Wendell and C. N. Greenough, A.M., of Harvard University. $1.40 *net*.

A concise scholarly treatment of the subject in its various branches, based on Professor Wendell's "Literary History of America," a work declared on both sides of the sea to be the most original and distinguished treatment of its subject in existence.

A HISTORY OF THE ANCIENT WORLD

By George S. Goodspeed, Ph.D., Professor of Ancient History in the University of Chicago. Illustrated in colors with numerous maps and charts. 12mo, $1.50 *net*.

Professor Goodspeed's book is a thoroughly original treatment of the whole field of Ancient History, bringing the record down to the time of Charlemagne.

OUR BIG GAME *Uniform with "Our Feathered Game"*

By Dwight W. Huntington. With 16 full-page illustrations from photographs. $2.00 *net* (postage 15 cents).

The cordial reception which the public gave to Mr. Huntington's "Our Feathered Game" has led to the preparation of a complementary volume, carried out on the same lines and dealing with "Our Big Game," from the point of view of the sportsman who is also a lover of nature. The work is divided into four books treating respectively of the individual members of the Deer Family, the Ox Family, the Bear Family and the Cat Family. As in the case of the earlier volume, the appendix contains the technical information likely to be useful to a big game hunter. The author has shot nearly all of the animals he describes and his stories of the chase and his accounts of the habits of the various wild animals are both entertaining and instructive. The illustrations are for the most part from photographs of wild animals in their natural haunts.

NEW FICTION

By HENRY SETON MERRIMAN — **THE LAST HOPE**
A popular success from the very start, a second edition being immediately necessary.

By NELSON LLOYD — **THE SOLDIER OF THE VALLEY**
An extremely interesting and entertaining novel.

By H. G. WELLS — **THE FOOD OF THE GODS**
One of the most suggestive of his vigorous tales.

NOW READY

An Index to Poetry and Recitations

Being a Practical Reference Manual for the Librarian, Teacher, Bookseller, Elocutionist, etc.

Edited by EDITH GRANGER, A.B.

THIS important work, so long delayed by the necessary enlarging of the plan, is now ready for delivery. It is a volume of incalculable value, and the advance interest in its publication is an indication of the practical necessity for a book of such scope and comprehension. As a labor and time saving reference work it has never been equaled, and those for whom it is particularly intended should lose no time in placing it on their shelves.

The work indexes very nearly four hundred standard and popular collections of poetry and recitation books, including dialogues, orations, drills, etc., comprising about thirty thousand titles, arranged alphabetically under three heads—titles, authors, and first lines. An appendix contains lists of titles suitable for special occasions, such as Arbor Day, Washington's Birthday, etc., also lists of drills, tableaux, pantomimes, etc. These additional helps will be of great assistance to those for whom the index is intended.

LAYCOCK AND SCALES'
Argumentation and Debate
By CRAVEN LAYCOCK, Asst. Professor of Oratory, and ROBERT LEIGHTON SCALES, Instructor in English, both of Dartmouth College. *Cloth, 12mo, $1.25 net postage 13c.).*

Full of interest and value to the members of school, college or club debating societies, and indeed to any one ambitious of becoming a good public speaker.

A SEASONABLE BOOK FOR THE SPORTSMAN, YOUNG OR OLD

Guns, Ammunition and Tackle
The latest new volume in THE AMERICAN SPORTSMAN'S LIBRARY, Edited by CASPAR WHITNEY, containing:

THE SHOTGUN AND ITS HANDLING. By Captain A. W. MONEY.
THE HUNTING RIFLE. By HORACE KEPHART.
THE THEORY OF RIFLE SHOOTING. By W. E. CARLIN.
THE PISTOL AND REVOLVER. By A. L. A. HIMMELWRIGHT.
THE ARTIFICIAL FLY. By JOHN HARRINGTON KEENE.

Cloth, 12mo, gilt top. With three colored plates and many other illustrations. $2.00 net (postage 11 cents).

FOR THE EDUCATIONAL LIBRARY

By EDWIN GRANT DEXTER, Professor of Education in the University of Illinois.
A History of Education in the United States
With seven Maps. Cloth, 8vo, 619 pages, $2.00 net (postage 16c.)

An important work, the first to supply the greatly needed reference book of facts concerning the development of the people's schools, the schools for special or higher education, and those factors in our social organization, apart from the regular machinery of the schools, which make for educational extension.

By GEORGE F. HEFFELBOWER, Professor of Greek Literature in Carroll College.
Croiset's An Abridged History of Greek Literature
By MM. ALFRED CROISET, Dean of the Faculty of Letters of the University of Paris, and MAURICE CROISET, Professor of Greek Literature in the State College of France. Authorized translation from the Second French Edition, by GEORGE F. HEFFELBOWER, A.M., Professor of Greek Literature in Carroll College. *Cloth, 8vo, 569 pages, $2.50 net (postage 19c.)*

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 22, 1904.

The Week.

No period in twenty years has been more inopportune for a feud among Republicans of this State. The Republican strength has been waning ever since 1900. In 1902 Odell scraped through with less than 10,000 plurality; in 1903 Greater New York passed over to Tammany control by a substantial majority. By assuming the duties of State Chairman, Gov. Odell has disgusted the better element of all parties. Only a few weeks ago well-informed Republican politicians were privately admitting that the movement of the independent vote toward the Democrats was irresistible; that New York would be against Roosevelt and against any Republican candidate for Governor, except, perhaps, Elihu Root. A man with "an Odell tag" on him—to use Senator Platt's expressive phrase—was foredoomed to defeat. And now we have a man who bears the Odell tag, put on him after a very bitter and dramatic struggle. Of Mr. Higgins personally every one speaks well. He is quiet, well-trained in business, and, as Chairman of the Senate Finance Committee, has had a creditable record. The doubt, however, is whether he has the courage to break up what is known as "the State Capitol gang," whether his backbone can withstand the pressure of the Odell machine.

The New York Republican platform certainly contains not a syllable that will serve as a summons to the defeated and disgruntled faction. The laudation of President Roosevelt's "honesty, wisdom, courage, and patriotism," and the endorsement of the national platform are in the usual perfunctory style; while the commendation of Governor Odell will, of course, excite among the disaffected only derisive laughter. The proposal to "increase the effectiveness of the school system" and build up the State's educational facilities "wherever practicable" is too general to win votes or to bind the party. The further purchase and preservation of Adirondack forest lands is highly commendable, provided the process does not mean more fat fees for favored Republican lawyers and landbrokers. The most curious plank is that in praise of the present system of indirect taxation. "The effective measures of the Republican party in this direction constitute the greatest step taken in the history of our commonwealth for the relief of taxpayers." And yet there seems to be a rift within the lute, for "if any taxes heretofore levied, especially such as affect the savings of the people, appear to be unjust or unnecessary, we favor such revision of the tax laws as will equitably correct such condition." Here is no trumpet-call to stir the hearts of the Republican hosts.

It appears to be fated that some orator or other should make a "break" at every political convention, and it was Chairman Fassett's turn at Saratoga on Friday. In one of his mounting periods about "that brave and fearless, etc.," he said that President Roosevelt had even dared to "defy the labor unions." Imagine the gasps and sinking of heart among the delegates. They must have felt something like that grief of strong men which moved the Democrats at St. Louis when that consummate naval rhetorician, Capt. Hobson, ventured to praise President Cleveland as a man who had taken a labor union by the throat. Woe was pictured on every countenance. One Democratic Congressman was heard to wail: "That speech means 3,000 Republican majority in my district." But perhaps Fassett's assertion that Roosevelt is the true Ajax defying organized labor will save the distraught Democrat after all. Seriously, the dread of saying anything which can be tortured into an affront to "labor" is one of the most needless of the many fears which haunt politicians.

"Uncle Joe" Cannon has chosen a most inappropriate time to sound a "note of alarm" over the Republican prospects. Brief was the joy of those who read in veracious Republican newspapers in this city on Friday: "There is little doubt that the Parker managers regard the fight as lost." If so, why was the country informed the same day that Speaker Cannon, who has been travelling through the West, disagrees with the general notion of the party that the Democrats are asleep? Why has he "read the riot act to both State and national managers"? If the Republicans have the Democrats on the run, there can be no call for such an emergency measure. Neither can it be necessary for Uncle Joe, at his time of life, to buckle down to active campaigning. What can have happened? This: he has learned that "an appeal to the discontented" is being sent out from New York. "Every man who is out of work," he says, is now receiving the attention of the Democratic managers. But the country never was more prosperous, say President Roosevelt, Senator Fairbanks, and Republican orators generally. Don't joke on serious subjects, Uncle Joe! How can there be any unemployed and discontented? Does not the Chicago platform declare in so many words that, "under the Dingley tariff, labor has been fully employed, wages have risen, and all industries have revived and prospered"?

New Jersey Democrats gave the Republicans fresh cause for worry on Thursday. Mr. Black, their nominee for Governor, is an able lawyer of excellent record, as far as possible from the type of machine politician; while the issue of equal taxation which the Convention pushed to the front is one over which the State is becoming aroused, though the Republicans are sorely divided about it. The Republican Mayor of Jersey City has severely arraigned the men in control of his party for subserviency to railroad interests, and for extravagant and oppressive legislation. The answer which the party managers propose to make is to nominate for the Governorship Senator Stokes, a well-known henchman of the railroads.

A Washington dispatch reports that Chairman Cowherd has urged the Southern members of the Democratic Congressional Committee to bring out a large vote this fall in every district, whether there is opposition to the Democratic candidate or not. Some advocates of reducing Southern representation find an argument in the preposterously small vote by which Southern districts send Democrats to Congress. It has been computed that a white Mississippian who votes has something like forty times more representation, proportionately, than a New Yorker. Efforts to bring the whole body of Southern white men to the polls will obviously reduce this apparent inequality. Yet such efforts must be in their very nature artificial, so long as one party practically monopolizes the voting privilege. All the Congressmen from Mississippi, all but two from Georgia, and all from Florida were elected without opposition at the polls. Will any man inconvenience himself to vote in such an election merely for the sake of making an impression on the North? Men will turn out and vote when there is something to vote about. The Democratic primary in the South has usurped the place of the election. In such a contest as the one between Congressman Bankhead and the spectacular Richmond Hobson, last April, a vote is polled immensely larger than that on election day. The returns just at hand from the South Carolina primary show the condition that must always exist when there is no healthy division of parties. Though not quite complete, they show that 11,319 men voted in the primary of the Sixth District, which chose its present Congressman by a total vote of 3,981, while in the Second District there were cast 10,072

votes in the primary to only 5,381 in the actual election of last year.

As the Statesboro outrage was one of the most shocking triumphs of lawlessness over order which the black history of Southern lynchings affords, the whole country has an interest in the meting out of justice to the men responsible. The court of inquiry, after hearing evidence, recommended a court-martial for Capt. Hitch, Lieuts. Cone, Mell, and Griner, the officers in command of those precious "soldiers" who, opposing a frenzied mob with Quaker guns, permitted two convicted criminals to be taken away from them and burned at the stake. Gov. Terrell has promptly carried out the recommendation, and the court-martial is to convene at Savannah a week hence. Lieut. McIntyre, who seems to have been made of different stuff from his fellow-officers, and was badly wounded while trying to save the negroes from the mob, is rightly exonerated. Some of these same militia announced before going to the manœuvres that they would not submit to "chaffing" by Northern troops on their part in the Statesboro affair. They have now to face something more serious than mere ridicule.

To the Administration the American cigar has appealed, and not in vain, against the flaunting manners of the Havana. There are miserable beings, cravens and weaklings of the smoker class, who prefer the bland aroma of the Havana to the simpler pungency of the American article. These bad Americans have taken advantage of the conspicuous pink revenue stamp with which the customs mark all imported cigars. By looking out for this band these effete lovers of pauper-made *perfectos* have been able to avoid the humbler and more wholesome article sealed only with the green internal-revenue stamp. This distinction the lovers of the American weed have held to be unfair advertising of the imported product. Only make the boxes alike, it was suggested, and the most graceless consumer of *Vuelta Abajo* may gradually be drawn, through the deceptive pleasures of Key West, to the milder fragrance of the Connecticut brands, to the more masculine delights of Louisiana plantation leaf, while, with the flaunting temptation of the pink stamp removed, he may finally be won to his birthright as a free-born American smoker—the Pittsburgh stogy. Of course, a well-disposed Administration had to get round the difficulty that by law the imported cigar-boxes must be plainly stamped, and that such stamp perforce and intentionally advertises the fact that the cigars are imported. But this difficulty will be remedied by making the customs revenue stamp small, and affixing it to the bottom of the box, where it will cost the bad American some pains to see it. Has the history of tariff humors and curiosities a more picayune chapter to show than this?

Some communities in this country earnestly desire foreign immigration. Others are pretty strongly opposed to it. Obviously, the practical immigration problem is one of distribution. The immigrant has a perverse way of settling in those places which do not want him and ignoring those which do. Any systematic effort made by the Government agents in Europe to attract immigrants to some particular spot in need of them, would be attacked with some justice on the ground that we get more than we want without advertising for them. Commissioners of immigration for many years past have believed that something in the way of better distribution could be accomplished by affording the States needing labor an opportunity after the immigrant has landed of giving him information about conditions in their sections and inviting him to settle there. Commissioner-General Sargent renews the recommendation this year, and asks Congress for a chance to begin work of this kind at Ellis Island. It is doubtless true that the majority of arrivals already know their destinations, but, if there is any considerable percentage which could be diverted to more useful fields by an explanation of the conditions, the plan may be worth trying.

The strongest impression which one gets from the speeches at the annual meeting of the American Bankers' Association is that banking in this country betrays great diversity. This is true as regards those institutions which operate under the National Banking law, and it is doubly so in the case of those which do business under other charters. In the one instance, the supervision of the Comptroller of the Currency and certain general requirements as to methods give an appearance of solidarity; in the other, we find the trust companies and private banks, not only differing among themselves in policy, but likewise flying in the face of provisions which are regarded as indispensable to the best interests of the national banks. The need of greater conservatism on the part of this class of fiduciary institutions was admitted on all sides in the proceedings; but, even better, real steps were taken to accomplish this end. The abuses of trust companies were discussed with surprising frankness by Mr. F. H. Fries. Broadly speaking, he said, the trust company acts for others and not for itself. To engage, therefore, in a business incompatible with these relations is foreign to the purposes for which it is intended. With this as a text, it was easy for him to pass on to the subject of promoting, underwriting, and reserve requirements. Topics more vital than these have not engaged the attention of the financial world in the last year. Mr. Fries, himself a trust-company president, did not mince words in talking about "the gross impropriety of a trust company becoming a promoter, or entering the field of speculation in any way." He also declared that if such an institution does a commercial banking business, the same reserves that are required of the national and State banks should be kept by it, and the same system of supervision should be submitted to. This excellent precept was accompanied by resolutions looking to the passage of uniform laws by the different States for supervision of trust companies.

An interesting divergence of opinion was revealed in the matter of an "emergency circulation" of currency. The question at issue concerns the familiar problem how the banks are to meet severe financial crises in the future, with the present system of reserves and note circulation. Panics of the past—those of 1893, 1890, and 1884, for instance—have been met by the use of clearing-house loan certificates, whereby all banks in a given clearing-house association virtually pooled their credit, the stronger institutions accepting from the weaker, in lieu of cash payment on a debit balance, certificates based on such assets of the weaker bank as the clearing-house committee should approve. Of recent years, the tendency of banking discussion has been towards the abandonment of this contrivance, and the substitution of a more regular and permanent measure of possible relief. Mr. Hepburn's address to the Bankers' Convention advocated adoption of the German system, under which banks are allowed, in time of stress, to issue notes in excess of the ordinary legal limit; such excess issue being, however, so heavily taxed by the Government as to ensure retirement when the emergency is ended. The president of the Association, Mr. Bigelow, took ground flatly against all plans of emergency circulation, remarking that when extravagance in trade or finance causes trouble in money markets, "the public is only worse off for any elaborate, prearranged plan to let it out of a bad hole in an easy way."

Canada as well as the United States is preparing for a general election in November. As Mr. Chamberlain has been telling the world that ardent appeals were coming from the colonies for imperial federation and preferential trade, it might naturally be supposed that these were now the leading issues in the campaign across the border. But in fact they are playing almost absolutely no part. In the last session of

the Dominion Parliament no one had the courage to bring them to the front. They were not regarded as a winning card then, and there is even less disposition on the part either of the Liberals or the Cpposition to talk about them on the stump. The present administration "points with pride" to the prosperous condition of the country and to its policy of railway extension, but it sees great possibilities of evil in the Chamberlain programme as a campaign issue. The French Canadians have distinctly not warmed to the late colonial secretary. And the English-speaking part of the community, when it comes to changing imperial federation and preferential trade from the realm of sentiment to that of practical attainment, are strongly of the opinion that a bird in the hand is worth two in the bush. The Canadians have no desire to increase their armaments at home, or contribute to the support of the British army and navy. They are, too, asking what profit there is for them in increasing the cost of food in Great Britain and diminishing their own manufacturing industry.

The effect of the war upon American cotton goods in Mantchuria is not so easily predicted as President N. B. Borden of the Fall River Cotton Manufacturers' Association supposes. Japanese success, in his opinion, is to be the salvation of the cotton mills of this country. He argues that the great falling off in our exports of cotton goods to China in the last eighteen months was due to Russia's attempt in the early part of 1903 to close that market to us, and that our business is picking up there now that the Czar's troops are being driven out. Prior to April, 1903, he says, we exported about 36,000,000 yards a month to China—the larger part to Mantchuria—but by November, 1903, the sales were down to 1,000,000 yards. In July, 1904, they were 17,244,010 yards, against only 9,751,868 in 1903. Undoubtedly, heavy rebates on the Siberian railway and the use of American labels on Russian cottons handicapped our mills considerably last year, and so, unquestionably, has the disturbed state of the country done in 1904. But the real explanation of our decreased exports is to be found in high-priced goods. Not the Czar, but Mr. Sully, is to blame for our manufacturers' ills in China in the last year or more. One thing Americans have got to learn—the Chinaman is the last person in the world that can be crowded in the matter of prices. As regards the future, there is a strong belief that Japan's purpose is not to open up Mantchuria to American cotton goods, but to obtain an outlet for her own growing manufactures.

Black but convincing is the picture of the horrors of war that is presented in Prince Radziwill's account of conditions at Port Arthur: the envenomed antagonism on each side, the disregard of flags of truce or surrender, the heaps of decaying dead on the surrounding hills, the probability of a massacre of the Russians when the fortress is finally captured. This one description is a sufficient answer to the Roosevelt rodomontade about the enervating effects of peace, and the need of war to brace the physcial and moral fibre of a nation. It would be quite as sensible to argue—as some silly persons do—that a course of gluttony, drunkenness, and sensuality is needed to develop a man's physique and expand his higher mental and moral nature. Upon a nation a war has much the same effect as debauchery upon the individual: it throws the rein to all his basest and fiercest passions; it gluts the ape and tiger in his nature till they overmaster the atrophied man.

Writing after the sortie of the Russian fleet from Port Arthur, Capt. A. T. Mahan calls attention in the *National Review* to Admiral Togo's extreme care to preserve his battleships. Other critics have declared that no portion of the Russian fleet would have escaped if its opponents had been Anglo-Saxons. The only explanation of the Japanese failure to close in is that the Admiral dared not risk the loss of a single ship. As Capt. Mahan puts it, Japan does not yet feel that she has any margin of sea power to spare, and he adds: "What a justification of the [Russian] tenure of Port Arthur and the consequent harassment of the enemy's little navy!" He differs from those critics who have thought that Port Arthur lost its importance so far as the land campaign is concerned, as soon as the Japanese armies "contained" it and pushed on into Mantchuria. He thinks that the delay it has occasioned has been of the greatest consequence, and points out that the time occupied by the siege was quite sufficient to have enabled the Russians to send out a reinforcing fleet large enough to turn the scale. Capt. Mahan also thinks that Kuropatkin's policy of successful retreat has been the proper one (his paper was written before the disastrous battle at Liaoyang). He quotes Bonaparte as saying in 1797: "Though our military position was imposing, it must not be thought that we had everything in our hands. Had the enemy awaited me, I should have beaten him; but had he continued to fall back, continually augmenting his resources, the situation might have become embarrassing." The question in Mantchuria now is: Has Oyama crippled Kuropatkin sufficiently to make such a plan of effective withdrawal impossible?

Probably no man of our time was more thoroughly trained for greatness than the late Prince Herbert von Bismarck. He came into the diplomatic service before his thirtieth year, with the glamour of his three wounds at Mars-la-Tour. All the grades of the service were promptly opened to him, and he was equal to every promotion. At the time of the elder Bismarck's forced resignation, the son was Minister of State, and had in every sense served up to the position. He was called back from a romantic elopement with the unhappy Princess Carolath with a severity usually applied only to wayward princes of the blood, and the tardiness of his subsequent marriage was unquestionably indicative of the personal sacrifice he had made to his father's ambitions. In fact, there are few cases where the son of a great statesman has been at once so rigidly and wisely trained for administration and so carefully safeguarded against all temporary swerving from one ideal. And Herbert von Bismarck's abilities, though not of the first order, were of a kind to justify his father's pains. It was fortunate, perhaps, that, declining to accept the eclipse of his name with his father's fortunes, he sought a seat in the Reichstag, and for twelve years played with astuteness and often with eloquence the part of candid friend to the Government that had dismissed his father and himself. A life like his does much to rebut that charge of degeneracy so frequently made against the sons of geniuses. Had he stuck to the army, he might have won a still higher position.

Since the future of Italy is largely bound up in the House of Savoy, there will be general rejoicing at the birth of an heir to King Victor Emmanuel III. and Queen Helena. The tiny crown prince is to take the name and title of his grandfather, Humbert, who, before he became King, was Prince of Piedmont. That title recalls the glories of the *Risorgimento*, and happily is noncontentious. Victor Emmanuel III.'s designation as Prince of Naples was always offensive to Garibaldians, who remembered how Naples was won from the Bourbons; and the style of Prince of Rome would raise the Papal question at a time when the Pope has been showing a conciliatory disposition. The new prince may live to see the working out of many movements now confused. Socialism is yet to be tried in Italy; it might conceivably take a republican as well as anti-dynastic form. Before long the faithful Romanists, now kept out of political life by the *non expedit*, will begin to play their part in the state, forming, very likely, a stalwart element of the now sadly broken conservative party. These and other possibilities await the infant who comes acclaimed by a nation and recalling in his name the mountain origins and military glories of his race.

THE FACTS ABOUT THE PENSION ORDER.

Report No. 1 of the Constitution Club, published on Thursday, deals with the charge that President Roosevelt's pension order of March 15, 1904, was an unconstitutional exercise of power. The conclusion at which this body of eminent lawyers arrives is that the order was, in effect, legislation by executive usurpation. It was tantamount to taking anywhere from $5,000,000 to $12,000,000 a year from the Treasury without warrant of law, and handing it over to applicants for pensions. After a careful examination of the law and the facts, taking into consideration every explanation or defence which has been offered, the Constitution Club's verdict is: "We conclude that the order was unconstitutional, lawless, and most reprehensible."

A wider inspection of the facts than is offered in this condensed report will certainly not deter candid minds from agreeing with its conclusion. This thing was not done in a corner. The President's motives were well understood. Earlier in the session of Congress friendly dispatches had represented him as being ready to accept the act for a service pension, for which so great pressure had been exerted. But the party managers feared that such a largess would not look well with an election coming. Yet something had to be done. A bill was pending in Congress which proposed a compromise. It read as follows:

> "That every officer or enlisted man in the army or navy of the United States coming within the provisions of the second section of the act of June 27, 1890, as amended by the act of May 9, 1900, who is or may become sixty-two years of age, shall be pensioned under said acts at $6 per month, and every one who is or may become sixty-five years of age shall be pensioned at $8 per month; those who are or who may become sixty-eight years of age shall be pensioned at $10 per month; and those who are or who may become seventy years of age shall be pensioned at $12 per month."

But it was found that this measure could not pass. That is, the end could not be attained through the law-making body. Whereupon, the President arrogated law-making powers to himself, took his pen, and sat down quickly and wrote:

> "Ordered, (1) In the adjudication of pension claims under said act of June 27, 1890, as amended, it shall be taken and considered as an evidential fact, if the contrary does not appear, and if all other legal requirements are properly met, that, *when a claimant has passed the age of sixty-two years he is disabled* one-half in ability to perform manual labor, and is entitled to be rated at $6 per month; after sixty-five years, at $8 per month; after sixty-eight years, at $10 per month; and after seventy years, at $12 per month."

In other words, the President proceeded to enact in precise terms a law which Congress had declined to enact!

The exact illegality of his order lies in its arbitrarily creating a presumption of fact which the pension law did not create, and which he had no authority to create, and in changing the burden of proof. The law said that there should be a pension for disability when "due proof" of disability had been made. Mr. Roosevelt steps in and says that attaining the age of sixty-two years shall be due proof. He got that out of his own head, not out of the law. But, say his apologists (he does not say it himself), it is simply a "rebuttable" presumption of fact which he established. Proof that an applicant sixty-two years of age is *not* one-half disabled may be produced. Yes, but who is going to produce it? Certainly not the applicant. The burden of proof formerly rested upon him. It was removed by the Roosevelt order and placed upon the Government. What that will mean in actual practice may fairly be inferred from what has taken place in the Pension Office before. For seven years, under an order of President McKinley, it has been held that the age of sixty-five was presumptive evidence of being one-half disabled. That was exactly the kind of "rebuttable" presumption of fact that is now alleged in President Roosevelt's defence. But what was the practice? The Commissioner of Pensions made a sweeping ruling that "a claimant for pension . . . who has attained the age of sixty-five years shall be *entitled* to at least the minimum rate of pension." No more talk of rebuttal! The general rule was established; and so it will be now, undoubtedly, with the Roosevelt order making sixty-two the proof of being one-half disabled. No wonder that professional old soldiers like Private Dalzell hailed the President's ruling as being "quite equivalent to the passage of the service-pension bill, concerning which there has been so much lying to us."

That the order was a radical change of the existing law was confessed by the House Republicans when the Democrats, proposing to make the thing legal, offered it as an amendment to the Pension act. Instantly Mr. Hemenway, chairman of the Committee on Appropriations, made the point of order that it was "new legislation"—in other words, was a "change of existing law." After much squirming, when the Republicans found how they had been tricked into declaring the President's order an act of legislation, the chairman of the Committee of the Whole sustained the point of order, though he tried to make out that the possibility of "rebuttal" made the Presidential order different from the amendment. But we have seen that a "rebuttable" presumption in pension matters really means one that is never rebutted.

Another stretch of power in the order is the clause declaring that it shall not be "retroactive." But if it is only a proper interpretation of the law, why should it not avail all claimants under the law from the beginning? Congressman Williams put the point sharply:

> "How can a construction of the law of 1890, if it is a proper construction, if it is not an executive decree, if it is not an executive usurpation, if it is not executive-made law—how can it 'take effect' for the first time on April 13, 1904, and 'not be deemed retroactive?'
>
> "How can a proper construction of a law passed in 1890 have decreed about it by an executive officer of this Government that it shall not date back to the time of its passage?"

Private Dalzell will not listen to the nonsense about the order not being retroactive. "If it is the law now, it was the law in June, 1890. . . . I estimate there are at least 300,000 veterans who now may go on the rolls by virtue of this decision."

Over and above all questions of legality, President Roosevelt's order was an obvious electioneering move. He seeks to shelter himself, as so many times before, under the mighty shadow of Mr. Cleveland's name, referring to a technically similar but practically very different pension order of his, and also to one of President McKinley's. But the dates are significant. Mr. Cleveland's order was issued in 1893, and McKinley's in 1897—that is, *three years* instead of seven months before an election. Roosevelt's order was nothing but a bit of campaign strategy. The Grand Army was threatening. Not content with having forced Roosevelt to throw Commissioner Evans to the pension wolves, it insisted upon further proof of anxiety for the soldier vote. The pension order was the result. A bold act of executive usurpation, it was besides an open bid for votes, on terms and by means that a scrupulous and inflexible President would have scorned.

GRAFT, RETAIL AND WHOLESALE.

Graft is the pertinent topic which Representative Robert Baker of Brooklyn discusses in the September issue of the *Arena*. He plainly thinks that his exemplary behavior in returning railway passes entitles him to speak with both authority and feeling. The article, though interesting, loses in force because Mr. Baker spreads himself thin over a large area. He denounces the various forms of graft to which office-holders and Government contractors are addicted; he passes swift and severe judgment upon the private citizen who tries to "work" the Government—Federal, State, or Municipal—for special favors; he is equally emphatic in his condemnation of corporations—say, railway and express companies—which, by offering secret rates to pet customers, grant them an advantage over rivals; and he makes havoc of those who water stock and promote swindling enterprises. He has his fling at so many different kinds of rascality, and mixes them up so impartially, that the reader carries away a rather confused impression that the

year 1904 is, as South described the year 1660, "the grand epoch of falsehood as well as debauchery."

It is, however, worth while to detach from his general indictment of the age in which he lives some of his more significant charges against the corrupters of government. These villains fall into two classes: the plain, vulgar thieves, who evade or break the laws; and the schemers who buy, directly or indirectly, special legislation under shelter of which they fatten. In the first class are the men, like August W. Machen and George W. Beavers, who have been defrauding the Postal Department. Their operations have more than once been described in our columns; and in the last issue of *McClure's* William Allen White has, in a much-debated article, reviewed their whole career of crime. Although honest people cannot hold two opinions about their conduct, Mr. White says quite bluntly, "Official Washington knew their power and presumed they were stealing, and official Washington honored them"; for "the man who is making 'easy money' off the Government is looked up to with a kind of envious respect." In this cynical opinion of the official conscience Congressman Baker concurs, for he regards the postal revelations as the mere little surface outcropping of a rich and inexhaustible vein.

This fact, indeed, may explain why the Republicans, fearful of an appalling disclosure of knavery, succeeded in staving off a general round-up of the rogues. Senator Lodge held off the hounds by pompously promising a full investigation "in our own time and our own way"; but his own time turns out to be never. On the floor of the House and in responsible public prints the charge was openly made that the railway mail service was rotten from top to bottom; and yet the Republicans dared not put in the probe. Mr. Baker very properly, then, returns to the attack upon "those greater criminals who, through collusion with higher officials and party chiefs, have taken from the Treasury millions every year in excessive mail-transportation payments." He adds the specification that "six millions are appropriated for rental of mail-cars at a cost equal to the original cost of the car, many being over twenty years old." In this accusation Mr. Baker, the Democrat, is heartily backed by William Allen White, Republican and ardent eulogist of President Rooseveit:

> "Railroad officials, who connive with Congressmen to carry tons of franked Congressional mail up and down their railroads during weighing time, to increase the bills against the Government, get restless when a man so powerful as August W. Machen has a penitentiary sentence in front of him and thirteen untried indictments behind him."

This uneasiness, however, has been groundless, for the Republicans refused to prise up the lid that conceals these iniquities. Mr. Roosevelt, the dauntless and resolute hunter of rascals, tamely acquiesced in the party programme of smothering the facts, and did not even make such an investigation as lay in the power of the Administration, independent of Congress. For what he did in bringing wrong-doers to justice he deserves praise; but more than one admirer of his quenchless energy is puzzled to know why his hand was stayed, why it never struck those "higher officials and party chiefs."

At the head of those who procure laws under which they may plunder with comparative safety, are the public-service corporations and the beneficiaries of the tariff. In regard to the corporations, Mr. Baker makes the sweeping statement: "There is not a clean page in their whole history; it has been one of long-continued, persistent bribery." When one recalls the scandals in regard to street railways, electric lighting, gas, and water companies that have blackened the annals of municipal and State legislatures in New York and every other commonwealth in this country, one must admit that Mr. Baker's arraignment has only too much support in fact. In this dirty business both parties are equally guilty; both Republicans and Democrats have been equally eager for a share of the loot. In New York, Croker and Platt, the Tammany tough and the moral rural Republican, have conspired to pillage the people. Neither the pot nor the kettle can call names.

The Republicans, however, must bear the odium of the tariff. They have framed the schedules; they have "fried the fat"; they have taken pay for legislation in campaign funds, and have defiantly asserted that this legalized robbery of the many for the benefit of the few is the bulwark of national prosperity. Never was there a more glaring falsehood. It would be as sane to declare that defalcation is the basic principle of sound banking, cheating the life of trade, hypocrisy the soul of religion, adultery the binding cement of wholesome family life.

The tariff grafting is a wholesale operation, compared with which the peculations of a few hundred thousand dollars in the Postal Department are mere petty larceny. The poison of that "Protection" which filches from millions for the sake of enriching the chosen thousands runs through all the arteries of state, and breaks out in our reckless and venal extravagance. The contagion of corruption spreads from the senatorial advocate of special interests down to the humblest ward-worker and district captain in the obscurest corner of the country. Through men like Gorman it infects and destroys even the sound tissue of the Opposition. For this reason, then, the Democratic party, if true to its mission, must wage now and in the days to come an uncompromising and relentless war for tariff reform. The leaders must organize a campaign of education, must gather and compact into a fighting army all who hold as the cardinal article of their political creed that saying of John Bright's, "There is nothing in public affairs that tends more to make men dishonest than the system of Protection. It was so in this country before our free-trade era; it is so now in the United States."

A TWO-WORLD EXHIBITION OF PAINTING.

A number of American collectors have fallen upon the singularly happy idea of exhibiting side by side a hundred of the best American with a hundred of the best European pictures. For this purpose an association has been formed, including a remarkable list of patrons of art; the Fine Arts building at Fifty-seventh Street has been hired for the late fall and early winter; and a provisional list of nineteenth-century masterpieces has been made. Living artists will not be excluded, though naturally those whose fame is generally admitted will be most fully represented. Certain limitations are imposed also by the nature of the material and by the prudence of the committee. Obviously, no comparison of mural painting is possible; portraits as such are excluded. The show, then, will consist chiefly of landscapes and marines—the most characteristic product of the century just past, with figure pieces in a subordinate position. Within these limits Chairman John Harsen Rhoades, and Mr. William T. Evans—whose part has been as prominent in the invention of the idea as it will be in its execution—and their associates mean to hang only the best examples that may be had. And such may easily be got without going beyond the galleries of the gentlemen immediately interested in the project.

It is no new thing, of course, for American paintings to be hung with fine European pictures. The Salons and the British societies; the International Exhibitions of Munich, Venice, Philadelphia, and Pittsburgh; even the current exhibitions of the dealers and, too rarely, the walls of our private houses have accustomed us to pass rapidly from the art of the New to that of the Old World. But it is fair to say that the comparison will never have been so complete and so insistent as it must be in this exhibition of two hundred masterpieces. We do not know the plans of the committee in detail, but the imagination readily supplies happy juxtapositions. Fancy the choicest of Winslow Homer's marines, for example, alternated with the best of Courbet, and, for the sake of contrast, one of Monet's finest studies of moving water. Think what combinations could be wrought about Inness, following him chronologically, by se-

lections from Français, Harpignies, Daubigny, and Rousseau. Between the Homer Martins would naturally be interpolated the tonalists, Corot, Cazin, with Sisley perhaps at the end. Wyant at one end of his career might fairly challenge comparison with Michel; at the other, with the landscapes of Millet. Preëstablished harmonies would be found between Mr. La Farge and Delacroix and Watts. Mr. Tryon's delicate art would call for a variety of gallery mates, of which William Maris, Chavannes in landscape, seem prescribed, while Millet's "The Sheepfold," in Mr. Henry Walters's collection at Baltimore, could hang only beside one of Mr. Tryon's later versions of moonlit landscape.

Already the intention of this novel exhibition will be apparent. Based in part upon a patriotic pride in American art, it waives the provincialism that usually goes with such confidence. For there is humility as well as pride in the attempt to measure a national art by international standards. The gentleman who hangs his favorite Inness beside a superb Rousseau accepts a hazardous comparison by which his picture must stand or fall. And, in fact, this exhibition, which cannot fail to afford pleasure to the most casual art-lover, is really significant, because it will furnish compactly the data for a just estimate of American painting. If, as most of the European critics reiterate unfeelingly, our painting is merely a clever reflection of the schools of Paris, that fact cannot fail to be demonstrated when the alleged originals are in sight. If, as is rather foolishly maintained (it seems to us), we enjoy a technical superiority over the Old World, combined with inferiority of substance, that indictment will be fully proved. If, on the other hand, there has been and is a specific American quality in men as different, say, as George Fuller and Mr. Blashfield, we shall learn wherein this vaguely divined Americanism consists. If it be true, as the youngest of our painters maintain with no little energy, that all the artists born before the seventies have suffered from congenital anæmia, why, the symptoms of this malady will surely be recognized in the presence of the most robust work of the French, Belgian, and Dutch schools.

These and other considerations combine to make the two-world exhibition a very important event. It cannot fail to bring about a juster, we believe, a higher, appreciation of American art; it may very likely modify its future course, for the lessons of such a comparative show are of a kind to which self-flattery itself can hardly turn a deaf ear. Finally, since the affair is wholly in the hands of laymen, it will give our artists a chance to see themselves as others—in this case, very competent judges—see them. The money proceeds of the exhibition will go to the Orthopedic Hospital.

RESEARCH COURSES AT OXFORD.

A volunteer committee of Oxford professors and fellows has issued unofficially a pamphlet entitled 'Oxford University: Programme of Special Studies for the Academical Year 1904-5, together with some account of opportunities for special work or research existing in the University' (The Clarendon Press). This publication shows at least a hospitable sentiment towards research; it is an expression of that liberal tendency which established the honor courses in modern literature, and relaxed somewhat the stringent requirements for foreign candidates for the bachelor's degree. The list of higher courses presented is in some respects remarkable for its richness; in others, no less surprising for inequality and lack of coördination. Oxford still lacks what a German, French, Scandinavian, or Italian university would regard as a reasonably equipped faculty of philosophy. On the other hand, it offers extraordinary facilities in many departments for those maturer students to whom this pamphlet is an overture.

At the outset it should be said that, unlike most modern universities, nothing like a curriculum is planned. Indeed, no higher degrees are offered in course—for the Oxford B.Sc. and B.Litt. hardly deserve that rating. Except for the very scanty provision of university lectures and exercises, the "special courses" are simply those which are thrown open as a matter of courtesy and public spirit by learned members of the several colleges. There is, however, a frequent proffer of "supervision," the value of which only those who have experienced the habitual generosity of Oxford scholarship can adequately appreciate. The formal machinery of research is mostly lacking; the word seminar occurs just once (in the Geographical Department), and presumably the thing is rare also. Evidently, Oxford not only is not a degree shop, but it is not a place to which a hopeful bachelor could honestly be advised to go on the chance of developing a vocation on the spot. There is no process by which all sorts and conditions of graduates may be signed, sealed, and delivered as contributors to the sum of human knowledge.

Probably there will be no disposition to press such a consummation. Oxford, although she lacks the inspiration of a striving band of *doctorandi*, has no mean substitute in her resident fellows and in the best of the aspirants for honors. Though there is little or no forced research on the Isis, there is no stagnation either in a community including, among those who come first to mind Professors Schiller and Caird, in philosophy; Robinson Ellis in Latin; Principal Moore in Dante; Sweet and Napier in English philology; Cheyne and Driver in Semitics; J. Rhys in Celtic languages; Sayce in Assyriology—not to go beyond the faculty of philosophy and letters. But here the great discrepancy between the departments should be noted. In philosophy more than forty courses are open—an embarrassment of choice. You may study the early books of Aristotle's Ethics under any one of three dons; Bacon or Kant, with an alternative of instructors; logic in from one to half a dozen courses. Such a prospect is not for the untutored seeker after the minimum of metaphysics that will absolve a degree; to find one's own among the Oxford philosophers one should be a very gourmet of ethics. In line with Oxford tradition, there is a similar though smaller display of courses in the classical languages and in history, while, generally speaking, the natural sciences offer comparatively a small showing of opportunities. One notes, in contrast to the general literary tendency of the lectures on the classics, a perhaps excessively philological leaning in the teaching of modern languages, which suggests that the honors course in this subject is not really naturalized, and hints that Mr. Churton Collins's rather vociferous criticism of this school was in part at least well grounded.

The scholars who thus advertise the facilities offered to advanced students at Oxford are frank enough to say that these seekers after knowledge must be able to find their own way about. This is easily to be inferred from the advice that, "generally speaking, paper work [in our academic jargon, seminary reports] . . . takes the form of essays rather of set pieces of work." This is fair warning that the Oxford professors do not supply leading-strings for infant investigators who do not yet know their own minds.

On the whole, the invitation of the University is offered chiefly to advanced students. Only those who have themselves and their purposes of investigation reasonably well in hand are likely to profit by graduate study at Oxford. Such students will meet with the most unaffected cordiality, in both academic and personal relations. They will be treated rather as younger colleagues than as pupils. It is possible that Oxford must, with the other universities, move on towards the regimentation of all studies; but for a time one would be glad to see her gradually drawing in an élite of young investigators, and settling her freer methods against the increasing formalism of the other great schools. It may not be superfluous to add that, while there is a very minimum of the snobbery of wealth at Oxford, the scale of living is higher than that of an American, and *à fortiori*, the Continental universities; nor is that

economy which may be so tolerable and even amusing on the Spree or the Seine even comfortable on the Isis. The Oxford graduate student will fail to get the best out of his experience unless he is of the happy middle condition between poverty and riches.

PRUSSIAN OWNERSHIP OF COAL MINES.

The attempt of the Prussian Government to add another to its numerous coal mines has met with a severe check, if not with a final defeat. At a meeting of the stockholders of the great Hibernia mine, held at Düsseldorf, the Government's bid for the property was rejected by an overwhelming vote. With more than two-thirds of the stock represented, the Government and its ally, the Bank of Dresden, polled only two and a half millions, while their opponents voted shares valued at more than 29 millions of marks. Then, as if to make the Government reverse the more hopeless, a six and one-half million increase of the stock was decreed, very little of which will be allowed to find its way into the hands of those who favor Government ownership. Naturally, the opponents of the sale are jubilant. In their opinion the real desire of the Prussian Minister of Commerce and Industry, Herr Möller, is to acquire all the large coal mines in Rhenish Westphalia, the most important group in the entire kingdom.

Newspapers like the *Deutsche Tageszeitung*, and individuals that favor nationalization, will not, however, accept the defeat as final. The above organ of the Agrarians declares that the Government will not be balked, and intimates that there are other and surer ways of accomplishing its end than by the purchase of a majority of the shares. By this it can mean only legislation against the Coal Trust or a condemnation of the mines, on the ground of the general welfare. It unhesitatingly avers that nationalization must come some day, and its opinion is of considerable importance because of the friendly relations of the Agrarians to the Government, as evidenced by the latter's readiness to sell coal to the farmers' associations at a lower rate than the Trust will give them. Even so liberal a newspaper as the *Frankfurter Zeitung*, perhaps the most weighty in Germany, which is certainly beyond all governmental influences, declines to believe that the stockholders' vote is final. A financial crisis or hard times might, it thinks, induce the owners of the Hibernia to part with their property, and on less favorable terms. It has heartily approved Herr Möller's plan.

From the American point of view, the most interesting phase of this situation lies in the announcement that the Government's action was based on fear of a dangerous private monopoly. This the semi-official *Politische Nachrichten* of Berlin very clearly intimates. The Government's original aim, as set forth in the inspired press, was to assure itself a sufficient supply of coal for its railroads and for military purposes, and also to become a member of the Rhenish-Westphalian Coal Syndicate. As it investigated the situation, it found that the Trust's influence had grown very rapidly; that it had absorbed all the small mines which had hitherto acted as a check upon its operations; that it was supreme in its field, and meditated incursions into other and related industries. The Government then decided that the general welfare was a further and more cogent reason for its entering into competition with the syndicate. The decision is noteworthy, since this is the first time that the Government has admitted the danger of a monopoly of any industry.

It is not, of course, the first time that Prussia has taken a step towards State ownership. The control of railroads and telegraphs was assumed long ago, and it has owned coal mines in the Saar district and in upper Silesia for many years. Hitherto other considerations than a fear of the Trusts have guided such investments. As in this country, the great industrial combinations seem to be doing the work of State Socialism far better and far more rapidly than its avowed advocates ever dreamed. The coal strike of two years ago revealed to our public the practical monopoly of the Pennsylvania coal fields. As in monarchical Germany, the thought which then presented itself to many minds in this republic was Government ownership and control, even though we had no such excuse as the national ownership of railroads. In his letter of acceptance, President Roosevelt says that it was his interference which alone prevented the movement from becoming too "irresistible" for even his unchanging "principles."

Fortunately, in this country the working of statutory and economic laws has shown and will continue to show the needlessness of a plunge into Socialism. In Germany the possibility of a resort to legal control seems for the moment all but forgotten. Her editors see the State fighting the great combination of capital in Westphalia and coming out second best. They see ministers and chancellors taking orders from manufacturers or Agrarians in Landtag or Reichstag, and they ask, in despair, what is to be the fate of the consumer and the individual? They remember that the Government itself has helped into being the Coal and Steel Trusts which now terrify the very ministers who were the fairy godmothers when these infants were born, and praised them so highly but the other day, when they were growing to their full strength. Only the *Frankfurter Zeitung* and one or two others call for a revision of the laws bearing on coal mining. The rest of the press affects, like the Berlin *Tageblatt*, to believe that the decisive conflict between the State and the capitalistic forces has not yet begun, or urges the Government on to further attempts to obtain control not only of the Hibernia but of all private mines, in order to avenge its defeat and to prove that the final arbitrament rests with itself and not with the capitalists who defy it.

DANIEL WILLARD FISKE.

The life of Willard Fiske, who died very suddenly at Frankfort on September 18, was like a well-rounded sonnet in which the last line echoes the first. His most recent bibliographic labor was expended upon a work in two volumes, yet to appear, entitled 'Chess in Iceland and in Icelandic Literature, with Historical Notes on Other Table Games.' Even as a sophomore at Hamilton College, in the late forties, he resolved to forfeit the remainder of the course that he might go abroad and study the Scandinavian languages—in Copenhagen with Rafn, in Upsala for two years at the University, his true Alma Mater. From 1852 to 1859 he was assistant at the Astor Library in this city, and began making the Icelandic collection which is now possibly the largest and completest in the world. Meanwhile, in 1857, he took part in the tournament of the American Chess Congress in New York, and edited its 'Book.'

When his relations with the *Nation* first began (in 1874) he was still preoccupied with Icelandic, and not till some years later did he reveal his new interest in forming a Petrarch collection, ultimately to be, like the Icelandic, one of the foremost extant. Thereafter, the two passions were fostered together, and in his catholic library Heine's answering "Pine and Palm" was realized. In 1886 he was engaged upon a list of books printed in Iceland supplementary to Lidderdale's for the British Museum, and he contrived in the winter of 1888-9 to get out a second supplement. That winter was spent in Egypt, and he all but finished there a side task, an index to Spitta Bey's Modern Arabic Grammar. A new enterprise now fired his imagination and enlisted his liberal propaganda, namely, a Romanized alphabet for the development of the colloquial Egyptian. To this end he prepared a Primer and a postal gazetteer. In August, 1889, he wrote to us:

> "I am greatly interested in a new movement going on in Egypt—a movement which seems to me to give good hope of an extended Saracenic revival. It grows out of the anti-Darwinian difficulty at Beirut, some few years back. It now has at Cairo a monthly scientific organ (very like the *Popular Science Monthly*), a monthly literary organ (in which the doctors of the Moslem university of El-Azhur write articles which are printed side by side with those of Christian Arabs), and a daily, the largest and best printed in the Arabic tongue. In the editorial rooms of the scientific journal I saw a library of some 5,000 volumes, English, French, and German."

This was wholly characteristic of Mr. Fiske's ability to sympathize with his environment. It was exemplified again in his using an enforced stay in Switzerland in gathering up with great rapidity a unique

collection of text-books and other works in the various Swiss dialects, which he then presented to Cornell University, as he also presented the great Dante collection raised with like promptitude.

The period following his connection with the Astor Library saw some fumbling for a settled vocation. In 1859-60 he was secretary of the American Geographical Society. In 1861-62 he was attached to the American Legation at Vienna, under Motley. Journalism in Syracuse and in Hartford occupied him from 1864 to 1868, when he was called to Cornell as professor of Northern European languages and University librarian. In 1879 he paid his first visit to Iceland, where he was well known and received a real ovation. In the following year he married Miss Jennie McGraw, the wealthy daughter of one of the chief pillars of Cornell, who unhappily was taken from him in the following year. Meanwhile, differences much to be regretted arose between himself and the Trustees of the University, and led to a suit involving the beneficent will of his wife, with such interruption of friendly relations that he definitively fixed his residence abroad, and transferred his two precious collections to Florence, Italy, at first occupying the late home of George P. Marsh, in the Villa Forini, Porta alla Croce, and afterwards purchasing the Villa Landor, once the haunt of Walter Savage Landor, and more or less authentically associated with the scene of the Decameron. Here he dispensed a lavish hospitality to Americans, English, Italians, persons of every nationality, resident or sojourning, and pursued his bibliographical work with a feverish industry, stimulated by his uncertain health. He was long a valetudinarian, and his death will not surprise his intimate acquaintance. After all, with too little care of his body, he surpassed the age of seventy, having been born at Ellisburg, Jefferson County, New York, on November 11, 1831.

Mr. Fiske's nature was essentially modest, simple, and trustful, ardent, persistent, generous—in his day of small things as in his prosperity; and his attachments were deep and lasting. Some of the closest of these were for ex-President Andrew D. White of Cornell, the late Charles Dudley Warner, the late Eugene Schuyler, the late Dean Sage, the late W. J. Stillman, and Prof. E. P. Evans, now of Munich. The imbroglio with Cornell was personal to the Trustees, and unmercenary; and, besides the gifts to the Library already enumerated, it is the common expectation that his Icelandic and Petrarchan collections will ultimately find their way to Ithaca. At that institution he was an active promoter of the chapter-house system for Greek-letter societies. Childless himself, he had a kindly drawing towards youth. Verse was an occasional solace, as a privately printed volume evidences. Mr. Fiske will be greatly missed, as he was much beloved.

THE *REDUCTIO AD ABSURDUM* OF PARTY GOVERNMENT.

LONDON, September 3, 1904.

The main object of party government, as it exists in England, is to ensure that the country shall be governed by the statesmen who command the confidence, and in accordance with the policy which has gained the deliberate assent, of the electors, or (to use a received though inaccurate expression) of the "nation." My purpose in this letter is, first, to point out that at the present moment our English party system fails, or is likely to fail, in the attainment of its main object, and next to show that this failure arises mainly from permanent causes, the existence whereof shakes one's faith in the whole party system.

(1.) The system has at this moment broken down, or, at best, is on the point of a breakdown.

Consider, for a moment, the position of a free-trade Unionist—that is, of a man who is both a strenuous opponent of home rule and a believer in free trade. Such a person—and there are thousands of such Englishmen—is in a difficult position. The Ministry, indeed, and its supporters, guided nominally by Mr. Balfour, but deeply influenced by Mr. Chamberlain, are strong Unionists; but then they are also for the most part protectionists. The Opposition, led nominally at any rate by Mr. Campbell-Bannerman, consists of men who are free traders, but are certainly not Unionists and will assuredly not carry out the policy of Unionism. At every election our free-trade Unionist is, then, placed between the horns of this dilemma: if he votes for an Opposition candidate he imperils Unionism; if he votes for an adherent of the Ministry he imperils free trade.

What makes the difficulties of a Liberal Unionist worth consideration is that, owing to a peculiar combination of circumstances, the nation stands, or is likely to stand, in the same position as that occupied by every free-trade Unionist. The majority of the electors have, it is certain, not forsaken the policy of maintaining the Union with Ireland. It is in the highest degree probable that they still adhere to the principles of free trade, at any rate as regards any taxation which threatens to raise the price of corn. But if this be anything like a true account of the actual situation, how can it be hoped that, at the next general election, the will of the nation will obtain recognition? If ministers obtain a majority, the maintenance of the Union will, one may hope, be secured, but encouragement will assuredly be given to the policy of protection; if the Opposition should be victorious, the attack on free trade will be repelled, the maintenance of the Union with Ireland will become a matter of extreme difficulty, the promotion of a really Unionist policy will be all but an impossibility. No one seriously believes that if Mr. Morley becomes again Irish secretary, the so-called Crimes Act will, if the necessity arise, be used for the maintenance of law and order. If, then, the object of party government is to give expression in Parliament to the will of the nation, the party system is at this very moment—to state the matter in the most moderate terms—on the point of breaking down.

(2.) This breakdown, or collapse, is due not to merely transitory circumstances, but to permanent causes.

This assertion will be denied by many Englishmen far better acquainted than myself with the details of public life. The prime minister's position and his intellectual peculiarities, Mr. Chamberlain's conversion to the doctrines of protection, the tardy action of the Duke of Devonshire—the conduct, in short, of individual statesmen—are, it will be argued, the accidents which have produced the present political situation, nor can any sane man doubt that the interests, the prejudices, and the peculiarities of politicians do tell for a great deal in public life; but the course of large movements is, we may feel sure, governed in the long run by general causes. If Gladstone had permanently retired from public life in 1874, we might not have witnessed in 1886 the startling transformation of English Liberals into home rulers; but an outsider who looks back over the events of the last eighteen or twenty years, must feel sure that, sooner or later, some English statesman would have perceived the party advantages and have convinced himself of the public benefit to be derived from an alliance between some English party and the Irish Nationalists. It is more than possible that, if Mr. Chamberlain had never become secretary of state for the colonies, English elections might not at the present moment be determined by the belief or disbelief of the voters in so-called fiscal reform. But any student who, having noted the course of opinion during the last thirty years, has traced the gradual decline of the old faith in *laissez-faire*, and has realized the close affinity between Socialism and protection, will hardly doubt that, by this time, some leading statesman would have pressed upon the country the revival of a protective policy. However this may be, it will be found that the proper working of the party system depends on certain conditions or assumptions, and that the breakdown of that system is due in great part to the failure of these conditions.

Among these necessary conditions the most essential are the existence of two, and if possible not more than two, parties, each of which holds a definite and opposed political faith, and a faith wide enough to cover all the main fields of national policy; the support by the nation—or, to use a current expression, by public opinion—of one or other of these creeds; the maintenance of a tacit understanding that the two parties which divide the country are each of them prepared to acquiesce and bow to the final decision of the nation, and are at any rate loyal to the fundamental institutions of the country. Though the existence of these among other conditions is always assumed by the apologists for the party system, the assumption is never more than approximately true. No party is at any time provided with a completely coherent creed. It is never true that there is complete agreement between the whole, even of the leaders, of a given party. Praed's lines:

> "I think that some men loathe the schemes their dearest friends are planning,
> That Mr. Hume hates Mr. Brougham much more than Mr. Canning,"

are still remembered after more than seventy years from the time when they were written, because satire aimed at the politicians of 1830 or 1832 applies in its essence to English politicians of every generation.

It is never, again, the case that public opinion supports any party with anything like absolute unanimity. Public opinion is itself to a certain extent a political fiction. On many matters, and those matters of importance, the public have often no opinion at all, and on others opinion may be hopelessly divided. Nor can we ever assert

that all persons interested in politics are prepared loyally to obey the will of the majority. Among partisans there will always be found fanatics who are virtually revolutionists, and are prepared in one shape or another to disobey or defy laws which do not meet with their approval. The assumption, however, that the conditions needed for the fair working of the party system are in existence, is at times substantially true. Between 1830 and 1850, for example, or even we may say till 1868, Tories and Whigs, or Conservatives and Liberals, were divided from each other, speaking broadly, on the definite issue, whether it was or was not expedient to withstand the progress of democracy. And this difference told in one form or another upon the answer to every question which affected national policy. There existed two distinct political creeds, to either of which a man could honestly and consistently adhere. Between 1867 and 1885 both parties promoted or acquiesced in the establishment of household suffrage. Resistance to democratic government came to an end, the Tory democrat made his appearance, the whole aspect of English politics underwent a change. This change, be it added, coincided with a much wider though less noticed revolution. Faith in *laissez-faire*, great and substantial as have been its triumphs, began to suffer an eclipse, and the decline in the power of Benthamite Liberalism was of necessity an advance towards Socialism. The definite old political creeds had vanished, though their disappearance was for a long time concealed by the maintenance of all party names and formulas. Does any one who looks at facts and not at names believe that among the so-called Tories or the so-called Liberals of to-day there is to be found the kind of definite political faith needed for the working of party government? The current political terms of the day—Unionism, Fiscal Reform, Disestablishment, Imperialism, Passive Resistance, the Labor Party, and a lot more of similar expressions—bear witness to the real state of facts.

The political world is cut through and through by cross-divisions. A man may be a democrat and a protectionist, he may be an imperialist and a free trader, he may equally well be an imperialist and a protectionist, or, while the most ardent advocate of freedom of trade, may be opposed to freedom of every other kind, and the fervent defender of everything tending to exalt the influence of the Church or the clergy. And cross-divisions of this kind are not peculiar to men actively engaged in public life; they exist as much among the electors as among the members of Parliament by whom the electors are represented. Nor does it seem at all likely that a definite political creed which one party upholds and another assails as a whole, admits of reëstablishment. The spread of education among the masses of the people, the diversified interests of modern life, and the complication of modern civilization all oppose the formation, either among politicians or among the public, of coherent and systematic creeds the dogmas of which may apply to all the main concerns of the nation. The inconsistencies of public men represent at bottom nothing else than the fluctuation or uncertainty of public opinion.

But the necessary disappearance of true party creeds has more than one result. Parties, in the first place, turn into factions; small bodies, in the second place, who pursue with genuine enthusiasm some single object, attain exaggerated and therefore dangerous, influence; and thus temperance reformers, home rulers, trade-unionists, clerical zealots, passive-resisters, or anti-vaccinationists, obtain a power to which they have no legitimate right. The despotism of the minority becomes at least as real and certainly as pressing a danger as the tyranny of the majority. The tacit understanding, in the last place, that every party shall bow to the will of the nation and must be loyal to the fundamental institutions of the country, ceases to command respect. This is a matter which admits of ample illustration; but here let me content myself with a mere reference to the development during the last thirty years of parliamentary obstruction. Such obstruction is at bottom nothing less than moral rebellion against the authority of the nation, but it bids fair to become a recognized weapon of parliamentary warfare, and a weapon, let it be added, of which the members of every party will, as suits the interests of partisanship, in turn denounce and applaud the employment.

If the party system in England has at this moment broken down, and fails to secure that supremacy of the nation which it is intended to promote, and if this breakdown is due not to the accidents of to-day, but to permanent causes, we have before us something very like the *reductio ad absurdum* of party government. AN OBSERVER.

THE PRINCESS DES URSINS.

PARIS, September 1, 1904.

The present Duke de la Trémoille has made very important contributions to historical science. He has published, at his own expense, several collections of letters taken from his very rich archives, and the Academy of Inscriptions and Fine Arts has very justly given him the title of *Académicien libre*. His latest publication consists of four beautiful octavo volumes, containing the correspondence of the famous Princess des Ursins, who was born La Trémoille. The Duke de la Trémoille seems always to have avoided publicity with as much care as others look for it; his books are given by him to his personal friends and to great libraries; they are printed with so much luxury that they could hardly find many purchasers in the shops. The four volumes of the Correspondence of Madame des Ursins have been printed at Nantes, at the printing-office of Émile Grimaud, and do great honor to this provincial printer.

Anne-Marie de la Trémoille-Noirmoustier had a very romantic life. She was married first in 1659 to Adrien Blaise de Talleyrand, who was called the Prince de Chalais and had to leave Paris after a famous duel in 1666. He fled to Périgord, to Spain, and afterwards to Italy. On the point of taking service with the republic of Venice, he died in 1670. His wife was at the time in Rome; she had many friends there, among others the Duke de Bracciano, of the house of Orsini, who married her in 1675.

"The new spouse," says Saint-Simon, in his inedited works (*Duchés Esteints*), "was handsome and young, and not unaware of it. She was in every way grace itself. Nobility; politeness, which charmed even more by its measure; a peculiarity of speech still natural and fluent; an involuntary eloquence which was touching; and especially an insinuating manner against which there was no defence; an infinite wit, and a mind superior enough to allow it in others and not to make show of her own; a rare talent for adapting herself to others—all was flowers and perfume with her; all attracted people to her with more grace even of mind than of body," etc., etc.

Saint-Simon continues thus with that extraordinary and untranslatable abundance which is characteristic of him, and which is at times almost overwhelming.

The Duchess of Bracciano spent several years in Rome, where she kept a little court. She was not on very good terms with her husband, and went to France without him. She lived there more at Paris than at Versailles. Madame de Maintenon was afraid of her beauty and of the influence she might gain over the King by her great intelligence and her wit. She refused to become a *dame d'honneur* to the Duchess de Chartres, afterwards Duchess d'Orléans, and in consequence lived more and more away from the court. Her income was diminishing, her husband was getting old, and she returned to Italy. The Duke of Bracciano died soon afterwards, leaving her nothing but debts. She sold the Duchy of Bracciano to a nephew of the Pope, and changed her name to that of Princess des Ursins, which she always bore afterwards and under which she is known to history. During her journeys she had become acquainted in Turin with the two Duchesses of Savoy and the Duke. Soon after the death of the Duke of Bracciano arose the question of the marriage of the King of Spain. The King of France and M. de Savoie (as the Duke was commonly called in France) had to choose a *camarera mayor*.

"They needed one," says Saint-Simon, "with talent to form the young Princess, who was only thirteen years old, without making her disgusted with her manners and still less the King of Spain; who would know how to amuse them and to unite them closer, who would be well inclined towards France, on whom our court could count, and who would follow its directions. She was also to be agreeable to the Court of Turin, so as to win over the Princess, and, above all, it was important that she would not be disagreeable to the Spaniards. No Spanish lady could fill the principal of these conditions; a Frenchwoman would have revolted the Spaniards; the Court of Turin proposed the Princess des Ursins, who was quit of a husband, and who alone combined all that could be desired. Madame de Maintenon found it so more than anybody, for it delivered her forever from a rival at court. The affair was soon settled, and Madame des Ursins, who could no longer live in Rome in the style to which she was accustomed, fond of power, saw the skies open and had not long to wait."

The Princess conducted the young Princess of Savoy to Catalonia, where, on the 2d of November, 1701, the nuptial ceremony took place at Figueira. The King and his wife spent the winter in Barcelona; in the spring the King left for Naples, and conducted the campaign in Lombardy, the Queen meanwhile remaining in Madrid with the title of Regent. The real power belonged to the Archbishop of Toledo. Madame des Ursins employed her time in developing the faculties of the young Queen, She carried on a regular correspondence with Madame de Maintenon, who, on her part, saw constantly the Duchess de Bourgogne, sister of the Queen of Spain. Madame des Ursins and Madame de Mainte-

non together had in their hands all the threads of affairs in the two countries.

Philip V., the King, was only too much disposed to be inspired by trusty advisers. Madame des Ursins persuaded Madame de Maintenon that she was herself mostly her mouthpiece and her instrument. The Queen was very intelligent and agreeable; she liked Madame des Ursins, and the King was more and more attached to his wife. Madame de Maintenon was perfectly satisfied, and counted on governing Spain through the agency of Madame des Ursins, "with the same power," says Saint-Simon, "and the same artifices which she used in France, where she never seemed to the King to meddle with anything, but where, in fact, she made him choose or dismiss whomever she liked; where she made the ministers do anything she pleased; where she seemed indifferent to what she really wished, and what the King often himself proposed; and where she turned out the ministers who wanted to shake off this dependency."

Madame des Ursins could not have found a better model. She had one advantage over Madame de Maintenon, namely, the affection she inspired in the young Queen, and the affection which the King felt for his wife; but her favor depended entirely upon the Queen, and, losing her, she would lose everything, in a country which has always shown itself very impatient of the power of a foreign favorite.

The correspondence of the first years opens with Madame des Ursins's entrance upon her functions at the Court of Spain. "How much cleverness," says the Duke de la Trémoille, "she shows in order to ingratiate herself in the mind of the King and to attain power! Homage, praise, outbursts of enthusiasm glorifying the acts of the master—with what infinite art all this was said! The talent developed by Madame des Ursins in the service of her ambition could not be surpassed." Volume one begins with a letter from the Duchess of Bracciano to the Count de Maurepas, Secretary of State (Paris, January 28), and ends with a letter from the Princess des Ursins to the Duke de Noailles (Barcelona, December 6, 1701). Immediately before the latter we find one to Louis XIV., written also from Barcelona (November 27, 1701). It reads thus:

"SIRE: I have not yet given myself the honor to thank your Majesty for the employment which your Majesty has confided to me. I did not know where I was going, and I trembled on seeing myself destined to serve a King and a Queen whom I did not know. Now, Sire, that I find myself almost equally honored by the confidence of both, that I perceive that their Majesties think only of my pleasure, and that it seems to me that these peoples consider you as the protector of their monarchy—having lost my fear, I feel your kindness in full force, and I take the liberty to offer a thousand humble thanks to your Majesty. I believe, Sire, that I can announce to you that henceforward the Queen, entirely occupied with what may make her beloved by the King and by his subjects, will thoroughly discharge her duties. . . . I will use all care in fortifying these sentiments. I will also do all that is possible in order that the King, leaving each thing in its place, may give his affection to the Queen and remain master of his authority."

This programme, written in the purest style of the *grand siècle* (a century, it has been said, in which all women wrote to perfection), shows very clearly what was the character of Madame des Ursins's function. She was to be the real Ambassador of France, the real inspirer of the Spanish policy.

In this first volume of the beautiful publication of the Duke de la Trémoille, the only one with which I shall deal at present, are many interesting letters. The reader is carried only to the time when Madame des Ursins's favor was established. How this favor ended and what treatment she received at the hands of the King of Spain's second wife, Elisabeth Farnese, is well known to all the readers of Saint-Simon. All the incidents of her departure from Spain, of the cold reception she received, on her return, from the King and from Madame de Maintenon, were fit subjects for the pen of the terrible witness who has given us the most vivid account of everything that fell under his eyes or came to his knowledge in the reign of Louis XIV. Saint-Simon condensed in his inedited 'Duchés Esteints' all that concerns Madame des Ursins, and which can be found in the Memoirs only in chronological fragments; and the Duke de la Trémoille was happily inspired in giving as the preface to his beautiful work this condensed life of the Princess. We find in it all the anecdotes which lend so much life to the Memoirs, and the strange personality of the Princess appears more complete and more lifelike. She was, on the whole, a most remarkable woman. She had all the adroitness, the capacity of a statesman; she had immense ambition; and when, at the end of her life, she retired to Rome, she attached herself to the Old Pretender, in whose house she died.

It will always remain a mystery if Louis XIV. was or was not a secret accomplice of Elisabeth Farnese, whom Madame des Ursins had selected as a wife for the King of Spain, after the untimely death of his first wife. The Italian Princess certainly did not obey Louis XIV.'s instructions when she ordered Madame des Ursins to be arrested, thrown into a post-chaise, and taken with a maid to Burgos and to Bayonne. Madame des Ursins had played the part of a statesman; she was treated like a prisoner of state. Louis XIV. must have been somewhat ashamed of the conduct of his son, the King of Spain, but Philip V. was a feeble prince, who was a tool in the hands of Elisabeth Farnese, and the Italian Queen lost little time in getting rid of the French Princess.

Correspondence.

THE DUTCH EAST INDIES.

TO THE EDITOR OF THE NATION:

SIR: In the last number of your esteemed weekly, my attention was especially drawn to an unsigned criticism of 'The Policy of Administration of the Dutch in Java,' recently issued by the Macmillan Co. Written by Mr. Clive Day, assistant professor of economic history in Yale University, as the result of a vast amount of laborious research, directed by an eminently judicious and discriminating mind, it certainly merits the highest praise, and I concur heartily with the anonymous critic when he calls it a "shining example of conscientious and honest scholarship." But, as a Dutchman from Java, I may perhaps be allowed to demur against the conclusion reached by your critic, and which, to me, appears very surprising. He tells us that "so far as he (Professor Clive Day) touches on recent home sentiment, he is hardly just to the facts in the case," while "it is evident that a nearer acquaintance with the Dutch people and with its political history that led to the triumph of the Kuyper Administration in July, 1901, would have made his book more satisfactory"—a statement which serves him as an introduction to the apotheosis of that triumphant Kuyper Administration.

Now, it is not Professor Clive Day but his critic who here labors under a delusion. Anyway, it would be very interesting to hear the last-named make good his assertion that "vast improvement [in the government of Java] has taken place within the past decade, and notably within the last two years." In Java, or, to cover the whole case, in the Dutch East Indies, we have experienced nothing of the sort. On the contrary, the condition of the natives is steadily growing worse, and the measures promised in September, 1901 (a repetition of the promises which, among other promises, made the Kuyper faction triumph at the polls)—the measures, not to ameliorate the poor condition of the natives (liable to cost money, and all new expenses are to be scrupulously avoided), but, provisionally, to investigate once more the reasons which have led and are leading to economic decline (reasons too well known without the red tape of a new official investigation)—are moving so slowly that it looks very much as if the great object in view is simply to put the fulfilment of the promises off till the end of time, *pecuniæ causa*.

Promises, heaven knows, have been bestowed on the Dutch Indies in plenty. There is no political party in the Netherlands but, when it came to power (or, more correctly speaking, in order to come to power), promised abundance of good things to those colonies: profusion of talk, immediately forgotten after the promises had served their political purpose. So will the Kuyper faction. And how the Kuyper faction failed to live up to its promises, exactly as the other factions failed before the Kuyper triumph mentioned by your critic, may be made clear to him by a perusal of the debates in both the houses of the States General, when the colonial budget for the current year was under consideration and the action (want of action) on the part of the present Minister of the Colonies and the present Governor-General of the Indies, and their manifest inability to grapple with the highly unsatisfactory state of affairs, met with the severest censure.

What we are looking for, irrespective of party, is a real awakening of the Dutch conscience in the Netherlands, not only in words but in deeds; a determination to make up for the past, to do away with the unavowable but nevertheless strongly rooted consideration that, since the Netherlands never have been honest in their dealings with the Indies, they need not be honest now; a clear conviction that, in colonial administration as in other administrations, honesty, after all, is the best policy, though bad politics for the whole may be good "business" for some. If Holland wants to retain her position as a colonial power under the new conditions that are shaping in the Far East, she will have to change her colonial methods a good deal and very soon. She will have to rise to the idea that the

natives, as your critic points out, "are the wards, not the serfs of the nation." Dr. Kuyper's Administration, like the administrations that went before, has, thus far, done absolutely nothing in this direction.

A good deal more might be said on the subject, but I am afraid of already having encroached too much on the *Nation's* space, and ask permission to close with a quotation from 'The Autocrat of the Breakfast-table,' wholly applicable to the relation between the Dutch Indies and the Netherlands, and for which my present Boston relations are responsible: "The great thing in this world is not so much where we stand as in what direction we are going."

Yours respectfully, J. F. SCHELTEMA.

[Our impressions of recent amelioration in the affairs of Insulinde were derived from Dutch gentlemen who had recently been in Java and were very far from being Kuyperites, as are we ourselves. We had no idea of ascribing the awakening of the Dutch conscience *solely* to the work of the Roman Catholics and the radical Calvinists who make up the Dutch Premier's following. The Kuyperites allege that the labor troubles and other pressing questions at home have compelled postponement of the needed reforms in Java.—ED. NATION.]

'GERMAN-AMERICAN UNDERSTANDING.'

TO THE EDITOR OF THE NATION:

SIR: Is it possible that several of your correspondents are unacquainted with Ratzel's masterly work, 'Die Vereinigten-Staaten von Nord-Amerika'? And am I right in believing that the recent death of Ratzel himself has been very inadequately noticed in the press on our side the water?

This looks like strange treatment of the standard German book on the United States, and of the eminent German professor whose knowledge of our land and sympathy with its people were so extraordinarily keen and far-reaching. Probably no other person on the Continent had so exhaustive and broad an understanding of our national character as the distinguished geographer at Leipzig—odd that your correspondent from Leipzig should have disregarded him; and perhaps no work could have contributed more toward enlightening home-staying Germans on everything connected with the United States than his two well-known volumes. These have been before the German public for a quarter of a century now—Part II. meanwhile undergoing one considerable revision (1893); they may be found in every library of importance throughout Germany, for at home their worth was recognized from the beginning. In other countries, too, for example, Scandinavia, they still count as a "highly valued work" (*Stockholm's Dagblad*, August 13), and properly. To judge from current discussion in the *Nation*, they might be better known in America. The very first comparison of Professor Münsterberg's opinions on 'Die Amerikaner' should be with Ratzel's, as these are found in his 'Vereinigte-Staaten' and in subsequent shorter articles.

LANE COOPER.

CORNELL UNIVERSITY, September 12, 1904.

Notes.

A. C. McClurg & Co., Chicago, will publish immediately a reprint of Gass's Journal of the Lewis and Clark Expedition (edition of 1811), with an introduction by James K. Hosmer, LL.D., with facsimiles of the original illustrations and portraits. The typography will be elegant.

Ludwig Max Goldberger's 'Land of Unbounded Possibilities,' a review of the industrial and economic conditions of the United States, is in the press of A. Wessels Co.

Lemcke & Buechner are publishers for the United States of Prof. George N. Olcott's 'Thesaurus Linguæ Latinæ Epigraphicæ,' a dictionary of Latin inscriptions (Rome: Loescher & Co.). The first fascicle is out, of 24 pages. There are to be four a year at 50 cents each.

The Clarendon Press, Oxford, has nearly ready a 'Concordance of Dante's Prose and of the Canzoniere,' edited by E. S. Sheldon, Ph.D. (Harvard); 'Dante's Divina Commedia,' translated into English prose by H. F. Tozer, M.A.; a facsimile reproduction of the first folio of Chaucer (1532), edited by Professor Skeat; 'The Tragedies of Seneca,' rendered into English verse by Ella Isabel Harris, Ph.D. (Yale); 'The Letters of Dorothy Wadham (1609-1618),' edited by the Rev. Robert Barlow Gardiner; 'Documents relating to the French Revolution,' in two volumes, edited by L. G. Wickham Legg; 'The Early History of India, from B. C. 600 to the Mohammedan Conquest,' by Vincent A. Smith; 'Origines Icelandicæ,' comprising translations of the Landnámabóc and the earliest prose sagas of the Old Northern Tongue, by G. Vigfússon and York Powell; and Dickens's Christmas Books in five tiny volumes printed on India paper, with the original illustrations, the set weighing less than two ounces.

Little, Brown & Co.'s fall list embraces a limited edition of Philip Gilbert Hamerton's descriptive text accompanying fifty facsimiles of Rembrandt's etchings, with a complete annotated catalogue, introduction and notes by Campbell Dodgson of the Prints Department of the British Museum; an illustrated reprint of Hamerton's 'Intellectual Life'; 'The Fires of St. John,' from the German of Sudermann by Charlotte Porter; 'The Little Book of Life after Death,' from the German of Gustav T. Fechner by Mary E. Wadsworth, introduced by William James; 'Roma Beata,' by Maud Howe; 'The Monroe Doctrine,' by T. B. Edgington of the Memphis Bar; and 'The Expansion of the Common Law,' by Sir F. Pollock.

Mr. Sidney S. Rider, Providence, is distributing to subscribers his long-expected work, 'The Lands of Rhode Island as they were known to Caunounicus and Miantunnomu when Roger Williams Came in 1636. With an Indian Map of the Principal Locations Known to the Nahigansets, and Elaborate Historical Notes.' There are eighteen maps and illustrations.

'The College Girl of America,' by Miss Mary Caroline Crawford, a graduate of Radcliffe, is announced by L. C. Page & Co., Boston. It will be freely illustrated from the life.

A. C. McClurg & Co., Chicago, are about to publish 'Life Stories for Young People,' translations from the German of the lives of Mozart, Beethoven, Joan of Arc, and William Tell. Furthermore, four child stories of the late Thomas Dunn English will be brought out under the title, 'The Little Giant, and Other Wonder Tales.'

Elliot Stock, London, will soon have ready 'Actual India: An Outline for the General Reader,' by Arthur Sawtell, with a new map.

The Consolidated Index to the first fifty volumes of the quarterly *Register* of the New England Historic Genealogical Society in Boston awaits, to be printed, a subscription large or small according to general participation. It is ready, in two divisions—of persons and of places—and is unquestionably the most important undertaking yet witnessed in the interest of genealogical research. The scheme is to print in parts at a price per part ranging from a possible $1.67 (600 subscribers) to $5 (200) subscribers. The number of parts seems as yet indeterminate. Twenty of from 96 to 128 pages are estimated. Every public library ought to be found among the subscribers.

'Peace and Progress,' two poems by Nathan Haskell Dole, will appear in time for the meeting of the International Peace Congress early in October.

Ginn & Co. have put out a fresh edition, with illustrations, of the late John Fiske's fluent popular little sketch 'How the United States Became a Nation.' It well exhibits the dangers, both in proportion and in judgment, which such work involves. Take the chapter headed "The Rise of the Democracy." Here we find in one paragraph the coming into use of friction matches and the whole anti-slavery movement (twelve lines) coördinated, together with this wild extravagance regarding Webster: "He was probably the greatest orator that ever lived, after Demosthenes and Chatham, and as a master of the English language he was superior to Chatham." In reference to his Union-saving utterances: "In this way Webster rendered incalculable service, and not a bit too soon; for"—notice the extraordinary conjunction — "humanitarian movements were beginning to mark this new era." Was Webster's Union, then, opposed to humanitarianism? If so, to whom did he render "incalculable service"? We cannot think it any service to Mr. Fiske's memory to revive this hasty epitome.

The late Canon Ainger, who brought out an edition of Charles Lamb's Letters in 1888, twice reissued—in 1900 in an *édition de luxe*—made the (for him) final increment in the two volumes just issued by Macmillan. The letters to John Rickman alone, here printed for the first time, bear an appreciable ratio to the whole, being nearly one-twentieth; and perhaps their contents, having a high Lambish and personal flavor, might be computed at a still higher ratio. The eccentric poet George Dyer, among others, figures in them, concerning whom Leslie Stephen wrote in the Dictionary of National Biography with touches quite akin to Lamb's own humor. The new output is handy and presentable, and leaves nothing to desire except the prolonged life of the lamented compiler.

The superb edition of the 'Poem of the Cid' (G. P. Putnam's Sons), to which Mr. Archer M. Huntington has been devoting his energies during the last seven or eight

years, has at last reached completion. The first two volumes, containing the text and an English translation, were noticed at length in these columns two years ago; the third and final volume, now before us, is made up entirely of notes on the Spanish text. The two hundred large quarto pages, printed in triple columns, give ample evidence of the scholarly care which Mr. Huntington has dedicated to this great monument of Spanish literature. The earlier doubt of scholars as to his accurate collation of the manuscript is now wholly set at rest, and such eminent Hispanists as Sr. Menéndez Pidal and M. Morel-Fatio have already testified to the value of his latest labors. The De Vinne typography, the valuable illustrations, the full vellum cover, add to the attractiveness of the work, but it may be fairly doubted whether the triple-columned page will be found a convenience rather than a hindrance for ready reference.

An octavo volume of more than 1,000 pages issues from the Government Printing-Office in Stockholm: 'Sweden: Its People and Its Industry.' This is the English version following the French, which was partly distributed at the Paris Exposition in 1900, as the present may be at St. Louis; and it surpasses both the French and Swedish in bulk, besides having the advantage of the latest information. It is supplied with beautiful illustrations, greatly augmented in number by private generosity supplementing the Government appropriation. All foreigners have much to learn from this national advertisement. We will instance its convenience for reference by citing the chapter on the Nobel Foundation, with an abstract of its statutes and the inventor's portrait. Under the heading of "Telephone Service" we are told that the development of the system in Sweden "has for many years been of greater extent, relatively to the population, than that of any other country in the world." Perhaps Norway does not lag far behind. We recall the late Professor Boyesen's telling of his telephoning to his grandmother from his mountain camp to learn how to boil coffee. The English of the text naturally shows some defect of idiom, but not to an unpleasant extent.

Everything connected with the relations of our countrymen to Germany in the early years of the nineteenth century is interesting and of value. Mr. Leonard L. Mackall, therefore, has done well in supplementing Prof. H. S. White's well-known article, "Goethe in Amerika" (*Goethe Jahrbuch*, v. 219-256) with a paper of his own, "Briefwechsel zwischen Goethe und Amerikanern," of which he has favored us with a reprint from the *Jahrbuch*, xxv. Here we find some scattered letters from Edward Everett, Theodore Lyman, George Bancroft, and G. H. Calvert to Goethe. Especially interesting is Goethe's comment (p. 36) upon Bancroft's Goethe article in the *North American*, October, 1824, and Mackall's note (p. 23) upon the "German Society" of Boston-Cambridge in 1828. The cream of the paper, however, is that part which deals with Cogswell's connection with Goethe, and the part played by Cogswell in obtaining for Harvard in 1819 a presentation set of Goethe's works from the poet himself. Mr. Mackall has thrown a ray of light upon one stage of American culture. We wish that he had arranged his notes better; one is often puzzled to determine whether they are genuine footnotes to the page or references to the supplement at the end of the paper. Also, the proofreader of the *Jahrbuch* needs admonishment. We doubt that Calvert ever spelled "pardo*nn*ed" (p. 20), or that Edward Everett is responsible for "introduction to *You* notice" (p. 5). Further, who is responsible for the "(*sic*)" in: "der berühmten Johns (*sic*) Hopkins University" (p. 24)? That Cogswell in 1818 could have written such schoolboy French as that printed at pages 8, 9, 12, seems to us scarcely credible.

The September number of the *Harvard Graduates' Magazine* is, as usual, largely occupied with reports and summaries of the last Commencement exercises. A weighty paper is that of Charles Francis Adams on the proposed increase of the tuition fee at Harvard, with its ingenious division of the profits between annual deficit and new scholarships for the deserving poor student. The first Harvard men to obtain Rhodes scholarships have their history and qualifications set forth, with the conclusion that "the rather exacting character tests laid down by Mr. Rhodes are certainly well met" in these two instances. Among recent benefactions, noticeable is the fund established by Arthur T. Lyman, its income being for unrestricted use "for the general benefit of Harvard College at the discretion of the Corporation." Mr. Lyman should have imitators.

The increase of the cultivable land in Egypt, if the irrigation projects advocated in Sir William Garstin's report on the "Basin of the Upper Nile" are carried out, will be nearly 25 per cent., or over one million acres, bringing in an annual revenue to the Government of $6,000,000. In the Sudan a million acres, especially adapted to the growth of cotton, will be added to the land now under cultivation. These new irrigation works include the construction of a barrage on the Blue Nile, the Abyssinian branch; regulation of the discharge of the Equatorial Lakes at their outlets; and, greatest of all, the cutting a new channel, more than 200 miles in length, between Bor and the mouth of the Sobat. This would leave to one side the vast swamp region where the river loses half its volume and the sudd prevents navigation. In the Sudan, population is needed to develop its present resources, but in Egypt a veritable land hunger prevails. In order to supply the numerous applications for land which it is now impossible to grant, Lord Cromer proposes immediately to raise the Assuan dam, which in the two years since its completion has proved so successful that it must be enlarged.

—We have already noticed volumes i., ii., and iii. of 'Bryan's Dictionary of Painters and Engravers' (Macmillan), in the new edition extended to five large square volumes. Volume iv. now comes to hand, and the assurances of its preface are borne out on examination, viz., that there are more new biographies in it than in any of the preceding volumes. Nor are they of new men only; *e. g.*, Raeburn, Reynolds, Romney, Rossetti, and John Russell, the miniaturist, have biographies especially prepared for this edition. Among these notices it is odd to find a biography of Ruskin, for assuredly he was neither painter nor engraver. He is announced as "English art reformer," and the notice has been written by one who believes in him and his teachings. An odd sentence near the close of the article may be quoted: "As a reconstructive legislator in art, Ruskin has not been generally accepted—at least not yet." The initials signed to this article, "F. H.," stand for the name of Frederic Harrison, sociologist and Positivist and the author of a recent work on Ruskin; and this makes his contribution seem like a strange invasion of the general scheme of the dictionary. Other art writers of great reputation are artists, perhaps without exception, and accordingly Eugène Fromentin is named in a previous volume; but of him, painter and writer, there are only ten lines of text in addition to a brief table of his works, although as a writer on painting he is of quite immeasurable value to the student. Eugène Delacroix and Gustave Courbet are also artists whose briefer writings upon their own art are never to be ignored by students, and yet Courbet's writing is not mentioned in its place, and to Delacroix as a writer only four lines of text are allowed. To devote then, nearly three columns to the very questionable influence of Ruskin is a strange distortion of the purpose of the book. Some "art writers and critics" and some "gifted amateurs" are mentioned, but they seem to be practising artists too, in every case recognized in the preface. The extremely British aspect of the revision has been spoken of in previous notices. May we detect insularity in the omission, under Allan Ramsay, the Scotch painter, to indicate that his portrait of Rousseau as well as of Hume hangs in the National Gallery at Edinburgh? In spite of its size and completeness, and in spite of the absence of any other work brought down to date as thoroughly, it is still to be said as has been said in former notices, that the illustrations are the most notable part of the Dictionary. The present volume contains 106 photographic cuts illustrating the product of 71 different artists.

—The northern Netherlands have been many times described in books, with color, drawing, and text, but seldom in one volume with such rich tinting and sympathetic commentary as in 'Holland, by Nico Jungman, text by Beatrix Jungman' (London: Black; New York: Macmillan), in the series with which Mortimer Menpes's six books have made us familiar. The artist, formerly a student in the University of Amsterdam, even as a young man, made the acquaintance of Drenthe cottagers, whose steady diet consisted of boiled potatoes dipped in pork-fat gravy, with weak coffee, and dark bread such as Dutch horses feed on. The detail of color, of faces, and of the environment of nature and artifice in the pictures shows long and loving familiarity, and the text is the delightful chat of a cultivated woman able to tramp and even more to see. Her genuine English origin shows itself at many points, but for literary purposes this is an advantage. She cannot discern any evil in the early consumption of tobacco by very small boys, yet enlarges upon the prevalence of the national scourge, consumption, and the vile and almost universal male habit of spitting, connecting the two, but not the three phenomena. Witchcraft, we find, still lingers, despite Weir and Bekker and their books. In this land of gold-buttons and ear ornaments, the collaborating couple wandered

far and wide, and the book is therefore almost unique in giving so much of description, in pen and pencil, of out-of-the-way places in provinces other than those threaded by railways. To the phenomena of Spanish blood, influencing face and feature in the southern provinces, the draughtsman and colorist has given discriminating attention. Few books let us so freely into the peasants' homes, as does this one. The suggestions of the low conditions of life, tending almost to savagery, in Drenthe do not seem, judging from our own personal observations on the spot, to be exaggerated. Among the odd customs seen in an all-the-year-round stay is the garlanding of an ox, from which when alive customers select the tid-bits which they are to purchase cold.

—The question of ambidextrousness has been receiving considerable attention of late. At the recent meeting of the Congress of the Royal Institute of Public Health in England, Mr. John Jackson read a paper in which he emphasized the importance of manual training in schools, and strongly endorsed the view that one-handed culture neglected one brain lobe, which thus became more or less atrophied, with positive resulting mental deterioration. There is in London a school for girls in which a specialty is made of training both hands equally; as there are about two hundred pupils, some interesting experimental conclusions may, no doubt, be looked for in time. On this side of the Atlantic the latest contribution to the subject is Mr. Albert Ross Parsons's 'Mind and Fingers: Contrapuntal Exercises for Pianoforte Students, Teachers and Virtuosi,' published by J. H. Schroeder, New York. Mr. Parsons, in his preface, favors the opinion that primitive man practised ambidextrousness, and that civilized man stands alone among created beings in neglecting one of two limbs, which is all the more anomalous in view of his using the two eyes, ears, and legs impartially. In these days of great competition, why reduce our strength by one-half? "In school work and much manual work, such as carrying weights, the postures which follow from the constant use of the right hand tend to dorsal and other curvatures." Mr. Parsons is inclined to think the day will yet dawn when applied music (*i. e.*, the playing on instruments) will no longer be snobbishly excluded from university courses, as less worthy of a place there than the handling of plane and saw. He makes the somewhat mystifying assertion that psychologists who are aware of the grounds upon which manual training has been introduced into the curriculum of schools and universities, will be interested to know that students hitherto slow in mathematical work have stated, with pleasant surprise, that, after practising five-finger exercises on the pianoforte diligently, they have unexpectedly found their studies in mathematics much easier. The connection is not clear. However, there can be no doubt that ambidextrousness will be fostered by a course of such exercises as Mr. Parsons's. He has made more than a thousand different combinations of the five fingers, in groups of six, twelve, and twenty-four notes, in parallel and contrary motion, in binary and ternary rhythm, and in the major and minor modes of all keys; and persistent practice of these, in school or out, will, no doubt, make players ambidextrous experts if it does not land them in a lunatic asylum.

—Mr. Plummer's edition of Bede filled one great gap, and another is now closed up by Mr. W. H. Stevenson's edition of Asser (Frowde). 'The Life of King Alfred,' by Asser, Bishop of Sherborne, is, without exaggeration, one of the most important documents in English history. Besides being the earliest biography devoted to a layman of our race, it commemorates the deeds of an illustrious sovereign and throws light upon the character of a true reformer. No oue pretends that it stands high as a piece of literary composition, but it is a bright gleam from out the Dark Ages—if only we are willing to admit that it is not a forgery of the eleventh or twelfth century. The text of Asser has cried out for a scholarly editor ever since the days, now more than sixty years ago, when Thomas Wright assailed its authenticity in the pages of *Archæologia*. His criticisms, followed by the still stronger attack of Sir Henry Howorth and aided by certain obvious difficulties of the text, have created the impression in many minds that Asser belongs to the same class with Ingulph of Croyland, Richard of Cirencester, and the spurious Life of St. Grimbald. The question is rendered infinitely complicated by the shortcomings of early editors like Parker, Camden, and Wise, who interpolated outrageously, and by the loss of the unique manuscript which was burned along with other treasures of the Cottonian Library in 1731. Pauli, Stubbs, and Freeman have all had something to say about the authenticity of Asser, and all have been inclined to accept the greater part of the work as genuine. Mr. Stevenson goes further still. While showing a willingness to admit the presence of certain problems which remain after all minor charges have been answered, he maintains that the case of Wright and Howorth breaks down altogether under critical examination. Not only is it difficult to find a motive for forgery, but internal evidence supplies strong marks of authenticity. For example, "Mr. Bradshaw has remarked that the Welsh words in the Life 'are of such unmistakable purity that it is an absolute impossibility that the work can be a forgery of the twelfth century.'" Professor Rhys is also of the same opinion. From the twelfth century forward the history of the work can be determined with perfect clearness from the copious use which is made of it by Florence of Worcester, Simeon of Durham, William of Malmesbury, Gerald of Wales, and the historians of St. Albans. Of the serious difficulties that the work presents, most arise from Asser's love of rhetoric. The embellishments of a writer who speaks of gold and silver-covered buildings as existing in the ninth century are sufficiently patent, but Asser was a Celt, and apparently possessed a fair measure of the racial temperament. Mr. Stevenson's edition is a fine piece of scholarship, and no less discriminating than learned.

—The recent publication in Japan, in a book of six hundred pages, of 'The History of Popular Rights in the Far East,' besides being a notable revelation of the "steady gain of man," is also a striking proof of the influence of British and American political ideas in the development of constitutional Japan. How far the Japanese have advanced may be shown by reference to the discussion of "Coercion in Japan," in an editorial thus headed in the *Nation* of February 16, 1888, commenting adversely on the arbitrary edict of December 25, 1887. The illegal arrest of members of the Liberal party, this journal said, endangered Japan's position among civilized nations, and it foreshadowed the perils to the country of further postponement of the promise, in the imperial oath of 1868, to form a representative government. The article precipitated a violent controversy on both sides of the Pacific. The dangers of assassination were especially pointed out, which to some writers in Japan (not very old residents) had "a curious air of anachronism about it," as if assassination by knife or bomb were forever a thing of the past. As simple matter of fact, within two years, besides other acts of violence, Minister Mori was stabbed to death, and Count Okuma had his leg blown off with an iron gas-pipe loaded with dynamite. A strong reaction in public sentiment followed, and the ministry in power, that had invoked the Imperial rescript under which the leaders of popular rights were illegally arrested, was replaced by a cabinet more radically in favor of law than of edict. One year later the Constitution was proclaimed. Of the men thrown into prison in 1888, Kataoka, after one year's confinement, was four times elected Speaker of the Lower House. He died recently, and his successor in the chair is Kono, who from 1887 to 1894 enjoyed seven years of enforced seclusion. A notable proportion of members of the Diet or of those holding high office have been in prison, some, like Muramatsu, even for attempting to defend those illegally arrested. With the steadying influence of passionate loyalty, these men, most of them pupils of American teachers, being familiar with the political ideas in vogue in England and the United States, have taken these countries as their examples in practical government, and the great republic as their model in liberty of conscience. The recent threefold series of meetings in Tokio, and other cities, of leading and influential men, some in very high office, to express their debt of gratitude to Americans, especially to the pioneer diplomatists and teachers; and of the University graduates, representing thirty-five Japanese institutions of learning, to acknowledge their intellectual obligations to this country; and of all religionists, Shinto, Buddhist, and Christian, and of the various sects of the three religions, to show that as to the war they are one in sentiment, are all profoundly significant. They prove beyond a doubt that the conflict in the Far East is for the Japanese not in any sense a religious war, or one of creed, race, or color, but one which is being fought out on other lines of division and conflict.

—While the question of making Mme. de Warens's "Les Charmettes" at Chambéry a national monument is still pending in France, the memory of Rousseau is being cultivated in another quarter, at Montmorency, by a committee imbued with taste and historical sense. Messrs. Badin, Louvet, and Ponsin have established a Rousseau Museum at No. 6 *bis* in the street bearing his name. One may see there, says M. Bournon in the *Débats*, furniture lent to Rousseau by his hosts, the Montmorency-Luxembourgs, and of a meanness that an

artisan household would resent—the table on which the 'Nouvelle Héloïse' was written, scarce fit for a doll's dinner party; Houdon's death-mask; the register of the death of Thérèse Levasseur; engravings and plans of Rousseau's divers residences, and a modest library of his works. The present proprietor of the Hermitage, a foreigner, calls it Posilippo, and the above committee rightly protests. It is No. 10 on the Rue de l'Ermitage (formerly Rue Grétry), and is closed to visitors. The house to which Rousseau retired from the Hermitage, a scant mile distant, has been marked by a tablet: "Le Mont Louis, habité par J. J. Rousseau 1757-1762.' This house was altered during the Second Empire, but the tower is unchanged, as is an alley of lindens, and a round stone table bearing a commemorative inscription in verse to the author of Saint-Preux and Julie.

WAGNER'S MOST INTERESTING LETTERS.—II.

Richard Wagner an Mathilde Wesendonk. Berlin: Alexander Duncker.

Besides "Parsifal" and "Tristan," there are two more of Wagner's works—"Tannhäuser" and the "Meistersinger"—concerning which these letters furnish new light and information. Of particular importance is what he says regarding the new version of "Tannhäuser" made for Paris. Some of his admirers have held, not without reason, that the rewriting of some of the scenes in the later and more mature "Tristan" manner marred the unity of style in this opera. This may be so; nevertheless, the new version is a great improvement on the old, which should now be definitively discarded. No one who is thoroughly familiar with the two versions can doubt that Wagner hit the nail on the head when he wrote to Frau Wesendonk:

"This Court of Venus was obviously the weak spot in my work; having no good ballet at my disposal at the time, I simply made a few coarse brush-marks and thus spoiled much; that is, I left the impression of this Venusberg quite colorless and vague, the consequence of which was the loss of the important background against which the tragedy that follows is to be built up pathetically. All the subsequent decisive reminiscences and exhortations, which should fill us with grewsome emotions (and which are needed to explain the play), lost their effect and significance almost completely; fear and persistent disquietude were not felt. At the same time I fully realize that at the age when I wrote 'Tannhäuser' I was not yet able to create what was here wanted; that required a much greater mastership, which I have acquired only now; now, after writing Isolde's final exaltation, I have only just become able to invent the correct ending for the 'Flying Dutchman' overture and to find the right tones for the grewsomeness of the Venusberg."

In this case, once more, Frau Wesendonk is the confidant to whom he imparts his germinating fancies, even before he has had time to jot them down for his own use. He tells her at great length (two printed pages) about the graces, the sirens, the bacchantes, the amorettes of the Bacchanale, with an apology for doing this in a letter to "Elizabeth." In December of the following year (1861) he begins to give glimpses of his only comic opera. A visit to Nuremberg in the preceding summer had recalled vividly his original "Meistersinger" sketch, and now, amid the abhorred distractions of Vienna and Paris, he resumes this early plan. Oddly enough, he writes that in this sketch he now finds "little or nothing" of use to him, when, as a matter of fact, it contains many of the best things to be found in the ultimate poem (the sketch was printed in *Die Musik*, 1902). His one desire is to work, to create; he had felt the imperative necessity of beginning this opera to save himself, "as men's lives are sometimes saved by the advent of insanity." He was pleased to find his memory so clear, his inventive faculty still active and vigorous. "I shall frequently send you specimens of my work. How you will open your eyes when you see my 'Meistersinger'!" In January: "Sometimes I have to laugh, sometimes to weep, so that I cannot continue to write my poem. I commend to you Sixtus Beckmesser. David, too, will win your favor." He assures her that, with the exception of eight lines taken from Hans Sachs's "Lied auf Luther," everything is his own, and he is pleased because Frau Wesendonk finds the pedantry of the Mastersingers so amusing; that was what he had aimed at: "lachen soll man!" When the music for the introduction to the third act had one day suddenly come into his mind (it is the gem of the whole opera), he wrote: "I now see clearly that this will be my most finished masterwork!"

Glimpses of the workshop of genius, both musical and poetic, like some of the foregoing, abound in these letters. Shortly after taking up his abode in the "Asyl," Wagner wrote a brief note in which he said: "The first thing I came across was a melody which I did not at all know at first what to do with; till suddenly the words for it presented themselves from the last scene of 'Siegfried.' A good sign. Yesterday, also, the beginning of the second act suggested itself, in the form of Fafner's repose, for which I found a humorous sentimental manner of presentation. Of all this you will know more when the swallow arrives in your house to-morrow to inspect its nest." Once, at Lucerne, his mind obstinately refused to work for a whole week. At the passage, "vor Sehnsucht nicht zu sterben," his creative faculty balked stubbornly. He was probably suffering from dyspepsia, for at this time he received from his correspondent a box of home-made zwieback which helped at once, and to which thenceforth he frequently refers humorously in his letters as an infallible remedy for balky composers. On another occasion, he was so displeased with a certain passage that he felt the necessity of doing it all over again; but nothing fit to take its place suggested itself, and finally he found, on playing it once more, that it was so good that he could not improve on it. George Sand records similar incidents in the life of Chopin. Regarding the first half of the third act of "Tristan," Wagner writes: "The passages depicting suffering always take me a long time; . . . the fresh, lively, fiery parts proceed much more quickly; thus do I, even in the technical execution, live in my work, sad or joyous according to the situation." The absoluteness of this absorption in his task is admirably summed up in his exclamation made as this opera neared its completion: "Noch hat er mich; dann habe ich ihn"—"It still possesses me; by and bye I shall possess it."

Albert Wagner believed that his brother was more of a poet than a musician, and there are passages in some of Richard Wagner's letters to Frau Wesendonk and elsewhere which indicate that, in some of his moods, at any rate, he shared this opinion. In August, 1860, he wrote from Paris:

"What a poet I am! Heaven help me, I am becoming quite presumptuous! This never-ending translation of 'Tannhäuser' has made me already so conceited; this very task, which makes it necessary to proceed word by word, was actually the first occasion to show me how concise and incapable of alteration my poem is. A word, a shade of meaning, changed makes my translators, like myself, confess that something essential has been sacrificed. At first I believed in the possibility of small changes; we had to abandon one and all such attempts. I grew quite astonished and found by comparison that I know very few things of which the same can be asserted. In short, I had to make up my mind to acknowledge to myself that the poem, in particular, could not have been improved on. What do you say to that? In the music I can more easily make improvements. Here and there I give particularly to the orchestra more expressive and richly colored passages. The Venus scene alone I shall do over again entirely. Frau Venus I conceived awkwardly; some good intimations, but no real life. In this scene I have written a considerable number of additional verses; the goddess of joy herself becomes sympathetic, and Tannhäuser's anguish is made real, so that his appeal to the Virgin Mary breaks from his soul as a real cry of anguish. Such a thing I could not do in the days when this opera was written."

In another letter he explains why and how he came to assist in the translation of his opera—a letter (p. 178) which it is to be hoped every future translator of a musical poem will read and take to heart. Wagner was not an expert in French—somewhere he speaks of the torture of having to speak that language; but he knew enough to be dismayed at the version submitted to him in Paris—so dismayed that at first he thought of throwing up the whole job; for to him the poem was as important as the music. Then it occurred to him that sooner or later his opera would nevertheless be produced with just such a marred text—had not even Goethe's masterpieces been thus maltreated? Therefore the only safeguard was for him to assist personally in translating the poem. "And thus I sit every forenoon with my young poet, going over with him verse by verse, word by word, nay, syllable by syllable, oft searching hours for the best turn, the best word; I sing for him and thus make him clairvoyant for a world which theretofore had been undiscovered by him. Now I am pleased with his eagerness, his growing enthusiasm, his frank confession of his former blindness, and—well, we shall see! In any case I know I am providing for my child for all time as well as I can." Of exceptional interest also are pages 125-6, in which Wagner confesses that he made a mistake in publishing the "Tristan" poem before the completion of the music, and draws a comparison between absolute poetry and poetry intended for music; in the former there are minute details taken from life, politics, society, house, and home, for which the music-poet has no use, the endless variety of melodic and harmonic material taking the place of those details in his work. Consequently, the real significance of the musical poem must be almost unrecognizable without the aid of the score.

The necessity of doing even his own translating illustrates the enormity of the

task with which Wagner saw himself confronted in all directions. Frau Wesendonk was one of the few persons who understood his position, and in his heart-to-heart talks with her he therefore frequently dwells on the tragic dilemma of his life. It was not simply that he was obliged to exploit his personality by giving concerts and thus wasting his energies in the effort to keep the pot boiling. The trouble lay deeper. He felt, usually, that the great task of his life was to create as many works as possible; and for this, with his poor health, he needed every scrap of his energy. But, on the other hand, why continue creating works which no one but himself could interpret? We who hear excellent performances of his works every winter find it difficult to realize the situation of half a century ago. In the references to "Tristan" made in two letters (pp. 242, 206) this situation is vividly shown:

" 'Tristan' is and remains a wonder! How I could have done such a thing becomes more and more incomprehensible to me; in reading it over again I opened wide eye and ear! How terribly I shall have to atone some day for this work when I shall undertake to have it properly presented: I have a clear presentiment of the unheard-of tortures awaiting me; for it is useless to try to deceive myself—I have herein gone far beyond present possibilities of execution. . . .

"All previous experiences are insignificant in comparison with a discovery I made at the first orchestral rehearsal for my concert. . . . I had the 'Tristan' prelude played for the first time; and—as if scales had fallen from my eyes—I perceived what an immeasurable distance I had got away from the world during the last eight years. This little *Vorspiel* was so incomprehensibly *new* to the musicians that I was compelled, as it were, to guide them from note to note as if for the discovery of gems in a miner's shaft."

But not only to the players was this music unintelligible; the audiences, according to Hans von Bülow's testimony, took it "on faith" until Wagner's own interpretation of it aroused sudden enthusiasm. "The Hungarians," writes Wagner, "who had had no idea of my music, and who, in their national theatre, lived on Verdi, etc., alone, understood every one of my selections from the 'Nibelungen,' 'Tristan,' 'Meistersinger,' with incredible alacrity, and it was obvious that this was so simply because I myself interpreted them." Nay, more: "I need but give a perfect performance of a fragment, and even the most experienced and gifted of my disciples are obliged to confess that they had previously had practically no conception of it." This was before the days of Hans Richter, Bülow, Seidl; but even they had to learn from him; *mirabile dictu*, Liszt himself, the most versatile interpreter of all times, had by no means divined all the secrets of "Lohengrin," and that was an early work. In 1856 Liszt visited Wagner, who wrote to Otto Wesendonk that his guest frankly confessed that he had very much needed his (Wagner's) help to penetrate the inner depths of his works.

After asking himself a number of times whether, under the conditions just described, it were more important for him to create new works or furnish the key to those already completed, Wagner concluded it would be necessary to do both; and he did so, though at a terrible cost of vitality. He asks Frau Wesendonk to compare his photograph taken before his concert trip to Russia with that taken after it, and note the pitiful difference. It must be remembered that his health was always precarious; often, even when working under the most favorable conditions, he was unable to write more than an hour or two a day. Dr. Gould's theory, set forth at great length in the *Lancet*, that this lack of sturdiness was a result of eye-strain, seems borne out by one passage: "After my work I usually lie down a while in order to rest my eyes for a quarter of an hour. Yesterday I was unwilling to yield, and wrote to you instead. But the expiation followed promptly; dizziness overcame me completely so that I had to stop." But eye-strain hardly accounts for everything. There was organic trouble, too, and, like most men of genius, Wagner was peculiarly sensitive to meteorological conditions. His letters are peppered with complaints and remarks like these: "Child, this is abominable weather. All work has been arrested for two days; the brain stubbornly refuses its tribute." "This God-forsaken weather arrests all mental activity; clouds and rain are heavy as lead!" "If only the sunspots would disappear; clear weather is still my best medicine." "When the air is clear and dry, everything can be done with me, just as when I am loved; but if the atmosphere presses down on me, I can at most offer defiance and resistance, but beauty becomes precarious." Further light is thrown on this point by a passage in which he protests against the current notion that he was pampered and needed luxurious surroundings to be able to work. In the room where he happened to write, even his beloved morning sun was excluded—"I could imagine myself in a prison," he exclaims; yet he works steadily on. "But, for the most part," he adds significantly, "it is only every second day that I can do my work with pleasure; the alternate day is usually less good because the favorable day always makes me overweening and inclined to overwork."

The necessity of economizing his energy and vitality also, no doubt, helps to account for Wagner's love of solitude and his aversion to social intercourse, although this was largely a matter of temperament, as in the case of Beethoven, Schumann, Verdi, Tchaikovsky, and other masters. From Venice he writes: "I have chosen for my meals an hour when I am sure to be alone in the restaurant." "The only person I talk to is Ritter, who is sufficiently taciturn not to disturb me." "A good-natured and really educated and intelligent man, a Prince Dolgoruki, called on me one day; I was pleased when he came, but more when he left. I am so contented when I am not entertained and distracted." "I always look on conversation with others as a useless, resultless exertion." "I flee human beings, undertakings, finally all intercourse, completely, because in truth everything tortures me—that's the kind of a man I am, and I cannot help it." Much of this is, of course, a mere expression of mood, and, although Wagner's correspondent sometimes remonstrates with him, it makes him happy to know that she understands these moods, however unreasonable they may seem; once (pp. 73, 78) he is on the verge of suicide. "Suffering, grief, discontent, bad humor, all assume in me an extreme (*enthusiastischen*) character." "Quick and violent changes of mood, from one extreme to another, are founded in my inmost nature." Hence we are not surprised to find him at times complaining of the very solitude he has created. "An agreeable, sympathetic person, if only a servant, is what I need." "On the whole, I constantly live entirely alone. Nothing suits me better. Often, however, my solitude makes me unhappy. What is to help me then? Reminiscence and—sleep." But there is another consolation: "The process of creating makes me forget all my wretchedness"; and, after all, "in the end, I know no one with whom I would swap places."

While Wagner's best friends sometimes suffered from the "enthusiastic" extremes of his moodiness, they were quick to forget and forgive. Their devotion touched him: "Yesterday Winterberger, who is going to Rome, took leave of me; he wept and sobbed violently. Karl, too, who left me in November, was incredibly affected. They all love me very much, after all, and they seem to regard me with what I might almost call veneration." He made warm friends in Paris, of whom he gives interesting sketches in some of these letters; one day he sat next to Berlioz, who promptly introduced Gounod; then a number of well-known men crowded about Berlioz, asking to be presented to Wagner, who writes: "Strange to say, all of them were enthusiasts who had studied my scores." This was in 1859. He adds the inevitable second thought: "I now fear many a call and must be on my guard." To the most intimate of all his friends there are, of course, a number of references. The most interesting of these is the explanation (p. 234) of why he ceased corresponding with Liszt. It was because he did not care to write his intimate letters to two; Liszt had no secrets and shared all his letters with the Princess von Wittgenstein. But the two friends found other ways of communicating, "like a parted pair of lovers," and there was no break in the friendship: "He continues to love me, and to me he remains forever a noble, most beloved man." In one of the fourteen letters of Frau Wesendonk appended to this volume she refers to a characteristic remark once made by Liszt: "I esteem men by what they are to Wagner." If Liszt could have read these letters, he would have found his reward in this tribute to his creative genius: "His 'Faust' has really given me great pleasure, and the second part (Gretchen) has made an unforgettably deep impression on me."

RECENT CELTIC LITERATURE.

Several important contributions to Celtic or Arthurian studies have been made in recent years by women—notably by Miss Jessie G. Weston in England and Miss Lucy A. Paton in this country. A new recruit for the work, and a very strong one, now appears to have been found in Miss L. Winifred Faraday, whose translation of the Irish 'Tain Bo Cuailnge' ('The Cattle-Raid of Cuailnge') forms the sixteenth number in Mr. Nutt's "Grimm Library." Because of the special interest of the saga, and also because of its inaccessibility, Miss Faraday's translation is a valuable addition to the materials available for the study of early Celtic literature. The 'Tain Bo Cuailnge' is the central tale in the earlier Irish saga-cycle, and contains the principal episodes in the life of the great epic hero, Cuchulainn. Several summaries or analyses of it have been published, but no complete edition or

translation has been made hitherto. For an accurate knowledge of the contents of the saga it has been necessary to consult either the original manuscripts or the facsimile reproductions of them published by the Royal Irish Academy. Consequently, even Irish scholars who have been able to make use of these sources will be glad to have a good English translation in convenient form. An edition of the text, with a German translation, has long been promised by Professor Windisch of Leipzig, and is said to be nearly ready. This will doubtless supply a much fuller introduction and commentary than Miss Faraday's, which is intended simply to give the necessary information to English readers. But Professor Windisch's work will not supersede Miss Faraday's, since his translation will be based upon a different text. Two versions of the 'Tain' have long been recognized, that preserved in the Book of the Dun Cow and the Yellow Book of Lecan, and another preserved in the Book of Leinster. The second is the more complete and systematic, and Professor Zimmer, who published an analysis of the saga in Kuhn's *Zeitschrift* (Vol. XXVIII.), held it to be the more original. But this opinion was controverted by Dr. Nettlau and Professor Strachan, and Miss Faraday has made the text in the Book of the Dun Cow the basis of her translation. Professor Windisch, who will edit the Irish original of both versions, will translate the Leinster text. So far as we have examined Miss Faraday's translation we find it to be accurate and cautious, such as might be expected from a scholar who has had the privilege of Professor Strachan's instruction and advice. It is a very close rendering of the original. Many words are indicated as doubtful or left untranslated altogether. This, however, is an evidence, not of the shortcomings of the translator, but of how much remains to be done in the elucidation of early Irish.

The language movement in Ireland steadily produces a considerable number of publications of literary, educational or propagandist character. A recent volume of interest is 'The Book of Father Eugene' (*Leabhar an Athar Eoghan*) by Miss Agnes O'Farrelly, compiled in memory of the late Father Eugene O'Growney, who died in Los Angeles in 1899. It may be obtained from Mr. David Nutt in London. Father O'Growney gave the best part of his short life to the teaching of Gaelic and to the struggle for its restoration, and an account of his work necessarily contains much of the history of the movement in which he took an important part. Miss O'Farrelly has made a very substantial volume, including biographical material and appreciative notices of Father O'Growney in both English and Irish, and a number of his own articles in both languages which she has collected and reprinted. A detailed account is given of the course by which Father O'Growney's remains were carried in honor back to Ireland—a really remarkable tribute of affection for him and of devotion to the cause for which he worked.

He is best known by reason of his five series of "Simple Lessons in Gaelic," the most widely used of all the text-books in the subject. More than three hundred thousand copies of the first series have been printed, and the work is so generally accessible that Miss O'Farrelly did not repeat it in the memorial volume. She has brought together, however, nearly all of Father O'Growney's other writings, and the collection is interesting, though the pieces are of very unequal value. A number of newspaper articles are included, some of which represent the author's earliest attempts at Gaelic composition (for the language was not native to him), while others provide Irish renderings of familiar songs like "Auld Lang Syne" and "The Star-Spangled Banner." Among the more serious pieces are modernizations of early Irish saga-texts and contributions to grammar and lexicography. An outline of Irish grammar, which Father O'Growney first compiled and published for the use of his classes in Maynooth College, is reprinted with additions and corrections by the editor. The main interest of this treatise is as a record of Father O'Growney's teaching. It is characterized by the same lucidity which has made his "Simple Lessons" so useful, and as an example of his method it is worth preserving for other teachers of the language. It can hardly be regarded, even with the editorial changes, as an accurate presentation of Irish grammar on historical principles, though much minute knowledge of modern Irish usage is embodied both in the original text and in Miss O'Farrelly's additions.

The volume closes with a considerable list of words and phrases collected in Aran and Meath, and previously published in the *Archiv für Celtische Lexicographie*. Father O'Growney labored faithfully for years to acquire a knowledge of the living spoken Gaelic, and if his life and health had been spared he would probably have made important contributions to the published literature concerning Irish dialects. He appears to have had a strong interest in the scientific, as well as in the practical bearings of his work, and he was possessed of knowledge which philological science could have turned to good account. But it was his fortune to become rather a teacher of wide influence than an investigator, and as such he will be well remembered.

Further testimony to the vigor of the language revival in Ireland is to be found in the appearance of two English-Irish dictionaries during the past year. The first was published last summer by the Celtic Association in Dublin and compiled by its secretary, Mr. E. E. Fournier. The second, by Mr. T. O'Neill Lane, has been recently published by Mr. David Nutt, in London. Both are primarily practical in aim. They are intended not so much to explain English words to speakers of Gaelic, only a small proportion of whom are ignorant of English, as to help speakers of English in the use of Gaelic. Both of them are well arranged to serve this purpose. For the thousands of members of the Gaelic League who are trying to master the language for daily use, Mr. Fournier's book has the advantage of being smaller and less expensive (six shillings, as against twelve and sixpence), and it appears to contain about as many words as the other. Mr. Lane's book, on the other hand, is better made and more handsomely printed, and it is clearly the product of more labor and scholarship. The separate articles are usually much fuller than in Mr. Fournier's, and there are a good many citations from literature and from earlier lexicographers. In comparing the two dictionaries with each other, and with earlier books of the same sort, like Foley's (1855), one is struck by the frequent disagreement in the rendering chosen for the same English word. This not only holds for the new terms of the sciences and industries—terms for which Irish in the days of its general use did not have to provide equivalents—but applies also to some of the commoner words on nearly every page. Such disparities make the Irish dictionaries, in comparison with similar works dealing with English or French or German, seem almost irresponsible. But the comparison is not altogether fair. From one point of view the work of the Irish lexicographers is rather to be regarded as peculiarly responsible. It must be remembered that there is no universally accepted standard of literary usage in modern Irish, and that the language movement is in part an effort at creation as well as at restoration. Different dialects are pressing their rival claims, which are by no means easy to settle; and sometimes also choices have to be made between words and phrases, or even grammatical forms, employed in the classic prose of the seventeenth century, and others that have taken their place in the living speech. Under such circumstances makers of grammars and dictionaries have a greater share than usual in the making of language, and they are judged largely by their contribution to this work. Mr. Lane has been criticised, for example, for showing too much preference for the dialect of Munster. Mr. Fournier has taken a different liberty, and has gone pretty far in the manufacture of new words. Coinages like *speactroscopa*, "spectroscope"; *tearmórméatra*, "thermometer"; and *eleictreomaighnéatach*, "electromagnetic," are in his pages. It remains to be seen how far each of these tendencies will operate in the actual development of the language. The influence of the Munster dialect is likely to be important because of the literary activity of Munster men in the Gaelic movement. Some provision also will have to be made for scientific terms in case Irish comes to be employed in all departments of modern life. But it is not clear whether foreign names will be freely borrowed, as in Mr. Fournier's coinage, or Irish will follow the example of Welsh in building up equivalents of many of them out of its native resources.

GLEIG'S REMINISCENCES OF WELLINGTON.

Personal Reminiscences of the First Duke of Wellington. With sketches of some of his guests and contemporaries. By the late George Robert Gleig, M.A. Edited by his daughter, Mary E. Gleig. New York: Imported by Charles Scribner's Sons. 1904.

There is as yet no satisfactory biography of the Iron Duke, though on the military and political side his 'Dispatches' offer a plenteous, if not even a terrifying stock of material, and for his private life *mémoires pour servir* are still appearing. The present volume is one of the latter class. Its writer, born in 1796, left Oxford at the age of fourteen to enter the army, and, after active service in the Peninsula and in America, returned with six wounds to Oxford

in 1816 to fit himself for the Church. Ordained in 1820, he became curate of Ash and rector of Ivy Church. Ash is only eight miles from Walmer Castle, and it was during his incumbency of Ash, and particularly during the years 1829-1834, that he was brought most into intimacy with the Duke. In 1834 he was appointed Chaplain of Chelsea Hospital, and, ten years later, Chaplain General to the Forces, a situation in which his earnest labors soon led to the further office of Inspector-General of Military Schools. He died in 1888.

A strong Tory and Churchman, a decided enemy to cant in every form, and highly esteemed for his philanthropy and zeal in the work of his offices, he also found time for much literary production. His best book was undoubtedly his first, 'The Subaltern,' and it was this which first brought him to the notice of the Duke. In it he described with much literary skill, vivacity, and accuracy what was really his own experience (the book first appeared anonymously in *Blackwood's*) as a young officer in the Peninsula and the south of France. The admiration expressed by the Duke for the "simplicity and truth" of the narrations of the scenes and events in which the youth had taken part, shows that the book can never be neglected by any who wish to get a trustworthy picture of the every-day life of these campaigns. His other works (including his 'Warren Hastings,' Macaulay's "three big, bad volumes full of undigested correspondence and undiscerning paregyric") are all but forgotten now; even his Life of the Duke, based on Brialmont and published in 1862, is heavy and, except for the anecdotes, uninteresting. And the present volume will be a disappointment to all acquainted with the subject, so far as its title arouses expectation of much that is new about the Duke. To novices, however, and to the collector of Wellingtoniana it may be welcome.

The fact is, that anecdote has been pretty well exhausted (the best in this volume we have already seen elsewhere), and it would seem as if there could scarcely remain unpublished any writings by the Duke which his well-known unwillingness to "wound the vanity of nations or individuals" would suffer his heirs to give to the world. Thus, in this volume are printed fifteen letters written by the Duke to Gleig during the Reform agitation of 1831, when Gleig, infected by the Duke's conviction that on the defeat of the bill depended the existence of the monarchy, was one of his most active supporters in the county of Kent. But of them, ten appeared long ago in the 'Dispatches'; four others are of no consequence; and the fifth is but further confirmation of that traditional horror which the Duke felt for anything approaching deceit, even in political measures. "I have two objections," he writes in this, "to the course which you propose. The first is one of conscience. I could not deceive any man." This is like his protest to Gleig in another letter (already published): "Nothing shall induce me to utter a word, either in public or in private, which I don't believe to be true." In fact, as Mr. Gleig notes in another part of his book, the Duke was forced into domestic politics from a sense of duty and against his will. "He detested them, not only because the whole course of his active life had carried him, so to speak, outside their sphere, but because the shifts and devices, not always either creditable or honest, to which party leaders are driven, were to him particularly distasteful." It was evidently not until after the event that the reverend gentleman, who had suggested one of these very "shifts" to the Duke, realized "the beauty of those moral qualities which rendered him incapable of ever becoming the successful administrator of the affairs of a country prone, as all popularly governed countries are, to be cajoled into clamoring for whatever adroit flatterers lead them to regard as conducive to their welfare."

There are three other letters from the Duke in this book, but they are personal to Gleig and of no general interest. An appendix of sixty-five pages contains the remarkable memorandum in which the Duke criticised Napoleon's Russian campaign; but this was published years since in the 'Dispatches,' and, indeed, was lent to Sir Walter Scott to use in his 'Life of Napoleon.' There are four illustrations: a photogravure of Gleig (who looks the typical, sturdy country parson); an engraving of Lawrence's best-known portrait of the Duke; and half-tones of Stratfieldsaye and the grave of the Duke's charger Copenhagen. By the way, Gleig's regret that the "agents entrusted with the duty of purchasing a domain for the Duke had not been instructed to make an offer for Sir John Cope's magnificent place, Bramshill" seems to be mistaken, now that we know from a letter in Ellesmere's memoir that the Duke himself inspected it and rejected it for Stratfieldsaye.

For the rest, we are given some account of the Duke as a host at Walmer and Stratfieldsaye with estimates of some of the guests who visited him. Among them are Talleyrand, Gens. Nugent and Alava, Lord Lyndhurst, Sir Robert Peel, the Arbuthnots, and Croker; but of none are we told anything of particular interest that was not known before.

Of the origin of the unhappy relations between the Duke and his wife, Mr. Gleig does not give the usual story. This is to the effect that the pair had loved in their youth before Arthur Wellesley went out, with no particular prospects, to India, but that Lady Catharine Pakenham's father had refused to consent to a match between them; and that on his return, though he loved no longer, he had felt it the part of honor to offer himself again to a beauty somewhat faded and unaccompanied by any great intellect. But Mr. Gleig adds that at the time of this return Lady Catharine was engaged to another man, and that she accepted the old love, now the hero of Assaye and secretary to the Lord Lieutenant, before being off with the new. Wellington, "to whom the story was told in a spirit by no means friendly to the poor lady, received the impression that he had been grossly deceived, and never afterwards got rid of it." That this is the true story one can scarcely doubt, since this volume is dedicated by permission to the present Duke, who, we are told, has read the proofs. To a man constituted as Wellington was, no happiness could have come of such a beginning, which tied him to a woman "very amiable, very religious" (!), but "who could not bring herself to take the slightest interest in the subjects which mainly engrossed his attention," and whose "habit of admiring him in public" was to him intolerable. Consequently, that thereafter "his lady friends were to him friends only" is a dictum of Mr. Gleig's to which, in spite of his ducal voucher, we find it hard to subscribe in the face of all the smoke which has so long risen from various anecdotic fires.

Another new version of the cause of an oft-told tragedy—the suicide of Gurwood, editor of the 'Dispatches,' is given here. The official version, in the Dictionary of National Biography, is to the effect that he broke down under excessive mental strain and the effect of his old wounds. But, according to Gleig, Gurwood had entertained the ambition of becoming the Duke's Boswell, and to that end, being brought for many years into daily communication with him, he had kept a record of the Duke's conversations. He did this with full knowledge that, if there was a thing which the Duke abhorred more than another, it was a violation of the sanctity of private intercourse. Through a person of whom Gurwood had made a confidant, "whom I shall not name because he acted abominably," the Duke was informed of Gurwood's plan, sent for him, and insisted that the manuscripts should be burned. "He made a bonfire of his precious memoranda, and never held up his head again." He was a preternaturally sensitive man, says Gleig (and as further proof relates another anecdote about his bursting into tears in church during a sermon of Gleig's on the battle of Waterloo), and felt that he was covered with such a load of shame that it rendered life unbearable. Whether the world has lost by the miscarriage of his project is a point that Gleig questions. According to him, Gurwood, "though brave and not wanting in intelligence, was very vain, and certainly did not possess mind enough to read the Duke's character aright." But what contemporary of Johnson would not have passed the same judgment upon the prince of biographers? Upon the whole, while Gurwood, who owed nearly everything in life to the Duke's favor, committed the unpardonable sin in attempting behind his back what he never would have dared breathe to his face, we yet cannot but regret the loss of what would undoubtedly have been a faithful record.

We have noted one or two slips here and there in the narrative; for instance, the statement that it was in 1830, on the death of George IV., that the Duke of Cumberland went to Hanover to take possession. It could not have been in that year that Gleig saw his duchess received at Walmer as Queen, for he did not succeed until 1837, and the Duke of Cambridge was in charge of Hanover during the reigns of George IV. and William IV. But these reminiscences were written when Gleig was verging on his ninetieth year, and at such an age the wonder is that memory was not busier with her tricks.

Elizabethan Critical Essays. Edited, with an introduction, by G. Gregory Smith. Oxford: Clarendon Press; New York: H. Frowde. 1904. Two volumes; pp. xcii., 431; iv., 509.

Mr. Smith's introduction, we believe, is open to but one criticism, and that not unimportant. This we can state, but can hardly define or explain. The unfolding of

ideas is orderly, unflagging, and comprehensive, yet there is an indescribable viscid quality in the matter of its phraseology. The selections from authors of whose work only brief excerpts are given, and the excisions from essays or letters in the main here reprinted, seem to have been made with the best judgment on careful consideration. Salient are the tractates on metrification: out of 747 pages of text, about three-eighths is taken up with utterances bearing on questions of prosody. A student of the history of the study of versification is thus enabled to gauge how feeble was the analytic insight of the age as compared with its creative faculties, and to give date and author for the origin of many ideas, technical terms, and catch-phrases which have been more or less uniformly repeated by all later treatises on versification down to our day. Beyond the light thus thrown on the psychology of the period and the comfort given to the keen-scented noser-out of sources, we cannot see that this matter is of any value to anybody, unless, perhaps, for its quaint style as literature. To a present-day student of English versification it is practically of no interest or importance whatever.

Most of these writers on metres are but blind leaders of the blind; the best have only flashes of illumination. With doctrinaire narrowness they dwell on the simplest and most mechanical rhythms, and all ignore or cavalierly dismiss the variable and Protean lilts which offered the most fascinating field for study and most demanded analysis and explanation. The exquisite subtleties of artistic expression evolved by their creative contemporaries they never allude to, probably never divined at all. Their speculations about applying classic conceptions to the clarifying of ideas on English rhythms, or to the devising of new metrical methods, are of the merest academic interest. Their conclusions are nugatory. To be sure, the superficial, fragmentary dilletantism of Gascoigne is that of an entirely sensible man. But he, while the first of the series, surpasses all his successors. His general comprehension of what he barely touches on is not duplicated among those following him. Each says some good things, but all are much at sea, vague, and, not only that, but full of false views and misleading assertions. We emphasize this because, on the one hand, these portions contain by far the most definite and striking set of opinions aired in the essays, and their worth has been and still is likely to be overrated; and, on the other hand, the present rage for thoroughness in scholarship leads many instructors to urge their charges too soon to intensive study, and many students to strain after an impossible ideal of scrutiny of all sources. Modern treatises, poor as the most ambitious is, are more informing for tyros than these haphazard jottings or hasty expressions of half-digested meditations.

The reading of these essays as separate compositions was little likely to produce any effect on one's intellectual emotions. Far different is the result when they are deftly treated as a correlated series. The perusal of them thus brought together, placed in chronological order and fully annotated, with cross-references added, brings home to one how brief was the flowering period and how rapid the ripening and decay of that dazzling combination of feelings and abilities which we call the Elizabethan spirit. This is seen quite as clearly in the modification of the pseudo-critical and critical essay as in the development of lyrical poetry or in the course run through by the drama. The change of temper as of manner is astonishing and unmistakable. There is a fumbling movement to the thinking of the scholarly Ascham, as of Lodge and Webbe, which appears no more later. Meres is stupid, but not tentative. There is a breath of pristine manhood half divined in Ascham, gloriously pungent in Sidney, and lingering on in Harington, which vanishes never to return. Nothing in the earlier writings foreshadows what comes upon us with the surprise of the first shower of dead leaves in a moist, summery autumn, when we find Daniel's approximations in mental posture, method and expression to the smug self-contentment, neat antitheses and aphoristic didacticism of the time of Pope. The time was a long way off, and lo! here already a foretaste of its twang; a patchouli differing as much as possible from the woodsy perfume of Ascham and Sidney. All in the space of one generation, in a mere thirty-five years, this miraculous sunburst of splendid activities had dawned, blazed and waned. The date of Ascham's 'Scholemaster' was 1570—it cannot have been composed much earlier; the date of Daniel's 'Defence' was 1603. The difference in attitude is positive. The early Elizabethans were enraptured with the universe; the pre-Jacobeans were already tending to the state of mind of the age of Anne and becoming satisfied with themselves. The early Elizabethans seem to us like joyous children suddenly made free of a spacious, beautiful garden, dancing from flower to flower, not suspecting any limits to what they might find or might do; men not long after their time appear to us verging even then toward the likeness of elders conning pressed specimen plants in an herbarium.

It is informing to find in the essayists, as in poets and dramatists, the same swift blooming, maturing, and withering of the age's characteristic. Without such a garner as Mr. Gregory Smith's we might still fail to realize it. His book appears to have added to the world's knowledge of his subject by shedding fresh light upon it, and all who are interested should give him hearty thanks.

The index is very full and apparently very faithful, but in several instances we have failed to find on a page referred to any trace of allusion to or naming of the author in question. The editing of the numerous blunders of Elizabethan printers or proofreaders seems to have been done with the perfection of tact. We think, however, we may venture to suggest that the "eccentricities of Webbe" (or of his printer) referred to in the preface (p. vii.) have in some cases escaped notice. Surely we should read in volume I., page 266, line 16, "match" for "watch"; 268.22, "may" for "way"; 282.5 "Wee" for "VVe"; and I. 49.16 xiiij should apparently be xiij.

One curious point also seems to disclose itself. It is evident from what Gabriel Harvey says in his letter to Spenser, I., 95.4-5, that the second and third lines of Spenser's English iambic trimeters, I. 90.30-31, are here printed not only as they were set up in the first imprint, but also exactly as Harvey saw them written out by Spenser when he received them from him. Yet it seems probable that Spenser composed the lines correctly by ear, and divided them wrongly when he wrote them out, or when he copied them into his letter to Harvey. For, if "thought" be taken as the last word of the second line instead of as the first word of the third line, the two lines scan perfectly, though somewhat woodenly.

The notes cover nearly every conceivable point in the texts as to which information or elucidation might be desired by a competent reader. Yet we miss a wished-for note here and there. On I.16.28 we should like to be told, if possible, who was the Englishman, who, in Ascham's opinion, surpassed all Latinists in England, though he knew no Greek. No note on I.139.17 explains the reference to "Euander's mother," which is less likely to be generally intelligible than many references for which explanatory notes are given. We have found but one mistaken note, that on II.315.13. From II.315.9-13 it distinctly appears that Meres is intentionally giving a list of Mediæval and Renaissance Latinists who won a reputation classing them with the ancient Latin poets; the note seems to assume that Meres blunderingly supposed that the latter-day authors of his list were ancient. Many of the notes are fine, compact, and informing; as, for instance, that on the canon on the three unities, I.398-399, a jewel of a tiny monograph.

We are pleased to see that, although late (after the text was stereotyped or printed), the editor was able to register his decision that our Puttenham was not George, but his brother Richard. His belief will help towards general recognition of what is now fairly well established.

An Index to Poetry and Recitations. . . . Including over 30,000 titles from 369 books. Edited by Edith Granger, A.B. Chicago: A. C. McClurg & Co. 1904. 4to, pp. 970.

The Reciter's Treasury of Prose and Drama, Serious and Humorous. Compiled and edited by Ernest Pertwee. London: Routledge; New York: Dutton. 1904. 12mo, pp. 942.

An Eighteenth-Century Anthology. With an Introduction by Alfred Austin, Poet Laureate. Boston: H. M. Caldwell Co. 1904. 16mo, pp. 328.

The "college girl" has set a high example of originality, intelligence, laboriousness, and accuracy in the 'Index to Poetry and Recitations' at the head of our list. The prose and verse (English and American) derived from so many collections is laid open to recovery by a faulty memory, or to discovery—for example, by one in search of appropriate readings or recitals on special days (Arbor Day, Labor Day, Washington's and Lincoln's birthdays, Thanksgiving, Christmas, and New Year's) as detailed in an appendix. There is an index first of titles (381 pages); next of authors (some 200 pages); finally, of first lines, whether prose or verse. This last is all the aid that can, in the nature of the case, be afforded the defective verbal mem-

ory, which may, however, be endeavoring to trace a piece by some line, stanza, or period in the body of it. We have already mentioned the first appendix. There is a second, grouping charades, dialogues, plays, drills, pantomimes, parodies, and tableaux. There is a third, of noted personages—J. Q. Adams, Blaine, Cæsar, Dickens, Hugo, Dr. Johnson, Landor, Bonaparte, Shakspere, Webster, Wordsworth, etc. A fourth appendix points the way to temperance selections.

Such an exhibition might be thought to suffice in the way of praise of this reference manual, which is presumably the most copious index of poetical first lines in existence. The "librarian, teacher, bookseller, elocutionist, etc.," for whom it is intended, will recognize its utility at a glance,and will give it a place beside Poole's Index. As our testing of the innumerable cross-references has never found the diligent compiler nodding, we have no criticism to offer. What we have to say in closing is mere remark. Some prominent collections of verse have been passed over, and of course with some loss, especially in the middle and lower grades; the best poems occur in all, or at least in many. We will instance Bates's 'Cambridge Book of Poetry and Song,' Epes Sargent's 'Harper's Cyclopædia of British and American Poetry,' Fields and Whipple's 'Family Library of British Poetry,' which range with Dana, Bryant, and Coates, indexed by Miss Granger. It may be that the first part of Palgrave's 'Golden Treasury' was practically included in the collections availed of; the second part less probably. One may regret these because the text is more likely to be punctilious than in their American rivals—a matter which Miss Granger could hardly pronounce upon for all her sources. In one narrow field, also, we miss Higginson and Bigelow's 'American Sonnets' and Crandall's 'Representative Sonnets by American Poets,' however much they overlap Mr. Stedman's 'American Anthology' here indexed. Finally, and this by way of praise once more, the author-index is, as far as it goes, a very convenient table of contents for the poets embraced in the scheme. Bayard Taylor, for example, is displayed in three-quarters of a column, Father Tabb in one-half, Tennyson in four columns, Wordsworth in rather more than four. Of the prose likewise, as, Webster in two and a half columns. Where else shall we go for this sort of thing? We are glad to observe that future editions are contemplated.

Miss Granger might have been more pleased had Mr. Pertwee's 'Reciter's Treasury of Prose and Drama' preceded her Index instead of appearing simultaneously. Its bulk is kept down by paper a little too thin, as permitting the reverse print to show through; otherwise the make-up is liberal and handsome. The authors quoted in extract are almost wholly English—with some translations—so that it is worth while to enumerate the Americans, viz., Miss Daskam, a fellow-alumna of Miss Granger; Richard Harding Davis; Mr. Dooley; Emerson; Uncle Remus; and Hawthorne. Upward of ninety authors altogether are drawn upon, with a nice taste and a wide range. The book is wholly commendable. It is a companion to Mr. Pertwee's 'Reciter's Treasury of Verse.'

The little Anthology sponsored by Mr. Alfred Austin takes us from Pope to Jane Elliot, and embraces the "Rape of the Lock," "The Ancient Mariner," "The Cotter's Saturday Night," Johnson's "Vanity of Human Wishes," "The Deserted Village" and "The Traveller," and Gray's "Elegy," along with shorter poems of good allure from Crabbe, Wordsworth, Cowper, and the rest—all strictly published between 1700 and 1800. As notable as anything in Mr. Austin's grave introduction is his elaborate defence of Pope against Matthew Arnold's relegation of him rather to prose writers; with a citation to the contrary at first hand from Tennyson, and help from Byron. For Crabbe, too, he has a good word. The volume is No. 15 in the "Red Letter Library."

William Churchill Houston. 1746-1788. By Thomas Allen Glenn. Norristown, Pa., Privately Printed. 1904.

Born in South Carolina in 1746, a citizen of North Carolina until graduated at Princeton in 1763, Houston's mature years were identified with New Jersey. Made a tutor immediately upon graduation, he was elected to the professorship of mathematics in 1771, and held that place without allowing it to interfere with his public duties until 1783. During much of 1776 he was a captain of New Jersey militia and saw some field service, and was a member of the Committee of Safety. He was in succession Deputy Secretary of Congress (a confidential office), a member of the New Jersey Assembly, and a member of Congress until 1781. Declining the Comptrollership of the Treasury, in 1781 he accepted the Clerkship of the Supreme Court of New Jersey, having been admitted to the bar in the same year, and he continued in the practice of the law and in the discharge of high political duties during the short remainder of his life.

His crowning service was in the Convention of 1787, which framed the national Constitution. Four delegates were appointed from New Jersey. Of these, Col. John Neilson, of New Brunswick, notwithstanding his conspicuous and well-proved patriotism, appears to have been unable to accept the weighty duty, presumably from pressing private reasons, and later Governor Livingston and Abraham Clark, the signer (whose health prevented his acceptance), were added. Curiously, Houston's name is not attached to the engrossed draft. On the other hand, Paterson, afterwards Chancellor, signed the Constitution, but did not sign the report of the Commissioners to the Legislature, which Houston did sign. There is no doubt that Houston was an active participant in all the deliberations of the Convention, or that he accepted the document as a whole; and the absence of his signature thereto appears to have been an inadvertence rather than a refusal. He died suddenly in 1788, at Philadelphia, where he was buried, but the resting-place of his body cannot now be determined.

Houston did more than fill a seat in Congress. He kept up an intelligent correspondence with the Governor, explaining legislation and urging coöperation; jointly with Robert Morris and Governor Livingston he made himself responsible for £7,000 to supply clothing for the State troops, if the Legislature failed to appropriate; and he devoted himself to the study and discussion of questions of finance. He steadily looked forward, and in the hour of greatest distress was hopeful as well as thoughtful, as in his comment on the capture of Charleston: "These things fulfil the end of God's government, where partial evil is general good. We pity our suffering brethren, but no man despairs of the republick." The Mecklenburg Declaration was written by his classmate Brevard, and was given out in the county of his boyhood. One may recognize in Houston an equal and enduring love of political freedom. With a longer life he must have secured a broader fame.

This little book, edited by Mr. Thomas Allen Glenn, is a contribution to the library of intelligent patriotism, notwithstanding the original material concerning its hero is confessedly limited. Because of that limitation, matter having only an indirect bearing on the subject had to be used. Of this the part touching the action at Princeton, for example, is not quite exact in some of its details. There are also one or two errors of the types. But on the whole the pious office of perpetuating an ancestral reputation has been modestly and attractively discharged, and, as the preface hopes, the book may well lead others to let gleams of light upon the patriotic past.

The Cathedrals of Southern France. By Francis Miltoun. Illustrations by Blanche McManus. Boston: L. C. Page & Co. 1904.

The new volume in the cathedral series much resembles the same author's 'Cathedrals of Northern France,' reviewed by us a little less than a year ago. It has the same fanciful cover, and the same elaborate endpapers with local maps included in the decoration; pictures of the same unsatisfactory and even vexatious character, giving neither pretty illustrations nor valuable knowledge of the monuments; and a text in which there is some evidence of sincere feeling for the buildings to which the book is devoted. One looks in vain for description of any monument, for information by means of which one might learn how important it is to visit a building, or, when in its presence, how and in what way it should be studied. Thus, in the great church of Albi, the essential peculiarity of its structure is missed, although in every clause one expects to find it stated; and again, at Carcassonne, we are left without a word as to the unusual character of the ancient cathedral as a Gothic structure. In like manner, the unique and unmatched west front of Arles, with its statues and decorative sculpture, is dismissed with brief and unsympathetic remark; and the still more astonishing front of St. Gilles is mentioned merely in connection with the Arles church. In fact, one does not discover anywhere that architecture as a fine art, or as an art of the builder, or as an art of the workman in decorative trades, has interested the author. The doubt is as to who are the persons to whom such a book is more useful or even more attractive than a good guide-book of the accepted type.

The main divisions are: Part I., Southern France in General; Part II., South of the Loire; Part III., The Rhone Valley; Part IV., The Mediterranean Coast; Part V., The Valley of the Garonne. Then there are appendices, such as a sketch-map of France, and another of the bishoprics and archbishoprics in the south—a classification of architectural style taken from De Caumont, as

printed in a book nearly half a century old, and one whose limitations bind us no longer, however much we may feel our indebtedness to the author. What is more likely to be useful is a brief list of the districts of Southern France—those of historical fame or of well-known local distinction—such old-time names as the Limousin, the Morvan, Berry and the Bordelais. It is worth any one's while to learn these by heart, for one does not now find them in maps or in gazetteers. There are in the appendix and in the text a number of little plans of churches which miss being of great value because they are without the internal points of support. The extreme outline of a cruciform church is not in itself very precious—you want beside that the piers which really do the greatest part of the work in carrying the vaulted roof. On the other hand, there is a useful little plan of the cathedral of Avignon, associated with the vast palaces of the Popes which adjoins it.

AMES'S TEXT-BOOK OF GENERAL PHYSICS
$3.50
By **JOSEPH S. AMES**, Ph.D., Professor of Physics and Director of the Physical Laboratory in the Johns Hopkins University.
This work provides a one year's course in physics which is well adapted for use in American colleges. The book states the theory of the subject clearly and logically. At the same time it gives a concise statement of the experimental facts on which the science of physics is based, and presents with these statements the accepted theories which correlate or explain them. Every experiment and observation which has an important bearing on our knowledge or theories of Physics, is mentioned and explained; and the few great Principles of Nature are given the prominence that they deserve. Numerous illustrations accompany the text.

California

Land of Sunshine, Fruit & Flowers

IF all the delightful things you have read and heard about California are true, you would like to go there, wouldn't you?

They ARE true, and if you can spare the time this fall or winter there is no reason why you should not enjoy the charm of California's balmy air and invigorating sunshine, the delicious fruits and lovely flowers, the big trees, the old missions and the glorious Pacific.

Think it over — can you afford to miss the California trip?

The Burlington California Excursions — leaving Boston, Chicago and St. Louis on certain days every week in charge of special conductors — afford a comfortable, interesting and economical way of crossing the continent. These excursions, in connection with the low rates in effect to California via the Burlington, make the expense a comparatively small item.

Burlington Route

Ask us as many questions about the trip and about California as you like—they will be answered correctly, promptly, courteously.

LONGMANS, GREEN, & CO.'S NEW BOOKS

Ideals of Science and Faith

ESSAYS BY VARIOUS AUTHORS

Edited by Rev. J. E. HAND, Editor of "Good Citizenship" (London). Crown 8vo, pp. xx-334. $1.60, *net*. By mail, $1.74. [*September*.

For several centuries Religion and Science have been at enmity—sometimes open warfare, sometimes covert hostilities. Round these two great interests social alliances, temporal and spiritual, have grouped themselves. Religion has received a wavering and intermittent support from Philosophy, and has enjoyed an alliance—bickering but abiding—with the governing classes, Military, Political, and Juristic. Science has been in alliance—always unorganized and generally unconscious—with industry, at first with the mechanical crafts, but increasingly with the great vitalistic industries of Agriculture, Health-maintenance, and Education.

On all sides is a growing recognition that the ideals common to both Religion and Science are not only numerous, but are indeed the very ideals for which the nobler spirits on both sides care most. Hence it is that Theorists of Science and Theologians evince an increasing desire not only for mutual toleration, but also for a working alliance.

What are these ideals? By what means is it proposed to work towards them? These are the questions which the editor of this volume has proposed to a number of writers, whose record entitles them to speak with some degree of authority from the standpoint of different groups. Their answers form the present volume of essays.

CONTENTS.—Preface. Introduction. APPROACHES THROUGH SCIENCE AND EDUCATION:—A Physicist's Approach—Sir Oliver Lodge, D.Sc., LL.D., F.R.S. A Biological Approach—Professor J. The Teaching of Biology in the Secondary School

By Professors FRANCIS E. LLOYD and MAURICE E. BIGELOW, Professors in Teachers College, Columbia University. (American Teachers Series.) Crown 8vo, 500 pages, $1.50. *Just Ready*.

The first ten chapters of this book are devoted to "The Teaching of Botany and of Nature Study." The twelve chapters following are devoted to "The Teaching of Zoölogy, including Human Physiology."

"At the present time those who enter the profession of teaching in the field of botany and its allied subject, zoölogy, do so generally without any special consideration of the problems which they are called upon to face in their work. It is to bring the student face to face with these problems that this book has been written."—Extract from Professor LLOYD'S Preface.

A DRAMATIC STORY OF RUSSIA

OLIVE LATHAM By E. L. VOYNICH,

Author of "The Gadfly." At all Booksellers.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 29, 1904.

The Week.

The President is no doubt giving his attention to the attempt of the Republican State Committee to assess Federal officeholders in Kenfucky. The circular letter of the Republican campaigners given out by the Democratic National Committee on Saturday reveals, if genuine, a condition of affairs which must make the former Civil Service Commissioner now in the White House writhe. We all remember with what zeal and indignation he used his powers to stop the collection of contributions from officeholders during the Harrison campaign. The ink on the specific orders against assessments of the present Civil Service Commission is scarcely dry. Yet here we have a most flagrant violation. The chairman of the State Finance Committee writes to the postal clerks and carriers that a list of all Kentucky contributors will be sent to Mr. Cortelyou "to be filed with the records of the National Committee." What else does this mean than an implied promise to refer to them, if after election there are opportunities for new appointments or promotions? The receiver of the letter learns also that it is "confidently expected" that aid and a liberal contribution—not less than $70—will be forthcoming at once. What officeholder will dare to resist so outrageous a "hold-up"? There is nothing left for him but to draw his check for the amount so kindly specified in advance. This ought to make the preacher of political morality in the White House fairly boil over with wrath.

"He dealt with a delicate and difficult situation," writes Senator Fairbanks with regard to President Roosevelt's course toward Panama. This oracular statement is forthwith corroborated by Señor J. Gabriel Duque, editor of the Panama *Star and Herald*, who arrived here last week. With engaging confidence Señor Duque tells the world that he was offered the presidency of the so-called republic if he would lead the rebellion. Whatever may have been the exact terms of the proposal which Señor Duque received, no one will now deny his assertion that the revolution, a "spontaneous uprising of the people," was brought about by a lavish expenditure of money raised in the United States. On this point Señor Duque merely confirms the letters of the staff correspondent of the *Evening Post*, who visited Panama, and the correspondents of other newspapers. Señor Duque, as reported by the *Tribune*, defender of the Administration, assures us:

> "All the rebel generals, with the exception of President Amador, received from $4,000 to $8,000 apiece for their work. The United States was cognizant of this, I believe. It has been said that I had made an agreement with Secretary Hay, but this is false, although we knew that the United States would not allow the Colombian troops to enter Panama, once we had firmly seized the reins of government."

So long as the revolutionists knew that the United States would prevent interference by the Colombian Government—knowledge founded, as the event showed, on the most substantial basis of fact—an agreement with Secretary Hay was wholly superfluous. Obviously, when Secretary Hay telegraphed to Mr. Beaupré that the people of Panama had adopted a government of their own, "republican in form," he meant "in form only."

Roosevelt organs receive in dead silence the statement made by Señor Duque, that the Panama revolution was simply a vulgar plot, hatched and financed in this country under the very eyes of the Administration. Simultaneously with this betrayal of the whole sordid scheme, comes the publication at Bogotá of Gen. Reyes's pamphlet, 'Misión Diplomática y Militar.' It is a colorless account of the fruitless endeavors of Colombia to induce this Government to do justice, showing again how Secretary Hay took fright at the President's illegal course, and would not squarely say to Reyes in Washington what had been said to him, under instructions, by our naval officers at Panama. It is a miserable and humiliating story; but the Republicans do not even care whether there was a national disgrace involved in it. Let us all go on yelling about the rapid-fire President who could "do things," and dismiss questions of morality and public honor as "tiresome."

Prominent among the classes of people supporting Roosevelt, we learn, are the Quakers. Mr. W. D. Foulke says that he does not know of a single Republican Quaker who will not vote for Roosevelt. That candidate, it is true, has expressed the opinion that the Quaker may be as dangerous to his country as the fire-eater. Hence it is a rare exhibition of humility if these lovers of peace none the less trust their fortunes to the apostle of the Big Stick. The campaign has been thus far so destitute of novel features that political managers are justified in catching at any suggestion of an innovation. A parade of Friends with Rough Rider hats in place of the traditional broad-brims would be such a novelty, yet we confess we have faint hope of seeing it. If such an alignment were possible, no news of the same sort could create surprise. We should look next week for the formation of a Steel Rail Manufacturers' Parker and Davis League, a resolution of the New York Liquor Dealers' Association endorsing Swallow, and a Debs club on Fifth Avenue.

J. Edward Addicks of course regards the agreement of Senator Fairbanks to speak in Delaware under the patronage of the Addicks "Union" Republicans as proof that the Addicks faction is now accepted by President Roosevelt. Addicks's Wilmington *Sun* joyfully asserts:

> "The Republican party, in all its organized or recognized official capacity, from its Presidential leader down, has recognized the Union Republican party of this State as a part of and the representative of the national Republican party. This fact brands the so-called 'Regular' party in this State as a rebellious faction, at war with and opposing the success of the national Republican party."

In theory President Roosevelt is implacable toward corruption. His voice has been the shrillest in declaring, "We cannot compromise with dishonesty, with sin"; "No man who condones corruption in others can possibly do his duty by the community." In practice, President Roosevelt will not compromise with dishonesty unless he can thereby gain some advantage for the Republican party; he will not condone corruption except for the sake of electoral votes. Before he appointed Byrne United States District Attorney, he and Postmaster-General Payne said they must recognize the Addicks faction because it had 12,000—mostly purchased—votes, against 8,000 for the Regulars. Although the President later professed that the Byrne appointment was personal, yet his action in the Todd postmastership and the sending of Fairbanks to strengthen the Addicks faction are evidence enough that, in the struggle for decency, the Delaware Regulars must reckon without the aid of the loudest talker about honesty in the United States.

Jaundiced critics of President Roosevelt (we have heard it alleged that such beings exist) will say that his giving out of a letter from Gov. Wright, as if in answer to Judge Parker on the Philippines, is a prostitution of the public service to partisan ends. But we at least cannot so view it. To us it appears one more fearless act of an heroic President, letting the truth be known though it make against even himself. Gov. Wright says that "the continued discussion as to the capacity of the Filipino for self-government and his immediate or ultimate independence is having its effect here, and makes our task

more difficult." Now this is a shaft aimed directly at Mr. Roosevelt himself, for it was he, the President of the United States, knowing that his words would go with all their official weight to the Philippines, who said in his Memorial Day address in 1902, that our task in the Philippines was the introduction of "the orderly liberty, the law-abiding freedom of the individual, which is the only sure foundation upon which *national independence* can be built." So Gov. Wright is addressing a severe rebuke to President Roosevelt. And that noble man, instead of dismissing or censuring an impudent subordinate, boldly publishes his own condemnation!

Roosevelt is running like a prairie fire—in Europe. So returning travellers gravely tell us. As they step upon the dock, they inform the palpitating reporters that, while of course they are not prepared to say what the campaign conditions are in this country, the Republican outlook in England and on the Continent is most flattering. Viewed from Eatanswill, Pumpernickel, or Torrevecchio, Parker has no show at all. We would say nothing to discourage these amiable prophets whose hearts within them burn, and who apparently say to themselves, "This is my own, my native land, where everything goes." Nor would we speak one unkind word of those distinguished foreigners who inform us, en route to or from St. Louis, that President Roosevelt's election is certain. Their example, however, makes the reticence of Mr. James Bryce the more extraordinary. He is a foreigner who knows this country well, and who follows our politics with eager intelligence, yet he absolutely refuses to be interviewed on the Presidential campaign, and, we understand, notifies his friends that if they see any opinion attributed to him in the press they may set it down as an invention. Perhaps Mr. Bryce is not only recalling Hosea Biglow's advice to those who are suffering from suppressed prophecy, but is mindful of that amazing distortion of his words which made him describe Mr. Roosevelt as the greatest President since Washington.

The withdrawal of Senator Elkins from active campaign work against his father-in-law seems to prove that there was some sagacity among the Democrats when they took a candidate not merely from the enemy's country, but from the family circle of a Republican boss. This is so unusual an element in a political situation that its effect is impossible to gauge, and it perhaps accounts for the extremely conflicting reports from West Virginia. The politicians assume the existence in every State of a large body of voters who are ready to throw to the winds their convictions on the tariff, Imperialism, and the money question, in order to vote for any ticket that has a man from their own State upon it. It must be said that the history of Presidential elections yields very little confirmation of this theory. Since the foundation of the Republican party, its Vice-Presidential candidates have carried their own States eight times and lost them three times. Two of these three failures, moreover, were in years when the national ticket was successful. In the same period the Democratic Vice-Presidential candidates, chosen more uniformly from doubtful States than the Republican, secured their own States five times to seven failures.

"I submit the proposition to any blacksmith in the United States," writes Commissioner Ware in a confident defence of Pension Order No. 78. As an author of effective campaign dodgers, Mr. Ware is close rival to the President. He writes with the same vigor and defiance, and makes his appeal direct to the palpitant heart of the masses. Is the question one of international law? By all means let us refer it to a boatload of clam-diggers. Is it the tariff? Away with the vaporings of "those professional counsellors who have confined themselves to study in the closet"; give us the verdict of the pushcart men and we ask nothing further. This, broadly speaking, seems the principle upon which the Republican advocates construct the brief. "How did the Commissioner get the money to pay those pensions?" Did he "open the Treasury with a crowbar and abstract the money"? No. Every blacksmith knows that Mr. Ware, versatile as he is, is not a cracksman. With the best crowbar ever forged he could not prise his way into the Treasury in less than forty-eight hours; and in that time he would surely be caught. The theory of the crowbar is clearly untenable. What, then, are these lawyers fussing about? Why do they trouble us with their hair-splitting and quibbling? Blacksmiths' Union No. 1 is unanimous, and adjournment is in order.

To "let Lodge down easy" is now the delicate problem that confronts the Massachusetts Republicans. Every member of the party is expected to be politely blind to the fact that he has received a severe caning at the hands of the friends of reciprocity. The Boston Chamber of Commerce's plank on freer trade relations with Canada is to be made a part of the platform by the State Convention on October 7, but the machine will "amplify it with explanatory sentences." These, it is hoped, will convince the public that Lodge, while standing upon such a platform, "is not taking an attitude inconsistent on this matter up to date." The declaration regarding reciprocity is now engaging the attention of ex-Gov. W. Murray Crane, Dana Malone, who is to head the resolutions committee, and Lodge himself. According to the Boston *Herald*, it is immaterial who frames it, as it will "be brought within the sphere of Lodge's pen" before it goes to its final draft. The fact is, it is hoped that the level head of W. Murray Crane will find a way to rescue the party in Massachusetts from the ridiculous plight in which Lodge has landed it. The Republican machine makes no bones of the fact that the friends of reciprocity will be given what they demand. At the same time, it proposes to show that Lodge is triumphant. The latter is making the task as difficult as possible. He has lost his head, and is easily incited to say rash things. He has just been taunted, for example, into defining his position once more. Now he is in favor of reciprocity if it can be so arranged as to satisfy forty-five States of the Union.

Senator Stone's observation that the Missouri campaign on both sides is apathetic beyond all precedent will surprise Easterners who remember that the early summer saw a struggle of unexampled excitement in the primaries. Yet the explanation is probably simple enough It was one of the jokes of the convention which nominated Mr. Folk that his managers did not even know by sight the leading politicians of the old order. The men who used to handle the machinery, set off the fireworks, and arrange the ratification meetings, are not now in control. The peculiar nature of the canvass is shown by the particular question which is just now uppermost in the State newspapers: whether Boss Butler did or did not contribute $200 to the Folk campaign fund. Butler says he followed his invariable custom of past years and gave it to the campaign collector. State Chairman Vandiver says he never received it. Everybody seems to agree that if Butler did contribute the money, it was with a view to discrediting the head of the ticket and masking his own purposes. Since the sole danger to the Folk ticket comes from a nominally Democratic element which dares not fight him in the open, apathy on the surface is only to be expected. As for danger to the ticket through radical disaffection, it is well known that the element aroused by the Circuit Attorney's energetic campaign includes precisely what was best and soundest in Mr. Bryan's following.

United States Senator McLaurin of Mississippi last week tried to defend his client (a white fiend who last winter tortured and burned a negro and his innocent wife under circumstances of unprintable atrocity) on the ground that the burning was a necessity. That there is some logic in this, from the

Southern point of view, is plain. Where there are courts ready and willing to try negro criminals, the only possible excuse for resorting to lynch law is the contention that the safety of the community as a whole demands it. If his plea is granted, the Senator will have to admit that he represents a State which is still uncivilized, for the first evidence of stability and orderliness is the working of the courts. As a matter of fact, this excuse is as hoary and invalid as the old Southern argument that you must not let the slaves read lest there be a servile insurrection. So, too, is the statement often made by lawless Southerners that there must be lynchings unless the South is to become an impossible residence for white women. But no defender of this institution—not even Senator McLaurin—can excuse the horrible killing on September 21, near Talbotton, Georgia, of two negroes who had actually been declared innocent of the charge of conspiring to murder whites. Doubtless the motives these lynchers would acknowledge are the same offered by the Senator in his defence. The "niggers" must be taught a lesson as a "warning" that this is a white man's country, and that the negro must stay in his "place."

The Huntsville militia company which failed to prevent the lynching of a negro in that city on September 7 has been disbanded. The trial of the cowardly officers who connived at the Statesboro lynching is progressing steadily. Gov. Terrell of Georgia has announced that he will turn over the names of the mob leaders to the Bullock County Grand Jury, and will call upon it to follow the example of the Huntsville special grand jury, which recommended the impeachment of the sheriff, mayor, and chief of police on the charges of wilful neglect of duty and total incompetency. It also urged the reorganization of the police department from top to bottom. Still more notable signs of an aroused public conscience at the South are found in the press. The Atlanta *Constitution's* headlines declared last week that Georgia mobs are "very helpful to Roosevelt." Strongly Democratic as it is, that newspaper stated that the Democratic managers feel as if they might as well give up their efforts to impress the country with their belief that the Democracy is a great law-and-order and constitutional party, if these Southern lynchings are to continue. The Florida *Times-Union* is even more outspoken. In its opinion, "the deadliest enemy that the Southern white man has is that class which is represented by the brutal desperadoes who shot two unarmed and unoffending negroes near Talbotton, Ga., Wednesday." It calls upon the farmers of the South to guarantee protection to the negroes unless they wish to face the prospect "of neglected crops and unpicked cotton." At the same time it urges upon the negroes the duty of keeping their ruffians under.

The Supreme Court of Massachusetts has just decided that the soldiers' bounty bill, passed by the last Legislature over the Governor's veto, is unconstitutional. This decision is based on the fact that "the act provided for legislation that is in the interest of private individuals, and not for the benefit of the general public." This, the judges now declare, renders any bounty bill unconstitutional. The law in question provided for the payment of $125 to every civil war veteran who had not previously received an enlistment bounty from the State. Technically, bounties and pensions are two different things, but practically they have but one meaning. Anyhow, this particular bounty measure has a haunting resemblance to Order No. 78. It is a pity some way could not be found to get the latter before the Massachusetts Supreme Court.

Is or is not New England cotton manufacturing doomed? The question is perennial. Among the latest to attempt an answer is President Walmsley of the New England Cotton Manufacturers' Association. He sounded a cheerful note in his annual address this week. There are difficulties, but the way out of them is not hard to see. Of first importance is the labor problem. Mr. Walmsley, a New Bedford manufacturer, thinks there should be "more conciliation between employers and employed." He is averse to any change in the working hours in New England; and as for wages, it is well to look the fact squarely in the face that they never can be brought down to the Southern level. "Any forced attempt," he says, "to reduce wages below a normal standard must inevitably result in failure." Such statements cause a wry face in Fall River. But, undoubtedly, Mr. Walmsley is right in his main contention that the problem before the New England mills is one not of labor, but of management. Many of the older mills, he finds, are in a deplorable condition, physically and financially, due to lack of ability on the part of those in charge. Let such "close down and go out of business altogether, and the sooner the better." On the whole, the cotton industry of New England has little to fear. It will progress in the direction of finer and more varied fabrics, resembling Switzerland in this particular. As a Southern manufacturer points out, Switzerland "buys cotton and sells skill."

The volume of our exports to Cuba is said to be "most discouraging" to those who looked for a large increase in business as a result of the reciprocity treaty. But that was no magician's wand by which all the laws of trade were to be overturned. It was not calculated of itself to throw the commerce of the island into our hands. It did make the way easier for our merchants and manufacturers; and if they have not been willing or able to avail themselves of the opportunity, that is not the fault of the treaty. For the first quarter of the present fiscal year the imports into Cuba from the United States increased only 3 per cent., against a gain of many times that figure in those from the leading European nations, whose cost of production has cheapened while ours has gone up, and whose better understanding of the needs of the Cuban market, and longer datings, continue to give the Englishman, German, and Spaniard the advantage, notwithstanding the tariff concessions to this country. Apparently, the Cuban market is evidently not worth our applying our "dumping" policy to it. But, of course, we are not going to tolerate present conditions forever. Minister Squiers is quite right in telling President Palma that our merchants and manufacturers "will not long support" a reciprocity arrangement which works like the present one. If Palma has half an eye he will quickly perceive that we may soon have to intervene "in the interests of civilization."

It will not be Minister Fielding's fault if his anti-dumping regulations are not made effective by the Canadian customs officials. He does not propose to have foreign goods—notably those from the United States—exported to the Dominion at less than the fair market price in the original country. Knowing well that it is harder to corner the purchaser of "dumped" commodities than to catch a flea, he has framed an invoice which is likely to tax the ingenuity of the importer to the fullest extent. The latter is obliged to swear that the invoice exhibits the fair market value of the goods "at the time and place of direct exportation to Canada, and as when sold at the same time and place in like quantity and condition for home consumption, in the principal markets of the country whence exported directly to Canada, without any discount or deduction for cash or on account of any drawback or bounty, or on account of any royalty actually payable thereon, or payable thereon when sold for home consumption but not payable when exported, or on account of the exportation thereof, or for any special consideration whatever." He must also swear that no different invoice of the goods mentioned has been or will be furnished to any one, and that no understanding has been or will be made between exporter and importer, "either by way of discount, rebate, salary, compensation," etc., other than as shown "in said invoice." Mr. Fielding probably says: "If this does not diminish 'dumping,' it will at least increase perjury."

THE PARKER CAMPAIGN.

Judge Parker's letter of acceptance contains some effective answers to the challenging document issued by the President three weeks ago. Omniscience being his foible, Mr. Roosevelt undertook to teach the Judge law, with the same patient condescension revealed in his instruction of the bishops in theology. The plight in which jurist Roosevelt is now left can best be exhibited by the use of parallel columns:

PRES'T ROOSEVELT.

"It is now asserted 'that the common law, as developed, affords a complete legal remedy against monopolies.' But there is no common law of the United States. Its rules can be enforced only by the State courts and officers. No Federal court or officer could take any action whatever under them."

JUDGE PARKER.

"Whether there is any common law which can be applied and enforced by the Federal courts, cannot be determined by the President, or by a candidate for the Presidency.

"The determination of this question was left by the people in framing the Constitution to the judiciary and not to the Executive. The Supreme Court of the United States has recently considered this question, and, in the case of the Western Union Telegraph Company vs. The Call Publishing Company, to be found in the one hundred and eighty-first volume of the United States Supreme Court reports, at page 92, it decided that common-law principles could be applied by United States courts in cases involving interstate commerce, in the absence of United States statutes specifically covering the case. Such is the law of the land."

Imagine the wigging which the Republican lawyer who stuffed the President will get on his next visit to the White House!

One of the hectoring demands of the President's letter was that calling upon his opponents to say whether his pension order, which they affirm was illegally issued, they would dare revoke. "Will they now authoritatively state that they intend to do this?" "If elected, I will revoke the order," says Judge Parker, quietly. He adds that he will urge Congress to do by law what the President attempted to do by Executive order—that is, give veterans a pension for age. While this is only following up what the Democrats of the House proposed, we are bound to say that we do not like such an approach to the promise of a service pension. But rebuke of Judge Parker for this lies in no Republican mouth. And fancy the jubilation of Mr. Roosevelt's admirers if he had so emphatically replied to an antagonist's challenge. "Teddy Calls his Bluff," would have been the exultant headlines. Well, we hope to hear less of this Republican boastfulness, hereafter, even if the party of moral ideas is compelled to find some other than gambling terms in which to glorify its policies and its candidates.

For the rest, Judge Parker's letter states the issues before the people, and the views which he holds, with explicitness and courage. His inflexible adherence to the gold standard he reiterates. For the Republicans to attempt to flog that dead horse along the road any further is as sensible as it would be to try to make the Julian calendar an issue in this campaign. Judge Parker speaks with emphasis, yet with precision, on the question of imperialism. No one can doubt where he stands. He is for the application of traditional Americanism, both at home and abroad—no man above the law, no subject people beyond the pale of the Constitution. He forcibly controverts the pretence that a promise of independence to the Filipinos would plunge them into war and massacre. He has human nature, if not the Republican wiseacres, on his side when he maintains that it would, rather, stimulate them in worthy national pride and efforts to become fit citizens of a free republic.

Upon the tariff issue Judge Parker puts much more edge than he did in his speech of acceptance. He perceives that the inevitable course of the campaign makes the tariff abominations of the Republican party a powerful weapon in the hands of the Democrats. Judge Parker is telling in his exposure of the way in which the high-tariff dogma has become the article of a standing or falling party with the Republicans. They have turned their back on their own teachings. They have falsified their own professions, and have flouted the solemn warnings of President McKinley, on the subject of tempering protection with reciprocity. President Roosevelt they have compelled to retract his own writings and speeches. Insensate protection, like a baleful obsession, now guides Republican policy. There are Republican tariff revisionists, as Judge Parker points out, but they are powerless in their own party. They may afford valuable aid in tariff reduction if the Democrats are given a mandate to set about that work, but if Roosevelt is elected, what warrant has any rational man for supposing that the Shylocks of protection will not go on exacting their pound of flesh?

Judge Parker has done all that could reasonably be asked of him to make his campaign a success. We have scant sympathy with the demand that he do something startling every week, or make a car-end tour of the country. Have we become so demoralized by the methods of Bryan and Roosevelt that we can take no interest in a political campaign unless it is sensational and spectacular? Are Americans to refuse henceforth to listen to a candidate unless he rides at them like a cowboy "shooting up the town"? We are loath to believe it. We should be sorry to think that effective campaigning must now be one long hysteric appeal to excitable electors, no issue of any value unless it can be shrieked about, no argument to be weighed unless printed with red ink in types a foot high. We recall the Tilden campaign, the Cleveland campaigns. In them the candidate was not expected to make of himself either a peep-show or a daily shocker. Mr. Cleveland, if memory serves, delivered no more than three speeches in 1884. Then, as in 1876 and 1892, the Democrats had a dignified candidate and a good cause. They have both to-day. Never were more important issues more squarely joined. Judge Parker puts them with directness and candor in his letter. It remains for those to whom the principles he lays down are dear, and to whom the perils wrapped up in Mr. Roosevelt's candidacy are grave and imminent, to take up the work of the campaign with steady and heightened enthusiasm.

THE NEW YORK SITUATION.

Presidential candidates and party organs are always, perforce, filled with admiration of the wisdom of political conventions. That is a part of their professional etiquette. Accordingly, Judge Parker is "pleased" with the result at Saratoga, however strong the evidence may be that he wanted another man nominated for Governor. In like manner, President Roosevelt was particularly "delighted" with the action of the Republican Convention. It is known that, in private, he does not conceal his dislike and distrust of Odell; but publicly he is bound to accept whatever the Republican boss proposes, and to be effusive about its being the very wisest course possible. That is one of the differences between a Presidential candidate and an independent newspaper, which, more fortunate than thick-and-thin partisans, is not compelled by the exigencies of politics either to stultify itself or to attempt to deceive its readers. If it has, with the *Sun*, called a man a "desperate political operator," it feels that it is, in decency, debarred from advocating his election as Governor. If it has dwelt upon the impropriety of a judge continuing to be a party boss, it is not ready, with the *World*, to turn a sharp corner and say that "this objection will not exist when he resigns from the bench." The plain moral of that would be that we may rightly say to every politically ambitious judge: "Use your judicial office for all there is in it. Be an open partisan on the bench. Smear your ermine with the oil of the political machine. Then get yourself nominated for a civil office, and all will be forgiven."

For our part we cannot advise anybody to vote for D. Cady Herrick. His ability we do not question. On the bench, so far as we know, he has been an impartial judge. But are we to attack Odellism with a candidate adept in all the disreputable arts of Democratic

politics in Albany County? Are we to preach judicial propriety while nominating a man who has been a local party boss though a judge? It will be said that Herrick was a useful organizer for Mr. Cleveland. So was the notorious Rasin of Baltimore, but that does not fit him to be Governor. That Herrick has long been Hill's enemy will be brought forward as a conclusive argument; but that alone is not enough. No; earnestly desiring as we do the success of the Democratic national ticket, we have our own character and consistency to sustain, and will not support Herrick for Governor. In passing by Jerome and Shepard to nominate him, the Democratic Convention deliberately threw away its great opportunity.

But while we feel and reiterate the grave objections to Judge Herrick which should have prevented his nomination, we are disposed to do full justice to the work of the Democratic Convention in other respects. The nominees for the minor offices seem to be much above the average. Of Mr. Harrison, named for Lieutenant-Governor, nothing but good is said by those familiar with his record in Congress. The final decision in the case of the judicial nominations was very gratifying. It definitively takes the Court of Appeals out of politics. This is more noteworthy in that it was a wise and proper step at variance with the desires and hopes of the machine Democrats. They wanted to make spoils of the judgeships, and they had an ostensible reason in the arbitrary methods of Odell as well as in the previous partisan attitude of Judge Werner. But, happily, the personal resentments and malign counsels of Hill were, in this matter, resolutely put aside. His personal discomfiture was heightened by the complete collapse of his cherished Stanchfield boom, and also by the failure of his eleventh-hour scheme to conspire with Boss McCarren and force the nomination of Comptroller Grout. It is a pity that the men who broke down all those Hill plots had not determination enough to keep on, and compel the nomination of a better man for Governor.

The actual situation in the New York State election is plainly one to perplex the independent voter. He was never more courted at the polls, yet never more flouted in conventions. Both candidates hasten to assure him—Lieut.-Gov. Higgins at Olean and Judge Herrick at Albany—that they are their own masters, and that every voter who hates a boss ought to be for them. Yet men sworn to no party will not find the choice simple. It is not an instance of being happy were 'tother away, but were both away. Neither is a candidate that independents would have chosen; yet one nomination made the other possible. If Odell had been willing to take a man like Root, the Democrats would never have thought of naming Herrick.

We do not pretend to say at present what choice of evils should be made by independents. One thing to remember is that the independent vote cannot be "delivered." Any self-constituted custodian who tries to put it in a bag and carry it to a given destination, will find that he has a light burden on arrival. To be an independent is to be independent. It is improper to speak of him as "bolting," for that implies that he sometimes submits to the curb. The situation which the unattached and conscientious voter has now to face is this: On one side he has a candidate of respectable record and good business ability, put forward by one of the most ruthless and predatory political machines ever constructed. The Democratic platform, in its scathing attacks upon Odell, only speaks the thoughts of many Republican hearts. On the other side, we have a party which exhibits a great improvement, on the whole, upon its course and control in this State for some years past, with a candidate who is admittedly of great ability and marked personal force, and of irreproachable private life, yet whose political activities in the past have been highly questionable, and whose mixing up of politics with jurisprudence has been, as the *Times*, which supports him, says, both an "impropriety and a scandal." Clearly, then, those who think the objections to Higgins and his bad company more weighty than those which lie against Herrick and *his* company, will make their choice accordingly, and vice versa. What the independent voter, alone with his conscience and a lead pencil, will do, can no more be predicted than what a jury will do. But it is certain that he will do what he thinks for the public good, and that, unlike the partisan and the ignorant, he will be able perfectly to discriminate between national and State issues.

NEW YORK IN PRESIDENTIAL ELECTIONS.

It is natural that, now as so often before, the political interest of the country should centre upon New York. The experience of more than a century proves that six times out of seven the candidate for whom it votes becomes President. It has taken part in twenty-eight Presidential elections. It has voted on the losing side at four. On three of these occasions its support was lent to distinguished sons of its own. De Witt Clinton was one of the greatest public men to whom its soil has given birth. In 1812 his popularity, and the opposition of the commercial centres to the foreign policy of the Administration and to the second war with Great Britain, won for him its vote as against James Madison. In 1868 the Tammany Hall of William M. Tweed was at the height of its power. It pleased it in that year to show its strength, and Horatio Seymour received in the counties below the Harlem a larger proportion of their total vote than was ever before or has ever since been given to any Presidential candidate. His majority below the river was 30,000 more than that given to McClellan four years before. As a result, he received the electoral votes of the State. Eight years afterwards another great New Yorker, Samuel J. Tilden, then Governor, carried his State by what was absolutely, although not relatively, the largest plurality it had up to that time ever given a Democratic candidate for the Presidency. Had conditions in the South been then what they ever since have been, he would, of course, have succeeded to the Presidential chair. As it was, after the country had been for months on the verge of civil war, Hayes was inaugurated. The sole occasion upon which New York has voted for an unsuccessful Presidential candidate who was not one of its own citizens was in 1856, when it gave to John C. Frémont the then enormous plurality of 80,000—a figure relatively even greater than the 143,000 by which McKinley carried the State in 1900. For nearly ten years prior to 1856, the Democratic party had been torn asunder by the quarrels of its "Barnburners," of its "Hunkers," its "Hards," and its "Softs." It was the effect of this long factional warfare even more than the strength of the American or Know-Nothing party which made Buchanan so much weaker a candidate before its voters than he was before those of the other doubtful States of the North.

At each of the other twenty-four Presidential elections the man for whom New York voted became President. At fourteen of these quadrennial contests New York merely swelled the majority for the victor. Washington, Jefferson at his second election, Madison at his first, Monroe, Jackson, the elder Harrison, Pierce, Lincoln in 1864, Grant in 1872, Cleveland in 1892, and McKinley would have been elected if it had voted against instead of for them. Ten times, however, New York has given what amounted to the casting vote. In 1796 it elected Adams only to defeat him four years later. In 1824 it was in its power to make Jackson President a Presidential term before he actually attained the dignity. In 1836, without its support Van Buren would not have been chosen. In 1844 it crushed the life-long ambitions of Clay, as forty years later it did those of Blaine. In 1848 it made Taylor President. Without its support in 1860 Lincoln would have been beaten. Garfield in 1880, Cleveland in 1884, and Harrison in 1888 owed their success to it. The ardent enthusiasm which both Clay and Blaine were able to in-

spire and maintain in the breasts of millions of their countrymen, and the narrow margin by which New York voted against each of them, gave a dramatic character to its decision in 1844, and again in 1884, which has sometimes been lacking even when weightier consequences turned upon its judgment.

It is impossible to form even an approximate idea as to what the ultimate results of a contrary decision by New York at some Presidential elections would have been upon the entire future history of the country. If in 1796 its electors had voted for Thomas Jefferson instead of for John Adams, no Alien and Sedition laws would have been enacted; no Virginia and Kentucky Resolutions adopted. Far more momentous, however, John Marshall would never have become Chief Justice of the Supreme Court, and in that event the Constitution to-day would have been in substance, though not in form, essentially unlike what it now is. In 1800 if Aaron Burr had not wrested the County of New York from the control of the Federalists, Napoleon Bonaparte would have offered Louisiana to John Adams instead of to Thomas Jefferson. Would Adams have accepted it? In 1860, if the combined opposition to Lincoln had been able to carry the State against him, he would not have become President. The House of Representatives would have chosen either Breckinridge or Bell. There would not at that time have been any secession or any civil war. It is at least conceivable that African slavery might still have legal existence among us.

Great as are the changes which a century has brought about, it is curious how persistent are some of the peculiarities of New York politics in matters which would seem to be of an essentially transitory nature. On general principles, nothing would appear more likely to be short-lived than the factional quarrels of rival politicians professing the same political faith. The deadly enemies of yesterday are the closest allies of to-day; the men who last year were inseparable associates, this year leave nothing tending to their mutual destruction undone. Yet for more than a century there have been few periods in which the course of the political history of New York has not been largely influenced, and sometimes altogether dominated, by these factional fights and their consequences. "Martling men," "Quids," "Bucktails," "Clintonians," "Barnburners," "Hunkers," "Hards," "Softs," "Silver Grays," "Conscience Whigs," "Stalwarts," "Half-breeds," are only a few among the many curious appellations, some meaningless, some expressive, which have been at one time or another given to the factions into which its political parties have been divided. In 1848 certainly, on a number of other occasions probably, these factional disputes have given the electoral votes of the State to Presidential candidates who, but for such quarrels, would not have received them. What part the bitterness between the followers of Platt and of Odell will play in determining the result on the eighth of November next will not be known until after the election has been held, and very probably not even then.

Another peculiarity of New York politics is that as a rule the Democratic party can command more support on State than on national issues. This was a well-recognized rule sixty years ago, when Whigs and Democrats struggled with each other for the control of the State. It has been still more marked and persistent since the Republican party was organized. Only at two of the Presidential elections since 1854 has the Republican party in New York failed to show greater relative strength at a Presidential election than it did at the last preceding State election. One of these exceptions was in 1864, when Lincoln's plurality was less than 7,000, as against 29,000 given the year before to Chauncey Depew, then the Republican candidate for Secretary of State. The other was in 1876, when Governor Tilden had a plurality of 32,000, as against one of only 13,000 given in 1875 to Lucius Robinson, the Democratic candidate for Comptroller. In New York the Republican plurality for President has averaged for the entire twelve elections since that party was organized something over 45,000. At the State elections next preceding the Presidential elections the average Democratic plurality was about fifty votes. Of course the enormous pluralities received by McKinley in 1896 and 1900 make averages which include these figures essentially deceptive as to the real relative strength of the two parties in the State. Confining the comparison to the period beginning in 1855 and ending in 1892, it appears that the average Republican plurality at the ten Presidential elections held during that period was 13,600, while the average Democratic plurality at the elections next preceding those same Presidential elections was 10,800; that is, the Republican party seemed to be during that period between 24,000 and 25,000 votes stronger at Presidential than at State elections.

CITY VOTE VS. COUNTRY VOTE.

Good crops make Republican votes in the country. High prices for the necessaries of life make Democratic votes in the cities. Behind the immediate issues these two counteracting tendencies have for years been in operation. They play an important part in the complex motives which induce each man to cast his vote in a given way. The Democrats are asking the dweller in the city to reckon how the era of high prices has affected his personal economy. The Republicans meanwhile claim the farmer vote as an asset. The index of their campaign book shows just twice as many references to farms and farmers as to gold and the gold standard combined. President Roosevelt himself has dispelled the impression that he was not enthusiastic over farmers as a class, by applying to them, in his letter of acceptance, the complimentary adjectives "steadfast, single-minded, and industrious." "The farmers did it," cried the Republicans joyously when they saw the Vermont political barometer pointing to "set fair." But they have not put away their umbrellas on that account. The weather-wise among them realize that the result will be decided in States where the rural vote is not omnipotent. There can be no doubt that in this election the cities, as such, will assume exceptional importance. If the Republican ticket is defeated, it will be largely through their influence. Four years ago there were sixty-three Congressional districts made up of large cities with their suburbs. Of them 34 were represented by Republicans and only 29 by Democrats. To-day, of 75 such districts, 40 have sent Democrats to Congress and only 35 Republicans.

Local contests furnish an untrustworthy guide at best for a forecast of national results, and yet the municipal elections of the past four years also make a striking showing. A long list may be made of cities now governed by Democratic mayors which have had Republican or Independent administrations and displaced them since the last Presidential election. It includes New York, Boston, St. Louis, Minneapolis, Indianapolis, Hartford, Reading, Elizabeth, Camden, Bridgeport, Trenton, Davenport, Ia., Manchester, N. H., Chattanooga, Sacramento, Springfield, Ill., Newport, and Williamsport, Pa. Of the cities in this list, New York and Indianapolis, it is true, had Democratic mayors at the date of the election in 1900, but they have had since that time Independent and Republican administrations respectively, and in their last elections displaced them by straight Democratic. The aggregate population of these cities is nearly six million. The list of places which in the same period have displaced Democratic by Republican mayors contains about as many names, but Buffalo is the largest city in the list, and the aggregate population is less than two million. This comparison takes account only of cities that have changed the complexion of their local administrations in their last, or almost their last, elections. If the list were to include all those now having Democratic mayors, such cities as Chicago, Milwaukee, Cleveland, and Baltimore would have to be added.

The latest information we have as to the shift of votes comes, of course, from the September elections. These have been widely celebrated as auguries for Republican success, and yet if there is one phe-

nomenon which they reveal clearly and convincingly, it is the divergence of city and country vote and the unmistakable Democratic trend of the former. Even in Vermont the county containing the largest city, Burlington, was one of the two which showed actual Democratic gains and Republican losses.

In Maine it is unquestionably true that the license issue was extremely potent in increasing the Democratic vote in the cities, and that in 1900 the Democrats were badly disorganized; yet, even making allowances for these facts, a separation of the city from the country vote gives surprising results. Maine has seven cities of more than 10,000 population. In 1900 they gave Hill, the Republican candidate for governor, 13,528, and his opponent, Lord, but 6,266. This year, the same seven cities gave Cobb, the Republican, 13,290, and Davis, the Democrat, 10,780. In other words, while the Republicans had actually lost 1½ per cent. on their city vote, the Democrats had gained no less than 71½ per cent. Outside of these cities, in the same period, the Republicans had increased their vote 9 per cent., to the Democrats' 23 per cent. Just how far these particular percentages are due to local issues no man is wise enough to say. But the tendency they disclose is general: the Republicans gained votes only in the country. The Democrats gained three times as fast in the cities as in the country.

Only one-sixth of Maine's voters live in the cities. Yet it needs no complicated calculation to see the bearing of her election on those States where the urban population is the dominant factor. New York has thirty-eight cities of 10,000 population or over. They gave McKinley in 1900 472,262 votes to 349,730 which he received in other places. Bryan's city vote was 455,189 to 223,197 in the country. It was pointed out very promptly when the Maine returns came in that, to apply the Republican net gain of 6.6 per cent. and the Democratic net gain of 28 per cent. to New York, would still leave it in Republican hands by nearly 8,000. If the country and city figures be looked at separately, however, they show a very different result. Leave out of account any loss of the Republicans in the cities, give them their full percentage of increase in the country, and then allow the Democrats even half the proportional gains they made in Maine, city and country, and the calculation shows a Democratic plurality of 15,000. Of course, nobody imagines that such changes as those in Maine are even remotely possible in New York—they would give Parker no less than 200,000 votes to spare; but it is not unfair to say that if the figures mean anything at all, they may well be disquieting to the Republicans. The change of votes necessary to carry Indiana and Illinois is considerably less than that for New York. For West Virginia, it is about the same.

A SECOND HAGUE CONFERENCE.

In acceding to the request of the Interparliamentary Union that he invite the nations to a second Hague Conference, President Roosevelt has taken a commendable step. It may be impossible to reassemble the Peace Congress soon—Russia and Japan could scarcely send representatives at present—and the unsettled questions may not be disposed of even when the delegates do find themselves at The Hague; but the President has, at any rate, shown his hearty good will, and, by so much, officially committed the United States to disapproval of war. It is Mr. Roosevelt's own fault if a certain suspicion attaches to him in his rôle of ingeminator of peace, and if cynics interpret this action of his as only a part of his general programme of being "good" until after November 8. A man who has spoken with such contempt as he has done of the idea of permanent peace among nations, and whom "cant about humanity" has so nauseated in his warlike ardor, will have to make many peaceful speeches and do many things really to promote disarmament and to discourage the belligerent spirit, before he will be accepted in entire seriousness as the original non-resistant.

The first Peace Conference, it will be remembered, met at The Hague on May 17, 1899; delegates from twenty-six nations adopted three conventions, three declarations, and seven resolutions. The declarations prohibited the use of dum-dum bullets and projectiles containing asphyxiating gases, and prohibited the throwing of explosives from balloons for a period of five years. The conventions related to the laws and customs of war on land and the adaptation to maritime warfare of the principles of the Geneva Conference of 1864, and, most important of all, provided for the peaceful adjustment of international differences. The third established the Hague Court of Arbitration, to which, at President Roosevelt's request, Venezuela and her European creditors referred the questions at issue between them. By this act the President rendered a notable service to the peaceful settlement of international disputes.

A reference to the resolutions adopted at the Peace Conference, which were merely "expressions of wishes," shows plainly the need of another meeting of the nations. The delegates of 1899 were forced to leave much of their work unfinished. They could not, for instance, go any further with the "limitation of the military charges which so oppress the world," beyond saying that it "is greatly to be desired, for the increase of the material and moral welfare of mankind." They asked for another conference or conferences for the revision of the Convention of Geneva, for the regulation of the rights and duties of neutrals, for the consideration of the immunity of private property on the high seas during war, and for the regulation of naval bombardments of ports, cities, or villages. In addition, the conference urged upon the various governments study of the questions relating to muskets and marine artillery and to the limitation of war budgets and of the land and naval forces.

Obviously, if nothing of moment had occurred in the last five years, President Roosevelt would still be amply justified in asking for another international conference in the hope of adjusting some of these disputed questions and of renewing the five-year agreement in regard to the use of war balloons. But the deplorable war in Mantchuria has brought to the front a number of questions which call for prompt study and settlement, while emphasizing anew the need of further light upon contraband of war and the duties of neutrals. We need not recall the excitement of the English press and the public a month ago over the Russian seizures in the Red Sea. This was a grave enough menace to the world's peace to make it highly important that the law governing the right of a belligerent warship to search merchantmen on the high seas should be codified as speedily as possible. The *Ryeshitelni* incident at Chefoo has also made necessary a new definition of the rights and duties of neutrals whose harbors are entered, together with a fresh statement of the proper procedure in the event of violations of neutrality.

The development of modern warfare and of modern news-getting has also brought forward for settlement some entirely new questions. The Hague Conference found itself unable to deal with the cutting of cables by the United States in the war of 1898. Since that time wireless telegraphy has reached such a stage of usefulness as to lead Russia to declare its apparatus contraband and to threaten to treat its operators as spies. Floating mines have played a more important part in this war than ever before—to the surprise of naval officers as well as of laymen. Breaking from their moorings, they have floated far from the actual scene of hostilities into waters navigated by peaceful merchantmen, to their great danger. The limitations, if any, of the submarine boat should next be considered by the second Hague Conference, which could not fail to extend the present three-mile limit of the coast jurisdiction of nations. The development of naval and land artillery imperatively dictates an extension of such neutral waters to at least six miles from shore.

In drafting his call to the nations, other important points will doubtless

occur to the President and his advisers upon which it will be wise and humane to lay much stress. Leadership in this direction will confer far more and more lasting honor upon the President and his country than any achievements in the way of building battleships, or assertions that the only way to secure peace is to speak softly and carry a big stick. By his promise to call another Hague Conference, Mr. Roosevelt has himself shown the falsity of the latter doctrine. What a pity it is that to his discredit must be set down his scorning of the earnest recommendations of the first Conference to "increase the material and moral welfare of mankind" by limiting expenditures for war, and his unceasing appeals for more fighting men and greater armaments!

DUMONT ACQUITTED BY DUMONT.

The report on the investigation of the *Slocum* disaster by the local Board of Steamboat Inspectors, printed in Friday's papers, is precisely what might have been expected. James A. Dumont and his fellow-officials have sat in judgment upon themselves, primarily, and upon the officers of the *Slocum* secondarily. They have, without a blush of shame, pronounced themselves not guilty, while punishing the other wrongdoers by revoking their licenses. Only in the records of their own inspection service can this shocking farce be paralleled. When the steamer *Rio Janeiro* sank off the Golden Gate in 1901 with a loss of 128 lives, the San Francisco Board of Inspectors similarly cleared its own skirts. It as solemnly shirked all blame for faulty life-preservers, for boats that could not be lowered, and for the absence of watertight compartments, gravely censuring the ship's engineer for not leaving his post of duty to help lower boats that either could not be put overboard or that sank when finally launched.

The San Francisco Dogberrys did not even pretend to defend themselves; but James A. Dumont and his associates have felt the need of replying to attacks, and have not hesitated, in their attempt to hide their shortcomings, to resort to obvious misstatements. They coolly find that the life-preservers which one of their subordinates inspected were in every case up to the requirements, and aver that double the quantity of life-saving equipments would not have rescued an additional life. The day after the catastrophe the *Evening Post* declared, editorially, after talks "with those who drew ashore bodies actually weighted down by the life-preservers," that these life-belts, "when thrown into the water, sank like stones; when ripped open, displayed a mixture of soggy cork and glue no more buoyant than so much dirt." And in rebuttal of all this, Dumont, trapped at last, asserts that a solid cork preserver of the date of 1875 is still buoyant! If this proves the Dumont case, Henry Lundberg, the dropped inspector who passed the *Slocum*, has a right to sue for reinstatement. If the adequacy of all the *Slocum's* preservers can be established by the simple say-so of a board of whitewashers, then why were no less than 1,365 of 1,500 preservers on the *Slocum's* sister ship, the *Grand Republic*, proved defective by the inspectors from other ports who conducted the reëxamination of steamboats in this harbor?

Even Dumont seeks to break the force of his false statement that "no dead bodies were taken from the water with life-preservers on them," and his assertion that the equipment was not at fault, by admitting that manufacturers do not always live up to the requirements for life-preservers. But this is precisely the reason why the Government of the United States pays Dumont and his inspectors to pass upon them. That is plainly not Dumont's idea of the reasons for his employment. It never has been in all his long and harmful official career. Now, he suggests that the best way to guard against deception is to station inspectors in the factories to supervise the making of the belts; and it is, doubtless, quite impossible to make him realize that thereby he confesses the hopeless inadequacy and inefficiency of that whole inspection service of which he was for so many years, owing to his political "pull," the responsible head.

If it is necessary to point out further the utter worthlessness of this opinion of Dumont upon Dumont, we would cite his statement that Coroner Berry failed to appear as a witness. That official has already declared the statement false, and has asserted that, ready and willing to testify as he was, he was never called upon. It is quite likely that Dumont was eager to acquiesce in this apparent failure to respond because the coroner's jury had held Inspector Lundberg for passing the *Slocum*. Of this the Dumont report has nothing to say, just as it overlooks the indictment of Inspectors Lundberg and Fleming by the Federal grand jury on July 29 for negligence causing manslaughter, the penalty for which is ten years at hard labor. These men are still awaiting trial.

But Dumont falls back upon the inefficiency of the crew as his main excuse for the loss of the 959 lives. Their failure to see that the hose was properly stretched, to lower the boats, and to stop the fire when it was first seen, is unquestionably largely responsible for the extent of the catastrophe. Whose duty is it to supervise the crew and see that it is efficient? Will Dumont maintain that his functions cease when his inspectors have passed upon a vessel's physical equipment? He declares that the captain and pilot failed to perform "their lawful duty by giving frequent instruction to the crew and exercising them in fire and other drills." But are such failures, such violations of the regulations, discoverable only at a cost of 959 lives? Section 4445 of the Revised Statutes requires that a master, a mate, a pilot, or an engineer must give his oath to do his duty "faithfully and honestly." Is an annual inspection of a vessel in dock the only way of discovering whether these oaths are being lived up to? Obviously not. And even Dumont could not have the hardihood to declare that his inspectors are without the power to order fire drills as often as they deem it necessary.

Far from really exculpating anybody, this report merely emphasizes the outrageous condition of the inspection service, and the need of a general overhauling of the laws so that others than inspectors shall sit in judgment upon inspectors. It alone should lead to Dumont's removal, although this will doubtless be deferred until the Federal board of inquiry reports, a short time hence. By its exposure of Dumont's methods in 1903, the *Evening Post* was able to bring about his removal from the headship of the service, but his transfer to this city followed. This was an undoubted if slight gain. But the Secretary of Commerce, and Mr. Roosevelt himself, will be censurable if a sweeping reorganization of the inspectors and the regulations governing them is not started as soon as Congress meets. Even in the Post-Office Department there is no greater need for officials "clean as a hound's tooth," and for a complete and thoroughgoing overhauling.

JAPAN AND THE JINGOES.

For a decade or more the worshippers of Jingo, the Anglo-Saxon god of war, have manifested the deepest interest in the welfare of the brown and yellow races. In international affairs, as in business, they have contended that the big fish must swallow the little, convinced that in "that great and wide sea wherein are things creeping innumerable, both small and great beasts," the Anglo-Saxon is the great leviathan which the Lord had "made to play therein." They even persuaded sundry theologians that Asia was a field "white already to harvest"; and that "Western civilization" should promptly enter in and possess it. Senator Beveridge, who had gone ahead to spy out the land, had reported that it was fair, flowing with milk and honey; and it seemed both unwise and unscriptural to leave such a region in the hands of heathen.

The onward movement would have begun long ago had it not been for certain differences of opinion about the details of the campaign. All were agreed, with the religious press, that

the Gatling gun should precede the gospel, but there harmony ended. From the standpoint of the "sociologist," it was argued that by cosmic law the aggregation of the outlying regions of the world into a few great states must proceed either by the extension of empire or the extension of democracy. While the *Dreikaiserbund*, Nicholas, William, and Theodore, were convinced that the spread of empire would be the best strategy, there were others who contended that it would look better to extend self-government, "in our own way and at our own time." Then when the discussion passed from strategy to tactics, further differences appeared. Capt. Mahan contended that rulership of the earth depends on the possession of "keys," and that the nation which first should seize the largest bunch of them would be an easy victor. The author of 'American Ideals' argued for the efficacy of the Big Stick, while Mr. Brooks Adams thought that the issue of the conflict would turn upon the control of mines of metals which should be beaten into swords rather than ploughshares. Others, finally, placed their reliance wholly in the sheer superiority of the Anglo-Saxon, and proposed an immediate start, confident that the dominant race would succeed in "muddling through" somehow.

Here matters hung until those upstart Japanese had the presumption to take a hand in a game which only white nations could play. The disciples of Buddha were supposed to be living a life of contemplation, calming their passions, and awaiting absorption in Nirvana — to which the Jingoes intended to speed them at a convenient season. These pygmies, in fact, were considered the very lightest part of the white man's burden; and the seizure of their ports was scheduled to occur without more serious resistance than the banging of gongs to frighten the foreign devils, or an ultimate resort to hara-kiri. True, the Japanese had fought tolerably well in the war with China, and some of the Jingoes would have conceded that they might make fair soldiers under commanders of some superior race, such as Shafter or Buller or Alexieff; but the idea that they could be a serious factor when Powers of the first class should begin to partition Asia, was preposterous. It was to be America for Americans, Asia for the Anglo-Saxon Alliance, and Nirvana for the Japanese.

But what a situation now confronts us! Here is a yellow nation that is actually "doing things" to one of the great world-powers which, by a fixed law of "sociology," was to have an important part in the cosmic process of wiping inferior races off the map. On the very soil where Brooks Adams had prepared an arena for the conflict over the partition of Asia, Oyama is driving the Russians before him. Key after key which the superior nation had seized, after the most approved plan, falls into the hands of the impudent Japanese. Where the matter will end we know not; it is all so different from the rules of Jingo strategy. The whole affair is disturbing. How in Heaven's name can we take up the white man's burden if the little brown or yellow brother is going to act like this? How are you going to civilize people who have a pure joy in being killed in battle? There is nothing like this in the war lore of the Jingo. He goes out to his crowded hour with a retinue of special correspondents, and, though willing to die, simply *must* live long enough to write up his campaign for the magazines and run for office.

For ourselves, we can see but one way out of the situation. The people of Asia can never be allowed to possess their own soil, worship such gods as they choose, and attend to their own concerns; that is clearly impossible. The cosmic process of empire-building must go on to the bitter sociological end. Asia must be opened, at all costs, to the white man's armies, missionaries, and capitalists. Why not, then, admit the Japanese to the Anglo-Saxon alliance? England has already concluded a treaty with them, and is now in Tibet getting a few chestnuts out of the fire while Russia is otherwise engaged. Secretary Hay's diplomacy, we are sure, is equal to the delicate task of arranging a ceremony of blood adoption, by which the subjects of the Mikado may acquire the standing of a white race, and become entitled to share in what we cannot prevent them from taking for themselves. Make Marshal Oyama a Knight of the Garter, give Gen. Kuroki an honorary membership in the Rough Riders, and the thing is accomplished. Mr. Dooley long ago urged that Irish, Polish, Italian, and African Anglo-Saxon clubs should be organized; and we see no reason why a Japanese branch should not be established. In such company even the courteous and inoffensive Japanese might in time learn to bluster, swagger, talk volubly of war and preparedness for it, and become an international nuisance.

ELBA IN SUMMER TIME.

PORTO FERRAJO, August 29, 1904.

The Allies who, in 1814, chose Elba as a place of safekeeping for Napoleon, may have known what they were about better than we think. What with the complications of boat and railway connection and the weather, the island is difficult to get to and away from even now. Years ago I started hither from Piombino, but was blown back by a tempest. I have said "Elba in summer time," but I doubt if anybody ever comes here at any season except a very few yachting people. Even the excellent Baedeker makes one or two errors in the scant paragraph he devotes to it.

This time I took the small steamer *Venezia* by night, from Genoa to Leghorn, waited over there the next day, as there was no direct connection, and sailed at eight the following morning, by the still smaller steamer *Giannutri*. This route gives you a very pleasant acquaintance with the Tuscan archipelago. Meloria, where Genoa destroyed the sea power of Pisa, is only a bit of coral reef with an old beacon-tower on it. We laid a straight course for Gorgona, a pretty island with a penal settlement. Then we laid another straight course for Capraja. I had a most excellent breakfast with the polite captain on his bridge. A subsiding sea was running, a legacy of hard gales that had been blowing from the southwest. Corsica was long in sight, and later Monte Cristo, all, like the heaving sea, deliciously blue. The chief resource of this navigation, alas! is of but a gloomy sort, namely, the supply of the penal settlements, for there is another on Capraja and there are two more on Elba, and still another on Pianosa. We could see a few of the convicts in striped cottons moving about among the vines like a larger sort of ants, or they would come out as oarsmen in a rowboat. It is not the custom to land at any wharves. Baedeker gives Capraja 2,000 inhabitants, but I was told that that figure dated back to the time when the Government had a large tobacco factory and a free port here; now, there are only about 300.

Still another straight course, and we reached the island of Elba, high and bold, at the little village of Marciana, Mt. Capanne rising more than 3,000 feet above it. Red patches of soil showed the iron ore, the mineral wealth of the island. Many traces of recent fires were seen in the woods, and a large one was burning at the very same time on the east coast of Corsica. Why might not the destruction of the forests, of which we hear so much, have occurred from such causes without supposing malice or indifference on the part of the inhabitants to the trees? Marciana is—the taste is going out—still tinted with bright hues, and barks were drawn up on its strip of beach, all about as ancient-looking as if it were in the time of the Phœnicians. We made fast to an iron buoy, embarked a respectable old lady and disembarked some supplies, among which, grateful to note, was a good consignment of soap; there is woful need of it in many such a place. We cast off; the sea boils under the paddle. "*Avanti adagio* (easy ahead)!" "*A tutta forza* (full speed ahead)!" We are away, and about half-past four we round into the landlocked capital, Porto Ferrajo. We had long seen from a distance, like a new Vesuvius, the smoke of its large blast furnaces, which were established four years ago and are still the talk of the country. I had been told that Porto Ferrajo was a *forno*, a furnace, and in this respect it is; but I suppose I escape the extreme heats of the summer, for the temperature has been entirely agreeable during my stay.

The little port is most cosy and homelike; it is enclosed between the arms of two prodigious fortresses, the "Falcone" and the "Stella," dating from the rule of the Medici, and stone and plaster houses clustered on the slope, making a town of 3,700 inhabitants. In the day of the Medici most like they had a chain stretched across its mouth, and at night comfortably locked it and put the key in their pockets. An interesting part of the enclosure is the for-

mer galleys and arsenal, still a large prison; it has a columned portico entrance, and terminates in a curious old octagonal tower, popularly called the "Tower of Passanante," from the assassin who attempted the life of King Umbert in 1878, and was confined and died in it. On the other side, clean seawater runs in a moat like a Dutch canal past a gateway of 1694, which leads to the pleasant sea baths of "Neptune," on the outer coast. The buildings about the port are all stoutly sloped, buttress-fashion, to resist I cannot say what, perhaps a chance hurricane that may pick up the water and hurl it against them. A new Florentine palace that gives a *cachet* of distinction near the centre, contains a club and a bank and apartments, and is the creation of a leading citizen whose enterprises are on every tongue. There is plenty of color and character in the look of the town, and resources for a painter. It must be remembered that the smoke-belching iron works are outside of all this; they are established on the flats that were once Government ponds for evaporating salt, which were abolished to give them the place. The Porto Ferrajo streets are wide, bright, and comparatively clean, and are entirely paved with large granite blocks, which climb the slopes in the form of broad flights of steps, with an impressive effect. But there are plenty of bad odors about, and the inn is shabbily kept, though the restaurant part of it, in separate hands, is just now very good.

One has to wonder why the Medici needed fortresses of such tremendous size in a miniature isle like Elba, but it appears that it was subjected to continual descents from contending Powers, and especially the Turks; it was considered an advantageous base for navigation; and they hoped to dominate from there Corsica, Tuscany and Liguria. The greater of the two, a regular Gibraltar of a place, the "Falcon," with all its rambling bastions, covered ways, and curtains, its scarps and counterscarps, ravelins, lunes and demilunes, is offered for sale, for a very few thousand francs; and, what is more, there goes with it the ex-imperial palace of Napoleon. Any amateur of the historic can buy so much of antiquity for a mere song; it might almost pay to do it for the whim of the thing. What the purchaser could do with the fortress I don't know, but the town residence of Napoleon has an attractive site, and, for one who was willing to stay here, might be redeemed. When I first arrived I was astonished at the simplicity of everything connected with Napoleon's stay. I had fancied, I do not know why, a certain amount of substantial grandeur belonging to the reign even of a King of Elba. But the isle was a primitive place, without conveniences or luxuries; nobody had resided there in a luxurious way. The Allies took no account of such things, and their immortal captive had to adjust himself the best he could. When he landed—and they had not even been notified of his coming—the City Hall was hastily utilized for his dwelling. He could not endure the constant publicity and hubbub there, and from the first eagerly sought to make himself more suitable abodes in both the town and the country. He found on the top of the slope between the two forts a couple of small dwellings belonging to the engineer corps, joined them into one, with a central body, threw down windmills and other obstacles all round about, getting light and air and a charming view of the sea, and at the back of the residence thus improvised made a pretty garden.

I take my details from a certain Pons (de l'Hérault), who was the superintendent of the iron mines at the time of his arrival, and was made by him Prefect of Lyons during the Hundred Days. A manuscript by this Pons was found in the Library of Carcassonne, and published, with an excellent introduction, by Professor Pélissier, in 1897. It is entitled 'Souvenirs et Anecdotes de l'Isle d'Elbe' (Paris: Plon, Nourrit & Co.). I mean to send for it, as it is novel and very entertaining, but here I have only had the loan of it over Sunday, by the courtesy of the Municipal Librarian, and have had to make much haste so as not to take undue time from my excursions. I had extraordinary difficulty in getting anything about Napoleon and Elba in advance. I inquired in the bookstores of Genoa, Leghorn, and Pisa—not a thing, not the smallest scrap of a guide, not a map. They had said I would find all that at Elba itself, but here was an absolute dearth—nothing but a few illustrated post-cards. I asked many presumably intelligent leading persons, and they had nothing and could suggest nothing. I was half ready to abandon the quest; why should I take an interest when the people of the island cared nothing at all for their only title to fame? But at length I found a few books at the Municipal Library, and I was able to buy a reprint of the history of the island that Ninci wrote for the Emperor in 1814. Later, I found a few others at the bank of the leading citizen of many enterprises before referred to, an Elban tied up with financial embarrassments (only temporary, I trust), apparently arising from his too sanguine belief in the possibilities of the island. The Bagni Napoleone, one of the most charming of seabathing establishments, and the manufacture of a local champagne with the Napoleon brand, were among lesser projects carried out, and he is the owner of the country estate, of some three miles square, of Napoleon at San Martino, on which the vines for the champagne are grown.

But to return to Pons and the Palazzina Napoleonica, the house in town. Pons, by the way, in describing the preliminaries to the arrival in the island, gives some poignant details of the journey through reactionary Provence, the brutal assaults upon the safety of the Emperor, which I had never seen before. It was evident why he chose thereafter the mountain route, by Grasse, on his return, and avoided the hostile cities of the Rhone valley. The house is a two-story stone edifice, without an ornament of any kind, absolutely severe and astonishing in its plainness. A wide terrace in front of it is the cemented roof of a barracks or casemate below; it is unrelieved now by even a blade of grass to temper the vivid glare of the sun upon it, though an old woodcut, by Horace Vernet, in a history of 1839, shows it with a bit of garden. The main part of the house below serves as offices for military engineers, and upstairs it is occupied by two families. There remains no furniture or other vestige of its august period. The visitor passes through it to a garden at the back, a really pretty garden here. You see on one of the walks the hoof-print of one of Napoleon's horses stamped in the cement when it was still fresh. In his impatience he moved into the house before anything was complete. He was always his own architect and engineer, and an indefatigable worker. He wanted to have the land gate in the town walls (that had been built up) opened, so that he could drive through that way and avoid the idle sightseers below. It was not done quickly enough for him, so one fine morning he took half a dozen workmen with him and opened it himself.

I climbed down the steep path to the sea where he used to go for his bath. There is a half-grotto, with a cemented seat in it; a drapery hung on a cord in front makes a bathing house of this. It was a detail that whimsically came nearest of all to making me realize the traditional demigod as a human being. Napoleon the Great in a bathing suit, the corpulent body of a middle-aged Napoleon splashing in the waves! "Was he a swimmer?" I asked the gardener. "Oh, sure!" he answered; "he did everything else so well, he must have been, and a good one, too." At the west side of the house are some poor vestiges still of a small theatre he made. The Princess Pauline gave private theatricals there, but it had a ticket-office, too, and the general public could pay their way in. The Princess Pauline came over to cheer the tedium of her brother's exile, and was the presiding genius of the few gayeties of the place. This favorite sister was the only one of his family, except his mother, that was good to Napoleon. "If he had never had any brothers and sisters," claims Pons, "he would be still on the throne." An odd trait about the lovely Pauline is that she preferred to be an invalid rather than a beauty; she was forever asking sympathy for imaginary ailments. This is hard to believe of the woman of whom Canova made his modern Venus. The evenings here ended at ten o'clock. The Emperor would walk over and strum a scale on the piano as a signal that it was time to close, and he would often apologize cheerily to some one whose feelings he had hurt, as he was given to doing. When his mother was there, this mother of kings, who remained always somewhat of a provincial with her Corsican accent, he used to play cards with her for a small stake, and he would trick to win. They would dispute over it, and he would say to her banteringly, "But you have lots of money, and I have nothing. Of course I must win." Pons essayed to be his Boswell, and claimed that at Elba he could be better studied than in any other part of his career; and I should think he might be right.

Baedeker calls this house, situated between the two Medicean forts, the "Villa San Martino," and says nothing of any other. But the real Villa San Martino is three or four miles inland, and was Napoleon's principal residence. He also had minor sojourning-places at other points in the island, Porto Longone and Rio Marina, and wanted very much to build on the mountain above Marciana, but finally was content with a little hermitage and a tent there. He went everywhere; made and improved roads, and collected his revenue. Some of his people did not think they would have to pay any taxes, and he sent a flying column after them. We are amused at one of his excursions by sea: he was set ashore at the neighboring small island of Pianosa; a gale

arose, and he could not be taken off, but had to pass the night there, poorly sheltered from wind and rain. He was very angry about it, but his chronicler says, "Il murmurait contre la marine au lieu de murmurer contre la bourrasque."

The road to San Martino runs for the first part of the way along the ugly manufacturing flats; then you turn into the hills among the vines. The country house is of the same character as the one in town; it was made over from a farm dwelling, is absolutely plain without, but is comfortable, with a stately touch, within, contains some little of the nice old furniture of the period, and is charming for the garden and woods round about, and the distant view of Porto Ferrajo. The captive could watch from his window the English frigate that did sentry duty. But this modest dwelling is almost hidden in front by a grand Neo-Grec palace of granite that Prince Demidoff put up in the fifties for a Napoleonic museum, while above is an ornate villa that he built for himself. Prince Demidoff finally carried off the collections, including most of the furniture, and sold them out at his famous San Donato sale, a world event about 1880. The property ran down, and came into the possession of Sig. Del Buono in 1896. Hay was then stored in the grand museum, to turn which to some account he put into it a collection of the fauna and minerals of the island; it is a good place to study the famous Elba iron. The flag adopted for the island by the Emperor is used as the trade mark of the San Martino champagne. I understand that all the estate is in the market again.

Wagons taking the mail run to several different points of the island, and bridle paths penetrate elsewhere. If you go back to the mainland at Piombino, a good way is to be driven to the pretty extreme northern village of Cavo and catch the boat there. A prohibition has gone out lately against visiting the iron mines, but it is not necessary to make a formal visit to them; they are quarries, not mines, and are all above ground. At Cape Pero alone you can see from the boat the whole process of exploitation: the red, friable-looking hill, the wire railway bringing down the ore, the bridge-truss cranes dumping it into the small sailing-craft for transportation. One comprehends how these ore boats became a principal means of Napoleon's escape; they had always served him as a natural means of communication with the Continent. The iron deposits of Elba caused the marvellous return of the Emperor—and Waterloo, Pons, his Director of the Mines, prepared a little fleet with munitions and supplies. They were just going round to Porto Ferrajo when the English frigate, with Col. Campbell, the resident Commissioner, cruising on board, hove in sight. Pons hastened to send off a boat to him with an invitation to a dinner to be given the next week. Col. Campbell inquired where the fleet of sail was bound. The question had been foreseen: "Just to load some ore for the Romagna," was the reply. Pons had had a pique against Campbell, and he rejoiced to think how well this neat trick paid off old scores. There is no romance like this story of Elba.

I found an American at the head of the blast furnaces, a graduate of the Cambria Iron Works. There are 600 hands. The enterprise must benefit the island, it is true; but it also takes away laborers from agriculture, and makes prices higher. It flames like a section of Erebus, and the smoke hangs low over the landscape. It is the great central fact, and was to me the finishing touch of a disillusionment. One is not so unreasonable as to find fault with industrial development, but all the coast of Italy from Genoa to Sicily smokes with factory chimneys; it has become a sort of Mechanicville. Add to this the trolley car, and the whizzing automobile making the air pestiferous behind it. A friend to whom I wrote of such things lately, replied humorously, "What you say of the prosperity of Italy breaks my heart."

And yet it is not such a joke, after all. We are going to stand it, of course; but a new era has come in. The Europe that has been such a paradise of picturesque romance for Americans ever since Bayard Taylor wrote his 'Views Afoot' scarcely any longer exists. We come in greater numbers than ever, because it is easier to come, but we must look with the eye of the imagination at what used to be here, rather than at what is here now. Old costumes, genial, warm color, quaintness—*via!* away with all that; it is not modern; and at the same time the squalid untidiness which those things rendered half-tolerable remains. There is especially a great lack of charm in all that relates to rural life. Even on Como and Maggiore now the mode is all to dun slate and granite grays, drabs, and browns. A respectable proprietor would be most ashamed of the pleasant old red and rose, azure, green, and yellow, or any sun-dial or pictured group on his outer wall.

WILLIAM HENRY BISHOP.

RECENT RESEARCH IN THE EAST JORDANLAND.

SWITZERLAND, September 4, 1904.

Considerable attention has of late years been given by archæologists to that region east of the Jordan termed by its Roman conquerors the Province of "Arabia," a region which, in its geographical, ethnological, and historical relations, forms a whole as definitely separated from Palestine as it is from Syria proper. During the last dozen years a score or so of travellers and scholars have added to our knowledge of this extremely interesting region, and the results of their researches have appeared either in independent volumes or in the Transactions of archæological societies, American, English, and Continental. For the most thorough exploration of this East Jordan land, however, we are indebted to Dr. Rudolph Brünnow and Professor von Domaszewski of Heidelberg. The results of the joint researches of these two scholars will be found in their splendid three-volumed work, 'Die Provincia Arabia,' the first volume of which, a bulky quarto, illustrated with over six hundred maps, plans, photographs, and drawings, has just been published by Dr. Karl Trübner at Strassburg.

The explorations in question were commenced in the spring of 1897, and resumed in the following year, both expeditions having Jerusalem as their starting-point. In the first journey their route lay along the west coast of the Dead Sea, then up the east side to Kerak, and thence to Petra; in the second the travellers struck directly across from Jerusalem to Madeba, thence south to Petra again, whence they journeyed northward to the Hauran. The results of both these journeys are combined in the account given of Ruins and Inscriptions in 'Die Provincia Arabia.' This work forms, indeed, an exhaustive *corpus* of these inscriptions, to which have been added copious extracts from the accounts of previous and subsequent travellers in the same region, the work being thus brought thoroughly up to date. Scholars will consequently be in future saved the trouble of collecting for themselves what is, in these volumes, once for all collected on the subject.

The first volume deals chiefly with Petra, an important section being contributed by Professor von Domaszewski on the historical development of its tomb-architecture, illustrated by photographs presenting an extraordinary variety of related forms. And the same learned Heidelberg professor of ancient history contributes to all three volumes accurate plans and descriptions of the Roman fortified camps along, or in the neighborhood of, the still serviceable Roman roads of the district east of the Jordan, which was all that the Cæsars ruled as the Province of "Arabia." To Professor Euting, chief librarian of the Strassburg Library, who joined the expedition in the spring of 1898, was assigned the task of copying the numerous Nabathean inscriptions found at Petra and included in this first volume.

Of the second volume, which Dr. Brünnow hopes to have ready in the autumn, Mashita—first discovered, though not described, by Sir Henry Layard, and rediscovered and first described by Canon Tristram—is one of the chief subjects. Not, however, *in situ*, as when photographed by Dr. Brünnow, is the splendid frieze of its ancient palace to which the Persian features of its style give a special historical interest, for the greater part of this frieze has now been removed to the Berlin Museum—an Imperial gift to the Emperor William by the Sultan Abdul Hamid. But this removal was, perhaps, not unjustified, seeing that these specimens of Byzantine art were in danger of very unceremonious treatment at the hands of the Turks employed on the new railway line to Mecca, which passes close to Mashita.

Questions touching the more ancient kingdoms and inhabitants of these regions are here hardly more than referred to. Dr. Brünnow and his coadjutors deal more especially with the centuries immediately preceding and succeeding A. D. 105, at which date the Empire of Edom, with its Nabathean capital, the "Rock" or "Rocks" [ἡ πέτρα, later αἱ πέτραι], was annexed by Trajan. But though the still buried records of remoter times are left to be unearthed by future explorers, sufficient material exists, I venture to think, in the facts collected in these two volumes with such scrupulous care and scientific exactitude to justify at least hypotheses with reference to the reciprocal action in these regions of Eastern and Western art forms, and especially, perhaps, with reference to the earlier sources of Arabian literary culture. For the architectural forms and sculptured ornaments of the rock-hewn tombs testify unmistakably to original Assyrian, or, perhaps more correctly, Babylonian, and later

blendings of Greek and Roman influences; the more recent tombs appearing, from their inscriptions, to have been the last resting-places of Greek merchants and Roman military officers. It is also noteworthy that the great size of the theatres, not only at Petra, but elsewhere in the province, seems to indicate the presence of large audiences, many of whom may have been Arabs. As the language of culture in this Eastern province, even before the severance of the Eastern and Western empires, was Greek rather than Latin, the plays acted were probably for the most part Greek, such, for instance, as the comedies of Menander. It is for Greek and Arabic scholars to consider whether a much earlier source of Aryan and especially Greek influence on Arabic culture is not to be found in the conditions prevailing in the Roman province of Arabia.

But not only by the scholar and the traveller will these explorations be found to be, in their results, of great importance. The very possibility of their achievement with perfect security is of interest to the politician also, in view of certain European ambitions in Asiatic Turkey. For, during the five years previous to the present writer's journey in the East-Jordan land, Idumæa had been so unsettled by the wars of Arab tribes for the possession of Petra and the pastures of Mount Seir that no travellers had even attempted to reach that wonderful city of rock-hewn monuments. The last party that had succeeded in reaching Petra had lost two of their number in conflict with the tribesmen, and a previous party had had six of their escort killed in a fight over the backsheesh plunder. In our own case, the Turawah escort we had secured declined to accompany us beyond the palm grove at the head of the Gulf of Akaba, where a whole week was wasted in negotiations—again and again broken off—before pecuniary arrangements were settled to the satisfaction of the Alawin chiefs, whose gracious protection was necessary to our safety. At length we moved forward on our journey, mustering a hundred armed men, with sixty or seventy camels and dromedaries, all marshalled in warlike array with scouts on the flanks, and the great sheikhs galloping to the rear of the van, keeping all in due order.

But our troubles were by no means yet at an end; for, on the very first night of our march from Akaba to Petra, a further demand of one thousand piastres (about $40) was made, failing the payment of which we were threatened with being left to shift for ourselves in the desert, without either animals or provisions. Yet a third time, when at the entrance of the pass by Mount Hor to Petra, we were informed that we could go no further; and a whole long day was spent in councils, dispatching of messengers, arrivals of sheikhs, further councils, threats, promises, and refusals—a whole course of diplomacy in which the would-be tricksters were ultimately foiled. And even when we had so far succeeded as to be at last actually encamped amid the ruins of Petra, hardly a day passed without its dangers from the quarrels of the Arabs with the only half-subdued Horites.

Very different were the experiences of our explorers in their journeys of 1897 and 1898. Although Dr. Brünnow was accompanied by his wife, their only escort was two, or at most three, Turkish troopers, Circassians who were entirely under their orders. And the Arab tribes, formerly the absolute lords of this Eastern borderland, seemed completely cowed by the Turkish garrisons now stationed along the old Roman roads of the province. It has long been the conviction of the ablest Turkish statesmen and generals that their Empire in Europe is doomed, and that, though they are resolved not to be turned out of it without the bloodiest reprisals, their only hope lies in consolidating their Empire in Asia. A like conviction seems to dictate the policy of Abdul Hamid, who, following in the footsteps of his great ancestor, Mahmud II., has succeeded in destroying the last vestiges of the feudal power of local beys and tribal chiefs. And as a further illustration of the comparative order which now reigns in this once wild and lawless country, a railway, entirely in the hands of the Sultan, is being constructed, from Damascus to Mecca. Abdul Hamid is also planting colonies of Moslems, many of them from European Turkey, along the line of the projected railway to Bagdad, and is even credited with the design of settling a colony of non-Arab Moslems in Petra itself. And when the Ottoman people are once freed from the intolerable strain on their resources involved in the struggle to retain as long as possible their admittedly doomed occupation of southeastern Europe, they will again constitute, from at all events the Caucasus to the Indian Ocean, a Power by no means easily amenable to European ambitions.

It may be interesting to add, in conclusion, a few words with reference to Dr. Rudolph Brünnow's connection with America, he having been born at Ann Arbor, Mich., in 1858. His father, Franz Friedrich Ernst Brünnow, a native of Berlin and an astronomer of note, held the post of director of the Observatory of Michigan from 1855 to 1863, and married in 1857 the daughter of Dr. Henry P. Tappan, the president of that university. Mrs. Rudolph Brünnow, who, as above mentioned, accompanied her husband on both journeys, is an American by birth and parentage. On various occasions she found it desirable to travel in Oriental male attire as his younger brother; not for safety, but in order to avoid the tedious visits of inquisitive Arabian ladies. And it is to her, their *tapferen Reisegefährten*, that her fellow travellers have dedicated these splendid volumes. J. S. S.-G.

Correspondence.

THE TURIN NATIONAL LIBRARY.

To the Editor of The Nation:

Sir: Several American students, desirous of offering books to the Biblioteca Nazionale of Turin, which met such heavy losses last winter by fire, have asked me to give them the address of a bookseller in New York, authorized to receive and forward to Italy gifts of books destined to help in making good to this library a part of its losses. Deeply grateful to the persons and institutions in America which have already honored us with their gifts, I am pleased to be able to inform others who may be similarly inclined, that the firm of Brentano's, Union Square, New York, has been authorized to receive and forward works destined for the Turin National Library.

I have been led to accede to this request and to name this forwarding office, not only by the fact that every small gift aids in the difficult work of reconstructing the sections destroyed, but also by the desire of seeing represented in this library as fully as possible the rich literature of America. It is well known that Italy, by its system of loans between its national libraries, possesses the most liberal bibliographical legislation in the world. Books presented to the Turin Library will therefore be available to American and Italian students in Rome, Venice, Naples, or in any of the other large cities of Italy, through the national libraries of the respective cities.

Allow me, Mr. Editor, to ask you to publish this letter in your columns, and to thank you in advance for your much appreciated courtesy.—Truly yours,

F. Carta,
Chief Librarian of the National Library of Turin.

September 14, 1904.

Notes.

Mr. William Garrott Brown requests us to solicit on his behalf the loan of any material, particularly in manuscript, relating to the life of Oliver Ellsworth of Connecticut, the Chief Justice of the United States. Mr. Brown's address is the Colonial Club, Cambridge, Mass.

'The Republican Party' is the title of a party history by Francis Curtis, in two volumes, extending from 1854 to 1904 (G. P. Putnam's Sons). It embraces a record of Republican "measures and leaders," and has a "foreword" of two pages by Mr. Roosevelt, an author's preface, and introductions by W. P. Frye and J. G. Cannon. As a record, it will be found of use by campaign orators and writers of campaign editorials; as a history, it is rather hard reading. The author gives a fair account of it in his preface: it is not a history of American politics, but of the rise and dominance of a single party; consequently, the record of the Democratic party has not been drawn upon "except in so far as Democratic deeds and misdeeds have made necessary Republican action." The work is mainly a compilation from a variety of sources, files of newspapers, books, cyclopædias, proceedings of conventions, tables of electoral and popular votes, State papers, platforms, etc. It is scarcely necessary to say that Independents and Independent movements are handled without gloves by the author; Mugwumps are described as persons who, having made a notorious mistake in leaving their party, have not the courage, or possibly the sense, to come back. Readers unfamiliar with the facts may wonder why any space at all is wasted on such miserable vermin. But this is only a rhetorical error, and one not at all likely to impair the value of the volumes for the purposes for which they are designed.

Volume ii. of the Second Series of New Jersey Archives is occupied with extracts from American newspapers for 1778, edited by Francis B. Lee. It is replete with curious matter relating both to the military

operations of that period of the Revolution and to the manners and customs of the day, indifferently supplied with a key in the index. Thus, the directions on page 411 for making "melasses" out of Indian corn (filling nearly two pages) lurk under "Receipts" (three items not particularized). They were taken, by the way, from the *Burlington Almanack*, and the correspondent, "Dulcis," betrays his Quaker origin not more by the use of "thy" than by the scruple implied in his hoping cornstalk sugar may "perhaps save the importation of so much made by the *iron hand of slavery*" —this at a time when slavery was still flourishing in New Jersey. We confess we have not fathomed the principle on which the source of each extract in this scrapbook is indicated. The index is especially valuable for its proper names. Many of those borne by Tories "are not to be found in the usual works of reference."

To the already very considerable number of handbooks to the Roman Forum another has been added by Professor Hülsen, the second secretary of the German Archæological Institute at Rome, 'Das Forum Romanum: seine Geschichte und seine Denkmäler' (Rome: Loescher; New York: Lemcke & Buechner). The author is the one man best fitted to speak with well-balanced wisdom and authority on all matters of Roman topography, and it has been a source of regret to his many students, among whom not a few Americans have been permitted by his kindness to number themselves, that his numerous contributions to the critical literature of his subject have left him no time to publish comprehensive and systematic treatises. The present attractive volume of 219 pages, with 112 plans and illustrations, many of them practically inaccessible elsewhere to the ordinary student, will be most gratefully received. It is a sufficient and eminently practical guide for use in the study, or among the ruins themselves, and its historical notes and appendix of sources and recent literature make it highly useful for the serious student. We hope it may be made more generally available for the travelling public by translation into English.

Heckerism or "Americanism" is supposed to have received its quietus at the hands of Leo XIII., but it furnishes forth a great octavo of 500 pages, 'L'Américanisme,' by Albert Houtin (Paris: E. Nourry), which has gained the distinction of being clapped in the Index, like the author's previous contentious works. A very unfavorable, almost opprobrious, review in *Polybiblion* for August allows the book the sole merit of "a complete bibliography of works and articles" relating to its subject. M. Houtin also reveals, by drawing upon it, a private collection "hitherto unknown in France."

A 'Bibliografia Generale per la Storia Parmense' has been compiled by Stefano Lottici and Giuseppe Sitti, and embraces 6,165 items duly classified, with a subject-and-author index.

The difficulties and hardships encountered in the construction of the nearly 2,000 miles of telegraph in Alaska are well described in the *National Geographic Magazine* for September, by Capt. William Mitchell of the United States Signal Corps, who draws largely from his personal experiences. The preliminary work of reconnoissance, transportation of supplies, and forming caches was done in the winter, as an animal could pull on a sled from 800 to 2,000 pounds, but pack only 200. The wire, also, was run over the snow and elevated on poles in the summer. The chief hardships were due to the cold (the thermometer falling to 70 degrees below zero), and to the mosquitoes, which were so intolerable that it was difficult to make the animals feed. An account of an expedition in southwestern Mexico, by E. W. Nelson, is especially noteworthy for its excellent illustrations. The coast belt is largely peopled by blacks, the majority of whom are of mixed blood, but there are apparently many full-blooded negroes. They have crowded out the original inhabitants, and have retained in many of the villages the characteristic African round hut, with conical thatched roof. An interesting summary is given of the twenty-five years' work done by the United States Geological Survey, including the mapping of 929,850 square miles, or 31 per cent. of the area of the United States, exclusive of Alaska.

The fifty-second annual report of the Boston Public Library says that "the consumption of soft coal, necessary while the coal strike continued, was abandoned April 1 [1903]." It defaced the noble building externally, and required extra cleaning within. The city itself increasingly uses soft coal, to the detriment of the valuable collections in the Library. The current fiction market has been screened, as usual, by an outside volunteer committee, with the result that 135 titles out of 680 examined were accepted, and much of this small remainder was juvenile fiction. Among the acquisitions during the past year was a marble portrait bust of the late Lucy Stone, by Anne Whitney, appropriately placed opposite the alcove occupied by Mr. T. W. Higginson's Galatea collection of women's works. We remark also forty-five photographs of persons connected with the Dreyfus trial. Among the donors is the late Pope Leo XIII., who gave the eleventh volume of the works of Thomas Aquinas. The experiment of allowing books to be kept for three months for summer reading does not seem to have been very successful, as only 364 volumes were taken out.

From an historical sketch of the National Union Bank of Boston, recently published, it appears that it was opened for business in 1792 on the very spot where it now stands. Although its organization was bitterly opposed, bets being offered of two to one "that the Union Bank never issues a bill," it was a success from the very beginning. "Dividends have been declared semi-annually without a break, averaging for the 112 years over 6 per cent. per annum, and amounting to $6,836,000—a remarkable record, in view of the several wars and panics that have occurred during the more than a century of its existence, and one not equalled, it is believed, by any other institution in the country." There are two striking illustrations of State Street—as it was a hundred years ago, showing the New York stage just leaving Israel Hatch's coffee-house across Exchange Lane from the bank, and as it is at the present time.

The commercial schools are the latest and most popular development of industrial education in Germany. Before 1880, as we read in the Consular Reports for September 6, they were almost unknown, and, until the close of the century, Government financial aid was refused. Their success has been so great, however, that now every Government of the Empire contributes annually to their support. They are divided into two general classes, the schools and the four Handelshochschulen, or universities. The main motive for the establishment of these latter was of course the need for broader and deeper expert knowledge in the business world, commercial operations having expanded "until they have become world operations demanding world knowledge." But another motive was almost equally strong, the elevation of the social standing of the mercantile classes through the leaven of a higher education. This is being accomplished, and the graduates of these institutions can claim the same social rank as the alumni of the universities. The instruction is eminently practical. In Cologne, for instance, "a judge and several active lawyers give lectures on the legal subjects embraced in the curriculum; a railroad official lectures on transportation; an industrial inspector lectures in his particular field; an old member of the largest banking house of Cologne lectures on money and banking; a Government official in the insurance service lectures on insurance, and a customs official lectures on tariff technicalities." The total attendance during the winter semester of 1902-1903 at Leipzig was 519, of whom 110 were Russians.

The persistent efforts of the German university authorities, at least those of Prussia, to reduce the women contingent at these institutions is evidently succeeding. In the past winter semester there were 54 regularly matriculated women students in all the 21 universities, and 1,423 who were only "Hörerinnen." During the present summer semester, according to official reports in the *Frankfurter Zeitung*, there are 73 women matriculated, but only 958 non-matriculated. In Berlin alone the decrease has been from 562 to 369. The slight increase in the number of the matriculated is to be attributed to the fact that now not only the two Baden, but also one Würtemberg and the three Bavarian universities admit women on exactly the same footing with men.

The financial considerations involved in the calling of prominent men from one of the German universities to another are rarely made known. It is, however, reported semi-officially from Vienna that Prof. A. von Eiselsberg of that university, called to succeed the famous surgeon König in Berlin, was offered a salary of 32,000 marks and guaranteed 25,000 marks in lecture fees. For family reasons, however, he declined this brilliant offer.

A remarkable document has been sent by the Executive Committee of the National Medical Association to the 482 gymnasia and 131 Realschulen of the Empire, with an urgent request for distribution among the graduates. It is an official appeal *not* to enter upon the study of medicine. The chief reason is the deplorable financial condition of an exceedingly large percentage of physicians. The determining facts adduced are (1) a surplus of medical men much beyond the demand; (2) the abrogation of the laws against practice by the incompetent; (3) legislation for the *Krankenkasse*. The increase in the number of

physicians has been enormous, from 17,728 in 1876 to 24,225 in 1887 and 29,133 in 1902. The number has more than doubled in a single generation, and the prospects are that the "learned proletariat" in this department will grow still more in the next year, since women and the graduates of the semi-classical Realgymnasia are now admitted to the profession. A further reason for avoiding this study as given by the circular letter is the fact that the addition of a "practical" year to the course has made the expenses of preparation, already very costly, still more so.

The fifteenth International Medical Congress will convene in the last week in April, 1906, in Lisbon. The preliminary programme arranges for fifteen sections. The official language of the convention will be the French, but German and English will also be permitted in both the general meetings and in the sections.

A monument costing 80,000 marks, in memory of Theodor Mommsen, is to be erected in front of the University of Berlin. Half this sum is secured, and appeal is made for further funds by the German Committee. Contributions may be sent to Delbrück, Leo & Co., Berlin, W., Mauerstrasse 61. Any surplus will be turned over to the Mommsen Fund established years ago. The chairman of the Monument Committee is Dr. Althoff of the Prussian Cultus Ministry.

—Admirers of Nick Bottom the Weaver—which of us is not?—will be pleased to learn that the many-gifted mechanic has a fairly classic pedigree. True, like most *bourgeois* pedigrees, his is not without its lacunæ and bars sinister. Still, our sympathies are quite with Hermann Reich in his essay, "Der Mann mit dem Eselskopf," of which he has favored us with a reprint from the *Shakespeare-Jahrbuch*, xxiv. The author of the already monumental "Mimus," starting from a clay relief of the first century, on which is depicted a mime with an ass's head, argues that there must have been an *Esel-mimus* known to Apuleius and other classical writers and reappearing from time to time in the Middle Ages. The resemblance between Bottom-Titania and the love scene in Apuleius (x, ch. xx.) is striking. Not less striking is it that the dry 'Polychronicon' of Ranulph Higden should speak of a "mynstrelle turned into the similitude of a ryalle asse." Reich's conjecture is that Shakspere must have taken the hint for his Bottom-Titania from some floating reminiscence of this ancient *Esel-mimus*. The conjecture is so plausible, so thoroughly in accord with the lines worked out by Reich in his larger work, that we hope our early dramatic and other literary remains may be explored anew with an eye to further discoveries. It were a pity, if Reich's hint were to fall unheeded. For ourselves, we are moved to ejaculate with Peter Quince, "Bless thee, Bottom! bless thee! thou art *translated*."

—Mr. Herman Smith's 'The World's Earliest Music' (London: Reeves; New York: Scribners) is a book which we find it impossible to take seriously. There are, indeed, some interesting passages in its 382 pages, some curious descriptions of ancient and modern intruments, and some original, though very shaky, theories as to the origin of musical scales. These are, however, so deeply buried under avalanches of stale and mostly irrelevant archæology, cheap sentimentalism, moral reflections *à la* Volney on the instability of sublunary things, and miscellaneous remarks on every conceivable topic, that it must be a patient and courageous reader who will persist in seeking them in a book as void of all method as it is unscientific and unscholarly. The wide range of this irrelevant matter will appear from a passing glance at the index, where the reader will find references to the migrations of the Chinese, the Akkadean (*sic*) language, Alexander the Great, ancestor worship, the founding of Athens, Turano-Sythic (*sic*) speech, Beethoven, Berosus, Buddha, and Confucius, Chorebus (*sic*), Danaus, the fountain of Dirce, Garibaldi's welcome, Goethe, Hippocrene water, costume of the Greeks, the glow on Hymettus, the Indus and Ganges, Judas Iscariot, Keats on Beauty, Magalasy braiding, empire of Medea (meaning Media), Napolean (*sic*), Mt. Olympus, Parnassus, Phideas (*sic*) the sculptor, Sarasate, Schiller, the Sumerian race, Tarentum in Sicily (!), the Trojan war, Chinese weights and measures. The majority of these things are nowise brought into relation with the subject of the work. We have preserved these inaccuracies and errors (which are not due to any index-maker, but are simply repeated from the text of the book itself) in order to show the author's surprising want of attention to such details. Other errors ("Herculanaeum" for Herculaneum, etc., etc.) occur in the text, but are not indexed.

—The critical edition of Catullus by Prof. Robinson Ellis reached its second edition somewhat more than a quarter of a century ago, and, with the exhaustive commentary contained in an accompanying volume, established the editor in the front rank of Latin scholars and at the very head of Catullians. He has now issued in the "Scriptorum Classicorum Bibliotheca Oxoniensis" (H. Frowde) a revised text of the same author, with *apparatus criticus*, paying due attention to all work that has been done on Catullus since the seventies. Mr. Ellis's general views on the constitution of the text appear to have remained substantially unchanged since his first edition was printed, and the conservatism which leads him now to obelize so many passages in the poems instead of inserting conjectural emendations deserves warm approbation. The new edition would have been more interesting if he had included in it his complete collation of cod. Ottob. 1829, which was unearthed in the Vatican library by Prof. William Gardner Hale as long ago as 1896. Mr. Ellis prints, with Mr. Hale's permission, some of the important readings of this "codex Romanus," but refrains from giving it completely in his critical apparatus out of courtesy to its original discoverer, who has not yet published it. There is not the slightest danger that Mr. Hale will lose any of the honor due his fortunate discovery; but it is a delicate and interesting question of ethics for just how many years an important manuscript in a public library should be treated as the private property of any one person, not even to be described, still less to be criticised, by others. Mr. Ellis has certainly kept on the safe side of the question, though his patience and generosity are to the detriment of his book, and to the loss of those who use it.

OSGOOD'S AMERICAN COLONIES.

The American Colonies in the Seventeenth Century. By Herbert L. Osgood. Macmillan. 1904. Vols. I., II. Pp. xxxii., 578; xix., 490.

Professor Osgood's long-awaited work, of which the two volumes before us are the first instalment, promises to make a large and definitive contribution to American institutional history in the colonial period. Of general histories of the period and constitutional histories of the United States there are good examples; but only in monographs and similar works has the institutional history of the colonies been essayed. The time has certainly come when, to quote Professor Osgood's words, "we must know in some connected way how the Atlantic, so to speak, was institutionally bridged; in other words, we must know under what forms English institutions were reproduced on the American continent, and how, if at all, they were modified by the influence of kindred European peoples who settled near or among the English colonists." Moreover, writers on American colonial history have fixed their attention mainly on the colonies themselves, with their internal or local incidents, while neglecting the equally important field of British colonial policy and administration. In an age which has given extraordinary attention to American history, it is in every way remarkable that "no systematic attempt has been made to ascertain what the constitutional law and practice of the old British colonial empire was, or to set it forth in its historical development"; and that "in no book can a satisfactory description be found of the organs of the British Government which were employed in colonial administration, or of the functions which they performed."

It is this great lack which Professor Osgood aims to supply. His point of view is "the colonies as they were in themselves and in their relation to the sovereign power from which their existence sprang." The student of colonial institutions

"is concerned with only those two subjects; they are all-inclusive. Under the one or the other will fall every other minor topic which he will find it necessary to discuss. He will classify the colonies not according to their location or to their social characteristics, but according to the forms of government which existed within them. This he will find to be determined by the form of their executives, and by the constitutional relations which existed between the executives and the legislatures, as the legislature developed in each colony. The main divisions of his subject will be suggested by the relations in which the colonies stood to the home government. The tendencies of historical development during the period he will find in the changes which came about in those relations and also in the internal organization of the colonies themselves. From this point of view the unfolding relations between sovereignty and liberty will be duly illustrated" (I., pp. xxvii., xxviii.).

From this standpoint the American colonies fall naturally into the two groups of chartered colonies, including the New England corporate colonies and the proprietary provinces, and royal provinces; and the institutional history of the period is concerned with these two phases or periods of political life and the transition from the one to the other. As Professor Osgood says, the term "chartered" points only to the method of origin of a colony, and signifies nothing as to its internal organiza-

tion. The merging of proprietary provinces in royal provinces during the latter part of the seventeenth century, and the substitution of royal provinces, was "the most important and significant transition in American history previous to the colonial revolt," and, it may be added, the one to which historians of the Revolution have paid, in general, the scantiest attention. No writer has yet undertaken to show, in the thorough way which Professor Osgood proposes, the natural impediment offered by highly developed self-government in the colonies to the establishment of a comprehensive scheme of colonial administration, or the reasons which led the British Government to urge, and the American leaders to resist, the new plans of colonial control.

The two volumes now published treat of the beginnings of self-government in the chartered colonies in the seventeenth century, so far only as the internal organization and relations of the colonies themselves are concerned. The study begins with the earliest form of the proprietary province as found in Raleigh's Roanoke project, Virginia prior to 1624, and the early settlements in New England. The corporate colonies of New England are then taken up, and a comparative study made of their political institutions and public policy; successive chapters treating of the organization and work of the legislatures, executives, and courts, the ecclesiastical system, land and financial systems, defence and Indian relations, and the history of the New England Confederation. The second volume applies the same comparative method to the institutions of New Netherland, New York, New Jersey, Pennsylvania, Maryland, and the Carolinas. The remaining events of the century, such as the dissolution of the London Company and the establishment of Virginia as a royal province, colonial administration under the Commonwealth, the acts of trade, and the Andros régime, are reserved for a third volume.

In a work which, like this, makes many contributions in detail to previous knowledge and opinion, attention can be called to but a few of the more important points in regard to which the material is notably new or the author's treatment particularly suggestive. The early colonization schemes of Gilbert and Raleigh, which prepared the way for the more successful, if more arduous, establishment of Virginia, are deemed worthy of a chapter, thereby restoring them to their proper place in the history of colonization. Similarly, the experiment at Sagadahoc is treated along with the settlement at Jamestown. The three chapters on Virginia, in which the progress of the colony under its three charters, and the gradual development of a clear governmental type from rudimentary or mixed beginnings, are traced down to 1624, naturally owe much to the patient researches of Alexander Brown; but what Brown presents mainly as annals or crude material, Professor Osgood embodies, with additions of his own, in orderly narration. We recall no writer who has so thoroughly examined the institutional beginnings of Virginia under the charters, or pointed out so clearly the significance of the administrative transitions which marked the early years of the colony.

About three-fourths of the first volume is devoted to the corporate colonies of New England, naturally with chief attention to Massachusetts. Here as elsewhere the patient following, step by step, of the course of events brings out as no other method could the development of governmental and administrative forms in the attainment of self-government. The account of the organization and procedure of the General Courts, for example, by bringing together much scattered material, throws new light on an obscure subject. The extended discussion of the relations between church and commonwealth in Massachusetts, and of the workings of the Massachusetts system as seen in the controversies with Roger Williams and the Antinomians, while kept well within the limits of an institutional study, is, we venture to think, superior in balance and proportion, and in the sure appraisement of the political significance of events, to any previous account, and would of itself entitle the author to high rank as a diligent, judicial, and sympathetic historian. Perhaps nowhere in the world, in the seventeenth century, was there a more complete dominance of combined secular and ecclesiastical authority over the individual than in Massachusetts between 1640 and 1700. Orthodoxy, for the maintenance of which this iron-clad control was established, became a name with which Puritan New England from its earliest years learned to conjure.

"By the attitude which they assumed toward the so-called Antinomian opinions, the magistrates and clergy of Massachusetts definitely committed themselves to a close alliance for the purpose of upholding a system of strict orthodoxy. Tendencies which were operative when the religious test was enacted and when Roger Williams was banished, now came fully to prevail. Pressure was brought to bear from the churches united in a synod, from the clergy and magistrates in frequent conference, and from the General Court as the highest expression of power in the colony, to keep local congregations and individuals alike in harmony with the doctrines and practices of the majority. From this union and resolve proceeded the body of legislation on ecclesiastical and moral subjects which has already been outlined. All parties must expressly or tacitly accept this, must yield it at least outward obedience, or leave the colony. Protest, whether by speech or action, was rigorously suppressed, and the secular power was resorted to for the purpose without hesitation. The life and thought of this colony and of other colonies, so far as its influence could be made to control them, was cast in one narrow Puritan mould, and was not allowed to escape from it. So little was there of enlightenment in New England outside the circle of ideas which the clergy imparted or controlled, that it was possible to maintain strict conformity for sixty years, and a type of thought which was essentially Puritan for nearly one hundred and fifty years longer. This, with the rigorous administration and political system which accompanied it, was the result of the appearance of the first learned class within the American colonies, and of its alliance with the secular authorities. But, though we consider Puritan New England to have been narrow and intolerant, we should remember that the intellectual activity which made even that possible did not exist in the other colonies till the middle of the eighteenth century" (I., pp. 254, 255).

The closing sentence of the paragraph just quoted is interesting as pointing to the greater intellectual virility of the homogeneous New England Puritans than of the mixed populations of the other colonies, and the partial compensation for intellectual repression in the long-practised capacity of Massachusetts for aggressive political leadership.

The last four chapters of Professor Osgood's first volume, dealing, respectively, with the land system, the financial system, the system of defence, and Indian relations in early New England, are packed with matter which to most readers will be new. Outside of the writers of a few special works, no historian has thought it worth while to tell us much about the way in which the private ownership of land was established and developed in New England, how taxes were levied and collected, the objects of colonial and local expenditure, the legal regulation of industry and trade, the organization, equipment, and employment of the military forces of the colonies, or the method of governmental dealings with the Indians. Thanks to Professor Osgood's researches, however, we have at last a clear and orderly outline of the governmental and administrative life of the people in these respects. As an illustration of the new light thrown upon hitherto obscure places, reference may be made to pages 461-467, where the status and functions of the boards of commoners or proprietors of land, as distinct from those of the town or any aggregation of individual landholders, are examined. Equally informing, and to most students equally unfamiliar, is the account of the origin of private land titles and the gradual disappearance of common lands.

The second volume is devoted to the Middle and Southern colonies, where the proprietary province in its later form appears. The method and general handling are the same as in the volume on New England, and what has been said regarding the painstaking care, the wealth of material, and the definitive value of the presentation applies to this part of the work as much as to the other. We note a special chapter on the colonial judiciary. The ecclesiastical element, naturally, is far less prominent than in New England, for while nearly all the numerous dissenting sects in the Middle colonies believed in maintaining a connection between church and state, their number and variety effectually prevented that predominance of some one group which alone could make such connection possible. The system of defence, also, while in many respects similar to that of New England, was as a whole less highly developed, while the nearness of the frontier to the populous areas, together with the slight volume of personal or commercial intercourse between the colonies, tended to make public opinion in each colony regarding defence narrow and sectional. The militant Puritan of the north had no counterpart in the colonies to the south. At the same time it is to be remembered that the section suffered no such Indian war as that of Philip in New England, and had in consequence no such incentive to joint action.

Professor Osgood's work differs from all other comprehensive studies of American colonial history in its consistent interpretation of that history from the point of view and in the terms of public law. This has not involved any neglect of social and economic material, or of the personal element which lends to our colonial annals so much of charm; but such material has been used as illustrating political growth, rather than for its own sake. The style is readable and effective, and the wealth of incident is great, but there are no entertaining accounts of domestic manners and customs, or vivid narratives of adventure or battle.

The authorities cited are mainly the original documentary sources, both manuscript and printed. The element of controversy, so dear to workers in new fields, is conspicuous by its absence. At two or three points Professor Osgood registers his dissent from the opinions of other writers, but the opposition is not pressed, and facts are left to speak for themselves. Altogether, the book must be adjudged the most substantial and masterful contribution made to the study of American colonial history in recent years.

ARABIA AND MOROCCO.

The Seven Golden Odes of Pagan Arabia, known also as the Mallakat. Translated from the original Arabic by Lady Anne Blunt. Done into English verse by Wilfrid Scawen Blunt. London: The Chiswick Press. 1903. Pp. xxii, 68.

The Shaikhs of Morocco in the XVIth Century. By T. H. Weir, B.D. Edinburgh: George A. Morton. 1904. Pp. xlviii, 316.

An unhappy life, for the most part, is that of the translator of poetry. The blanks are to the prizes as a thousand to one, and with each attempt he carries, in the German phrase, his own skin to market, and hears the people say that it is a very poor skin indeed. Yet none is ever deterred by the grinning trophies, and the Horaces, Homers, Virgils, and Dantes are ground out in perpetually renewed effort at the impossible problem. Where FitzGerald created and Butcher and Lang rendered, may they not, too, have their day? And so the unending quest goes on, an æsthetic exercise far away from practical issues or thought of use, a pursuit of an ideal equivalent which will be and yet not be the original itself.

Thus the case stands, broadly, with the great classics. Translators of these have an eye to the readers of the originals, and seek first and last their approval. They render to please themselves, and to show that they can render; sometimes their labors fall to the luck and delight of the reading public. But there is another translating with a very different object and value. Some languages and literatures can never be learned or reached by any but a few, and yet they contain treasures of human experience and emotion. If our knowledge is not to be narrowed to a few threads of the varied skein of life, we must use, trust, and enjoy the interpretations of out-of-the-way learning. The man of strange tongues and uncanny reading comes here to his own, and if he but add a knack of expression in his native language, of suggestion and melody and colored vocabulary, he is sure of welcome when he brings back his bales of foreign stuffs from untrodden lands. Still greater is his prize when he has already approved himself a poet in his own tongue. Along with some strange failures, some of the greatest successes have been reached by poets thus interpreting unknown poetry and alien life. Here there is no question of the hundredth translation of a classic to show the skill of the translator. We have a veritable addition to the bonds which draw races together and make the whole world kin.

Mr. Blunt won his poetical spurs long ago with his 'Love-Sonnets of Proteus.' The path from these, with their grip on the real, their ring of a high personality, their clanging, flashing imagery, is very straight to sympathy with the old poems of Arabia in their immediate touch with life—the narrowed, fiercely individual, grim, yet passionate and luxurious life of the desert—in their unerring interpretation of its moods and conditions and their wealth of imagination mediating their ideas. Such poetry was a good beginning for a future translator of the Mu'allaqat, the great Seven Songs of the Desert, gathered by the earliest Muslim editors from the mass of pagan poetry and ever since held sacred. And, later, his training for the task went further. He became one of that small number of Europeans to whom the ways of the desert and innermost Najd itself have been opened. Its unchanging life, the same now in all essentials and almost all details as it was fourteen centuries ago, was lived by him. In the very atmosphere of these poems he has moved; their pictures and imagery, their social ways and ideas have been his own. It is as though somewhere in strange waters a Greek colony from the Homeric age still survived, and one or two had reached its shores and walked in its ancient ways. So, if we have not here a clear creation and a great English poem such as FitzGerald's 'Omar,' we have in this first complete verse translation of the Mu'allaqat, a rendering singularly satisfying and full of the tone, the swing, and the vitality of the original. A literal translation it is not. No one could pack into the same compass of English lines the pregnant hints and clues—vistas of thought—which lie half hidden in the Arabic. The lack of rhyme, too, limits the music, and the effort at the same metres, while it gives vraisemblance and leads us afield, hinders from the smoothness which carries the Arabic lines rippling or rolling along. And the same disdain of the details of exact structure which Mr. Blunt showed in his sonnets, has here handicapped him in reproducing lines whose perfection of finish is absolute. But, for all that, his verses for the great multitude will be the first suggestion of the real poetry of Arabia, so different in its virility and energy from the hot-house languors and sensuousnesses which commonly stand for the Orient. Here, the life is all in the open with wind and rain, sun and storm. Thus, for example, Imr al-Qays, the disinherited, wandering king, sings the kinships of the desert in its hunger and toils:

"Water-skins of some folk—ay, with the thong of them laid on my nága's wither—borne have I joyfully,
Crossed how lone the rain-ways, bare as an ass-belly; near me the wolf, starved gamester, bowled to his progeny.
Cried I: Wolf, thou wailest. Surely these lives of ours, thine and my own, go empty, robbed of prosperity.
All we won we leave here. Whoso shall follow us, seed in our corn-track casting, reap shall he barrenness."

And thus Antara, the knight of a thousand tales, sings the joy of the spring rains and the renewed verdure:

"Sweet as the vials of odors sold by the musk-sellers, fragrant the white teeth she showed thee, fragrant the mouth of her.
So is a garden new planted fresh in its greenery, watered by soft-falling raindrops, treadless, untenanted.
Lo, on it rain-clouds have lighted, soft showers, no hail in them, leaving each furrow a lakelet bright as a silverling.
Pattering, plashing they fell there, rains at the sunsetting, wide-spreading runlets of water, streams of fertility,
Mixed with the humming of bees' wings droning the daylight long, never a pause in their chaunting, gay drinking-choruses.
Blithe iteration of bees' wings, wings struck in harmony, sharply as steel on the flint-stone, light-handed smithy strokes."

Tarafa, "the boy," who died and left a scanty handful of songs and an inheritance of unfulfilled renown, has this picture:

"Alas for the dark-lipped one, the maid of the topazes, hardly yet grown a woman, sweet fruit-picking loiterer!
A girl, a fawn still fawnless, which browses the thorn-bushes, close to the doe-herd feeding, aloof in the long valleys.
I see her mouth-slit smiling, her teeth,—nay a camomile white on the white sand blooming and moist with the night-showers.
Sun-steeped it is, pure argent, white all but the lips of her, these are too darkly painted to fear the sun-burning.
The face of her how joyous, the day's robe enfolding her, clean as a thing fresh fashioned, untouched by sad time-fingers."

Of these Mu'allaqat only four, so far, have left any mark in English verse. In 1796 J. D. Carlyle included a portion of that of Labid in his 'Specimens of Arabian Poetry.' His enterprise was apparently part of the Romantic movement, but his rendering, though very smooth, has no trace of the glory and strength of the original; it is in the drawing-room manner of its day. In the sixties of the last century E. H. Palmer published a verse translation of the whole of Antara's Mu'allaqa poem, but it, too, is simply an easy, ineffective copy of verses. Burton, in his 'Pilgrimage,' gave a most tantalizing fragment, a version of Labid's two opening lines, in melody and suggestion by far the best of anything we yet have. Finally, Sir Charles Lyall has rendered part of Imr al-Qays and Zuhayr's Mu'allaqa entire. To these verse translations should be added his rendering of Labid's poem into rhythmic prose. There can be little question that these last are the most happy attempts yet made. Their scholarship is flawless; they are literal to a marvellous degree; and they give the atmosphere, and those in metre the lilt and ring, of their originals almost perfectly. Perhaps in his verse-rendering Sir Charles Lyall has been forced a little towards a somewhat higher Romantic coloring than is in the classical energy of the Arabic; no other criticism can be made. But his and Mr. Blunt's success in such varied forms brings back the old quarrel, whether Oriental poetry can most adequately for all purposes be rendered by the impressive prose of the Bible, or rhythmic prose, or, finally, by varyingly free metrical efforts. A comparison of the thirty-ninth chapter of Job with Sir Charles Lyall's and Mr. Blunt's 'Labid' would be highly instructive.

If Mr. Weir's book is not poetry in the technical sense, it is a work of great interpretative value, sympathetic and artistic, and full of the best historical imagination. He has taken a collection of biographies which a certain Ibn Askar—a Moorish hagiologist, who died in 1578 A. D., fighting, such were the party politics of the time, in the ranks of Don Sebastian, on that fatal day at the Makhazin when the Portuguese chivalry was destroyed and their leader vanished—wrote of the saints whom he had known, has rearranged them as they came chronologically and had part in the story of their troubled times, and has given us, thus, a very complete picture of these times on the side of the religious leaders, which means, in Islam, of the body of the people. The translation is singularly simple and effective; a note of sincerity is struck and held, and these 'Acta Sanctorum,' or, perhaps better, this 'Golden Legend,' is handled with respect and understanding Moroccan conditions and ideas of to-day become intelligible to us as we read, and the possibility of our own mediæval life, even,

becomes clearer. A single extract will show this best. A certain shaikh, Alee Hamamoosh, was on easy terms with the Jinn, companies of whom used to study the Qur'an under him.

"There lived a man in Fez who had a daughter of such surpassing beauty that the jinn carried her away, and whither she had gone, he could not tell. Then he was in a great strait, and where to turn he knew not, until one of the advice-givers bade him go and consult the Shaikh Alee Hamamoosh. To him, therefore, he went, and related to him his affair, and laid before him his case.

" 'It may be that God will yet restore thee thy daughter,' replied the shaikh, 'but do thou go this night to the outside of the Futooh Gate, and sit there until the first half of the night is gone by. For the jinn, with their kings, will pass by thee in seven companies. But be thou brave and fear not, until the seventh company shall come up. Then go thou to its king'—and he described him to him—'and say to him, "Such a one [meaning himself] sends thee greeting, and commands thee that thou restore to me my daughter." '

"The man, therefore, did as the shaikh had commanded him; and he saw of the glory of the jinn, and of the majesty of their number, what it terrifies the intellect to think of. And when he stood before the king and had delivered to him the shaikh's message, the king ordered his company to halt.

" 'Fetch me such and such a jinnee,' he commanded, 'and the human creature that is with him.'

"In half an hour they were found and brought before the king.

" 'Take thy daughter,' said the king to the man, 'and give the shaikh my salutations, and say to him from me, "Verily, I am obtemporating to that which thou hast enjoined upon me." ' And he turned upon the jinnee, and demanded, 'What led thee to do what thou hast done?' But the jinnee answered never a word, and the king commanded that he should be killed and crucified upon the spot.

"So the man came with his daughter to the shaikh, and gave him an account of all that had occurred.

" 'Go in peace,' answered the shaikh, 'and see that thou tell no man of what has befallen, so long as I continue alive.'

"So the man departed to his house, and on the way, passing by the spot where the jinnee had been crucified, he found what looked like a dark-green beetle hanging upon a splinter of wood."

Here, the nocturnal demon procession of European folk-lore will be recognized, with a termination, however, more suggestive of Japan. Of other, similar stories there are many; and many, too, are those dealing with the daily life of the folk. Such a book as this of Mr. Weir's does more to make us understand Morocco, with its warring dynasties, its devout leaders, its ceaseless unrest, and its simple-minded masses, than an army of newspaper reporters hunting Raisuli's head.

WOOD'S FIGHT FOR CANADA.

The Fight for Canada. By William Wood. London: Archibald Constable & Co. 1904.

The prospective purchaser who sees Major Wood's book for the first time will probably ask himself, "Is this a *réchauffé* of Parkman, or am I likely to find something new in it?" The answer to such a query, natural and indeed inevitable, may be given without hesitation. The present volume is neither a diluted nor an embellished version of Parkman, but an independent study of the war—quite as independent as Casgrain's 'Montcalm et Lévis'—which approaches the contest from a different standpoint, is written in a characteristic style, and grounds its results upon first-hand knowledge. There are several signs which show that Canadian history is receiving more attention from Canadians themselves than has fallen to its lot for some years, and in the ranks of the true researchers Major Wood has his place. Though he owes a greater debt to the documents edited by Dr. Doughty than to the text or footnotes of Parkman, he is not a compiler, but an historian. This is a distinction worth making in days when Sir Gilbert Parker is publishing ill-considered "copy" on Quebec.

While fully recognizing the value of Major Wood's performance, we must venture to differ somewhat from the author regarding the nature of its importance. To us the book makes its chief appeal through liveliness and mastery of detail rather than through the novelty of its standpoint. On the contrary, Major Wood emphasizes, in his prefatory *apologia*, a single motive as one which informs and controls his whole narrative:

"The point of the whole argument is, however, that this great fight for the dominion of the West has never been consistently described as a combined naval and military operation in which the fleet and the army were so much the necessary complements of each other on all occasions that they perfectly realized the ideal of a single United Service throughout the whole expedition. And, this being so, it seems that any honest attempt to redress the balance, and do justice to the great silent service of the sea, would alone vindicate the book that made it."

Stated in other terms, Major Wood lays heavy stress upon the sea-power element in the war, much as if Mahan had written a detailed account of the operations at Quebec to correspond with his chapter on the coöperation of Washington and De Grasse at Yorktown. Major Wood makes his point clearly, and will undoubtedly do something to raise Saunders to a higher place than he has yet enjoyed in the opinion of the general reader. We feel sure, however, that a story of Montcalm and Wolfe which relied chiefly for its success upon an intelligent application of Mahan's ideas to a particular situation, would be far less meritorious than is this work of Major Wood. Nor do we think he could have made his narrative recommend itself so well as it does by pointing out and supplying the deficiencies of Parkman, or any other predecessor, in mere statement of fact. Major Wood holds the strategy of the campaign in a firm grasp, and interprets it adequately, but to us his pages are rendered attractive chiefly by his own enthusiasm, his skill in bodying forth the salient points of an existing situation, and the freshness of his illustrations. These, more than his development of maritime considerations which have become somewhat obvious, we hold to be his strong points.

One of Major Wood's best conceptions is that the "Fight for Canada" should be kept in line with the whole Seven Years' War. This elementary idea may, in the depths of their own consciousness, be appreciated by all writers on Ticonderoga, Louisbourg, and Quebec, but there is a very general disposition to divide the American operations from those in Europe. Major Wood, however, has heard of Kunersdorf and keeps it before his eyes, while his insistence upon the value of sea-power prevents him from mistaking the significance of Hawke's movements in 1759. Wolfe and Nelson are constantly compared and with a show of reason; but if one looks simply to battles, the companion pieces are the Plains of Abraham and the cannonade amid the tempest at Quiberon, both won in the same year by brilliant initiative and daring, assisted by remarkable good luck. We do not know that Major Wood could have gained anything by giving a fuller description than he has done of the course which the war followed in Germany, but one suggestion we do make bold to offer against a future edition. Since the root of French weakness was in Versailles, would it not be well to add one chapter on the court administration of Louis XV.? It is true that the subject is not a new one, yet, as the material is so complete and the connection with Canadian affairs so intimate, we think Major Wood might add a telling feature by inserting a few pages on the régime of the Pompadour. Moreover, such a sketch would harmonize well with the excellent chapter on Vaudreuil and Bigot.

Major Wood's strong belief in British imperialism, which is always apparent, does not detract from his sympathy with what was best in the life of New France or from his admiration for Montcalm's defence. So far as leading individuals are concerned, he displays little wish to disturb accepted judgments, though his language is more pronounced than that of most historians. Pitt, Wolfe, Montcalm, and Bigot have had their reputations pretty well settled for them at the hands of historians by this time. With Vaudreuil and Lévis the case is hardly the same, since French-Canadian writers incline to give them better treatment than they receive from outsiders. Major Wood, who does not mince words and has the courage of his convictions, tells the unpleasant truth about Vaudreuil without any euphemism whatever:

"He framed ambiguous orders, for the double purpose of embarrassing Montcalm and saving his own credit, whatever the results might be. But he never faced any of the risks in person, though he really held the command-in-chief; and he always threw the burden of executive responsibility on Montcalm, whom he afterwards traduced in his official dispatches. That he was a liar, a backbiter, and a pettifogger, utterly unfit for his great position, is proved to the full; and the best excuse that can be made for him is that he was almost as great a fool as a knave."

Towards Lévis, Major Wood is polite, but not enthusiastic. He declines to see any great generalship in the battle of Ste. Foy, and remembers the burning of the flags.

By making the Seven Years' War in America pivot round the siege of Quebec, Major Wood seizes upon the picturesque and critical incident, thus gaining force of impact for his narrative. Nevertheless, there is more to be got out of the struggle than can be extracted from it by one who nails his colors to the mast of a sea-power theory. A double issue presented itself: on the one hand raged an ancient, national contest between Great Britain and France, a contest European in origin, if fought out from the Great Lakes to India; on the other hand existed fixed grounds of antagonism between the English and French of this continent, an antagonism to which the policy of Dongan and Frontenac had given shape even in the seventeenth century. Had Wolfe failed to take Quebec, the result to Great Britain and the modern British Empire

might have proved permanently disastrous. and, without control of the sea, the British victory could not have been won in 1759. Yet, considering the disparity of resources which existed between New England and New France, and the rooted hostility of the two populations, we are unable to perceive how control of the sea could long have prevented the English colonies from mastering their rivals, whether along the St. Lawrence or to the west of the Alleghanies. The colonial contingents that accompanied Amherst were not destined to play a spectacular part in terminating the war, but in any exhaustive discussion of the issues at stake it would seem desirable to give greater prominence to the purely American aspects of the question than is given here. Major Wood is perfectly familiar with Peter Schuyler and the "Glorious Enterprise," but he does not adjust his perspective to the idea that in all probability there would have been an English supremacy of some sort upon this continent whatever the fate of Wolfe's expedition. In offering this criticism we see that before us lie long vistas of historical conjecture. Our only purpose is to accentuate one issue of capital importance which might to advantage be placed in higher relief.

Major Wood avoids a display of pedantry and uses graphic language. In a word, he writes for the public, and there seems to be need that the public—even the literary public—should be instructed on matters relating to the siege of Quebec. Not long ago the Boston *Transcript* favored its readers with an account of the large hotel which recently has been erected in Toronto, and, in describing the frescoes, the writer observed (we quote from memory, but with sufficient accuracy): "One of the subjects is that famous scene in Canadian history where Wolfe, as he crossed the St. Lawrence, recited Grey's [*sic*] Eulogy [*sic*] to his troops before scaling the heights of Alabama [*sic*]." These lines were probably penned within five miles of Parkman's old study in Jamaica Plain—a circumstance which proves that Major Wood's stirring and accurate book is a work of utility, and not of supererogation.

Outlines of Psychology. By Josiah Royce. The Macmillan Co. 8vo, pp. 392.

An unpretending little volume, designed for a short text-book for students of sixteen and indefinitely upwards, the antipode of a cram book is this. It will not distend the mental stomach with bran, nor even impart much glow of repletion. Yet it will always interest every reader and often charm him. It will seduce a young person into close observation and close reasoning; and it will only be long after it has been laid aside that the learner will come to appreciate all the benefit he has derived from it. As an effective text-book it is necessarily an outline treatise, stating each point in explicit terms. Yet it is at the same time an essay in the sense of being animated throughout by a central idea, that of the essential unity of conduct and of cognition. We must not be understood to imply that it is a one-sided book, far less a book of one idea. It is a picture of the mind whose lights and shades are due to an evident centre of illumination.

The first result of this is that all the explanatory theories in it are such as physiological psychology propounds, albeit less than the usual proportion of space is given up to physiology. The strictness with which the author confines elucidation to that direction is marked, and, to our thinking, excessive. No doubt, that method is as thoroughly proved as can be; but that does not in itself in the least disprove the method of explaining one state of mind as caused by another state of mind. It may be that Professor Royce would admit this, but that he deems it needless and confusing to insist upon ideas to which common sense clings so tenaciously. On the other hand, it may very well be that he is an automatist; for there is nothing in his idealism to forbid his being so. It will be as an automatist that his readers will mostly understand him.

The author's unification of conduct and cognition cuts deep into the theories of psychology. An instance of this, that will interest everybody on account of its practical bearings, is his proposal of a substitute for that division of mentality into Feeling, Volition, and Cognition, which was brought into vogue by Kant, and which has been so generally employed ever since, in spite of the derision that has been poured upon it by almost all the writers who have availed themselves of it. The fact that no other division has been proposed that has proved convenient in half so many relations, would seem to show that, crude as it is, there must be "something in it"—that there must be some truth of which it is an ungainly and ill-fitting vesture. In place of Cognition, Professor Royce puts the phenomena of forming habits, whether of cognition or of conduct, giving to this the name of "Docility." Another thinker more than twenty years ago used the same word, "Docility," for one of three departments of mind, and with the same signification, except for a detail that we shall mention presently. We believe that this feature, at any rate, of Professor Royce's division will soon commend itself to all psychologists.

For what is habit-taking? We can conceive, and do observe, three kinds of direct effects of causation. There are, first, transitory effects which come into existence with the causal action, disappearing the instant it ceases. Such are the accelerations of motion produced by forces. We do not say that power is *expended* in producing such effects, since by expenditure we mean a transfer of something, not an annihilation. An effect upon which power is expended may either remain after the cause is removed without any tendency to change, when we may say that the subject upon which the change is wrought is *inert* in respect to that effect; or else, when the power is expended, the effect may at once begin to undo itself, the subject of the change showing a tendency towards change of a definite kind, when we may say that it is *elective* with reference to such changes. Thus, the law of inertia may be expressed by saying that all bodies are *inert* in respect to their velocity. That is, if an expenditure of exertion imparts a certain velocity to a body, it will retain that velocity unchanged after the cause ceases to act. The law of the conservation of energy may be expressed by saying that all effects of physical force consist in bodies being inert in respect to velocity, but elective in respect to certain changes of relative position. Thus, if a missile were thrown up into a vacuum, then, as soon as the energy of its upward motion was expended, the body would begin to return to earth, while, its horizontal displacement being a change of position in respect to which it is not elective, the energy of horizontal velocity remains in that form. To say that a nerve-track is capable of habit is to say that it is inert in respect to changes wrought in it by the passage of a nervous discharge along it. A physicist will hardly hesitate to believe that this is due to particles of the nerve being displaced by the passage in ways to which they are inert. If so, the phenomenon closely resembles that of a stream of water wearing itself a channel—a faculty on which every skilled ditcher relies.

Simpler things take habits—that is, behave as they have before behaved. On a cold winter morning. the sheet of ice on the countryman's ewer that offers considerable resistance to his first poking a stick to the bottom, will offer hardly any to a second poke, and none at all to a third. Any new behavior of any object whatever must be due to some new condition of that object; and ordinarily this will persist and cause the new behavior to be repeated. Thus, that which distinguishes the water-course, and still more the nerve, is not that it acts as it has acted, but on the contrary is these two features: first, that the number of particles whose displacement will facilitate the current is very great, so that many repetitions of the action continue to become easier and easier, and thus the habit is slow in its development, instead of being fully formed from the beginning; and, secondly, that in the case of the nerve the new positions of the displaced particles appear to have at first little stability, so that new habits are apt to be easily destroyed. The earlier user of the term Docility included under it not only the tendency to the formation of habits, but also the liability of habits to get broken up, which is certainly a most important characteristic of the intellectual man. It is probably his physiological point of view which prevents Professor Royce from once mentioning the consequences of surprise at the unexpected and the counterexpected, where an apparent rupture in Nature's habit produces a real rupture of our associations.

For the Feeling and Volition of the old triad, Prof. Royce would substitute respectively "Sensitiveness" and "Initiative"; and here we cannot think his proposals happy. "Initiative," according to his own analysis of it, consists simply in motiveless persistency in repeating an action. But this differs from Docility only as acting from a habit differs from forming a habit. Now, acting from a habit is just like acting from any other disposition, so that "Initiative" is nothing but Docility plus Volition. The author's unification of conduct and cognition should, however, have led him to regard volition and sensation, or the action of sensitiveness, as simply two species of one genus of mentality, that of reaction. For there can be little doubt that sensations react upon the stimulating causes as we know that volitions react upon the willer.

If we once accept docility and reaction as two categories of mentality, we shall forthwith be obliged to recognize a third. For, as is generally admitted, all formations of habit take place entirely outside of consci-

ousness. We can only know that we have formed a habit by some experiment, although it may be an involuntary experiment or may be an experiment in the imagination. What we call pleasures and pains are nothing but sensations of any kind that are significant to us of our having favorable or unfavorable dispositions, of one or another of several kinds; and therefore when a sensation acquires a pleasurable or painful cast, or both, which it had not before, that is a sign of our having formed a habit. But, then, this is a case of becoming aware of a habit by experiment. Sensation and volition take place upon the very edge of consciousness. We have no direct knowledge of them as processes; we know them only by comparing what went before with what comes after.

This is generally acknowledged by psychologists in reference to volition. If there were any kind of sensation which we might expect to take in the act, it would be the case of the emergence of an idea into consciousness by a suggestion addressed to an association. But we cannot catch even this in the process of emerging. To a man standing between the rails of a track on which a locomotive is approaching, it is successive sudden enlargements that he perceives. The sense of continuous change is an affair of quasi-inference. Thus we have no immediate consciousness either of facts of docility or of facts of reaction. Since, then, we are conscious, we must admit immediate consciousness, or feeling, as a third category of mentality.

What we have said must be taken as a small sample of the stimuli to reflection that are richly strewn upon these pages. We regret that we should have left ourselves no space to illustrate the skill with which the reader of them will be taught to draw practical corollaries from the truths of the new science.

Machiavelli and the Modern State. By Louis Dyer. Boston: Ginn & Co. 1904.

This little book is based on three lectures which Mr. Dyer gave at the Royal Institution several years ago. They rarely seem to grapple with the main subject, while they discuss elaborately side issues. We are not quite sure what Mr. Dyer wishes us to infer from his demonstration that Machiavelli had no very accurate understanding, in the modern scientific sense, of Roman history; or that he did not invent a code of morals; or that when he discoursed on the Romans, he was really thinking of the Swiss; or that he was a poor judge of men; or that he drew an imaginary portrait of Castruccio Castracani to illustrate some of his own political views; or that he was so hypnotized by Cæsar Borgia that he regarded him as the model prince. If all these allegations were proved, which we can hardly concede, how would they explain the immense power which Machiavelli's masterpiece has had, and will long continue to have, over statesmen and governments? If he was the simple soul Mr. Dyer hints of, all the more wonder that he went literally to the very bedrock of statecraft.

Because Machiavelli happens to make an allusion only three lines long to Lorenzo de' Medici, Mr. Dyer argues that "such a failure [to portray] must serve to warn the readers of 'The Prince' that its gifted writer was no reader of human character." Surely a sweeping conclusion to draw from a small premise! The truth is, that Machiavelli did not intend to paint Lorenzo's character in detail. Again, why should the fact that "Machiavelli never had anything like an intimate intercourse with any of the great personalities of his day—excepting only Cæsar Borgia, and, at a much later time, Guicciardini," unfit him for writing 'The Prince'? Mr. Dyer explains further that Machiavelli was too unaristocratic by birth to understand his "social superiors"—an argument which, with equal validity, might be brought against most of the world's great men. How could Napoleon "understand" the altitudes and profundities of the Bourbon *noblesse*, or Bismarck, the incorrigible Junker, fathom the sublimities of the Prussian Kings whom he served?

These instances, which might be multiplied, awaken distrust in the soundness of Mr. Dyer's judgment, and our distrust is confirmed when we compare his translations from Machiavelli with the originals. Take, for example, the reference to Lorenzo just mentioned. Machiavelli wrote: "So that if we consider his gay life and his grave, there appeared in him two almost different persons joined by an impossible joining." Mr. Dyer translates: "Take into account his two prevailing moods, the grave and the gay, and you shall discover in him not one but two persons, marked by contradictory notes that blend into an impossible union of incongruous opposites." This is paraphrasing—with a vengeance; and it is all the more unwarranted because Machiavelli is the tersest of modern writers. To represent him by such a very flowing version does him as much injustice as it would do Tacitus. Again, Dante's "un solo principe" Mr. Dyer renders "one sole prince *and potentate*" (p. 50), and he transforms Dante's simple "de jure" into "by *divine* right" (p. 51), using a technical political phrase which Dante never intended; likewise, Machiavelli's dictum, "The chief foundations of all states . . . are *good* laws and *good* arms," into "The indispensable foundations upon which are built all states . . . are *steadfast* laws and *steadfast* arms"—a very different proposition. The laws which have perpetuated despotism in Russia are "steadfast" enough, but they are not "good."

On the whole, we must confess to disappointment, and this is keener because, in his preface, Mr. Dyer led us to expect just such a study of Machiavelli as is needed. He has worked industriously over his material, as his collating shows, but he has an unhappy knack of hunting down unprofitable clues. It matters little whether Machiavelli was thinking of the Swiss when he discoursed on the Romans; what we need to know is how he came to formulate his terrific treatise, and why, if Cæsar Borgia was his model, the Machiavellian principles have cropped out in all modern States and nearly all rulers since his time. Frederick, Napoleon, Bismarck, Beaconsfield, Rhodes, Chamberlain, were true Machiavellians; and President Roosevelt, in his letter of acceptance the other day, revealed himself an apt disciple.

Geschichte des Möbels; unter Berücksichtigung der Architektonischen und Tektonischen Formen: Eine Stillehre für Bau- und Möbeltischler. Die Entwicklung des Möbels von den Anfängen des menschlichen Wohnhaus bis zur römischen Kaiserzeit, unter Einbeziehung des Mobiliars in den ostasiatischen Ländern. Von Dr. Alfred Koeppen und Carl Breuer. Mit 423 Abbildungen. Berlin and New York: Bruno Hessling. 1904. Pp. viii., 309.

This quarto volume is announced as the first of a series, a general work on the history of that which we cannot express in English by one word or compound term. *Mobilier* in French, *Mobiliar* in modernized German, express and describe everything that is useful and portable—kitchen utensils and costumes, tools and weapons, metal and pottery vessels, furniture of wood, bronze, and marble. An examination of the present volume shows that it is intended to explain the history of furniture, *Möbel*, the smaller thing, by an examination of *Mobiliar*, the larger one; and that it is in every respect as general in its purpose as might be indicated by the above list of minor subjects. The inquiry ranges over antiquity, prehistoric and of the classical epoch, the aboriginal life of America and Africa, the world of India, China, and Japan. Mediæval Europe and the European peoples of later times are to be treated in future volumes. The purpose of the work and the system adopted are set forth in a preface signed by Dr. Koeppen, and in this he gives credit to his associated author, Mr. Breuer, for his part, which seems to be that of travel and observation in many lands, and later the preparation of the treatise, correspondence, and the selection of material. A very interesting table of contents occupies four of the large pages, each separate title of chapter or section being followed by the bibliography of that department. This is an unusual feature, and should be welcome to every student, presenting, as it does, in a very accessible form, the material for wider study.

In order to explain the full significance of the movable objects, our authors have gone so far back into the origin of things that the Immovable also is treated. The peculiarities of ancient Persian architecture, with the bull-head capitals, the doorways decorated with rosettes, the slender colonnades, and the massive portals, are all treated in text and in illustration, that the facts concerning the little-known subject of movable furniture among the Persians may be the better understood. The same disposition is noticeable with regard to the arts of ancient Egypt; and the almost unseizable *Mobiliar* of the Aztecs is explained as well as may be by sculptures of façades, taken in connection with a few articles of wood and of hard stone found in Peruvian and other tombs. So in the absorbingly interesting subject, the furniture of the Greeks of classical times, the authors have been compelled to draw their material from medallions, vase-paintings, bas-reliefs of funereal and memorial character, and decorative statuettes and groups, to which are to be added a few pieces of actually existing furniture, such as the marble chairs in the front row of the Theatre of Bacchus at Athens, and a very few wooden chests and caskets found in the Crimea and in Egypt. Plans of Grecian and Roman houses are given, though with great reserve, in order the better to explain the placing and utilization of pieces of furniture. With the Roman times more freedom is possible, for there is much more material at hand,

thanks to the discoveries in the country about Vesuvius.

So far, with respect to the arts of antiquity, there is no fault to be found with the completeness of the work. All is said and shown that could be asked with reason. It is only when still existing civilizations are treated, those of India, China, and Japan, that we ask whether it is really possible to do justice to the subject in so limited a space. Granted that it is a matter of proportion, and that the relative importance of, say, Chinese civilization would not justify the appropriation of more pages and more cuts than are given it here, it must still occur to every one how very little is said compared with what there is to say. To China is given 28 pages, including 30 half-tone illustrations, but as these include several pieces of grandiose architecture and sculpture, and as the slightest acquaintance with the subject furnishes to the memory an immense amount of wholly trustworthy material in paintings, carvings, and embroidery in addition to the actual pieces in our collections, the student must suffer from the sense that these painstaking and accurate authors have given him so little compared with what there was to give. As for Japan, of course a volume of the size of this one could be filled without leaving the museums of one European city, and yet the authors have felt themselves obliged to limit their work to the same space that is allowed to China.

No further exception can be taken. The choice and the presentation of the objects represented and described are altogether praiseworthy, nor can the reader fail to observe the sympathetic treatment which each of these varying peoples and epochs has received at the authors' hands.

American Renaissance: A Review of Domestic Architecture. By Joy Wheeler Dow. New York: William T. Comstock. 1904. Pp. 182. Ninety-six half-tone plates.

This can scarcely be called a learned treatise, but it is a vastly entertaining book. Its author is not merely a skilful architect: he is a wag, a humorist. He not only sees the fun in things, but, what is rarer, he puts it so that others must see it. And what matters it if his English is not always of the best or his sentences by no means uninvolved? He has a profound and well-grounded belief in the excellence of American architecture in the seventeenth and eighteenth centuries, and he makes his reader feel it and share it. Even the early nineteenth century affords him many worthy examples of an art that has not yet reached its decadence; and in what he calls the "Transitorial Period"—that time of crudity so scathingly arraigned in the 'American Notes' and 'Martin Chuzzlewit,' and so guilelessly exposed in the diary of Philip Hone—he has an eye open for all that is good even in the Victorian Gothic cottage and the Greek-temple dwelling house. And, of a truth, there was much good architecture in this despised time, as in the Sargent house in New Haven, with its ample scale and its simple scheme.

It is when he reaches the sixties, the years of the Italian villa and the Mansart roof, that Mr. Dow finds a fair field for grim fun-making. The "Reign of Terror" he calls it, and the name is apt enough to stick to the thing. Even in this, the lowest of all states to which American architecture fell, he finds some good. The spaciousness of the rooms, the simplicity and amplitude of the house plans, lead him to say that "there is no good reason why we should not exploit such architecture to-day, save one—Man cannot live by bread alone." No one can express in fewer words than these the utter poverty of the style in all the nobler qualities of architecture. Of the fashionable vagaries of our architecture since 1876, the close of the "Reign of Terror"—that is to say, of the Eastlake style, the Queen Anne, the Romanesque, the revived Colonial—Mr. Dow has much to say that is none the less true for being so entertainingly put.

Though rambling, discursive, and full of quips and quirks, the book is sound. Its author's discernment is keen and his taste sure. The illustrations are abundant, and include both the bad and the good; and while it requires a good deal of egotism on the part of an author to include ten or a dozen views of houses of his own design in such a book, it must be confessed that the examples of Mr. Dow's personal work hold their own remarkably well.

The Nation Said

of Loomis's **CHEERFUL AMERICANS**

(Now in its seventh printing)

"The mere name and the very cover are full of hope. . . . This small volume is a safe one to lend to a gambler, an invalid, a hypochondriac, or an old lady; more than safe for the normal man. . . . The book should fulfil a useful mission on rainy days, and on kerosene-steeped evenings in those spots of earth where men and women do congregate."

LOOMIS'S

More Cheerful Americans

(Ill'd by Mrs. Shinn and others, $1.25) has just appeared.

BITS OF GOSSIP. By REBECCA HARDING DAVIS. $1.25, *net*. Potage extra.

Fifth Edition of the New Book by the Author of "Rebecca"

THE AFFAIR AT THE INN By KATE DOUGLAS WIGGIN and Others

"A highly amusing account of a little international comedy. Mrs. Wiggin has never conceived a more attractive character or painted one more delightfully; one laughs, or at least smiles, at almost every sentence. In fact, it is not often that the early fall is enlivened by a book so thoroughly enjoyable."
—*New York Times Saturday Review.*

Illustrated in tint $1.25

Spieker's Greek Prose Composition
$1.30
By **Edward H. Spieker,** Ph.D., Associate Professor of Greek, Johns Hopkins University.
Intended for use in college classes, this book assumes that the student has had some practice in turning connected English sentences into Greek, and that he is therefore familiar with the principal forms of inflection. For the ordinary course one hundred and twenty exercises are given, followed by twenty-five based especially upon Demosthenes and Plato. The introduction does not try to take the place of grammar, but gives merely the main points which will be of special assistance to the student. The vocabulary includes all the words which will be needed in writing the exercises.

NEW BOOKS

SEND FOR ILLUSTRATED FALL CATALOGUE

BREAKING THE WILDERNESS

The story of the Conquest of the Far West, from the Wanderings of Cabeza de Vaca to the first Descent of the Colorado by Powell and the Completion of the Union Pacific Railway. With particular account of the exploits of trappers and traders.

By FREDERICK S. DELLENBAUGH, Author of "The Romance of the Colorado River," "North Americans of Yesterday," etc.

8vo. Fully Illustrated. Net $3.50. (Carriage 25 cents.)

While there have been numerous books published relating to various parts of this period, yet there appears to be no single volume which presents a comprehensive and concise view of the whole. It is intended that "Breaking the Wilderness" shall, in a measure, fill this place.

THE UNITED STATES 1607-1904

A History of Three Centuries of Progress in Population, Industry, Commerce, and Civilization.

By WILLIAM ESTABROOK CHANCELLOR and FLETCHER WILLIS HEWES

In 10 parts (each complete in one volume and sold separately). Part 1. COLONIZATION, 1607-1697.

8vo, with 150 maps and diagrams (many in colors). Net $3.50. (Carriage 25 cents.)

The record of the settlement of the twelve English colonies of the 17th Century, preceded by a brief review of the period of discovery and settlement.

NARRAGANSETT BAY

Its Historic and Romantic Associations and Picturesque Setting.

By EDGAR MAYHEW BACON

Author of "The Hudson River from Ocean to Source," etc.

Large 8vo, with 50 drawings by the author and numerous photographs. Net $3.50. (Carriage 25 cents.)

Mr. Bacon presents in a form similar to his "Hudson River," another volume emphasizing the unique beauty, the great historic interest, and the legendary charm of Rhode Island's noble bay.

RALPH WALDO EMERSON, Poet and Thinker

By ELISABETH LUTHER CARY, Author of "The Rossettis," "William Morris," etc.

8vo, with numerous illustrations in Photogravure, uniform with Miss Cary's other works. Net $3.50. (By mail $3.75.)

Addressed not to the student, but to the general reader, this volume shows Emerson as he looks to the generation succeeding his own.

JAPANESE LIFE

In Town and Country

By GEO. W. KNOX

No. 2 in OUR ASIATIC NEIGHBORS 12mo, Illustrated. Net $1.20. (By mail $1.30.)

Previously Issued:
Indian Life in Town and Country.

SWEDISH LIFE

In Town and Country

By G. VON HEIDENSTAM

No. 12 in OUR EUROPEAN NEIGHBORS. 12mo, Illustrated. Net $1.20. (By mail $1.30.)

Just Issued:
Belgian Life in Town and Country.

MARJORIE FLEMING

The Story of Pet Marjorie, together with Her Journals and Her Letters.

By L. MacBEAN

To which is added
Marjorie Fleming, A Story of City Life Fifty Years Ago.

By JOHN BROWN, M.D.

With numerous illustrations, including a frontispiece in color.

PORTRAITS OF THE 17th CENTURY

Historic and Literary

By C. A. SAINTE-BEUVE

Translated by Katharine P. Wormeley

Two parts, 8vo, with about 30 Illustrations. Sold separately, each $2.50 net.

The subjects of these brilliant essays include many of the most notable persons in the history and literature of France of the 17th Century.

THE MASTER'S VIOLIN

By MYRTLE REED

Author of "Lavender and Old Lace," etc.

12mo, very daintily printed and bound. Net $1.50. (By mail, $1.65.)

"A rare piece of work, an exquisite literary production, full of delicately woven fancy, tenderness and humor. A captivating love story."—*Newark Advertiser.*

Send for Illustrated Fall Catalogue

2 vols., 8vo. Net $10.00.

Dodd, Mead & Co., Publishers, New York

Thomas Y. Crowell & Co.'s New Publications

FOR THE FALL OF 1904—*NEW BOOKS AND NEW EDITIONS*

ADDISON

Essays

By JOSEPH ADDISON. With introduction by HAMILTON WRIGHT MABIE. 330 pp., 18 no. cloth, 35 cents; limp leather, 75 cents; 12mo, cloth, plain, 60 cents; gilt top, 75 cents.

A new and careful selection of the fugitive writings of this renowned essayist, including the Sir Roger de Coverley papers.

AUSTEN

Pride and Prejudice

By JANE AUSTEN. Luxembourg Library. With 17 illustrations. 8vo, cloth, gilt top, $1.50.

This well-known author's masterpiece is now presented in a specially illustrated volume which should appeal to the reader.

BOLTON

Emerson and Raphael

By SARAH K. BOLTON. Chiswick Series. Each with 8 illustrations. 12mo, gilt top, per vol. 50 cents net. Postage, 5 cents.

Two popular brief biographies which are now embellished by full-page halftones from photographs, scenes, and paintings.

BRADFORD

Messages of the Masters

By AMORY H. BRADFORD. Silent Times Series. Illustrated. 16mo, plain edges, 65 cents; gilt top, 85 cents net. Postage, 8 cents.

This book of appreciations of great paintings and their lessons has proved so helpful and popular since it was first issued a few months ago that a cheaper edition has been deemed desirable.

BROOKS

Dames and Daughters of the French Court (Ready in October)

By GERALDINE BROOKS, author of "Dames and Daughters of Colonial Days." Illustrated. 12mo, gilt top, $1.50 net. Postage, 15 cents.

Many interesting and picturesque figures cluster about the throne of France, and not a few of these "dames and daughters" exerted a wide effect upon history. The treatment of this attractive theme could not be in better hands than Miss Brooks's.

BULWER-LYTTON

Rienzi

By EDWARD BULWER-LYTTON. Luxembourg Library. With 17 illustrations. 8vo, cloth, gilt top, $1.50

Lord Lytton's popular story of the "Last of the Tribunes" is now added to our Luxembourg Series, with extra illustrations.

CHESTERFIELD

Letters to His Son and His Godson

By LORD CHESTERFIELD. Selected and edited, with introduction and index by CHARLES WELSH, 360 pp., 18mo, cloth, 35 cents; limp leather, 75c; 12mo, cloth, plain, 60c; gilt top, 75c.

Lord Chesterfield's letters on deportment have made his name proverbial for politeness and breeding. Aside from that fact, they are characterized by good thought and literary charm.

CUTLER

Stories of King Arthur

As told in Malory's "Morte Darthur." Adapted, with introduction, by U. WALDO CUTLER. Children's Favorite Classics. 16mo, illustrated, 60 cents. Also bound in other styles, at various prices.

For centuries these fine old tales of chivalry have been prized by old and young alike. The present new version is based upon the Malory text and will be found of high merit.

DANTE

The New Life

By DANTE ALIGHIERI. Translated by DANTE GABRIEL ROSSETTI. Chiswick Series. Illustrated. 12mo, gilt top, 50 cents net. Postage, 5 cents.

The love story of Dante and Beatrice, as told by the "divine poet" himself, has been translated once for all by Rossetti. The illustrations are from Rossetti's drawings.

DE FOE

The Complete Works (In 16 Volumes)

Of DANIEL DE FOE. Edited by GUSTAVUS HOWARD MAYNADIER, of Harvard University. With etched frontispieces. 16 vols., 8vo, popular cloth, $16.00; library cloth, $20.00; library half leather, $24.00; library half calf, $40.00. Sold only in sets.

A noteworthy achievement is this first full printing of the works of "the first great realist." It includes not only the immortal "Robinson Crusoe," but his other great imaginative stories, travel sketches, scattered descriptions, and essays. The introductions and editorial work are by Dr. Maynadier, who has also edited our Fielding and Smollett.

DOLE

The Greek Poets

An anthology edited by NATHAN HASKELL DOLE. 8vo, cloth, gilt top, $2.00; half calf, $3.50; limp seal, $4.50.

Mr. Dole's mature, scholarly work on "The Persian Poets" is here worthily followed by a highly important study of the place and value of all the Greek poets, with full examples of their writings, in the best English translation. The volume contains biographical sketches, notes, and indices.

Richard Wagner

By NATHAN HASKELL DOLE. Chiswick Series. With 8 illustrations, 12mo, gilt top, 50 cents net. Postage, 5 cents.

A brief but clear story of the great musician's career, thoroughly illustrated from portraits and scenes.

GOWANS

Hundred Best English Poems

Selected by A. L. GOWANS. Handy volume, 18mo, cloth, 35 cents; limp leather, 75 cents; Astor edition, 12mo, cloth, 60 cents.

As the title indicates, this volume collects and preserves the hundred greatest poems by writers of England. The collection should prove of service and interest to every lover of poetry.

LANG

Aucassin and Nicolette

Translated by ANDREW LANG. Chiswick Series. Illustrated. 12mo, gilt top, 50 cents net. Postage, 5 cents.

The song story of Aucassin and Nicolette is one of the earliest and certainly the best of the old French minstrel romances. Its spirit and text are admirably preserved in this translation.

LE SAGE

Gil Blas

By ALAIN RENE LE SAGE. Trans. by TOBIAS SMOLLETT. Luxembourg Library. With 13 illustrations. 8vo, cloth, gilt top, $1.50.

This famous book, with its scarcely less famous translation, is here embellished with illustrations from the French text.

LEVER

Harry Lorrequer

By CHARLES LEVER. Luxembourg Library. With 17 illustrations. 8vo, cloth, gilt top, $1.50.

The popularity of Lever's great Irish novel is perennial. The present text is extra illustrated from the drawings in the original edition by "Phiz," well known as Dickens's illustrator.

McSPADDEN

Stories of Robin Hood

And His Merry Outlaws. By J. WALKER McSPADDEN. Children's Favorite Classics. Illustrated. 330 pp., 16mo, 60 cents. Also bound in other styles, at various prices.

These merry tales in prose are based directly upon the old ballads which were popular in England for several centuries. An introduction is included, telling about the real Robin Hood.

Synopses of Dickens's Novels

By J. WALKER McSPADDEN. Handy Information Series. 250 pp., 18mo, cloth, 45 cents net. Postage, 5 cents.

A companion volume to "Shaksperian Synopses," and a work of no less practical utility. Each novel of Dickens is synopsized, and complete lists and index of characters are given for the first time.

SEND FOR OUR COMPLETE CATALOGUE

MATTHEWS

Songs from the Dramatists

Edited by PROF. BRANDER MATTHEWS. Text of Robert Bell. With Introductions and notes. 340 pp., 18mo, cloth, 35 cents; limp leather, 75 cents; 12mo, cloth, plain, 60 cents; gilt top, 75 cents.

For half a century this collection of songs has been a favorite with all lovers of the English lyric. It covers a wide array of writers, with brief biographical sketches, notes, and other aids to the readers.

MILLER

Finding the Way

By J. R. MILLER, D.D. 16mo, plain edges, 65 cents net; cloth, gilt top, 85 cents net. Postage, 8 cents.

The Face of the Master

By J. R. MILLER, D.D. Chiswick Series. 12mo, illustrated, decorated cover, gilt top, 50 cents net. Postage, 5 cents.

The Inner Life

By J. R. MILLER, D.D. What Is Worth While Series. 12mo, illuminated cover, 30 cents net. Postage, 5 cents.

More than a million copies of Dr. Miller's kindly helpful books have been issued, some of them being translated into several foreign tongues.

MORRIS

Poetical Works

Of WILLIAM MORRIS. Selected and edited by PROF. PERCY R. COLWELL, with introduction, notes, bibliography, and photogravure portrait. 8vo, cloth, gilt top, $2 00; half calf, $3 50; limp seal, $4 50.

As a poet Morris ranks with Swinburne and Rossetti among the chief ornaments of the Victoria era. These carefully selected poems will show him at his best, and will widen his circle of American readers.

NICOLL

How to Bring Up Our Boys

By S. A. NICOLL. What Is Worth While Series. 12mo, illuminated cover, 30 cents net. Postage, 5 cents.

Not vague theorizing or sermonizing, but straightforward hints from one who has had unusual opportunities in the bringing up of boys.

NICOLL

The Lost Art of Reading

By W. ROBERTSON NICOLL. What Is Worth While Series. 12mo, illuminated cover, 30 cents net. Postage, 5 cents.

A forcible plea for higher literature and the moments of cultivated leisure too often forgotten in the work-a-day world of the present.

OMAR KHAYYAM

The Rubaiyat

Of OMAR KHAYYAM. Chiswick Series. With 8 illustrations. 12mo. gilt top, 50 cents net. Postage, 5 cents.

This text of the Rubaiyat deserves notice because of the quaint drawings with which it is illustrated, the special type, and the binding.

RAWSON

Twenty Famous Naval Battles

By E. K. RAWSON, U. S. Navy Department. Illustrated with plans, old prints, maps, and portraits. 12mo, cloth, $2.00.

In answer to a general demand from readers this well-known book of battles, from Salamis to Santiago,—a "Creasy on the Sea"—is now available in a single-volume edition, well printed and illustrated.

ROSSETTI

The Complete Poetical Works

Of DANTE GABRIEL ROSSETTI. With introduction and notes by W. M. ROSSETTI, and indices. Gladstone edition. 12mo, cloth, gilt top, 75 cents.

This is the first edition of Rossetti's poems to be fully indexed. It follows the authorized English text, is complete, and contains an introduction by the poet's brother, notes and indices.

SHAKESPEARE

Macbeth and Julius Cæsar

THE FIRST FOLIO EDITION

Edited by CHARLOTTE PORTER and HELEN A. CLARKE. "Handy volumes," with photogravure frontispieces and rubricated titles. Cloth, gilt top, per volume, 50 cents net; limp leather, 75 cents net. Postage, 5c.

SHERIDAN

Comedies

Of RICHARD BRINSLEY SHERIDAN. Edited with introductions and notes by BRANDER MATTHEWS. 1 vol., 18mo, cloth, 35c.; limp leather, 75c.; 12mo, cloth plain, 60c.; gilt top, 75c.

"The Rivals" and "The School for Scandal" are considered the best comedies since Shakespeare The two plays are here given in one volume, with full and scholarly editorial material.

SPENDER

A Browning Calendar

Edited by CONSTANCE M. SPENDER. Chiswick Series. Special type by the Merrymount Press. 12mo, gilt top, 50 cents net. Postage, 5 cents.

A unique arrangement of selections from Robert Browning's poems, in calendar form—one for each day in the year.

STORM

Immensee

By THEODOR STORM. Chiswick Series. With 8 illustrations. 12mo, gilt top, 50 cents net. Postage, 5 cents.

A special printing of this beautiful German classic, with full-page half-tone illustrations of exceptional merit.

THACKERAY

The Complete Works (Cornhill Edition)

Of WILLIAM MAKEPEACE THACKERAY. With biography, bibliography, and special introductions by WILLIAM P. TRENT, of Columbia University, and JOHN BELL HENNEMAN, of the University of the South. Fully illustrated. 30 vols., 8vo, cloth, gilt top, $37.50; half calf, gilt top. $75.00. Sold only in sets. Ready in October.

WARE

Zenobia

By WILLIAM WARE. Luxembourg Library. With 17 illustrations, 8vo, cloth, gilt top, $1.50.

The kingdom of Zenobia, Queen of Palmyra, has vanished, and even the great empire which caused her overthrow is but a memory; yet books like this will prove enduring witnesses to all future years. This edition gives a series of valuable photographs of the ruins of Palmyra.

NEW BOOKS FOR YOUNG PEOPLE

BUTTERWORTH

Little Metacomet

By HEZEKIAH BUTTERWORTH. Twentieth Century Juveniles. Illustrated by FRANK T. MERRILL. 150 pp., 12mo, illuminated cloth, 60 cents net. Postage, 10 cents.

Little Metacomet was the son of King Philip, who waged fierce war upon the colonists of America. This story shows the brighter side of Indian life, picturing the small prince among the birds, animals, and flowers of the New England woods.

HAWKES

Stories of the Good Greenwood

By CLARENCE HAWKES, author of "The Little Foresters." Twentieth Century Juveniles. Fully illustrated by CHARLES COPELAND. 150 pp. 12mo, illuminated cloth, 60c. net. Postage, 10c.

The children will be glad to follow this entertaining writer of nature again to the field and forest, as they have found him to be one of the best guides that could be secured. Here he tells many interesting tales of bird and beast and woodcraft.

LEONARD

It All Came True

By MARY F. LEONARD, author of "How the Two Ends Met." Twentieth Century Juveniles. Illustrated by CHARLES COPELAND. 144 pp., 12mo, illuminated cloth, 60 cents net. Postage, 10 cents.

A rich but lonely little girl is the "Princess" of this make-believe fairy story She is rescued by the children next door, and other remarkable things happen

OTIS

Dorothy's Spy

By JAMES OTIS, author of "How the Twins Captured a Hessian." Twentieth Century Juveniles. Illustrated by CLYDE O. DELAND. 164 pp., 12mo, illuminated cloth, 60 cents net. Postage, 10 cents.

An exciting story of the first Fourth of July, where two children see Washington's review in New York and King George's statue pulled down, and have an adventure with a red-coat.

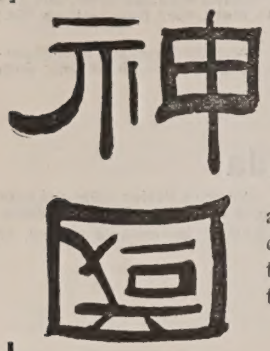
THOMAS Y. CROWELL & CO., 426-8 West Broadway, N. Y.

THE NEW MACMILLAN BOOKS



PUBLISHED THIS DAY.

Mr. LAFCADIO HEARN'S Japan

AN ATTEMPT AT INTERPRETATION *Cloth, $2.00 net (postage 13c.)*

The last, most serious, and most complete work of "the one who, above all others, was most capable, and most successful in giving us the fine flavor of Japanese civilization . . . It is not a matter of relating customs, giving illustrations, telling anecdotes, describing scenes. It is a much subtler effect . . . But the Japanese and the Westerner acquainted with the East alike testified to Mr. Hearn's rare interpretative gift, the subtlety of his sympathy and the effectiveness and fidelity of its expression."

—The Evening Post, Chicago.

Mr. Justin McCarthy's *autobiography* **An Irishman's Story**

A representative Irishman, the well-known author of "A History of Our Own Times," tells this graphic and engaging story. He knew English politics thoroughly as a reporter of the House of Commons; his interests were wide, his connections with many public men were intimate, and his personality is delightful. *Cloth, 8vo, $2.50 net (postage 17c.)*

A new and enlarged edition, with five new chapters

Mr. Francis L. Wellman's The Art of Cross-Examination

"Quite as attractive as a new story by Conan Doyle."—Philadelphia *Press.* *Cloth, $2.50 net (postage 16c.)*

"*It is entertaining to a degree, even to men who know nothing about law.*"—NEW YORK TIMES.

By the Author of "The Real World," "The Web of Life," etc.

Mr. Robert Herrick's *new novel is entitled* **The Common Lot**

Its first edition was exhausted by advance sales a week before the day of publication.

The book is an extremely interesting picture of the forces of corruption brought to bear upon a young architect. Through an interesting story it shows the corroding influences of greed and graft, the awakening shock of a great disaster, and his later growth. *Cloth, $1.50*

OTHER NEW NOVELS.

The Second Edition of

Mr. Mark Lee Luther's The Mastery *Cloth, $1.50*

"If you like a good, meaty story, full of red blood and growing in vigor till the last word is said, we recommend this."—*Cleveland Leader.*

Mr. Upton Sinclair's *novel* **Manassas** *Cloth, $1.50*

A tense, absorbing story of vigorous contrasts.

Mr. Laurence Housman's *novel* **Sabrina Warham** *Cloth, $1.50*

"Far out of the ordinary in interest, strength and scope."—*N. Y. Times.* *Second Edition.*

READY NEXT WEEK

Mr. F. Marion Crawford's

new novel

Whosoever Shall Offend

is as full of romance and entertainment as was his last year's success "The Heart of Rome." The central theme is the attempt of one man to undermine the health, moral and physical, of a lad who stands between him and a rich estate. *Cloth, $1.50*

Miss Gwendolen Overton's

new novel

Captains of the World

is a strong addition to the list of industrial novels, being clear, interesting and unusually sane. *Cloth, $1.50.*

175th thousand **Mr. Winston Churchill's** *novel* **The Crossing**

"It is a genuine embodiment of the young life of a great people; the reader himself feels the joy of high-spirited adventure," says the London *Academy.* *Illustrated. Cloth, $1.50*

Published by **THE MACMILLAN COMPANY,** 66 Fifth Ave., N. Y.

The Nation.

NEW YORK, THURSDAY, OCTOBER 6, 1904.

The Week.

People who commented upon President Roosevelt's failure in Gen. Miles's case to take the usual official notice of the retirement of the General of the Army, said it betrayed a small-minded and unforgiving temper which they would not have suspected in him. But that inference did the President injustice. No one can question his native magnanimity after reading his telegram of condolence on occasion of Senator Hoar's death. It required a really lofty soul to overlook the fact that the Senator, in almost his last speech of any significance, thus characterized Theodore Roosevelt's dealings with Colombia:

"Now, Mr. President, I want to know—I think the American people want to know and have a right to know—whether this mighty policeman, instructed to keep the peace on that isthmus, seeing a man about to attack another, before he had struck his blow manacled the arms of the attacked so that he could not defend himself, leaving the assailant free, and then instantly proceeded to secure from the assailant the pocketbook of the victim, on the ground that he was *de facto* the owner?"

More Panama chickens are coming home to the White House to roost. Another emergency calling for quick thinking and prompt action is before the President. His own bantling Republic of Panama has filed a protest with the State Department, on account of the high-handed action of this Government in the canal zone. It alleges oppression and violation of the treaty, and asks that the matters in dispute be referred to the Hague Tribunal. It might seem difficult for Mr. Roosevelt, in his new rôle as *pacificator mundi*, to refuse so reasonable a request, especially as he is just about to summon the Hague Conference afresh; but it is already evident what sort of reply will be given to the pained Panamanians. The State Department has just explained pityingly to the Minister of Panama that arbitration is not for the likes of him. But, asks Minister Obaldia plaintively, is the Washington Administration to be both judge and jury, just because it is strong and Panama is weak? Si, Señor! After having robbed Colombia, do you suppose that this nation is going to let you have anything to say about our disposition of the booty?

The Republicans assure us that there is but one Roosevelt and that "two" is a slander. The approved maxims which he lays down as a candidate for the Presidency, are those which have always filled his thoughts and animated his whole life. Secretary Hay on Monday, addressing the International Peace Conference in Boston, added a few touches to the Presidential portrait now enjoying the greatest popularity. "President Roosevelt," he said, "has the same tireless energy in the work of concord that he displayed when he sought peace and ensured it on the field of battle. No Presidents in our history," he added, coupling McKinley with Roosevelt, "have been so faithful and so efficient as the last two in the cause of arbitration and of every peaceful settlement of difficulties." "We shall continue to advocate and to carry into effect, as far as practicable, the principle of the arbitration of such questions as may not be settled through diplomatic negotiations." Now every good citizen must rejoice to hear such principles as these enunciated by a national administration, whatever its party complexion. What puzzles us is why, in nominating so conspicuous a man of peace, ex-Gov. Black should have gone out of his way to talk about war, a thing the mere thought of which is evidently abhorrent. Why, in celebrating the virtues of a life-long apostle of peace, should the epigrammatic orator have used the phrases he did? "You may talk of orderly tribunals," said he, "and learned referees; you may sing in your schools the gentle praises of the quiet life; you may strike from your book the last note of every martial anthem, and yet out in the smoke and thunder will always be the tramp of horses and the silent, rigid, upturned faces." If we are to accept Mr. Hay's estimate of the President, all this was not only a disagreeable picture, but absolutely irrelevant.

People who take their politics from bill-boards and cartoons and bawled headlines will naturally protest that they cannot read all of the letter by Carl Schurz, as printed in the *Evening Post* of Monday; and it is perhaps over long. It contains, however, matter of the highest importance, set forth with singular fair-mindedness and literary skill. The weight of his long experience and honorable reputation goes with all that Mr. Schurz writes; and this statement of his, though it may be attacked by many, will be asserted by no one to be the work of a partisan or dishonest mind. Republicans who have hailed Mr. Schurz's adhesion to their cause, in those political contests when he has sided with them, cannot with any grace sneer at him now, or discount his influence with men who choose their political company by conviction more than by prejudice. The analysis of President Roosevelt's character is made by Mr. Schurz with an impartiality and keenness of discrimination which call for especial admiration.

The tobacco-stamp decision, though it concedes a little to the Trust, is on the whole in favor of the "independents." The "large red stamp" is to be red, but not large, and is to be put on the bottom of the box. The arguments in support of the decision are, be it noted, those advanced by the "independents." They protested that in practice the stamp was used as a trade-mark to advertise the imported goods. President Roosevelt, as his view is expounded by the Secretary of the Treasury, holds:

"The Government's business is to collect the revenue and to provide as far as possible against fraud; but it is not the Government's business to furnish a guaranty in the form of a trade-mark for the benefit of the goods. This should be left in the tobacco business exactly as it is in all other businesses."

Back of this conclusion stands a glittering aggregation of talent, as the late Mr. Barnum would have said: the Secretary of the Treasury and two of his assistants, the Solicitor of the Treasury, Attorney-General Moody, and the President of the United States. From the unanimous opinion of these dignitaries no one except the Tobacco Trust is likely to dissent. The "independents" and their 250,000 votes and eight Congressional districts—or was it twenty-eight in their last outgiving?—are presumably happy.

In view of the awkward position of Republican orators and organs, called on to explain the $23,000,000 deficiency in the Government's revenues for the first two months of the fiscal year, it is natural that they should greet with jubilation the news of a $5,800,000 surplus for September. It is true that the same month in 1903 yielded a surplus revenue of $6,300,000, and in 1902 one of $11,000,000. But there is, at all events, a surplus, and it may be that the turn of the tide is close at hand. Receipts by the Government, last month, ran beyond those of 1903—which has not happened since February. Expenditure increased, to be sure, more rapidly than income; but expenditure can sometimes be temporarily held in check. Even so, the Government's accounts will not provide very great comfort to Administration orators. October interest payments, footing up something like $4,000,000, cannot be deferred; it is not easy to keep down the drafts of the Navy Department, with the year's much larger appropriations on the books, and even last October there was a deficit of nearly $5,000,000. If last year's results were to be duplicated, election day would be approached with a deficit, for the four completed months of the fis-

cal year, amounting to something like $23,000,000. The Secretary of the Treasury, last December, estimated that the deficit for the full fiscal year 1905 would be just this sum. To escape exceeding even that far from optimistic estimate, it would be necessary to have no more excess of expenditure between election day and July first.

Despite confident announcements, the Fall River mills did not open on Monday. That city—formerly so bustling—is to be given still further opportunity to reflect on President Roosevelt's dictum that wages were never higher. Its mills are shut up, its merchants are losing money, and the men in the stores are being thrown out of jobs. All this is because the cotton-mill operatives are a little slower in recognizing that times have changed than other classes of labor have been. A good many mills of all kinds have been starting up lately because the employees have concluded to accept lower wages and talk less about the rights of unions. A heavy demand for cotton goods might bring victory to the Fall River operatives, but this is not yet in sight. Despite Republican prosperity, consumers think twice before paying high prices for cottons. If the mills are going to do any business, they must economize, just as those in a great many other industries have had to do. Cotton manufacturing is at present waiting, like every other business, for the country to catch up with its extraordinary expansion of the last six years. If the cut in wages is accepted in Fall River, it will undoubtedly be applied throughout New England. Perhaps that will be the result of the conference which, it is said, will shortly be held to settle the strike.

Gov. Odell is serving at least one useful purpose. He shows what the fate of a boss would be who should dare ask the voters to say what they think of him. Bosses know better than to submit themselves to a popular election. At any time when Platt was acclaimed as the undisputed leader of his party in this State, notoriously he could not have been elected to the humblest public office. This he well knew, and wisely stuck to his machine and his bond-slaves in the Legislature. But Odell has done his best to make himself the chief issue in this State campaign. Poor Mr. Higgins has thus far been so pushed into the background that, if he does not emerge soon, people will think that it is Odell who is the Republican candidate for Governor. Odell is making his wonderful card indexes of voters and appointing deputy leaders and exercising every art of the political manager in order—to elect Mr. Higgins? No, to vindicate himself. But the gathering clouds show what sort of storm is going to burst upon the boss who seeks a vindication at the ballot-box. We wish all the bosses would "try it on" in the Odell fashion, so that they, too, might get the popular verdict upon their manners and morals.

If we may judge by the space devoted to it in Western newspapers, the Mormon question will play a very important part in the politics of the Rocky Mountain States this year. The new third party in Utah, calling itself the "American party," has decided to nominate candidates of its own for all offices except Presidential electors and members of the judiciary. Meanwhile, Senator Kearns, one of the most prominent men in the new movement, in order to show that his attack on "Smootism" is disinterested, has announced that he will not be a candidate for re-election. Nothing shows better the curious position of the two parties towards the Mormon Church than the fact that at the initial mass meeting of Gentiles at Salt Lake City, where Republicans were the moving spirits, the most vigorous and effective speaker was the Democratic Senator from Idaho, Mr. Dubois. In Idaho his party is making a strenuous fight against Church domination, while the other ignores it as an issue. In Utah, since the Mormon Senator demonstrated his control over the Republican organization, a professedly non-partisan anti-Mormon movement has begun, while the Democrats keep quiet and hope at heart that the solid Church vote will not be cast against them. In Wyoming, a polygamous Mormon has just resigned as a Republican Presidential elector. But for the Smoot hearings before the Senate committee last winter, it is hardly probable that agitation would have taken this form. Unquestionably the most effective anti-Mormon document put forth in years is President Smith's admission that if Apostle Smoot had run for the Senate without the Church's permission, he would have been considered "out of harmony with his quorum."

Reports from Vermont tell of an organized and powerful movement for the repeal of the license law passed two years ago, and this will be one of the important questions before the Legislature which assembled on Tuesday, though the party in power has pledged itself to another two years' trial of the law. It is evident that there has been a decided reaction from the temporary enthusiasm in which the State overthrew the long-standing prohibitory law. Forty-four towns which voted "yes" two years ago, voted "no" this year, while only one changed from no license to license. Most of the towns still for license declared for it by reduced majorities. At the same time, it must not be forgotten that to say that license has failed in any number of localities is a very different thing from saying that the local-option law is a failure as compared with statutory prohibition. It is a good thing that these forty-four towns have seen their way to get rid of the saloon through the movement of their own public sentiment—much better for the cause of morality and sound government than if the same places were compelled to reform because other towns outvoted them. The Southern States present to-day the largest stretches of "dry" territory in the country, though not one of them has State prohibition. Local sentiment has brought about a gradual extension of no-license territory, until in such a State as Tennessee the sale of liquor is confined to less than a dozen of the larger cities. If every town and city of Vermont should vote "dry" at the next election, it would not necessarily be an argument for going back to statutory prohibition.

Secretary Taft's order that the Chicago River tunnels must be lowered before April, 1906, so as not to interfere with navigation, is a step in one of the most extraordinary campaigns ever taken against a municipal nuisance. The tunnels effectually blocked the river to vessels of any great draught, and agitation to have them lowered has been intermittent for many years. One local authority after another was appealed to, without result. As a last resort the city applied to the Federal Government, not for the usual financial aid in improving a river for navigation, but for drastic action. Representatives from the city of Chicago introduced at the last session of Congress and pushed through a bill authorizing the Secretary of War to declare the tunnels an obstruction to navigation, and impose a heavy fine for every month of their maintenance. "I find that I have not the moral resolution to do right of my own accord and remove those tunnels," the city said, in effect; "I therefore beg that you threaten me and if necessary punish me until I do." The rod is to be applied by request of the naughty boy. It was a novel enough way of going about a reform and may prove to be effective; yet we fancy that the city would have been up in arms had the initiative come from without.

The *Evening Post's* Washington correspondent pertinently suggests that there should be some organization akin to the Indian Rights Association with the object of supplying accurate news from the Philippines. As it is now, the people of this country must depend for their information largely on the reports of officials, most of whom are directly interested in representing the situation as paradisaical. President Roosevelt declares the insular government a mo-

del, and Secretary Taft does not dissent when his enthusiastic superior compares him to Cromer, Milner, and other great colonial lights. Governor Wright's only trouble is the pesky Americans (Mr. Roosevelt included) who will upset the Filipinos by talking of their independence. But outside of official circles there is a very great difference of opinion. The military men in the islands can see nothing in the future save bloodshed and unceasing strife. The American newspapers and business men in Manila cannot sufficiently express their contempt for the commission and all its works, while intelligent foreigners, like John Foreman, consider our experiment a practical failure thus far. Surely, there ought to be some means of getting news of the islands which is absolutely non-partisan and accurate, leaning neither towards the Civil Commission, the army, nor the merchants whose cry is the Philippines for the Americans. If something of this kind is not done, the public must continue to be misled or deceived.

American consuls in Europe are now busy participating in a symposium on "dumping." The views of our representatives at London, Glasgow, and Edinburgh were published on Thursday. These, according to high protectionist authority, strikingly demonstrate the 'inadequacy" of the Democratic argument that the tariff should be lowered to keep American manufacturers from selling cheaper abroad than at home. The British, it seems, keep up the home market and cut prices to foreigners, just like our own Trusts. Such is the conclusion drawn from the following statement of our consul at Glasgow: "Surplus stocks are avoided, even to the extent of closing the works. However, if there is a surplus, 'odds and ends,' it is exported at reduced prices." The consul-general at London is "quite convinced" that concessions are made to foreign buyers, but he slips up when it comes to furnishing proof. The best he can do is to cite the "dumping" of several hundred copies of a book which "did not sell as well as expected" at home. No doubt the British manufacturer cuts prices abroad when he finds he has miscalculated the market, but nothing is said by our consuls to contradict the plain inference of the report recently issued by Mr. Chamberlain's tariff commission—namely, that the "dumping" methods of Germany and the United States are something English and Scotch manufacturers have yet to be educated up to. That is why the Hon. Joseph wants a protective tariff. It doesn't make a particle of difference how big your loss is abroad, if you can only make your friends and neighbors at home foot the bill. That is one difference between the British and the American "dumper"; the latter can hide behind a protective tariff.

Our consul at Pretoria recently lodged a protest with the British Foreign Office against the treatment of thirteen American negroes in the Transvaal. They have not been allowed to travel in second-class railway carriages, or to walk on the side-paths (which seem to be reserved exclusively for the whites), or to start in business. It will, unfortunately, not be difficult for the Foreign Office, if it sees fit, to send our consul some countervailing facts about the treatment of negroes south of Mason and Dixon's line, with a few references to our "Jim Crow" cars. Sensitive Southerners will, of course, see in all this merely another Republican bid for the negro vote. The English Liberals are citing it as proof of their contention that Mr. Chamberlain's moving indignation on account of the outrageous treatment of the Kaffirs by the Boers was pumped up. Lord Lansdowne, in the days before the war, declared that, "among the many misdeeds of the South African Republic, he did not know of any that filled him with more indignation than its treatment of the Queen's Indian subjects." Lord Salisbury's war cry was: "Equal rights for men of all races." The wrongs of the poor Kaffirs were dwelt upon by any number of humbugging Imperialistic orators, who now pay no attention to the appeals of British Indians, American negroes, and Zulus for the restoration of the good old times of President Kruger.

Sir William Harcourt enjoyed in England, and particularly in the House of Commons, a repute not unlike that of Senator Hoar in this country. He was the representative of an elder day not only in years, but in his entire conception of public life. The ways of the wire-puller and the mealy-mouthed politician he could never make his own. A formidable debater, he spoke not for the passing fad of the hour, but for a consistent body of principles which he had thought out and was prepared resolutely to defend. In all that related to finance and fiscal policy he was a master, and nobody would have been better able to pulverize Mr. Chamberlain's contentions. Hence Sir William's disappearance from the scene at this juncture will make his loss doubly felt. Uncompromising in public life, and above the art of being all things to all men, he was not a popular leader of his party; but in private his charm was great. His learning and wit and knowledge of the world made him much in demand socially. One has only to read George Russell's stories of his bright sayings to see that he was as deft in the swordsmanship of repartee as he was overpowering in his use of the Nasmyth hammer in public debate.

The Japanese movement before Mukden is unquestionably the hugest manœuvre ever undertaken by a modern army. A front sixty miles long has hitherto been unheard of in military annals, and raises at once some very interesting questions. Can an army extended over such a distance be successfully commanded by one human being? The size of a regiment has been limited by what is considered the capacity of a colonel, just as the size of a squadron of cavalry has practically been fixed by the physical inability of a captain to control more than a given number of horsemen. If Oyama can really manœuvre four armies as one, keep them in touch on plain and mountain, and prevent the line from developing a fatal weakness at any critical point, the art of warfare must certainly have advanced. The Japanese are said to be very strong in their field telegraph and in their planning in advance for every detail of a battle; but the failure of the smaller enveloping movement at Liaoyang makes it probable that Oyama will again have to content himself with a strategic success rather than the capture or annihilation of Kuropatkin's forces. Whether Kuroki is once more to bear the brunt of the turning movement on the east, or whether Oyama will turn to the plains on the west as the best means of striking the Russians, has not yet been clearly developed.

Japan's resort to a third internal loan —this time of forty millions of dollars—shows how rapidly her war burdens are beginning to pile up. A military expert, writing in the London *Times*, roughly estimates her daily war expenditure at $500,000, or $15,000,000 a month. This is obviously guesswork, particularly as no accurate information as to the number and pay of the Japanese reserves now being called into service is obtainable. One of the heaviest items is the cost of coolie transportation in Mantchuria—paid in hard cash —and this expense steadily increases the further the Japanese armies penetrate into Mantchuria. It is only a question of time before Japan must again enter the market for a foreign loan, this time with her railroads as a pledge instead of her customs, and there are those who believe that her recent victories will enable her to obtain better terms than when she negotiated her previous loan, which was concluded before her armies had successfully crossed the Yalu. As for Russia, the writer in the *Times* remarks that her "finance is a much too tangled skein for any one to unravel who is not to the manner born." M. Lévy, the French expert, calculated in June that the direct cost of the war for Russia was between thirty and thirty-five millions monthly. This must have been increased since then, owing to the mobilization of the additional army corps and the recent disasters, so that forty millions a month is now a conservative estimate of the actual expenditure.

GEORGE FRISBIE HOAR.

When the United States Senate comes to pay its customary tribute to the departed senior member from Massachusetts, it can unanimously praise one who for twenty years defended it against the charge of decadence and growing disrepute. Mr. Hoar did more than that: he resented with asperity attempts to bring the force of public opinion to bear upon that body by petitions and the like—as in the case of the ill-fated Olney-Pauncefote arbitration treaty of 1897. Loyalty such as this will have its official reward; and it will also be remembered, to the credit of Mr. Hoar's heart if not of his authority as a Constitutional lawyer, that he insisted on the right of every State to be represented continuously in the Senate. He abhorred a vacuum in his favorite club; and when the occasion arose in Quay's case in 1899, he stoutly stood up for the legality of the appointment (really a self-appointment, the Governor of Pennsylvania being Quay's creature), though the Senate eventually unseated Quay. This was to be more papist than the Pope, but the excess of zeal in behalf of a full Senate could only be regarded as flattering. Courteous himself, Mr. Hoar did nothing to impair the sacred "courtesy" of the Senate. One tiny fly may, by the too critical, be detected in this pot of ointment, for Mr. Hoar had some wise and weighty words of protest against his beloved McKinley's forestalling independent action of the Senate by appointing its members on important commissions, afterwards to be reviewed by them in their seats.

Individual brother Senators will, of course, bring especial palms. Aldrich will lament the passionate devotee of protection, whom nothing could induce to let Canadian fish enter our ports free. Lodge, reflecting with a sigh on Mr. Hoar's having called the public to witness that he had always voted the same way as his junior colleague, will laud his righteous abhorrence of the independent voter, and dwell on their paternal and filial relations unmarred by Lodge's having—in Everett's pregnant phrase—changed not his mind, but his soul. Spooner will reveal the admirable quality in Mr. Hoar which reconciled right and intense feeling *contra* with sheepish voting *pro*, as in the case of the Panama treaty. Platt will attest Mr. Hoar's commendable coolness towards civil-service reform, while preserving a discreet silence as to his objection to the political assessment of office-holders. Some one may claim a crown for him for supporting (nearly at the expense of his reëlection) the River and Harbor bill vainly vetoed by President Arthur in 1882. More than one will rise up and call him blessed for having helped enact the Arrears-of-Pensions bill.

All his good, we fear, will not be spoken of in the chamber which he has quitted. Before entering it from the House of Representatives he had been faithful in exposing the corruption of the Grant régime. His speeches on the Philippine and the Panama iniquities will remain his noblest monument. He worked hard but uselessly to eliminate the word "cede" from the Paris Treaty with Spain; he inserted in the Military Appropriation bill a statesmanlike provision against the sale and lease of public lands in the Philippines except as regulated. His judgment of our treatment of Colombia will be that of posterity, and no one more truly and fervently brought our Imperialism to book with the Declaration and the Constitution. Yet he denounced President Cleveland for his reversal of the collusive revolution in Hawaii, designed to precipitate annexation, and excused this defection from his own anti-Imperial principles by pointing to the lax morals of Queen Liliuokalani and to the scanty population of the archipelago—"it was a very little one." Towards Cleveland, the validity of whose election he challenged, he was never either fair or generous or anything but partisan, unless in the single matter of the Presidential Succession bill, which he was willing to have inure, if need be, to the benefit of any Democratic Administration deprived of its head. His whole Senatorial career, at least, was marked by a confusion of thought and an inconsistency of action truly remarkable in a man of such natural gifts and training as Mr. Hoar. His economic deliverances were nothing less than naïf, and in general he displayed a lack of humor that belied his relationship to his brother, the Judge.

When the Judge was contesting Republican support in Massachusetts against Butler in 1876, he did not, though a bolter, forfeit the assistance of Mr. George Hoar, then a Representative in Congress. But the latter could not abide bolting in Theodore Lyman, running as a civil-service-reform candidate in 1882. On Butler's election as Governor of Massachusetts and triumphant appearance *ex officio* at the Harvard Commencement, Mr. Hoar, though president of the alumni, refused to walk in the procession. On the other hand, having shown up in blistering terms our un-American offence against the Filipinos, he not only maintained his attachment for McKinley, but, still as president of the alumni, constrained the Harvard authorities to offer the President an honorary degree, which only by accident of non-attendance went unbestowed. He may be said to have atoned for this in some measure by his refusal to deliver a memorial address in eulogy of McKinley to his Worcester fellow-citizens; but this refusal was really a surprise.

Senator Hoar's complacency and optimism were inexhaustible. He was never troubled by the great change which came over the composition of the Senate in his time. He was blind to the corruption of his party, being able to divorce, in his conception, the rank and file of the voters from the machine whose encroachments have perverted the Constitutional scheme of election to both houses of Congress. In the Republican rank and file he saw the hope of the country, and to that end he was a Republican first, last, and all the time. "He was prepared," he said, "to serve God in the minority rather than Baal with the Democrats and Mugwumps, even though they were in the majority." He never could realize that the Republican party had been fossilized by Protection; much less that the Democratic party alone contained within itself a self-reformatory element—though he had twice witnessed the miracle of that element compelling a victorious support from the baser, and passed away in the midst of what we hope will be a third example, begun by the nomination of Parker.

In point of family—or what we should prefer to call sound New England stock—of intellectual, legal, and legislative training, scholarly and oratorical distinction, personal dignity and amiability, and faithful application to the duties of his office, Senator Hoar worthily filled the chair of Webster and of Sumner. We would not say that he cannot, in these aspects, be replaced, but it will be with difficulty. He himself did nothing to make it easy by contending against that slavish party discipline which relegates to private life men of cultivation and political aptitude, but too original, erect, and self-respecting for party requirements. On the other hand, plenty of politicians can be found who may be relied on to vote regularly under party dictation, with or without the privilege of high-minded, eloquent, and convincing outbursts against the course eventually acquiesced in.

A CANDID REPUBLICAN.

In the October *Atlantic* Representative McCall discusses "The Issues of the Campaign" from a "Republican Point of View." His article, by its remarkable freedom from partisan bias and its frank and truthful estimate of men and measures, certainly stands far above the run of political writing. Mr. McCall has fairly earned the liberty of speech which he enjoys and exercises. His hold upon the Eighth District of Massachusetts—one of the most intelligent in the State—has only been strengthened by his independent attitude. The more muttering there has been about his plain-speaking and honest voting, and the direr the threats of the Lodge machine to punish him for insubordination, the

more steadfastly his constituents have stood by him. Elected for six successive terms, his latest plurality was nearly 7,000.

An author and student as well as a Congressman, Mr. McCall writes with the impartiality of an historian. His calm verdict upon the struggle for the gold standard makes kindling wood of the Republican platform, and reduces much Republican oratory on that subject to mendacity. After showing how his own party was too much responsible for the financial difficulties which threatened to submerge us in 1893, Congressman McCall asserts that it was President Cleveland who "heroically performed the task" of laying "a secure foundation for the national credit." One passage we must quote:

> "It is not a difficult thing to be a patriot on dress parade, to the music of bands and amid the popular acclaim. One can be that while sacrificing the people to their own momentary errors. Mr. Cleveland was not that sort of patriot. He was never a great favorite with the gallery. But in unflinching pursuit of a really patriotic purpose, in bravely incurring the odium involved in the performance of a pressing public duty—a duty the discharge of which was of momentous consequence to the country—it would not be easy in the history of all our Presidents to find a parallel to Mr. Cleveland's conduct at this particular crisis. But his heroism proved for the time being his undoing. He saved the gold standard, but he lost his party."

Men who try to be as candid as Mr. McCall must admit that his argument against the Democratic party, drawn from its desertion and execration of its President at that great national crisis, has much weight. He fears that the party would, in a similar emergency, fall away from Judge Parker. That candidate Mr. McCall recognizes as "a man of courage and independence," and remarks that his qualities would not be "out of place in the Presidential office"; but he points out the danger of a breach with his party as befell Mr. Cleveland. It is a result, we must concede, not impossible, though it is both possible and probable that Judge Parker has a talent for winning over opponents not possessed by the ruggeder Cleveland. It is wholly conceivable, therefore, that in a perilous juncture he would stand as immovable as his rock-like predecessor, while yet able to conciliate and harmonize the various elements of his party.

The Massachusetts Congressman's references to the tariff are well-nigh sacrilegious. To the Home Market Club they will seem a stumbling-block and to the stand-patters foolishness. Tariff revision must speedily come, affirms Mr. McCall. If it be said that the Democrats threaten a radical revision, disturbing to business, he declares that "between a radical revision and no revision at all, the former is preferable." If some schedules are not soon changed, they will "impose the payment of a tribute as directly as if that were the declared purpose of the law," and "the plunder and confiscation of to-day become the vested interests of to-morrow." This is simply awful, coming from a Republican, but worse is to follow. Mr. McCall actually ventures to hold an opinion differing from President Roosevelt's! He says that it "cannot seriously be contended" that the tariff has not a direct relation with Trusts. This is a cruel characterization of Mr. Roosevelt's serious contention in his letter of acceptance, and may bring down upon Mr. McCall the President's charge that no man who talks about attacking Trusts by means of tariff reduction can be an earnest enemy of the Trusts. Yet the Congressman is ready with the rejoinder, since he says of Mr. Roosevelt's famous anti-Trust proceedings: "It may be questioned whether they have abated by a single farthing the profits which the Trusts have wrung from the people."

On the whole question of Imperialism and the Philippine policy, Congressman McCall reaffirms his well-known views. He says that if President Roosevelt's language means anything, it means that he believes in the "ultimate independence" of the Filipinos. One of his sound remarks is: "We must change our relations with the Philippines or readjust our system of taxation." The venture that was to result in immense profit has really proved a frightful drain. "Our revenue," says this Republican member of the Ways and Means Committee, "is insufficient to support us with our colonial appendages." Of President Roosevelt's "fine public spirit" and "high ideals of government," Mr. McCall speaks approvingly, but indulges in something like mirth at "that creature of carnage and war, of blood and iron," which is the offspring of the "imagination of some of his eulogists." Indeed, for all the swaggering about the Spanish war—"a war between a cripple and a Colossus"—Mr. McCall has only contempt. "After a half-dozen years of boastful exaggeration and 'world-power' fustian, which have brought us to the point of bullying and beating our little brothers among nations, the time has come for the republic to resume its serenity."

Foolish or bigoted Republicans will denounce Mr. McCall as a traitor to his party. Even ordinarily sensible Republicans may pray to be delivered from such a candid friend, with a residential election pending, and may accuse the *Atlantic* of malice in selecting such a champion of the Republican cause when it might easily have got a writer who would have cried up Republican policies to the skies, but whom nobody would read. Yet if Republicanism has any future, it lies with honest men who stand erect and speak the thing they will, whether girt by friend or foe. And if Massachusetts Republicanism knew the things that make for its own peace, it would be thinking of a successor to Senator Hoar, not in the person of a moneybags or a satellite of Lodge, but in such a man as Samuel Walker McCall.

ROOSEVELT'S PHILIPPINE INCONSISTENCIES.

Scornful as he is of the ability, courage, and consistency of his opponents, nothing quite so aroused President Roosevelt's indignation, in his letter of acceptance, as their uncertainty on the Philippine question. He referred with the utmost contempt to "their irreconcilable differences of opinion," their proved inability to create a conservative policy," and "their readiness for the sake of expediency" to abandon principles. The Democrats, he asserted, had occupied three different positions within fifty days, and one of them, self-government by the Filipinos, was an impudent annexation from Mr. Roosevelt himself.

The President's sarcastic references to the divisions in the ranks of the Democratic party are particularly delightful when one thinks of the good Republicans like Senator Hoar, Congressman McCall, ex-Gov. Boutwell, Justice Brewer, and many others who felt bitterly outraged by the forcible subjugation of the Filipinos. And when it comes to the ability of a party to create a definite policy, we may well ask: What is the Republican plan in regard to the islands? There are many Roosevelt partisans who declare that any one who should haul down the flag in the Philippines ought to be shot as a rebel. Gen. W. H. Carter, a Roosevelt appointee commanding the department of the Visayas, complains in his official report that the present lawlessness of the Filipinos "will delay their ultimate Americanization," and protests that temporary barracks "only serve to develop and confirm in the minds of Filipinos the idea that Americans do not intend to hold the islands permanently." President Schurman, on the other hand, speaks and works for an early independence, while Secretary Taft talks of independence as wholly remote and practically impossible. The Republican platform, ignoring the wishes of hundreds of Republican professors, college presidents, and clergymen, remained silent upon the question of the future disposition of the archipelago.

This state of affairs alone, it would seem, might have deterred the President from indulging in such irony at the expense of his political adversaries. It might have occurred to him, too, that somebody would take the trouble to run over the expressions of opinion in his own multitudinous speeches since 1898, and call attention to the very large-sized beam in his own eye. For instance, on August 31, 1899, Governor Roosevelt declared to his hearers that "The right of justice and of equality be-

fore the law must be established there [in the Philippines], and then it is our duty to build up by degrees, as rapidly as possible, a spirit of manly independence and self-reliance, without which *free* institutions cannot exist." A year later, this present-day advocate of self-government for the Filipinos said in his letter of acceptance of the Vice-Presidential nomination (September 15): "To grant self-government to Luzon under Aguinaldo would be like granting self-government to an Apache reservation under some local chief." Lest anybody should misunderstand this, he made his position perfectly clear twenty-three days later by thus preaching the doctrine of perpetual control of the archipelago: "We cannot in honor shirk our work in the Philippines. . . . We are there, *and we have got to stay.*"

On Memorial Day of 1902 the peaceful spirit was once more supreme in Roosevelt's breast, and, under its enervating influence, he took what he would have characterized two years earlier as a "step backward" by expressing the following most admirable sentiments: "Peace and freedom—are there two better objects for which a soldier can fight? These are precisely the objects for which our soldiers are fighting in the Philippines." And he proceeded to give aid and comfort to Aguinaldo and all the *insurrectos* by repeating that "our armies do more than bring peace, do more than bring order. *They bring freedom.*" In this same address he used the words national independence in connection with the Filipinos, and went on to assert that when the Filipinos have "shown their capacity for real freedom by their power of self-government, then, and not till then, will it be possible to decide whether they are to exist independently of us or be knit to us by ties of common friendship and interest." On July 27 of the present year, in his speech of acceptance, Mr. Roosevelt came back to the self-government idea once more by stating: "We have established in the islands a government by Americans, assisted by Filipinos. We are steadily striving to transform this into self-government by the Filipinos, assisted by Americans." Previously he had declared in his "Big Stick" letter that "it is not true that the United States has any land-hunger." So here this model of consistency rests to-day, on the question of independence.

As to our motives in the islands, Mr. Roosevelt's opinions are similarly varied. At Lawrence, Mass., on August 26, 1902, his view was: "Now we will govern the islands well. We will govern them primarily in their interests, but *in our interests also.*" In April, 1903, he asserted that "The government is conducted *purely* in the interests of the people of the islands." Contrariwise, in 1900, after likening the Filipinos to Apaches, he dared to say: "What the Boxers have done in China would have been done by the followers of Aguinaldo if it had not been for the firmness of President McKinley and those who have stood by him in the last two years." Last year these opinions were quite forgotten. Then, while extolling Gov. Taft and his associates, he affirmed that "With them and under them we have associated the best men among the Filipinos, so that the great majority of the officials, including many of the highest rank, are themselves natives of the islands. The administration is incorruptibly honest; Justice is as jealously safeguarded as here at home." Yet everybody knows that more than three-fourths of the native officeholders of to-day are the same savages who fought us from 1898 to 1900. What a marvellous triumph for civilization!

This confuting of Roosevelt out of the mouth of Roosevelt could be continued much further. But these instances suffice to show his lack of clear thought and his want of statesmanlike policy based on principle. And who so rash as to predict where Mr. Roosevelt will stand a year or two hence if reëlected?

OUR ELECTION AUGURS.

In printing a critical article on the art of prophecy, the London *Spectator* did not perhaps realize that it was offering anything especially timely. But on this side of the water, where few days pass without a prediction by somebody in authority that some particular State is about to give some particular majority for some particular candidate, the subject is particularly suited to the season. An important element in any political campaign is its "atmosphere"; and one of the ways of putting heart into the workers and winning over doubters is to carry out the maxim, "Claim everything."

He would, in truth, be a strange sort of political manager who should stand up before the votes were counted and admit, in so many words, that the election was lost. We expect the Republicans to receive news from the Gulf States, as Mr. Dooley said, "so encouraging as to be almost incredible, or quite so." A prophecy of victory is always regarded as most effective when it is most specific. When a man of reputed sagacity gives his name to an exact numerical forecast of results, it almost compels conviction. Yet even such careful and conscientious anticipations sometimes go wrong.

It takes only a few minutes of browsing through newspaper files of twelve years ago to find the exact counterparts of the glib prophecies of to-day. Then, as now, the note of absolute conviction could be heard from every oracle. Senator Hiscock started on a Western trip at about this season, and, to an interviewer at Chicago, remarked that "New York will give Harrison about the same plurality that he had in 1888." Harrison's plurality was 14,000. Two months after the prediction, the State gave Cleveland 46,000 plurality. Two weeks before election, the optimism of the party carried the national executive committee to the point of sending out a semi-official telegram claiming New York by 20,000. This was signed by such astute politicians as Chairman Carter, and Messrs. McComas and Bliss. In other States, the Republican confidence displayed itself even more strikingly. Ex-Governor, now Senator, Foraker declared in mid-October that there was no trouble about carrying Indiana. State Chairman Gowdy, after a "careful analysis," declared "Indiana is safely Republican, in my opinion, by 5,000 to 10,000 majority." A few weeks later, after a "poll," he raised his estimate to "from 10,000 to 20,000." The State, of course, went Democratic by 7,000.

Henry C. Payne has been one of the Wisconsin leaders who have most convincingly assured the President that there is no cause for apprehension over the Wisconsin situation. We find him saying this same thing in September, 1892. Mr. Burrows, now a Senator from Michigan, after a tour of eleven States with the best of opportunities for "sizing up" the situation, set 25,000 as a reasonable figure for Harrison's plurality in Wisconsin. The State, in fact, gave Cleveland 7,000. Mr. Burrows likewise gave Illinois to Harrison by 20,000. The voters gave it to Cleveland by 27,000. John Kean, jr., who now represents New Jersey in the Senate, was then a candidate for Governor, and was one of the most modest of prognosticators, estimating his plurality at a paltry 5,000, which turned out to be just 20,000 too great.

How, after all, does any one pretend to know beforehand the result of an election? Our Senator goes West on a speaking tour, and, coming back for a call at national headquarters, remarks that Indiana is safe by 15,000. He has talked with the local managers of his own party. They base their information on reports from lieutenants. Some of these have attempted systematic polls of their territory, some have not, but all are eager to make the best possible showing for themselves. Even a poll conscientiously taken records but few of the independents whose shift from one side to the other is one of the chief forces in determining elections. Taking the most mercenary view, there is always the other fellow's money to be considered, and the difficulty of making men "stay bought."

That is the professional politician's situation. The layman is really much worse off. He is strangely fond of having an opinion beforehand on the result in an election. How does he get it? If he is a man of exceptionally wide acquaintance, he may have chatted on the

issues, before the ballots are cast, with something like one two-thousandth of the voting population of this State. He knows three life-long Republicans who are indignant over the pension order, and two others who fear Imperialism so much that they will desert their old party allegiance. On the other hand, he has found four Democrats who wish to hold the Philippines, two who are enthusiastic over the clever handling of the Panama complication, and one who has put his money in a knife factory and fears tariff reduction. Seven is greater than five. Therefore, the Republicans will sweep the State.

The *Spectator*, in the article alluded to, describes "the respectable form of prophecy which consists in deductions from data which are too obscure and subtle to be obvious to a man's contemporaries." Such the glowing utterances of soothsayers at headquarters pretend to be, yet the *Spectator* recalls unfulfilled prophecies. "To the same class belong, too," it remarks, "prophecies which have failed, as when Adams on the eve of the French Revolution saw a long period of peace and prosperity in store for France, but immediate anarchy for England, or when De Tocqueville declared that America must remain an agricultural country with no large fortunes among her citizens. Both Adams and De Tocqueville thought they argued from good data, but they read their data wrong."

THE GOSPEL OF WORK FOR THE INDIANS.

The report made to the American Bar Association at St. Louis recently by its Committee on Indian Legislation contains the only gospel which can save what is still savable in the American Indian. It declares that what the nation must do for its ward is to compel him not only to work, but to work to an economic end. It is too much to expect, as the committee realize, that every Indian will at once become self-supporting, but he can be put upon the road to self-support and required to stay there. The compulsion will come, they believe, when the red man finds himself on the ground, with the alternative of digging a living out of it or starving to death.

Two distinct merits appear in this proposition. First, it does not blink disagreeable facts, perceiving that some Indians will be crushed under the wheel of civilization through their own unwillingness to adapt themselves to the universal order of mankind. Second, it frankly recognizes the wisdom of doing at once a duty which must be done some day, and which will only be made the harder by prolonged postponement. The trouble with nearly every white philanthropist who addresses his attention to the Indian problem is that he lets sentiment dominate judgment. His pity for the individual quite overwhelms his sense of justice for the race. Because, in a group of one thousand Indians, five hundred would take their chances of going hungry if reduced to eating only what they earn, he is willing to sacrifice the welfare of the remaining five hundred who could and would do something for themselves if it were required of them. This is an error not only of logic, but of plain humanity. The history of mankind is full of illustrations showing that human progress has a cruel as well as a noble side. To abandon lawmaking because there are some members of every community too weak or too wrongheaded to conform their conduct to the laws when made, would be a monstrous wrong. Nobody except an anarchist would entertain such an idea, if stated abstractly; and yet there are thousands of good citizens who balk at the thought of bringing the Indian under the law of labor to which all the rest of mankind are subject.

But the committee err in assuming that their proposed new order of things is not already in operation. The Government—lamely, it is true, and in the lumbering way in which it does most things—has been enforcing a compulsory labor law on Indian reservations for some years past. The practice has attracted less attention than it deserved, because it has been established by executive order and not by statute. The Commissioner of Indian Affairs, in pursuance of the general discretion reposed in him by law, has instructed agents everywhere to strike from the free-ration rolls all able-bodied Indians and provide them with work. Naturally, this rule has caused much dissatisfaction, especially in those tribes which had treaties with the Government guaranteeing to them certain food supplies in perpetuity; but the Commissioner has held fast to his purpose, on the theory that a sound interpretation of both the treaties and the general statutes justified him in attaching terms to his distribution of good things.

The committee's demand that the severalty act be put into operation wherever practicable, might be met by the statement that this change, or something corresponding to it, is also in progress at so rapid a rate that probably before another ten years have passed there will not be a closed reservation in the United States. The general severalty law, which gave a wholesome impetus to the movement for individual land-ownership, has of late been superseded to a considerable extent by special legislation adapted to the varying conditions of different tribes. The general law, for example, provides for the allotment of eighty acres to each member of a tribe where the land is recognized as agricultural, but 160 acres where it is fit only for grazing; but in a large part of the frontier West it has proved difficult to classify the land satisfactorily. There are districts in Oklahoma where an active controversy still rages over the question whether they are best adapted for raising wheat or grazing cattle. In places where wheat seems to have gained the day, it is still regarded as dubious whether, in view of exposeure to floods or droughts five years out of ten, the intent of the law would not be nullified unless a double crop could be raised in the fruitful years to make up for the failures in the barren years. In the colder parts of Montana a doubt whether, even with irrigation, anything except hay can be grown, raises the further question whether a hay country is not, after all, only a stock-raising country, and therefore, in fairness, to be governed by the same allotment rule as grazing land.

These few examples will suffice to show the intricacies besetting a subject which seems simple enough on its face, and will explain why the Executive has in so many cases deferred to Congress in the application of the severalty system. Another reason may be found in the fact that the opening of the unallotted Indian lands to white settlement is not an executive but a legislative function, and the only part the Executive takes in the matter is the protection of the Indians by insisting that Congress shall put a fair price upon the opened lands. One of the hardest of recent struggles between these two branches of the Government occurred over the opening of the Rosebud Reservation in South Dakota, made memorable by the riots at Bonesteel last July. When this subject was before Congress, most of the South Dakota delegation stood out for a low price per acre, to be offered as an inducement to the immigration of white settlers; and the President would have been defeated in his fight for fair treatment of the Indians if he had not made it plain that he would veto the whole bill unless this item were satisfactorily adjusted.

Public utterances like those of the Bar Association's committee are an encouraging sign that the intelligence of the American people is coming to the aid of their interest, and their generally right purpose, with regard to the Indians. While it is true that after a long period of sluggishness the Government is waking up to its duty, no harm can come from an active application of the moral prod by just such hands as are now wielding it.

IRISH AFFAIRS.

DUBLIN, September, 1904.

It is a year since the last Irish Land Act passed. Its main object was to induce landlords to sell their entire estates and so close the interminable struggle between them and their tenants. Chief Secretary

Wyndham's bill was considerably modified in passing through Parliament, but only in details. The act provides that a landlord selling his entire estate shall be paid the price agreed on between him and his tenants in cash, instead of as heretofore in 2¾ per cent. stock. In addition to the price, the seller is to get a bonus of 12 per cent. on the price, to be relieved of legal fees and stamp duties, and enabled to borrow at the rate of 2¾ per cent. on the security of his residence and demesne. New machinery was created for the more rapid distribution of the purchase money among sellers and their mortgagees, and three "estates commissioners" were specially appointed to carry out the sale provisions of the act, under which the Chief Secretary anticipated that almost the whole of the tenanted land in Ireland might be transferred to the occupiers within fifteen or twenty years.

Tenant purchasers are to repay the prices agreed by an annuity for sixty-nine years at the rate of 3¼ per cent., interest being at 2¾ per cent., and the sinking fund at ½ per cent. Hitherto, repayment has been made by a 4 per cent. annuity for forty-two years, interest being at 2¾ and the sinking fund at 1¼ per cent. From an arithmetical standpoint an annuity of 4 per cent. for forty-two years is of the same capital value as 3¼ per cent. for sixty-nine years, interest in both cases being at 2¾ per cent. While the annual payment is at a lower rate, the risk of non-payment is spread over a longer term, and the effect of the longer term is to increase largely the amount of interest paid. Thus, a borrower of £100 will in sixty-nine years have to pay £189 as interest, and £35 as sinking fund, while at the same rate of interest in forty-two years he would have paid as interest £116, and as sinking fund £52.

The money for this transaction is raised by the issue of stock in England bearing 2¾ per cent. interest, and repayable at par in thirty years. The loss to the Imperial Exchequer, the bonus to sellers, and any loss from default in repayment are to be debited to and charged against Irish funds; that is to say, the expenditure hitherto claimed to be necessary for police is to be diminished. The grants for local purposes—education, poor relief, and the like, equivalent to those made in the rest of the United Kingdom—are to be pledged for and indented on to cover any loss in this transaction, which it is estimated will cost in the whole about 120 millions sterling. Losses include that arising from the issue of the stock, which at present is at a discount of 10 per cent.

Under former acts it was the special duty of the lending authority to refuse loans unless the security for each advance was deemed adequate, but under the present act the estates commissioners must, for most classes of farms and within certain limits of price, lend without any inquiry into the sufficiency of the security. Thus there is no check on improvident buyers, or on those whom impending eviction for arrears of rent has placed at the mercy of the selling landlord. In such cases default in payment is likely to occur, and as the whole local taxation is liable to make good any losses from non-payment, or delay in repayment, the bargains made between landlords and tenants are a matter of vital concern to the whole body of ratepayers. The local councils, however, who are the guarantors in the last resort for repayment to the Treasury, are not allowed any voice in the matter. As long as loss from default fell directly on the British Treasury, it was considered of the first importance that the security for every loan should be strictly scrutinized; but when Irish local rates were fully hypothecated, all precautions were withdrawn.

The act is working well from the sellers' point of view. Under former acts sales were made at the rate of less than two million pounds' worth in each year, at prices averaging less than eighteen years' purchase of the rents. But during the last nine months the estates commissioners have received agreements to the amount of ten million pounds, at prices averaging twenty-two years' purchase of the rent. In addition to this price, selling landlords get the bonus and exemption from stamp duties and other legal expenses, so that it appears that landlords can now sell at prices equivalent to 40 per cent. more than former current rates, and, under this inducement, are selling about six times as fast as they did before 1903. Tenant purchasers appear willing, in order to secure an immediate reduction in their annual payments, to agree to prices 22 per cent. higher than before without any reference to the additional burden that will fall on them as ratepayers to provide the bonus and make up the losses arising from the issue of stock at a discount, and possible default in repayment by some of the tenant purchasers. It was supposed that, in consideration of the bonus and other advantages, landlords who had been anxious to sell at current rates would abate the prices they were asking, and that tenants would rush in and buy. What has happened is, that landlords have claimed that, as the repayment instalments are now at a lower rate, though for a longer term, the tenants can afford to pay a larger price, and so far they have induced the tenants to do so.

A good illustration of what is going on all over the country came under my notice last week. A large estate in Kerry was sold three years ago for eighteen years' purchase of the rents. The landlord was paid in stock worth 90, so that he got a little more than sixteen years' purchase in cash. I noticed on this estate new buildings and reclamation of waste land, which the owners said they could now make with safety. Adjoining this estate, another extensive tract of poor land, said to be held at higher rents, was sold within the last month to the tenants, who agreed to give twenty-three years' purchase of their rents, the landlord getting, in addition, the bonus and the other incidental advantages which I have mentioned. Thus, on adjoining estates of similar quality, the first landlord got for a £10 rent £165; the second landlord got £260.

On the whole, the Land Act of 1903 is resulting in a very large number of estates being sold, but at prices so high, at rates so far in excess of those which have hitherto prevailed, that repayment of their loans by the tenant purchasers may be doubtful. The restriction of expenditure on education, poor relief, and development of the local resources of the country, is a serious burden on ratepayers, and, as landlords are practically exempted from all local rates on their tenanted estates, and with few exceptions take no part in the management of the educational system, or in the ordinary local business dealing with roads, bridges, and local improvements, they pay no attention to the burden on the rates which has been imposed in their interest. Eight years ago a royal commission reported that Ireland was overtaxed in proportion to Great Britain to the amount of nearly three millions sterling a year. Since then as much more has been added to the burden of taxation on the continually diminishing population of Ireland, and this falls mainly on the poorest classes. The additional duty placed on tea this year means not less than £400,000, to be paid mainly by the poorest classes.

The Government of Ireland is still as wasteful, extravagant, and inefficient as ever. Ireland lags behind the rest of the world in education and the development of its internal resources. For forty years successive governments have promised to establish a system of university education which would suit the needs of the country and be acceptable to the people. To obtain votes, to conciliate the Catholic hierarchy, they have held out hopes and given promises without stint, but nothing has been done. The system of primary education is administered by an unrepresentative, irresponsible board of seventeen members, appointed for political reasons, but never on the grounds of any special knowledge of their duties. They hold secret meetings, give no information as to their proceedings, and are unaccountable to Parliament or to the public. The history, poetry, and language of Ireland have been practically excluded from their programme. Owing to the growing influence of the Gaelic League, the Irish language is now unwillingly permitted to be taught. Drawing has been introduced only within the last three years. The "national" system of education has been one of the most potent instruments of the Anglicization of Ireland. "You speak Irish; how is it your children can't speak it?" I said to a woman lately. "They wouldn't be allowed to use it in school, so we checked them using it at home," was her reply. When the home language is not the vehicle of education, what an obstacle exists in the way of imparting knowledge!

The defects, extravagance, and inefficiency of the present system of education are fully admitted, but as every change requires legislation at Westminster, nothing is or is likely to be done. A movement attracting more attention in England than in Ireland is that of the Irish Reform Association, a self-constituted committee of landlords under the presidency of Lord Dunraven. This body has put forward a programme held by some to be a manifesto in the direction of Home Rule, by others intended to anticipate and minimize legislation in that direction which the balance of parties after a general election may make inevitable. This committee advocates a devolution to Ireland of a larger measure of local government; it considers the present system of financial administration wasteful and inappreciative of the needs of the country—that a system of Irish finance could be devised whereby the expenditure could be conducted in a more efficient and economic manner; that "private"-bill legislation should be conducted in Ireland; that the whole system of education requires remodelling and coördination; that the settle-

ment of the question of higher education is urgently needed; that the better housing of the laboring classes is of the utmost importance. And they announce that they will coöperate in any practicable proposals having the betterment of this class in view.

These are brave words. The English Conservative press denounces the Committee as traitors to the Unionist cause, tampering with the accursed thing, Home Rule; while the Liberal press commend the manifesto as a sign of reasonableness at last among Irish landlords. In Ireland the manifesto is looked upon as an astute move made for the purpose of detaching weak Nationalists from the Home Rule party, attracting those Unionists who see that their party can no longer maintain its irreconcilable position, and attempting to regain some of the political power which the landlords are losing by capturing the laborers' vote. I am inclined to think that this committee is, in a sense, in earnest. They and many others of their class would be in favor of Home Rule if they could be certain that they would be the Home Rulers. Having, during the rule of the Unionists, obtained enormous plunder out of the public purse, by exemption from their share of local taxation, by the reduction of their liabilities to the Exchequer in tithes and quitrents, and, finally, under the last Land Act, having secured, actually or potentially, prices for their estates, at the cost of the public, which exceeded their wildest hopes as much as they exceeded the price of a falling and discredited security, the landlords may be satisfied that there is no more to be got out of the public purse. That they are in favor of popular government, or of the Irish people as a whole (through their representatives) being responsible for their own expenditure and the taxation which that expenditure requires, I do not think.

Their professions of regard for the better housing of the laboring classes may be judged by their performances. The Irish small farmers and laborers were the worst-housed peasantry in Europe, and their houses belonged in law to the landlords. Several Laborers Acts have been passed during the last fifteen years to enable local governing bodies to build suitable cottages with small plots of land attached, to do what in England is considered the duty of the landowner. As a rule, the landlord party have opposed all legislation which involved the compulsory acquisition of sites. By continual appeals against the action of the district councils they have added largely to the expense, which fell almost entirely on the tenant ratepayers. As an example of this: In a southern town, lately visited, which with the whole surrounding district belongs to a wealthy owner who, within the last thirty years, built a new residence for himself at a cost of £100,000, the Council sought to acquire two acres for artisans' dwellings. The landlord opposed them, with the result that the legal and parliamentary costs of acquiring the two acres for which the landlord asked £900 amounted to £300. The price then remained to be fixed by a Government arbitrator.

As to the financial relations of Ireland and England, the party represented by Lord Dunraven's Committee taught the country a lesson eight years ago. They formed a Committee, invited and got the coöperation of the Nationalists, and made fiery speeches in Ireland; Lord Castletown holding up the example of the Boston citizens in relation to the tea duty as a pattern for Irishmen. But, invited to repeat what he had said in the House of Lords, he toned down and explained away his speech, wrote apologetic letters to the *Times;* and as soon as Parliament had exempted the landlords from their share of local taxation, the Committee melted away and has never been heard of since. It remains to be seen whether the Nationalists who were then made a cat's-paw of, will associate themselves with Lord Dunraven's new Committee. Their best course would be to commend the new departure of the landlords, but to let them work out their programme alone, giving Parliamentary support when the occasion arises.

AN IRISHMAN.

MORE ABOUT FOUCHÉ.

PARIS, September 25, 1904.

I mentioned, not long ago, and analyzed the work published by M. Louis Madelin on the famous Fouché, Duke of Otranto. It seemed as if the matter were exhausted by this author's compendious and conscientious volumes. M. G. Lenotre, whose studies on the Revolutionary period are so remarkable, has, however, added a curious chapter to M. Madelin's history—a chapter especially devoted to Fouché's married life and to Madame Fouché. This reads at times like a novel and at times like a drama. M. Lenotre is a psychologist as well as a historian; he gives intense life to the subjects which he treats. We would not, however, encourage him to bring his favorite subjects on the stage, as he has recently done; the stage requires arrangement, artificiality, and often inexactitude, and M. Lenotre's chief merit as an historian is absolute fidelity to the truth.

At the time of the diligences, long before the time of railways, the provincial traveller arrived in the Court of the Messageries, Rue Notre-Dame des Victoires. There he found porters who took possession of his luggage and carried it, often on their backs, to the place which the traveller had assigned to him. It was in this modest way that, in the last days of September, 1792, Joseph Fouché, chosen Deputy by the electors of the Loire-Inférieure, arrived in Paris. He brought with him his wife, Bonne Jeanne, whom he had married only ten days before. She was twenty-eight years old; she was plain, red-haired—what the French call a decided *laideron*. His father was president of the administration of the district of Nantes. It has been said, wrongly, that Jeanne had belonged to a religious order; nothing is known of her infancy or her education. She lived in the shade even after her husband had risen to eminence. Husband and wife took an apartment in the third story of those narrow houses in the Rue Saint-Honoré, near the church of Saint-Roch, many of which still exist. Fouché knew the quarter well, as he had often passed through Paris at the time when he was an Oratorian. The house had the advantage of not being far from the Assembly, which sat at the Manège, near the Tuileries.

Fouché went regularly to the Chamber, but spent all the rest of his time at home with his wife, who was in the family way. Nothing interested her but her household and her husband, judging everything he said or did excellent, sharing all his successive opinions, not from indolence of mind, but from love of him. This piously educated Bretonne is not astonished when, feeling the wind, Fouché writes in his 'Reflections on Public Education,' "All religion belittles and degrades man." She is no more moved when, after the sitting, he comes to announce to her that he has voted for the King's death, and that the King will be condemned. He is sent on a mission, and she joins him, though on the eve of her confinement. They go to Champagne, to Burgundy, to Nevers. On the 10th of August, at Nevers, on the anniversary of the abolition of royalty, she gives birth to a child, and the city celebrates the event. "The National Guard is under arms, the child is shown to the people; a procession is formed in the Place de la Fédération, where the guillotine is erected." At the altar of the Fatherland, a *citoyen* and a *citoyenne* preside over the civic baptism; the child receives the name of Nièvre. "Thus the Proconsul associated his wife with his glory. He loved her tenderly, consulted her often, gave her an intimate place in his life." "She is a model of her sex," wrote he. Of a very pure life, he remained the faithful husband, the constant and devoted friend, in the first years of the marriage. Notwithstanding the horrible ugliness of Bonne Jeanne, he is in love like a shepherd of Florian, and wants people to know it. M. Lenotre gives curious descriptions of feasts which the Proconsul gave as Brutus, in which the execution of criminals alternates with mythological scenes, and in which he is himself dressed as a "priest of nature," with a crown of fruits.

Fouché finds himself so happy in his married life that he abolishes, with a stroke of his pen, ecclesiastical celibacy, and forces every priest "to get married in the course of a month or to adopt a child." He has many occupations; he drains the country of all ecclesiastical ornaments and sends them to Paris. He goes to Lyons on the 10th of November, with his wife and the little Nièvre; he finds there Collot, and proceeds at once with him to the pillage of the churches. "On the 4th of December sixty-four young men are, in his presence, killed with cannon-shot; on the 15th, two hundred and nine fall victims of the mitraille on the Place des Brotteaux; and in the evening Fouché returns serenely home, embraces his wife, inquires for his little child, a sickly infant, whose health constantly made its parents uneasy. He wrote in his fine, nervous, and rapid hand to his colleagues in the Convention those famous letters which are monuments of ferocity and sanguinary delirium: "Tears of joy fill my eyes, they fill my soul. . . . We sent to-night two hundred and thirteen rebels under fire." Bonne Jeanne, the only person whom he consulted, probably read these reports, but she approved everything he did. He quitted her very little. They would walk arm in arm through the city paralyzed with horror, and sometimes went as far as the Place des Brotteaux.

An Oratorian, a friend at the Seminary of Nantes, Father Mollet, one day asked Fouché to help him escape, as his life was threatened. As it was the hour of their promenade, Fouché took him with him and his wife. At the Brotteaux, before the trees which had been splintered by the

mitraille, Mollet nearly fainted. Bonne Jeanne, who walked "with as much impassibility as if she had been in a garden full of roses, was amazed at the emotion of their companion. Fouché shrugged his shoulders. 'Let him make his grimaces and don't talk to him,' said he to his wife." We must add that he gave a passport to Mollet, and thus saved his life. The complete Fouché is in this anecdote.

Barras tells us in his Memoirs that Madame Fouché left Lyons a few days before her husband, in a coach which broke down in the suburb of Vaise, and that this accident revealed a large quantity of packages, her plunder of Lyons. There was, however, no change on their return, in 1794, to the Rue Saint-Honoré. The Fouchés had even debts; the child was ill. Robespierre, who had become a sort of demigod, was so hostile to Fouché that he had to hide from place to place. For ten days he felt, as M. Lenotre says, under the knife of the guillotine. Curiously enough, during these very days he used to meet, under the trees in the Champs-Élysées, Robespierre's sister. What could there be between them? Did she not know that he was married? Did she hope to marry him? We have here, says M. Lenotre, one of those mysterious comedies which abound in the history of the Revolution. What is certain is, that long afterwards Fouché, as Duke of Otranto, gave a small pension to Robespierre's sister.

Fouché succeeded in not becoming a victim of Robespierre, but he was hated by those who triumphed in Thermidor; he was looked upon as one of the most sanguinary tyrants of the Terror, with Carrier and Lebon. His child died at that time, and his wife could not be consoled. He soon had another child, as sickly as the first. After the dissolution of the Convention, he entered into partnership with another member of that body, and undertook to feed and sell pigs. The speculation was not fortunate; he found himself ruined, and on the 31st of December he exiled himself to Saint-Leu, in the valley of Montmorency, where he had a third child, but the children died one after the other.

In 1797 a change of fortune took place; Fouché became an army contractor, and soon afterwards was named Legate of the Directory at Milan. He made the journey to Italy with his wife, who had there a fourth child. From Milan, he was sent to The Hague, as Ambassador. Madame Fouché was not intoxicated by her new grandeur, and remained quite effaced. "One would believe," says M. Lenotre, "that Madame Fouché was unintelligent or apathetic, if one did not know that she was half in all the works of her husband, that she shared all his secrets, that she advised him, that she had constant influence over him." They both had but one desire—to found a family and to enrich it. Everything was subordinated to that sentiment; even ambition seemed only a means to satisfy it. They devoted themselves to their object with a haste which looks like eagerness, as on the day when, leaving the Legation of Milan, they took away, as a memorial of their ephemeral piece of luck, the carriage, the horses, the linen, and a number of things belonging to the Embassy.

We find Fouché always the same in his conjugal relations; he does not care, when he becomes omnipotent, if Paris laughs at his affection for his "laideron." In 1803 he has four children, all in good health; he lives with Madame Fouché in the Hôtel de Juigné, on the Quai Malaquais, which has become the Hôtel of the General Police, the formidable centre of a police which covers the whole of France and the whole of Europe. There Fouché receives every day the reports of his agents, spies, former Terrorists, Chouans, ladies of the world, prostitutes, etc. Fouché organizes this terrible machine; he is all-powerful. He is very rich, and has great domains in France and in Italy. But his domestic life is still modest; when he does not wear his rich uniform, he is dressed like the meanest of the clerks of his ministers. He spends all his evenings with his family when he is not obliged to go to Court.

"The Duchess," says M. Lenotre, "does not consent to leave her children. An old relation, the governess of her daughter, a person of wit and of good manners, some old Oratorians, Fouché's secretary, the preceptor of his sons, are the only guests. They find amusement in a game of cards. Joseph, Armand, Athanase and Josephine run about the room. This man of ice, whom the portraits show us with a terrific pallor, with white lips, colorless hair and eyebrows, and the impassibility of a ghost—this man is gay at home, full of fun, an incessant talker. He goes to bed at ten, like his wife and children; all five sleep in the same room. Bonne Jeanne instituted this régime; she is as jealous of her husband as if he were twenty years old."

He is himself perfectly satisfied; he does not conceal the fact that he loves his wife, and praises to everybody "her enlightened mind and her rare virtues." Bonne Jeanne has become very pious; she receives the Cardinal de Belloy, the Archbishop of Paris. Fouché proclaims that he owes everything "to his remembrance of the morals of the Gospel." At Ferrières, where Fouché retired during the disgrace which followed the Russian campaign, Madame Fouché fell ill; she died there on the 9th of October, 1813, at the age of forty-eight years. "I am much to be pitied," wrote Fouché, "since I have had the misfortune to lose the companion of my life; my work, my books, my walks, my sleep—everything was in common with her." It did not prevent him from getting married, three years afterwards, to Gabrielle de Castellane, and Louis XVIII., forgetful of Louis XVI., signed the marriage contract.

Correspondence.

NON TALI AUXILIO.

To the Editor of The Nation:

Sir: Is not this sermon rather severe on our President?—Yours truly,

Edwin Brainard.

Chicago, September 27, 1904.

Rev. F. E. Hopkins.

[Pilgrim Congregational Church.]

In our city we have had nearly a hundred insurrections in the past eight months, called strikes. And employer and employee still regard each other in a way that invites more of the same sort. We know there are at least ten thousand hungry persons in this town as a result of eight weeks' war at the stockyards. We know that in our hearts we are glad we humbled Spain, gobbled up Porto Rico, hold the whiplash over Cuba, mean to "develop" the Philippines, *and that millions of men hope to elect as our next President a man who climbed to his present eminence on what somebody has called a "ladder of swords."* For all these reasons we discreetly held our tongues when the peace advocates were in Chicago. We permitted the international delegates to find their own enjoyment; and, whether we were polite of not, we were something a great deal more important—we were not hypocrites. It was a great thing for a big city, even unintentionally, to say, We have no sympathy with vague ideas and false definitions of peace.

TOTAL ABSTINENCE IN GERMANY.

To the Editor of The Nation:

Sir: Only a few years ago, who would have believed that in Germany a total-abstinence movement would gain ground so as to attract general attention; that it would make headway against universal and inveterate habit, against ignorance, prejudice, and the love of beer? And yet all this has taken place, and is in progress.

The present agitation against the use of intoxicating drinks has some remarkable features of its own, differing, as it does, very much from the temperance movement here some sixty years ago, and also from the more recent temperance agitation in England and America. In the latter instances it was chiefly the religious, moral, and economic aspects of the drink question which furnished the weapons to combat it, whereas at present in Germany the chief reliance is placed upon the results of scientific investigation concerning the effects of the alcoholic beverages. It may interest the American reader to learn how a beer-drinking nation takes to total abstinence, and what prospects there may be for the cause of temperance in a country where the drink habit permeates all classes of society, and where all social intercourse is associated with the use of wine or beer.

The present movement against the use of alcoholic beverages is of recent date, as appears from what Professor Bunge of Basel says, namely, that as late as 1888 he was the only man within the wide range of the German language who publicly came forward for total abstinence. And Professor Forel, another one of the great leaders of the cause, says that when, in 1887, he urged that, in accordance with English practice, alcoholism should be treated by total abstinence, he was laughed at and railed at, for in Germany and Switzerland alcoholism was treated by alcohol! The force of social usages when in conflict with the unwelcome truth of the harmfulness of alcoholic beverages is strikingly shown by the experience of Prof. A. Fick of Würzburg, as told by his son, Prof. Rudolph Fick of Leipzig, saying that his father, who died in 1891, and who was opposed to the use of alcoholics, did not during his lifetime see any progress of the cause of abstinence worth mentioning, but that he was made to suffer almost daily for his opinion and his practice of abstinence by ridicule and other tribulations.

When, through the efforts of Professors Bunge and Forel, and a few others, the cause of abstinence at last attracted some attention, Professor Kraepelin of Heidelberg in 1892 undertook a series of experiments for the purpose of ascertaining the effect of alcohol upon the simpler operations of the mind, in the hope, as he con-

fesses, of saving something of the reputation of wine and beer. These experiments, which were afterwards extended by some younger men under the direction of Professor Kraepelin, have attracted a good deal of attention, and their results are a storehouse of material for combating the defenders of the moderate glass. They show, of course (what seemed at the time surprising), that the sensation of increased vigor and alertness after drinking a moderate quantity of wine or beer is altogether a delusion; that, on the contrary, the powers of body and mind are diminished by these beverages. More astonishing still, the enfeebling effect persists much longer than was suspected. Thus, Aschaffenburg, experimenting with typesetters, ascertained that when these men had drunk half a bottle of wine each, they were under the delusion of increased vigor and capacity for work, while they actually did inferior work. This disturbing influence was still quite distinct on the following day, so that a second day of abstinence was necessary to bring the men up again to their own standard of efficiency.

A flood of other material was supplied: the greater mortality of the moderate drinker as compared with the abstainer, his greater tendency to mental disorder and to crime. But, alas! how great is the power of habit, how deaf are those who will not hear! Though proof abundant is now at hand that alcoholic beverages injure the health, blunt the understanding, poison the soul, yet those who should before all others take heed—the students at the universities and those who once were students—refuse (with rare exceptions) to be warned. The churches are indifferent or unfriendly to the cause of abstinence; physicians stand aloof, nay, continue to prescribe wine as an invigorating drink to convalescents.

There is, however, a more hopeful side to this matter. The cause of abstinence is making vigorous progress among the laboring classes, who in increasing numbers are joining the order of Good Templars which came to us from England. We have among the laborers and artisans many men enthusiastic for the cause of abstinence. They are rapidly gaining new members from among their numbers. In method of work the German Good Templars differ widely from their English brethren, for whereas in England the churches are active promoters of the cause of abstinence, and the whole mode of agitation has a clerical aspect, and much is made of the Bible as an aid, nothing of the kind takes place in Germany. The pamphlets here used for agitation are short treatises on the effects of alcohol written by such men as Bunge, Forel, and Kraepelin, besides many other writers, all of whom adopt the scientific or physiological aspect. These little tracts, while showing the deleterious effect of drink upon the drinker and his family, do not omit to call attention to the baneful effects of inheritance. Kraepelin and Bunge insist that he who thus poisons the germs of the coming generation commits a criminal act.

The Good Templars have by this time gained a firm hold in the province of Schleswig-Holstein, and in the cities of Hamburg and Bremen. Gradually they are making their way into other portions of the Empire. Thus we have the singular spectacle of an effort among the humbler classes for deliverance from a social vice which afflicts the whole nation, while Church and school stand by indifferent; an effort among the lowly to regain health and vigor, while physicians look on inactive; a struggle to purify family life, to regenerate the nation, in which Church and State take no part.

Respectfully, WERNER A. STILLE.

HANOVER, GERMANY, September 22, 1904.

CHANCELLOR NESSELRODE.

TO THE EDITOR OF THE NATION:

SIR: Allow me to correct a statement in your issue of September 8, 1904, page 195, in the Paris letter on "The Nesselrode Papers." Instead of: "He [Chancellor Nesselrode] lived ninety years, and died as recently as 1850," must be read: "He lived eighty-two years, and died as recently as 1862." C. B. OSTEN SACKEN.

Late Consul-General of Russia in New York.

HEIDELBERG, GERMANY, September 20, 1904.

AN INQUIRY.

TO THE EDITOR OF THE NATION:

SIR: To the second edition of his Ecclesiastical Sonnets Wordsworth prefixed the following lines:

"A verse may catch a wandering soul that flies
Profounder Tracts, and by a blest surprise
Convert delight into a sacrifice."

From what source did Wordsworth derive these lines? Professor Dowden says from George Herbert; Professor Knight, more cautious, bids us compare them with Herbert. The fifth and sixth lines of Herbert's "Church Porch" read thus:

"A verse may find him who a sermon flies,
And turn delight into a sacrifice."

It was common enough for the poets of the seventeenth century to seize a good bit of verse wherever they found it and to rewrite it for their own purpose. In several instances Herbert so rewrote Donne; and Herbert was himself constantly rewritten by Harvey and Vaughan, and to a less extent by Crashaw and Speed. But who carried him up to these "Profounder Tracts" which pleased Wordsworth? I am unable to discover. Can any of your readers inform me?—Very truly yours,

G. H. PALMER.

HARVARD UNIVERSITY, October 3, 1904.

Notes.

The Clarendon Press are to publish for the executors of the late Prof. Frederick York Powell a selection of his shorter and dispersed writings, with a prefatory memoir. The loan of letters and papers contributory to this end is solicited by Prof. J. A. Stewart, Christ Church, Oxford.

For the preparation of a second edition of his official catalogue of Whistler's Lithographs, Mr. T. R. Way will be glad to communicate with owners of lithographs undescribed in the first, through his publishers, Messrs. George Bell & Sons, Portugal Street, London, W. C.

While Mr. James Bryce is visiting this country, Macmillan Company are putting to press a rewritten and enlarged edition of his 'Holy Roman Empire.'

Henry Frowde announces an exact facsimile of the original English edition of Grimm's Tales, with Cruikshank's illustrations to the 1823 and 1826 editions, printed from the original plates. Only 240 copies will be for sale.

Harper & Brothers have nearly ready 'Theophano: The Crusade of the Tenth Century,' by Frederick Harrison; 'A Journey in Search of Christmas,' by Owen Wister; 'The Luxury of Children, and Some Other Luxuries,' by Edward S. Martin; and 'True Bills,' by George Ade.

Baker & Taylor's fall list includes 'The Art of Caricature,' a manual, by Grant Wright; 'The Appreciation of Sculpture,' by Russell Sturgis; and 'The Episcopalians,' by Daniel D. Addison, D.D. (in "The Story of the Churches").

A. S. Barnes & Co. are to undertake a new literary series "In the Days of ——" (Chaucer, and Shakspere, by Tudor Jenks, with more undesignated). Mr. Mabie will furnish introductions.

Brentano's will shortly bring out 'Visits to the Louvre,' by Dr. Arthur Mahler, in collaboration with Carlos Blacker and W. A. Slater, sumptuously illustrated.

'Three Weeks in Europe, or the Vacation of a Busy Man,' by John U. Higinbotham, is announced by Herbert S. Stone & Co., Chicago.

The American Unitarian Association, Boston, will republish the Works of Channing in six volumes, with an introduction by the Rev. John W. Chadwick; and 'Tides of the Spirit,' selections from the writings of James Martineau, edited by Albert Lazenby.

Little, Brown & Co. announce a new work on the Law of Evidence by Prof. John H. Wigmore of Northwestern University.

The old Roman border fort, the Saalburg, in the Taunus Mountains, is to be described in the light of excavations and restorations, by Jacobi, Woltze, and Schulze, with abundant illustrations, some in color. The publisher is F. A. Perthes in Gotha (New York: Lemcke & Buechner).

An English book of 'Selected Cases on the Law of Torts' is published at the Clarendon Press, Oxford (New York: Henry Frowde). The authors are Francis R. Y. Radcliffe and J. C. Miles, and they have rewritten the headnotes of all the cases "so as to state the principle established" rather than "the application of that principle to a particular set of facts." The other notes are mainly "explanatory or supplemental"; in two or three instances they present a statement of the existing law. The cases themselves are abridgments from the original reports. Some authorities lend themselves to this sort of treatment better than others. It should be said that the book is designed chiefly for teachers of law in England.

The third volume of the Hon. John Boyd Thacher's 'Christopher Columbus' (G. P. Putnam's Sons) contains six chapters, with forty-one reproductions of alleged portraits, on the personal appearance of Columbus; two chapters on his handwriting; twenty on the history of his remains since their first burial; and seven on the various families claiming legitimate descent from the discoverer. As in the preceding volumes, the most valuable feature consists of facsimiles of Columbian material, including a series of copies of photographs of all the letters and other unquestioned autographs known to be extant, forty-two in number, with transcriptions and trans-

lations. Throughout, the author's contributions evidence the same critical and historical insight, the same literary and linguistic capacity which marked the previous volumes.

Some forty years ago the Rev. Oswald Cockayne issued, as part of the Master of the Rolls Series, three stout volumes entitled 'Leechdoms, Wortcunning and Starcraft of Early England,' containing a collection of Anglo-Saxon medical treatises. Dr. Joseph Frank Payne, in the Fitz-Patrick Lectures for 1903, made use of the material thus furnished and has issued the results under the title of 'English Medicine in the Anglo-Saxon Times' (Oxford: Clarendon Press; New York: H. Frowde), with some illustrations of medicinal plants drawn from an illuminated MS. of the 'Herbarium Apuleii Platonici,' an Anglo-Saxon version of which forms part of the Cockayne collection. Dr. Payne has endeavored, with more or less success, to trace the derivation of the curative lore of our ancestors to the sources, whether indigenous or derived from the works and traditions of the great Græco-Roman medical school, and he pays a tribute to Anglo-Saxon botanical zeal in the fact that the MSS. furnish about five hundred English plant-names of herbs used medicinally. The illustrations curiously manifest how crude were the ideas of the artists with regard to vegetable forms. The most interesting are a series representing the mandrake, and showing how the resemblance of the root to a human body developed into the conception of a complete man with a crown of leaves growing from the top of his head. All of them show a dog attached and tugging at it, this being the time-honored method of gathering it, on account of the superstition that whoever pulled up a mandrake root would shortly perish.

The seventh edition of a well-known handbook hardly needs a special review. Fifty years ago, the Rev. Dr. G. U. Pope, the present University Teacher of Tamil and Telugu at Oxford, aided by the superintendent of the American Mission Press, published the 'Tamil Handbook,' since prescribed for civilians appointed to Madras. Half a century of improvements, incorporating the result of twenty years' active teaching, has produced a "final edition" of 'The Handbook of the Ordinary Dialect of the Tamil Language' (Oxford: Clarendon Press; New York: H. Frowde). If the venerable author is spared to see his final edition become a penultimate edition, he may still perfect perfection by suppressing here and there what seems like a vain repetition, such as the paragraph on the *āytham* found on page 13 and almost duplicated on page 22. But it is sufficient to say that of the half-dozen Tamil handbooks in existence this is, as it has been, the best; the latest edition having utilized Bühler's 'Indische Palaeographie' for historical statements in regard to the history of the alphabet, while the practical need of the student is always before the author's eye. A good point is that all the examples are drawn from the actual literature, not made up to illustrate a rule.

Dr. Sven Hedin contributes to *Petermann's Mitteilungen*, No. 7, what will be substantially the preface to the forthcoming volumes containing the scientific facts of his last journey. As bringing out strongly the personality of the great traveller it has an unusual interest. The work will consist of eight volumes, to be published in 1906. The edition is limited to 250 copies, price £15. The first two subscribers were the Japanese Count Otani, and the Geographical Society in Tokyo. His own narrative will consist of four volumes of 2,000 pages instead of one as he at first planned. Taking the form of a diary, it will be practically notes explanatory of his 1,149 maps, or, in his own words, "a topographical, morphological, hydrographical, and orographical description of the land through which I travelled." The English translation is by J. T. Bealby, the translator of his previous books. Dr. Sven Hedin regrets the meagreness of his contributions to some important branches of science, from the lack of a scientific staff, and adds, "but I have the peculiarity of loving to be alone, and hence on my travels have always been alone." After a reference to Newton's (attributed by Hedin to Mommsen) comparison of himself to a boy playing on the seashore, he says: "How shall I call myself then?—a child who has never looked on the far horizon of this immeasurable ocean, and whose glance has never swept over its blue mirror, to say nothing of playing with pebbles on the strand. Yet the experiences and observations which I have made in the toilsome wanderings to that wondrous shore, I give to the students of geographical research, in the hope that my work has not been wholly in vain."

An interesting memorial of the days when the Jesuit missionaries formed an influential link between the learning of Western Europe and that of China is reproduced, in reduced facsimile, in the eighth volume of the 'Skrifter utgifna af Kongl. Humanistiska Vetenskaps-Samfundet i Uppsala' (Leipzig: Harrassowitz). It is a six-foot map of the world, in two hemispheres, drawn by P. Ferdinand Verbiest, a Jesuit father who, born in Flanders in 1623, went to China in 1659 and died there twenty-nine years later. In 1671 Verbiest is said to have been appointed royal astronomer to the Emperor Kang-Hsih. His map, evidently drawn some years after this appointment, shows that he must have obtained from Europe several of the best-known contemporary geographical publications. The representation of "The Middle Kingdom," which is given the position demanded by its name, is of course the most important portion of the map. The facsimile, although too small to show the details necessary for careful study, gives quite enough to prove the extent and the accuracy of the geographical information in the possession of the Chinese rulers regarding all their outlying dependencies.

The Northern Museum in Stockholm has just sent out its annual report (*Meddelanden*) for 1902(!). The most interesting acquisition of that year was Viktor Rydberg's library of about 3,000 volumes, and the furniture from his study, presented by his widow. By bequest of the painter, Prof. J. A. Malmström, the Museum received 650 sheets and 26 sketchbooks of original drawings, aquarelles, and oil paintings of buildings, costumes, and race types from Sweden, Norway, and Finland. Numerous pieces of household goods, peasant costumes, and furniture from all parts of Sweden have been added to the collections, as well as some fine specimens of artistic furniture from the end of the eighteenth and beginning of the nineteenth centuries, and some old musical instruments, among them a clavichord made by Peter Kraft in 1801. Three new buildings have been put up at the outdoor museum "Skansen," certainly the most unique part of the whole establishment. Two of them are of particular interest, as illustrating the life of the Finnish population in northern and middle Sweden; one is a dwelling, the other a combined dwelling, steam bathhouse, and grain kiln. A descriptive catalogue of the historico-ethnographical collections at "Skansen" was begun during the year; when completed, it ought to be an important contribution to ethnographical literature. The Museum took part in the International Exposition of Military and Modern Costumes held in St. Petersburg; this necessitated the purchase of a large number of articles of costume, which was made possible through the munificence of Mr. Emanuel Nobel in St. Petersburg, a nephew of Alfred Nobel. The volume is quite fully illustrated, and contains in addition to the report proper three contributions: a Calendar of the parchment scrolls earlier in date than 1600, in the possession of the Museum; some notes on Legends and Superstitions among the Finnish settlements and in Lapland; and an illustrated study of the ornaments on various pieces of furniture and household goods made by an unknown wood-carver and carpenter from Ringebu in Norway.

—To be remarked in the October *Century* is a sensible discussion of the Trust problem by Prof. John B. Clark of Columbia University. He sees clearly two truths which all must come to see before any real progress can be made towards settling that problem, as a disturbing factor in modern political and industrial development—namely, that it is useless to fight against the mere fact of a much greater unification of similar business interests than we have known in the past, and, on the other hand, that such unification is sure to develop evils dangerous to society and the State in the absence of careful legal regulation. The natural laws of trade can be depended upon to interfere with the exaction of exorbitant prices when those prices reach a certain level; but that level is so high that the careful Trust manager can keep safely below it, and still wring from the consumer prices that are essentially oppressive and detrimental to the best interests of society as a whole. Professor Clark's positive counsel is to avoid quixotic efforts at "Trust-smashing," and centre attention carefully upon the points where the unfair exactions of these combinations are brought to bear, such as discriminations favoring the big shipper in railroad rates, cutthroat competition against the independent dealer in given localities or in given classes of goods, and "factor's agreements"—refusing to supply the local dealer with a given Trust-made article unless he binds himself not to buy a similar article from the independent manufacturer. With proper safeguards at these points, it is reasonably maintained that independent competition would meet the Trust at a much lower level of prices to the consumer than under present conditions, and to secure just this result must be the aim of any really practicable measures of relief.

—Elizabeth Luther Cary essays in *Scribner's* what many would regard as the impossible task of establishing "Americanism" as the foremost among the salient qualities of the literary work of Henry James. Admitting the meagreness of his American experience and associations, the American character, she thinks, is portrayed in the majority of his many novels with remarkable sympathy and understanding. Her description of the characters resulting from this sympathetic insight is quite flattering. They appear against the foreign background provided for them in "an air of their own, a clear medium of innocence enriched by intelligence," and from this medium they shine forth "youthful, bright, incorruptible, confiding, expectant," remarkable in the depth of their temperamental refinement and their inability to think coarsely of their relations with their fellow-beings. With an intense thirst they bring this unsophisticated, receptive temperament to the deep wells of transatlantic civilization, expand and ripen with the draughts, and then return to us "rejoiced or sometimes chastened" (can they even gild refined gold or paint the lily over there?), "but singularly unspotted and unimpaired." Doubtless we should all be glad to have just as much as possible of such Americanism here at home; but after all it is the Americanism of Mr. James himself which is in question, and those who deny him this quality will scarcely feel themselves refuted when they find the writer admitting that he has exploited the land of his nativity chiefly "as a place from which to escape whole-hearted to the homes of traditions and symbols, of faint, fragrant messages from the past, and long-established institutions." Mr. F. A. Eaton, the Secretary, contributes the first of a series of illustrated papers on the Royal Academy.

—We have too long delayed noticing 'Diderot's Thoughts on Art and Style' (London: Rivingtons), selected and translated by Beatrix L. Tollemache—a second edition. Mrs. Tollemache seems to have done her work well, and the book should be welcomed as giving to English readers some notion of the ideas on art of the French critic who has attained one of the highest reputations. As one might gather from that critic's admiration for the worst pictures of Greuze (though he could see the faults of coloring in them), the reputation was founded on little real knowledge of or sympathy with painting. It was the accident of Grimm's asking him for some notes on the Salon that first turned his attention seriously to that art, and he always looked at it very much from the outside. He was a humanitarian, a philosopher, one of the preparers of the Revolution, and he preached Rousseau's "Return to Nature." Hence his love for Greuze's moralities (this artist's immoralities are much more painterlike), and hence his attacks on the academic in art, which sometimes give a deceptively modern air to his writings. In reality, he saw little beyond the subject and its treatment from an intellectual point of view, and he could write a formal article on "Composition" without mentioning the arrangement of lines or spaces. Often, in his "Salons," he dwells not even on the subjects of the pictures he is nominally discussing, but on anything that comes into his head which is not the picture. The most fumbling and awkward of the "conferences" of the old Academy show more real knowledge of the aims of art than was possessed by this brilliant writer. Strangely enough, the Revolution of which Diderot was a precursor, produced, in the school of David, an art the most rigidly academic that the world has ever seen.

—In a moderate-sized volume entitled 'Dante and the English Poets from Chaucer to Tennyson' (Henry Holt & Co.) Prof. Oscar Kuhns offers a somewhat sketchy study of the external traces of Dante's influence upon English verse. Although the author shows here, as in his previous literary investigations, evidence of scholarship and judgment, one cannot help regarding all the first half of the book as rather perfunctory and superficial. Certainly nothing is added by him to our knowledge, for instance, of Chaucer's indebtedness to Dante. Occasionally he even seems to overlook the essential feature of the passages he is discussing. In Longfellow's

"The ice about thy heart melts as the snow
On mountain heights, and in swift overflow
Comes gushing from thy lips in sobs of shame,"

as compared with the Italian:

"Lo gel che m' era intorno al cor ristretto
Spirito ed acqua fèssi, e con angoscia
Per la bocca e per gli occhi uscì dal petto,"

the characteristic part of the figure is surely not, as Dr. Kuhns appears to imply, "melts as the snow on mountain heights," but "the ice about thy heart melts . . . and . . . comes gushing from thy lips in sobs of shame," which is obviously enough a translation of the words of the "Purgatorio." It may be noted in passing that Milton's episode of "the change of the fallen angels to snakes" is far closer to the "Inferno" than to Ovid; while, on the other hand, many of the parallel passages cited on pages 101-104 have little or nothing in common. It is not until we reach the nineteenth-century writers, who occupy about half of the book, that we find the author independent enough to be thoroughly interesting. This part of the work, which is evidently, in the main, the fruit of first-hand reading and reflection, contains much that is of value. Throughout the volume copious quotations from the English poets add to the reader's pleasure. A comic relief is afforded by the selections from Leigh Hunt's 'Story of Rimini.'

—The death of John Foster Kirk, which took place on the 21st of September, at his home at Chestnut Hill, Philadelphia, was the passing away of a man of letters of the older generation, who of late years had come little before the notice of the general public, whose one important work was published forty years ago, but who maintained to the very end of his life of fourscore years a constant quiet activity in some form or other of scholarly or literary work, and a wide interest in literatue and thought. Mr. Kirk was born in Fredericton, N. B., in 1824, and in 1842 came to Boston, where he was engaged in proofreading and reviewing; the task of supplying the punctuation to the first edition of Emerson's poems being among those that fell in his way. The first impulse to historical research came to him during his eleven years' service as secretary to William H. Prescott, with the opportunities thus thrown in his way of access to authorities and association with scholars and men of letters in this country and abroad. When, after Prescott's death, he turned to work of his own, and to a topic on which his mind had already been for some time engaged, the career of the great Duke of Burgundy, he left nothing untouched which could throw light upon his subject, collecting himself a considerable number of rare chronicles and memoirs of the period, visiting the scenes of Charles's victories and defeats, and seeking diligently after fresh material in the French and Swiss archives. The first two volumes of the 'History of Charles the Bold' were published by John Murray in London and by J. B. Lippincott in this country, in 1863; the third volume came out in 1868. The work, though received with much cordiality by scholars here and abroad, including the highest Continental authorities on the subject, had not the wide sale which Murray had been led to expect for it by Dean Milman and others, who had expressed enthusiastic estimates in regard to it. The trouble may have been with the bloody character and acts of its hero. But this Life still remains the most important work on its subject. It was a loss to letters that its author's riper years should have been passed in occupations which afforded little opportunity for the prosecution of further labors in the field of historical research. In 1870 Mr. Kirk became editor of *Lippincott's Magazine*, and with the Lippincott house he was ever after associated. The revised edition of Prescott's works which they brought out in 1873-6 was prepared by him, and contains supplementary notes from his hand; and after he had retired, in 1886, from the conduct of the magazine, he prepared the Supplement to Allibone's 'Dictionary of Authors,' by which Allibone's work is continued down to 1888. His contributions to periodic literature, mostly unsigned, included personal reminiscences of Carlyle, Thackeray, and Rossetti. Mr. Kirk was for two years, 1886-8, Lecturer on History at the University of Pennsylvania, and the degree of LL.D. was conferred on him by that institution. He was a member of the Massachusetts Historical Society till his removal to Philadelphia, when he was elected an honorary member. In the early days of the *Nation* he was an occasional contributor to its columns.

—The announcement from Yokohama that Lafcadio Hearn died in Tokio, September 26, of heart trouble, did not surprise those who knew of the extremely delicate state of his health during the past twelvemonth or longer. In him the world of scholarship loses a keen interpreter of the Japanese people and civilization. Born in 1850, in the Ionian Islands, of a Greek mother and an Irish father, Mr. Hearn seems to have been from childhood intensely susceptible to beauty. At the age of nineteen, he came to America and entered upon journalistic pursuits at New Orleans, afterwards writing for the magazines articles noted for their grace and literary finish. In a trip to the West Indies he enlarged his unusual powers of discriminating and appreciative observation by study of the various races. Attracted to the Chinese and Japanese by reading the works of the French Sinologists, and to the search from the first for the *weird beauty* of their legends (the italics are Mr. Hearn's

own, in his preface to 'Some Chinese Ghosts'), he determined about 1890 to betake himself to Japan. Beginning as a teacher in the south, he rose to be lecturer on English literature in the Imperial University in Tokio. Marrying a native lady and getting naturalized, he withdrew from the society of Occidental folk in Japan, and became a veritable sensitive plate for impressions of the variegated life of Japan, past and present, visible and invisible, in its minute details. He was, as was no other alien, the photographer of the Japanese soul. No one understood more thoroughly the æsthetic asset of Japan's treasure house.

THE GREAT EARL OF CORK.

The Life and Letters of the Great Earl of Cork. By Dorothea Townshend. E. P. Dutton & Co. 1904.

When Sir Walter Ralegh became involved in pecuniary and other troubles he sold his Irish estates to Richard Boyle, at that time a lawyer of no great fame, but gifted with good judgment and exceptional energy. The sale took place in 1602—that is to say, on the eve of Elizabeth's death, and before Ralegh had been overwhelmed by his final misfortunes. Coming thus into possession of 42,000 acres of land, Boyle determined to render his property valuable, and so well did he succeed that before long he had gained an earldom, and made himself the richest man in Ireland. Every one knows how it was reserved for others to benefit by Ralegh's colonization schemes, but few are familiar with the career of the man who acquired his estates in Ireland and converted them into the corner-stone of a magnificent fortune:

"In his own day," says Miss Townshend, "Boyle was called the Great Earl of Cork as invariably as though it were a part of his title; now his very name is forgotten, save when some Munster antiquary points to a squalid hamlet or a desolate seashore, and tells that here the Great Earl of Cork had his linen factories, yonder he mined for silver, and there stood his sheds for curing pilchards, in the days when he had made the land to prosper."

Richard Boyle, the subject of this biography, was born in Canterbury at the close of 1566, the son of an impoverished gentleman. A scholarship at Corpus Christi, Cambridge, gave him his literary education, and, proceeding from the University to London, he was admitted to the Middle Temple. Fortune, however, declined to favor him in any substantial way, until, during the Armada year, he migrated to Dublin. As the Elizabethan grants of land had caused much litigation, he found enough to do, and incidentally formed convictions regarding the potential value of Irish property. The pacification of the island, which occurred in the last years of the Queen's reign, proved a source of immediate advantage to speculators, and Boyle, with natural shrewdness and adequate local knowledge, seized his opportunity. That he had enemies did not prevent him from defeating them and clearing himself of sinister charges in Elizabeth's own presence. From this time forward his advance to prosperity was rapid. By successive stages he became clerk to the Munster Council, member for Lismore in the Irish Parliament, privy councillor for Ireland, and Earl of Cork. The more important of his promotions fell within the reign of James I., his title being secured as most titles were secured in days when baronetcies brought £1,000 apiece. Boyle was a serious-minded if not a religious man, and he always kept a diary. Referring to his earldom, Miss Townshend says:

"His gratitude to Heaven was shown by his choice of a motto. The Earl of Cork's shield ever after bore the pious words, 'God's providence is my inheritance.' His thankfulness to King James was as great as if the honor had been bestowed out of pure grace; to the feelings of those days there was neither degradation nor bathos in the added entry: 'The fees whereof in England and Ireland stood me in £305. 4. 4 sterl., besides £4,500 sterl. otherwise paid.'"

Had Boyle been merely a successful speculator in Irish lands who got himself ennobled by cash payments, it is not likely, even in these days of multiplied biographies, that he would be taken as the central figure of an elaborate work. His personality awakens a good deal of interest when once it is interpreted through his journal and letters. Strafford dignified him by fierce and special attack, Cromwell spoke of him in terms of high admiration, and Evelyn says that his wonderful sagacity was equalled by his probity. In the warmth of his family affections he recalls Henry Fox, and his record as a public man will stand far closer scrutiny than Fox's. But most of all he is to be remembered for the success of his attempts to stimulate industries in Ireland. Here his enterprise was due in the first instance to an intelligent sense of self-interest; yet it would be unfair to deny him the credit of having acted from higher motives than those of selfishness or ambition alone. "He came to Munster," says Miss Townshend, "resolved to show what the English rule in Ireland ought to mean, and to convert a country devastated by war and famine into a rich and contented portion of the Queen's dominions." And if this was his design, the result justified beyond all expectation his boldness and public spirit. Though an Englishman, he gained the confidence of the native population and even of its hereditary leaders. His open-handed hospitality endeared him to a convivial race, and opposition to Catholicism did not prevent him from maintaining friendly relations with Catholic chiefs.

Boyle sought to Anglicize Munster with all completeness, but his methods were those of a sensible, good-hearted man. To lawlessness he opposed peace, and to semi-barbarism the agencies of an industrial civilization. So numerous were the enterprises which he set afoot that it is difficult to give a just idea of them in a few words, but Miss Townsend indicates their general tendency when she says:

"Under his fostering care, comfortable farmhouses sprang up in the deserted valleys, lonely sea-bays were changed into harbors crowded with fishing-smacks and merchantmen, among the barren mountains were seen the glow of his iron forges, his water-mills and salmon wears were found on every stream. In the eastern part of the Province he rebuilt the towns that had been ruined in the Desmond wars, and among the impassable western forests he founded the frontier towns of Bandon, Clonakilty, Enniskeane, and Castletown, to hold the settled country secure against the raids of the wild tribes of West Carberry and Kerry."

The most interesting branch, perhaps, of his activities was the mining industry. While he gained little by his search for copper, he discovered lead and silver in profitable quantities, besides building up extensive iron works at Ballyregan, Cappoquin, Mocollop, Ardglyn, Kilmacoe, and Lisfinnon. "The ore is said by a contemporary to be hematite, bog-iron ore, and clay ironstone; and Boyle worked it into all sorts of forms, from bar iron for export to the Tallow knives he sent to Lady Carew as a Christmas present. In seven years he made 21,000 tons of bar iron, worth at £18 a ton the immense sum of £378,000." A striking personal touch is that Boyle was by theory a free-trader in an age when the short cut to wealth lay through a grant of monopoly.

To give some idea of the power which the Earl of Cork gained through the application of business methods to the exploitation of Munster, we may say that he could levy from his own estates an army of 1,679 foot and 501 horse. With such military resources and a command of ready money which was almost unique at this period, he became a mark for the exactions of Strafford when the principles of absolutism were being applied to Ireland under the form of Thorough. As land titles had been very unsettled during the reign of James I., when Boyle was acquiring most of his enormous property, there was no lack of technical grounds upon which to attack him. For some time he could not tell whether he would be completely ruined through Strafford's hostility or whether he would get off with the payment of a fine. In 1636 the blow fell, and he was forced to pay the Crown £15,000 on the score of having acquired lands at Youghal by irregular means. Everything considered, he escaped lightly so far as his purse was concerned, but the form of his humiliation remained a lasting source of vexation to him. The close of his life was rendered distressful by the Irish rebellion of 1641, and the destruction through its means of much that he had accomplished. Nevertheless, his work in Munster represents the best effort made by the English in Ireland during the first part of the seventeenth century, and won for him high praise in high quarters. According to Cromwell, Ireland would have escaped the rising of 1641 had there been but one Earl of Cork in every province.

Miss Townshend deserves hearty thanks for having given us a complete picture of Boyle's life. Her book is scholarly and discriminating as well as sympathetic. That she has delicacy of perception may be seen from her concluding words. After sketching a life which was full of getting and spending, she breaks off with a reference to higher things:

"The dust of well-nigh two centuries and a half has gathered over the glories of the great Earl of Cork; his wealthy eldest son is forgotten; even the brilliant Orrery and gallant Shannon are no more to us than names. Of all the Boyle family only one is familiar to us to-day, Robert the philosopher, who never made money, nor accepted a title, nor desired to rule over any kingdom but that of his own gentle spirit."

RENNERT'S LIFE OF LOPE DE VEGA.

The Life of Lope de Vega (1562-1635). By Hugo Albert Rennert, Professor in the University of Pennsylvania. Philadelphia: Campion & Co. and J. J. M'Vey. 1904.

It is nearly one hundred years since the publication of Lord Holland's biography of

the Spanish dramatist, and his was the last extensive work in English on the subject. In the meantime fresh facts have been brought to notice by several critics and historians, notably by Ticknor, Von Schack, La Barrera, Pérez Pastor, and Asenjo Barbieri, so that the time is ripe for the harvesting of many new details of information. Professor Rennert's book is all the more opportune in view of the revival of Lope's fame, so long unjustly eclipsed by that of Calderón. In the eyes of the outer world, Calderón had been exalted by the German Romantics to a position of dramatic preeminence which he was not entitled to claim for his sole possession. A reaction in favor of Lope was inaugurated in the German-speaking territory by Grillparzer, and a similar impulse toward an equitable adjustment of literary rights has been manifested in John Rutter Chorley's articles in such English periodicals as the *Athenæum* and *Fraser's Magazine*. Of late Lope's own countrymen have taken steps in the direction of the complete rehabilitation of his glorious memory, for the Spanish Academy has entered on the printing of a magnificent new edition of his dramatic works under the able direction of the prince of Spanish literary critics, Menéndez y Pelayo.

Mr. Rennert has utilized all that his predecessors in the field of investigation had to offer him, and he has added thereto a wealth of information which his own extensive researches have well qualified him to state with the weight of authority. Step by step he has followed the checkered course of Lope's career, chronicling his liaisons no less than his legitimate matrimonial adventures, and listing and characterizing his many literary productions in the order of their composition and publication, interpreting them, too, whenever they seemed to have bearings upon the author's private life. If he has not hesitated to make known the obvious infamy of procedure in Lope the man, he has been prompt to eulogize the positive achievements of Lope the brilliant and original dramatist. Sanity and fairness have moved him in his endeavor to provide us with a comprehensive account of the doings of one of the world's imperishable geniuses, the Phœnix of Spain, as even Lope's own contemporaries called him.

In no case more than in that of Lope de Vega is it necessary for the modern reader to dissociate the inglorious life of the man from the splendid labors of the poet. The known blemishes in the character of a Shakspere affect hardly at all our estimate of the transcendent value of the dramatist; there is no little danger that the moral blots on Lope's personality will sadly impair the lustre of the writer, if they be not sedulously kept out of view. For Lope was a strange compound of sensuality, pettiness, servility, and genius. Fortunately, this last quality outweighed all the others. Still a very young man, he was brought to trial for a scandalous libel upon a woman whom he had loved and upon her family, and as a well-deserved punishment for his crime he was exiled from the kingdom of Castile for two years under pain of death, and was banished from the capital for a still longer period; later on, he seems to have been arrested for cohabitation. Twice married, he figured constantly in amours of which children were the result. Even after taking Holy Orders for the express purpose of "bringing order into his disorder," he fell again from grace; and this affair, the basest of all, was with a married woman. Furthermore, while engaged in his own erotic pursuits, he acted as a poetical pander, and indited love ditties intended for the mistresses of his patron, the Duke of Sessa. It was not heedlessly, either, that Lope sinned and sinned again. His correspondence shows that he realized the enormity of his conduct: repentance was ever on his lips; his spirit was very willing to reform, but his flesh was deplorably weak as long as lusty youth and manhood lasted. Then, when old age came upon him, when his vanity was wounded repeatedly by the favor shown to playwrights of a younger generation and the popular neglect of himself, the poor sinner's heart was broken and his end hastened by two grievous calamities—the loss of his son Lope and the elopement of his daughter Antonia. Retribution came upon him in this world; let the world forgive and forget his frailties.

Turning now to the contemplation of Lope the author, who dominated as its crowning figure the golden age of Spanish letters, one is overcome with sheer amazement at the magnitude of his literary labors carried on despite the distractions of a life of moral turpitude. Practically all the more important forms of verse composition were essayed by him, and although he may not have developed any exceeding degree of skill in his epic endeavors, he undoubtedly attained to success in his pastorals and lyrics, and scored innumerable triumphs with his plays. The poetical worth of his ballads has rightly been ranked very high by Mr. Rennert, who has felicitously rendered into English some of the typical among them, just as he has ingeniously interpreted the autobiographical references contained in the pastorals. It is with Lope's plays, however, that the world is mainly concerned, and the number of these almost overtaxes one's credulity. According to a statement made by the poet himself in his "Egloga á Claudio," he composed no fewer than 1,500 plays, exclusive of the *autos* or short religious pieces. In the panegyrical 'Fama Postuma,' his disciple and biographer, Montalván, put the figure at 1,800. The critics are prone to regard these numbers as greatly exaggerated, but, after all allowances are made, Lope's fertility still remains prodigious. If we may credit another assertion of his, he wrote more than 100 of his *comedias* within the space of twenty-four hours each. Of this vast dramatic output there are actually known to us at present some 431 *comedias*—clearly, enough for the abiding fame of any one author; and, in him who reads systematically any considerable number of them, wonder increases steadily at the unfailing originality shown by Lope in the devising and unravelling of so many plots, not to speak of the extraordinary talent revealed in his harmonious blending together of a multitude of varying metres. Mr. Rennert has read deeply into Lope, his favorite author, of whose pieces he himself possesses no fewer than 300, and he thus states his judgment respecting them:

"In all the countless number of his plays, judging from the many that I have read, I will make bold to assert that there is not one which is wholly bad—not one without repeated bursts of lofty poetry which only a splendid genius could have written."

It is interesting to note that Lope was entirely cognizant of the fact that his plays do not as a rule observe the precepts of classicism. This is attested by characteristic remarks in his treatise 'The New Art of Making Plays' *(Arte nuevo de hacer comedias)*, some of which have been translated by Mr. Rennert. In this wise, for example, does Lope explain his attitude with regard to the classic art of dramatic composition and the methods in vogue in his time:

"Noble wits, the flower of Spain, you ask me to compose for you a treatise on the Art of Making Plays which may be acceptable to the public of the present day. Easy this subject appears, and easy it would be for any one of you who has written less *comedias* and who knows more about the art of writing them. But what is a disadvantage to me in this matter is my having written them against the rules of art. Not because I was ignorant of the precepts, for, while still a tyro in grammar, I read the books which treat of them, yes, even before I was ten years old. I did it because I found that at that time the *comedias* in Spain were not as their first inventors thought they should be written, but rather as they were treated by the barbarians who accustomed the vulgar to their crudities; and so they introduced them in such a way that he who would now write according to the rules of art would die without fame and without reward, for custom is more powerful than reason, in those who lack reason's light. True it is that I have sometimes written following the rules that are known to few, but as soon as I see the monsters, full of apparitions, coming forth, to which flock the public and the women, who canonize this sad spectacle, then forthwith do I return to my barbarous custom; and when I have to write a *comedia* I lock up the precepts with six keys, cast Terence and Plautus from my study, so that they may not cry out—for truth is wont to speak aloud even in mute books—and I write according to the art which they invented who sought the vulgar applause. For, as the common herd pays for them, it is meet to speak to them like an ignoramus, in order to please them."

The self-depreciation expressed in such statements is not to be taken too literally, of course.

The usefulness of Mr. Rennert's clear exposition of facts appertaining to Lope de Vega's life and work is increased by the appendices, in which he reprints from Pérez Pastor and La Barrera the record of Lope's trial for slander and the poet's several wills and testaments, and above all by his including within the covers of his book an admirable catalogue of Lope's plays. This catalogue, which at the last moment he substituted for one prepared by himself, is a recast of John Rutter Chorley's 'Catálogo de Comedias y Autos de Frey Lope Félix de Vega Carpio,' originally published in the fifty-second volume of the "Biblioteca de Autores Españoles." Chorley revised this earlier form of his work, and bequeathed the interleaved copy containing his corrections and additions to the British Museum. There it lay until Mr. Fitzmaurice-Kelly called its existence to the attention of the present editor, who has provided it with supplementary information not available in Chorley's time.

In conclusion, the book may safely be recommended to those who desire in English a good account of the life of the greatest of Spanish playwrights. It is excellently printed, and, though bulky (for it extends to nearly six hundred pages), it has but few errata. Most of these have been

noted at the end in a list following a good general index.

The Quintessence of Ibsenism. By G. Bernard Shaw. New York: Brentano's. 1904.

Thirteen years have passed since Mr. Shaw first published his essay on Ibsen. It had been read as a paper before the Fabian Society in London at a time when the Fabian policy had a certain vogue, or at least a degree of notoriety. The Fabians, under the presidency of Mrs. Annie Besant, put up a lively debate, and Mr. Shaw had to defend his thesis against some of the keenest wits in London. Shortly after, several of Ibsen's plays were performed before the British public, which greeted them with so perfect a lack of comprehension that Mr. Shaw came to the rescue with this essay.

According to Ibsen himself, a normally built truth has a life of twenty years at most. But its life does not begin until it is generally known and pretty generally accepted—is, in fact, no longer interesting to the pioneer. Ibsen in his old age, the Socrates of Norway, faces a society grown more tolerant, but hardly more receptive, of his ideals than when Mr. Shaw began to defend them. Mr. Shaw's thesis, therefore, bears reprinting, because it is still in that stage so fascinating to the reformer when he can count on its being labelled even by intelligent critics as immoral, or cynical, or paradoxical. It would be a dull world for Mr. Shaw, the playwright, if his playgoers should be transformed into philosophers who could not be shocked or astonished or mystified. As it is, he may rest in the assurance that the majority of those who see his plays or read his books are far from bringing a premature old age on his theories by accepting them.

What Mr. Shaw sets out to explain is the moral doctrine that Ibsen desires to impart, the cure which he attempts to apply to the complicated Scandinavian soul. He is not concerned with Ibsen's æsthetics nor with his development. He passes by the question whether such and such a play is classical, romantic, or naturalistic, and what stage of Ibsen's philosophy it may mark. Mr. Shaw deals with twelve plays only, beginning with "Brand" and observing the chronological order down to "Hedda Gabler," the last play published when he wrote this essay. These twelve plays all illustrate the effect of idealism on society, and aim to prove that "the real slavery of to-day is slavery to ideals of virtue." By an ideal he means a fancy picture, a sort of mask which society has not the courage to do without. So immortality is the mask fixed on the face of death; the sanctity of the institution of marriage disguises more than one brutal truth, and so on. The realist, who is in the proportion of one in a thousand, is he who is strong enough to face the truth which the rest, whether they be Philistines or idealists, are shirking. He is, in fact, the "Superman" of Mr. Shaw's last play, who is, however, in the end defeated by the convictions embodied in a woman determined to marry him and cure him of speaking the truth about the facts of life. That, from Ibsen's point of view (which Mr. Shaw adopts), is a melancholy triumph of society over the individual, "that most precious pearl," which, says M. Brandes, a Scandinavian, Kierkegaard presented to his epoch.

The typical villain of an Ibsen play will, therefore, be an idealist who imposes the outmoded ideals of society on some unhappy individual, who may, of course, be himself, as with Brand, who sacrificed himself, his wife and child. The heroine will be an "unwomanly woman," a Marie Bashkirtseff or a Nora rather than an Agnes. The realist, the sane man in such a community, is he or she who asserts the claim of the real in defiance of every fetter forged by society. Mrs. Alving in "Ghosts" was responsible for the tragedy of her son's life because she accepted the idealistic teaching of Pastor Manders and returned to her dissolute husband instead of leaving him free to follow his temperament and asserting the claims of her own. Nora, however, though she is almost crushed by the selfish idealism of Helmer, has more character than Mrs. Alving, and in her the rights of the individual are avenged. In the "Wild Duck" Ibsen satirizes the incorrigible idealist who insists on telling the truth and so destroying the peace of a household made happy by romantic illusions. We cannot all face the truth; the average man needs a vital lie to support him, and the idealistic busybody learns from the tragedy of the "Wild Duck" that ideally frank relations between a husband and wife cannot be manufactured from without. "Rosmersholm" has seemed to most critics of Ibsen to be a *volte-face*, a proof that Ibsen had gradually, and in profound discouragement, come to accept the fact that the development of the individual, the assertion of the pagan ideal of the right to live and enjoy, might have to yield after all to the Christian ideal of renunciation. It is the voice of Musset:

"Malgré nous, vers le Ciel il faut lever les yeux."

When Rebecca West expiates her selfishness by her death and the death of Rosmer, the Rosmersholm conventional ideal of morality triumphs. But Mr. Shaw, to maintain his thesis, prefers to believe, not that "Rosmersholm" is Ibsen's adieu to the cult of nature which he preached in "Ghosts"—a confession that a society which has accepted the Christian ideal cannot react to paganism; he regards it rather as one more instance of the fatal effects of idealism, a protest against the Rosmersholm view of life, the view that denied to Rebecca the right to live and be happy. The woman, says Mr. Shaw, had the higher light when she asserted her individuality at the cost of another's life.

Here, at any rate, we believe that Mr. Shaw's theory has carried him away. When Ibsen's followers represent him as adopting the "Greek view" of life, the desire to grasp at enjoyment and to give youth its due, they forget that the Greeks would have considered the death of Rebecca and Rosmer as the only fitting expiation of their crime. Even Hedda Gabler, says Mr. Shaw, acted at the dictates of a fatal and outworn idealism—only, in this case, she made wrongdoing her ideal. This strikes one as an over-ingenious interpretation of a play whose motives are already complex enough. Hedda's fierce egoism is rather a warning against the ideal of Mrs. Alving when it is envisaged by a woman without scruples and without soul.

The critics of Ibsen are of course drawn from all of the three classes into which Mr. Shaw divides society. Needless to say, he is himself the realistic critic. If his reading of the plays should be generally accepted by his readers, he would at once understand that he or Ibsen, or both, had become old-fashioned and must be swept away. Few people, however, even now, read Ibsen with any sort of desire to find out what he is driving at or which side he takes. Mr. Shaw's essay must at least have the effect of rousing their curiosity, for they will find that to understand it they must constantly turn to the plays and regard them not as curious and fantastic studies of Scandinavian society, but as an array of types which, like the characters of Theophrastus, flourish in all societies and at all times.

The Story of Chamber Music. By N. Kilburn. Charles Scribner's Sons.

While the Englishman who wrote this book is conductor of the Middlesborough, Sunderland, and Bishop Auckland musical societies, his taste seems to incline him particularly to a form of music which requires no conductor at all. He poses the question which of the great forms of musical composition it would be preferable to plead for in case all the others were doomed to destruction, and answers that it is certain that many a musician would, if forced to such a choice, "without hesitation pledge himself to uphold the claims of chamber music; for who can measure the almost infinite variety and charm which it affords, and that, too, with the slenderest means? Probably no other form of music would wear so well as this, and to hardly any other could we turn, day by day, with such abiding satisfaction."

It is to be feared that not five per cent. of music lovers in general would agree with Mr. Kilburn in his preference. The vast majority of them would vote for the opera, while lyric song, pianoforte, and orchestral music would all have returns far ahead of chamber music, which, except in Berlin and in some other German centres, plays but a small rôle among musical entertainments. At the same time it would be wrong to gauge the popularity of instrumental quintets, quartets, trios, and duos by the frequency with which they are heard in public. Chamber music, like lyric song and pianoforte music, is heard to best advantage not in a concert hall, but in a private music room of moderate dimensions. The playing of it in a large auditorium is a concession to the desire of hearing the great artists in such music, and the necessity of having an audience large enough to compensate them. Amateurs, moreover, seldom have sufficient technical ability to quite do justice to many of the masterworks in this domain of art.

Whatever one's individual preferences may be, it cannot be denied that an addiction to chamber music, at home or in the concert hall, is a healthy sign of musical life and progress, and cannot be commended too highly. Those who incline to make experiments in this direction will find Mr. Kilburn's book a useful manual. It considers the history of chamber music from the earliest times to Brahms and Dvorák, Richard Strauss and Bruckner, and the opinions advanced are usually sound. Judging by the comparative allotment of space, the author has more sympathy with the

older composers than with the modern schools. Tchaikovsky and Grieg, in particular, are treated at much less length than they deserve, which is the more surprising inasmuch as a Russian composer entirely unknown to fame, Gretchaninoff, has twelve pages devoted to him, while Tchaikovsky has only one. The exalted position of Schubert among chamber music composers also is hardly realized by our author.

This book has copious illustrations in musical type, pictures of composers and players, autographs, and an appendix containing brief biographic notes, besides a glossary of terms, in which, for example, the principal variety of chamber music, the string quartet, is thus defined:

"The instruments which form this combination, viz., the two violins, viola, and violoncello, are, as to their construction, the result of a slow development of probably 1,000 years, the fully developed violin dating from about the end of the fifteenth century. Music for the string quartet came into vogue about the middle of the eighteenth century. Earlier than this such music usually took the form of the sonata *à tre*, viz., two violins and bass."

The Letters and Speeches of Oliver Cromwell. With Elucidations by Thomas Carlyle. Edited in three volumes, with notes, supplement, and enlarged index, by S. C. Lomas. With an Introduction by C. H. Firth, M.A. G. P. Putnam's Sons. 1904.

The present edition of Carlyle's 'Cromwell' contains a thorough overhauling of the work by Mr. Lomas as collator, and Mr. Firth as critic. In one way it is unfortunate for this famous book that the era of the Civil War and the Protectorate should have been studied with such minute care by Gardiner and others during the past half century. Judged by modern standards of learning and accuracy, Carlyle is open to grave reproach, even when we have assigned his classic to the field of literature rather than of history. For example, he is always covering with sarcasm the antiquaries, like Birch and Noble, to whom he is indebted for guidance and material. Yet, as Mr. Lomas shows by the most explicit proof, they were often right, while Carlyle went wrong by neglecting to read the plain statements of fact which are contained in their books. Thus, he says: "Dorothy Cromwell . . . has a 'little brat'; but the poor little thing must have died soon: in Noble's inexact lists there is no trace of its ever having lived." Noble, however, gives the exact date of birth, and tells us that the "little brat" lived to be over eighty. Carlyle might well have spared numerous anathemas against his predecessors, and profited by using with more care what they had left behind them. At least this would be our comment if Carlyle could be tried by the standard applied to the ordinary historian.

But when a man reaches the measure of a prophet, he cannot be grouped with the *historicus officinalis*, and has not Mr. Birrell called Carlyle the greatest figure in English letters since the death of Johnson? His 'Cromwell' was designed to be an artistic piece of interpretation, and the merits which won it recognition in 1846 belong to it still despite Gardiner *et al.* Carlyle first disclosed to the English world an essential historical fact, namely, that Cromwell was neither fanatical nor hypocritical, but honest. From the first he carried public opinion with him, and though a few years ago Parliament declined to vote a statue to the Protector, the debate abounds in acknowledgments of his true greatness. And, furthermore, Carlyle took exactly the right means to accomplish his purpose, for by publishing the text of the letters he presents Cromwell (picturesque editing notwithstanding) as he actually was. From the nature of its effect upon the general sentiment, Carlyle's 'Cromwell' is more important than his 'Frederick' or his 'French Revolution.'

Historical errors abound in it—not slight ones, like the fate of Dorothy Cromwell's "little brat"—but vitiations of the gravest character, such as the reiterated statement that Cromwell was a despiser of parliaments. Reading his own present-day philosophy into the events of the period, and limited by a large ignorance of English history prior to the Civil War, Carlyle worked out some singular results. Of these two shortcomings his prejudice against parliaments was on the whole the more fruitful source of perversion. He either did not know or would not admit that Cromwell protected the Long Parliament from the army for above a year before he suppressed it, and enacted the celebrated scene only in the last resort. Furthermore, Carlyle misrepresents the whole tenor of the political development which follows 1653. As Mr. Firth says in his introduction:

"When Cromwell had put the key of the House in his pocket, and had sent the members about their business, he did not decree (as Carlyle would have done) that henceforth there should be no more talking-shops in England. On the contrary, the first thing he did was to call another, in order 'to divest the sword of all power in the civil administration,' and when that failed, he called a second and a third. For Cromwell's political ideal was not a government without parliaments, but a government which worked with and through parliaments. Without the consent of the people of England in Parliament assembled he knew that he could found nothing permanent, that he could not secure for posterity the civil and religious liberties for which so many men had died."

It is the function of Mr. Firth, in the introduction from which we have just quoted, to put Carlyle's Cromwell into line with the most recent research and with the sanest opinion now current regarding the great Rebellion. The criticism thus called for he has furnished in a manner that exacts exceptional praise, for he has brought learning, insight and literary skill to bear upon a large historical issue. There is much wit in his essay of thirty pages, and among its humors may be mentioned the detailed account of Carlyle's relations with Mr. William Squire of Yarmouth, who, after the first appearance of 'Cromwell,' announced that he possessed the journal of Sam Squire, a Roundhead trooper, and also thirty-five letters of Cromwell himself. These letters Carlyle published in *Fraser's Magazine*, and held to be authentic against the whole weight of antiquarian opinion, though they contained a good smattering of nineteenth-century phrases. Even when he met Squire he was not enlightened, but found the author of the hoax "full of innocence." The episode is curious in itself, and illustrates in a somewhat unexpected manner the working of Carlyle's mind.

Mr. Lomas's contribution to this edition is largely bibliographical, but his painstaking examination of Carlyle's methods as editor is hardly less interesting than the general criticisms of Mr. Firth. We cite his chief generalization, together with a peculiar example which falls under it:

"Taking Carlyle's edition as a whole, the mistakes in the letters are very numerous, but not, as a rule, important. Sometimes, however, they affect the sense, and in such cases Carlyle unhesitatingly inserted words of his own, without reflecting that, as Cromwell was a very accurate writer, he would not be likely to send out letters which needed such 'embellishments' to explain them. See, for instance, Letter XCIII., written to Mr. Mayor on the subject of Richard Cromwell's marriage, and entirely in Cromwell's own hand. Into this short letter Carlyle inserted nineteen words, most of which were quite unnecessary, and one or two misleading. Moreover, where Cromwell speaks of the contingency of Mayor himself having a *son*, Carlyle (who imagined him to be speaking of Richard) added a note, 'Grandson, *i. e.* In the next sentence, die means more properly *live*.' It is hardly necessary to say that, in an important business letter, Cromwell did not say 'son' when he meant 'grandson,' or 'die' when he meant 'live.'"

This edition not only supersedes all others, but has much independent value as a piece of erudition.

Belgian Life in Town and Country. By Demetrius C. Boulger. Illustrated. G. P. Putnam's Sons. 1904.

This is a painstaking account of Belgium considered from every side—social, political, racial, commercial, industrial, rural, urban, educational, legal, literary, military, and colonial. If the book has a fault it is one in a measure inherent in the subject, namely, that it is not in the national development of Belgium as a modern country that we are mainly interested. Belgium has been created in the last seventy-five years, but, clever as the creation is, it does not much appeal to us. It is a little too French, perhaps, for us to believe it original. This is a pity, for, philosophically considered, the wonderful prosperity of Belgium is the result of an interesting experiment in autonomy and liberal institutions.

Owing to the perversity of the human mind, prosperity and good government do not stimulate the imagination, and consequently the tourist and ordinary reader will care less than they ought for a good deal of Mr. Boulger's information. But the author may fairly reply that he did not write for the tourist and ordinary reader. They are already provided for. The glories of the historic "Low Countries," their treasures of art and architecture, are celebrated more fully by other writers. Mr. Boulger does not by any means pass these subjects over altogether, but has essayed the useful, if humbler, task of showing us Belgium as it is; and this, we think, he has done very well. His picture of Belgium gives just the necessary amount of history; the rest is description. In the opening chapters on Fleming and Walloon, the modern Constitution and the Legislature and electorate, he is perhaps at his best. The study of the mining life of the country in chapter vii. is also valuable in a different way.

Henry Holt and Company's Fall Fiction

Published at 29 West Twenty-Third Street, - - - - - - - - NEW YORK CITY

Sinclair's THE DIVINE FIRE. (*Just Published.*) **$1.50.**
The life and loves of a cockney—the son of a cockney—who became a real poet and fell in with many sorts of people, high and low, artistic and philistine. The author shows sincerity, humor and penetration.

Canfield's FERGY THE GUIDE, and his Moral and Instructive Lies about Beasts, Birds and Fishes.
With some fifty sketches by ALBERT D. BLASHFIELD. **$1.50.**

N. Y. Evening Post:—"He is a wholesouled, thoroughgoing and spontaneous liar, with originality and a real love for his art . . . a liar who must rank as an artist . . . his language is as direct and as unforced as his inventions are moral and instructive. . . . The marginal illustrations by Albert D. Blashfield, informed by a thorough appreciation of 'Fergy's' humor, add not a little to that enjoyment."

Bacon's (John H.) PURSUIT OF PHYLLIS. (A humorous romance of travel in England, France, China, and Ceylon.) **$1.25**
N. Y. Evening Post: "It is brisk, buoyant, and entertaining."

Loomis's MORE CHEERFUL AMERICANS. Illustrated by FLORENCE SCOVEL SHINN and others. **$1.25**
The author's "Cheerful Americans" is in its seventh printing. In this new book he tells merry tales of Americans who succeeded under obstacles and of others who were cheerful even in Suburbia. He gently satirizes golf, popular songs, labor unions, "the novel for the masses," and many other things.

Lorimer's (Norma) ON ETNA (A Romance of Sicily to-day.) **$1.50.** (*October*)

Winthrop's (Theodore) Mr. WADDY'S RETURN. Edited by BURTON E. STEVENSON. **$1.50.** (*October*)
The story of Mr. Waddy, who returned to New England from India. The scenes are chiefly in Boston and Newport before the War.

Stevenson's (Burton E.) MARATHON MYSTERY. With five scenes in color by ELIOT KEEN. **$1.50** (*October*)
This story, which has the merits and distinction of the author's popular "Holiday Case," opens with a strange happening in a New York apartment house.

Eyre's THE CUSTODIAN. With illustrations by PENRHYN STANLAWS. **$1.50.** (*October*)
A humorous story of an Englishman under a cloud, who practically became the jailer of an erratic German princess in a lonely place in Scotland.

JUVENILES
Bruneck's PRINCE HENRY'S SAILOR BOY. Illustrated by Geo. A. Williams.....$1.50
Costello's NELSON'S YANKEE BOY. Illustrated by W. H. Dunton.....$1.50 (*October*)
Burton's BOYS OF BOB'S HILL. Illustrated by Geo. A. Williams.....(*October*)
Mrs. RANKIN'S DANDELION COTTAGE. Illustrated by Mrs. Shinn and Miss Finley.....$1.50 (*October*)

Important Books from Our Fall List

LIFE OF SHAKESPEARE

By William J. Rolfe, Litt.D. The publication of this work is a literary event of first importance. It is the latest and most complete biography of Shakespeare, written by one of the foremost living authorities on the subject. Within the 550 pages of text Dr. Rolfe has condensed all the known facts, as well as trustworthy conjectures respecting the life of Shakespeare; also adequate and brilliant criticisms of the plays, sonnets, and other writings, and all available data regarding portraits, editions and aids to the study of the poet's works. It is fully illustrated, and contains an exhaustive index. Cloth, 8vo, illustrated, $3. Half morocco, $5.

GLOSSARY TO SHAKESPEARE

By Alexander Dyce. The glossary to the complete works of Shakespeare by Rev. Alexander Dyce (1798–1869) is everywhere recognized as a standard work of reference. The present one-volume edition contains all of Dyce's invaluable references and illustrative quotations from Shakespeare, with the addition of several new features, of which the following is perhaps the most noteworthy: Dyce's references are only to volume and page of his own edition. For these, which are useless except to owners of the Dyce edition, references to the particular play, with act, scene and line (numbered to conform with the Cambridge text), or the particular poem, with title and line, have been substituted. Illustrated with portraits, cloth, 8vo, $3. Half morocco, $5.

A SHORT HISTORY OF ANCIENT EGYPT

By Percy E. Newberry and John Garstang. This is a brief history of Ancient Egypt from the founding of the monarchy until the disintegration of the empire three thousand years afterward. The joint authors are experienced students of Egyptian archæology, and this handbook is the ripest fruit of their extensive explorations. It offers the general reader an unusual opportunity of obtaining the results of the very latest scholarship in attractive form. Cloth, 12mo, *net* $1.20. Postage extra.

JAPAN: The Place and the People

By G. Waldo Browne, with an introduction by Hon. Kogoro Takahira, Japanese Minister to the United States. This work contains a popular account of the Japanese people, their traditions and civilization, from the prehistoric origin of the race to the present time, together with a fascinating description of the topography and scenery of Japan and the strange customs of its inhabitants. The volume contains about 450 pages of text, and includes sixteen exquisite color plates, more than fifty full-page halftone illustrations from new photographs, and two hundred and sixty text cuts. Cloth extra, large 8vo, *net* $2.50. Postage extra.

LOVE TRIUMPHANT: A Book of Poems

By Frederic Lawrence Knowles. Mr. John Burroughs pronounced Mr. Knowles's first book of poems "The most fresh and original book of verse that has come to my hand in many a year." Regarding the present volume, Mrs. Louise Chandler Moulton writes in a letter to the author: "There was much in your first volume, 'On Life's Stairway,' that I greatly liked, but this volume is incomparably finer. . . . You have both variety and individuality. Your note is your own. If I saw an unsigned poem of yours anywhere I should not need to be told whose it was." Cloth, 12mo, cover design by Marion L. Peabody, gilt top, *net* $1. Postage extra.

COMPLETE WORKS OF EDGAR ALLAN POE New Cabinet Edition

This edition contains all of Poe's short stories, as well as his complete poetical works, criticisms and general essays. It is prefaced by a sympathetic memoir from the pen of the late Richard Henry Stoddard, occupying over two hundred and twenty pages, and contains also brief appreciations by James Russell Lowell and others. The text is printed in large clear type, with wide margins, on laid deckle-edge paper. The edition contains nearly forty etchings and photogravures. Sold in sets or separately. Complete set, 6 volumes, cloth, 12mo, gilt tops, $9; per volume $1.50. Half calf or morocco (in complete sets only), $18.

NEW STERLING SETS

The best Library editions at a popular price. Each volume cloth, 12mo, fully illustrated, at the uniform price of $1; half calf, $2 per volume. Sold in complete sets only. The new Sterling sets comprise the complete works of **Charles Lamb,** in 5 volumes; **Edgar Allan Poe,** 6 volumes; **Lord Macaulay** (Essays), 3 volumes; **Captain Marryat,** 12 volumes, and **Henry Fielding,** 7 volumes.

"These monumental volumes are the admiration of every true student of Shakespeare," says Dr. William Aldis Wright.
The *London Athenæum* states, "This, the most exhaustive work on Shakespeare's plays, comes from America."
Dr. J. W. Rolfe declares of a recent volume, "This, too, like its predecessors, is . . . the entire literature of the subject compressed into a single volume, and the more valuable for the editor's personal contributions thereto."

Publishers J. B. LIPPINCOTT COMPANY Philadelphia

OXFORD MODERN FRENCH SERIES

The Delegates of the Oxford University Press have for some time believed that, among the many series of annotated French texts now being issued, there was still room for a series to be chosen from the best modern French writers who have already attained to the rank of classics; writers such as Balzac, Gautier, de Tocqueville, Taine. This series which the Delegates are beginning to publish consists not only of romances and short stories, but embraces also narratives of travel, biographies, and essays.

The texts have all been very carefully selected with the hope that this series may commend itself not only to schoolmasters, but also to parents and others who wish those under their charge to read good modern French books, and have hitherto not known what books could be put into their hands with absolute safety.

The series is under the general editorship of Mr. Leon Delbos, M.A., Instructor in French in H. M. S. Britannia.

The following eight volumes have already been issued, and others will be ready very shortly.

Deux Héroines de la Révolution Française, by Lamartine. Edited by Mary Bentinck-Smith, Lecturer in Modern and Mediæval Languages in Girton College, Cambridge. 60c.

La Vendetta and Pierre Grassou. By Balzac. Edited by Marie Pechinet, B.A., Lecturer in French in the Royal Holloway College. 50c.

Bug-Jargal. By Victor Hugo. Edited by Louis Sers, Assistant Master in Wellington College. 50c.

Mademoiselle de la Seiglière. By Sandeau. Edited by A. L. Dupuis, French Master in King's College School. 60c.

Mémoires d'Outre-Tombe. By Chateaubriand. Edited by Louis Sers, Assistant Master in Wellington College. 60c.

Voyage autour de mon Jardin. By Karr. Edited by Stuart G. Hallam, M.A., Assistant Master in Beechmont Preparatory School, Sevenoaks. 50c.

Le Château de Vaux. by Gozlan. Edited by A. H. Smith, M.A., Modern Language Master in Whitgift School, Croydon. 40c.

Extraits des Voyages d'Alexis de Tocqueville. Edited by J. Mansion, of the Royal Academical Institution, Belfast. 50c.

For Sale by all Booksellers. Send for Catalogue.

WHY!

are the Burrows Brothers classed among the leading booksellers of the country?

Their latest catalog, from the **RARE BOOK DEPARTMENT** (No. 49), partially explains this fact, and if any one interested in scarce and rare volumes desires a copy of this list they can obtain it by sending their address to the firm at Cleveland.

Fine bibliographically or for reference, and absolutely Free.

The Nation.

A WEEKLY JOURNAL OF POLITICS, LITERATURE, SCIENCE, AND ART.

Established in 1865, *The Nation* was a pioneer as a journal of literary and political criticism of the highest order, conducted free from the control of party, school, or interest of any sort. It has long been a recognized authority at home and abroad. The list of contributors includes most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. *The Nation's* departments are:

THE WEEK. Brief Comments on the most important current events, domestic and foreign.

EDITORIAL ARTICLES. Careful and moderate discussion of prominent political and social topics.

SPECIAL CORRESPONDENCE. From all quarters of the globe, by intelligent and trustworthy observers.

OCCASIONAL CORRESPONDENCE. Letters to the editor on every subject germane to the scope of the paper.

NOTES. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.

REVIEWS OF BOOKS. By able writers and scholars (mainly specialists) of both hemispheres.

FINE ARTS. Competent criticism of art exhibitions and works of art, the drama, etc.

The style and form of the paper are chosen with a view to the most suitable shape for binding, and a set of *The Nation* preserved, bound, and indexed makes the most complete and readable record of current events of importance in the political and literary world available for the American public. Two volumes are completed annually. The index and title-page accompany the last issue of each volume.

SUBSCRIPTION PRICE—$3 per year postpaid in the United States, Canada, and Mexico; $4 a year postpaid to other countries included in the Postal Union. Subscriptions for a shorter period taken at the yearly rate. Remittances should be made by check, draft, or money-order, payable to "The Nation." Specimen copies sent free at any time on request. Address

The Nation, 206-210 Broadway, New York City.

17. A Century and a Quarter of Divorce Legislation in the United States.
18. Problems of Marriage and the Family.

Bibliographical Index. Case Index. Subject Index.

PRESS COMMENTS

This is the most substantial and valuable work on its subject yet produced in our country. Scholarly, scientific, thorough, it is an inductive study of the first importance to every student of the primary social question—the question of the family.—**The Outlook.**

In the three volumes which constitute this monumental work the learned author has provided the first adequate treatment of the history of human marriage. . . . The volumes bear on every page the marks of wide and painstaking scholarship.—**Quarterly Journal of Economics.**

The general reader will peruse the text with sustained interest; he will experience little difficulty in following the author's argument or in appreciating the force and significance of his conclusions. The scholar will find in the numerous footnotes, the extensive bibliography, and the carefully executed index, many additional points of excellence.—**The Dial.**

There can be no broader or more complex subject for literary discussion than the development of the human institution called the family. Innumerable are the problems presented. From the remote past the topic bristles with difficulties. The laws relating to marriage and divorce are most complex. The author of "A History of Matrimonial Institutions," who has thus imposed on himself a stupendous task, has certainly accomplished his work in a satisfactory manner.—**The New York Times.**

No student of matrimonial institutions can afford to overlook this work. The amount of learning condensed in Dr Howard's three volumes is enormous. The bibliographical index alone occupies about 140 pages and the author's footnotes furnish conclusive proof that the innumerable authorities have been not only consulted but thoroughly examined. The task must have exacted the assiduous labor of many years.—**New York Sun.**

As a whole this work is singularly comprehensive, clear, open-minded progressive and authoritative. It is an interesting and dignified historical monograph.—**The Chicago Record-Herald.**

Dr. Howard's elaborate study of matrimonial institutions and legislation affecting alike the binding and the dissolution of the tie is probably the most important work that has appeared on this subject in America.—**The Churchman,** New York.

These volumes must long be considered both as authoritative in statement and as a stimulus to future monographs . . . Professor Howard has accomplished his task in philosophical and historical spirit; with a clearness of statement that inspires confidence and respect; with the controlled enthusiasm of one that is master of his subject and not mastered by it. The work, as a vast storehouse of well-arranged facts, is an honor to American scholarship.—**Boston Herald.**

The Nation

Was established in 1865 as a weekly review of literature, science, art, and politics, and its editorial management has been unchanged from the first. It is conducted in a spirit of complete independence The list of contributors includes most of the leading names in literature, science, art, philosophy and law at home, and many of corresponding eminence abroad. THE NATION presents a complete and accurate record of the world's current history, with impartial comment on questions which would occupy the attention of intelligent men. To the scholar, the student, the thinker and to all professional men it is confidently recommended as an aid to sound thinking.

Subscription, $3.00 a year, post-paid. Shorter term at a proportionate rate.

Publication Office, 206-210 Broadway, New York.

SOME OF HARPER'S FALL BOOKS

FICTION

VERGILIUS
By IRVING BACHELLER, Author of "Eben Holden."

A tale of the coming of Christ. The scenes are those of ancient Rome in the days of Augustus Cæsar, and of Palestine under the dark rule of Herod on the eve of the nativity. The story is one of powerful situations with a rarely delightful love interest.

Post 8vo, Ornamented Cloth, $1.25.

A LADDER OF SWORDS
By GILBERT PARKER, Author of "The Right of Way."

In wholly different vein from the author's last novel, "The Right of Way," comes this exquisite romance of the days of Queen Elizabeth, delightful in conception, swift and compelling in interest, and written in the finished style of this great novelist. The scenes on the island of Jersey are of idyllic freshness and beauty, and in the Seigneur of Rozell, the lord of the island, the author has produced a character of delightful humor and braggadocio.

Illustrated by the Kinneys. Post 8vo, Cloth, $1.50.

JESS & CO.
By J. J. BELL, Author of "Wee Macgreegor."

The story of the troubles and happiness of Jess and her delinquent husband Davie is told in the most delightful manner, often through the odd and whimsical sayings of the Scotch characters, Mistress Wallace and Maister Ogilvy. Jess & Co. will probably prove to be Mr. Bell's most successful book. The dialect needs no glossary. *16mo, cloth, $1.25*

THE GEORGIANS
By WILL N. HARBEN, Author of "Abner Daniel," "The Substitute," etc.

The scene is that of "Abner Daniel." The story deals with the troubles of two lovers, whom Abner, with generous impulse, ingeniously brings together. There are several subsidiary characters who provide a great deal of mirthful entertainment. Abner himself, with his shrewd humor, pervades the whole, which is the strongest story of Georgian life Mr. Harben has written.

Post 8vo, Cloth, $1.50

THE FLOWER OF YOUTH
By ROY ROLFE GILSON Author of "In the Morning Glow," "When Love is Young," etc.

Perhaps no American author of recent years has taken so strong a hold on the affections of his readers as has Mr Gilson. This latest story can be compared only with *Prue and I*. It is full of quaint humor and sentiment and there are many parts dealing with child life, handled with the same simplicity and truth found in Mr. Gilson's earlier stories.

Post 8vo, Cloth, $1.50

THE SON OF ROYAL LANGBRITH
By WILLIAM DEAN HOWELLS Author of "Letters Home," "Questionable Shapes," etc.

A new novel, which promises to be the most popular story Mr Howells has written for some time. It deals with a strange situation—that of a woman who conceals from her son the faults and shortcomings of his dead father. The situation is new in fiction and works out to an intensely interesting conclusion involving the love romances of four lives.

Crown 8vo, Special Binding, Uncut Edges, Gilt Top, $2.00

THE TRUANTS
By A. E. W. MASON Author of "The Four Feathers."

An exhilarating story of London life. The Truants are two young married people living with the rich, overbearing father of the young man. The plot develops startlingly and rapidly, with exciting incidents and a certain mystery which adds greatly to the interest. It is written in a breezy, stimulating style, and is bound to be a success.

Illustrated. Post 8vo, Ornamented Cloth, $1.50

THE LADY OF LOYALTY HOUSE
By JUSTIN HUNTLY McCARTHY Author of "If I Were King," "The Proud Prince"

At the outbreak of the quarrel between King and Parliament, 1642, Lady Harby, the young mistress of Harby Hall, is the first to fly the King's flag. An attempt on the part of a small body of Parliamentary volunteers to capture Harby ends by leaving the Puritan leader a prisoner in Lady Harby's hands. From this point the story becomes a tale of love that proves greater than the claims of warring factions. It is the most delightful piece of work yet from this author's pen.

Post 8vo, Cloth, $1.50.

MISCELLANEOUS

IMPERATOR ET REX: William II. of Germany
By the author of "The Martyrdom of an Empress."

The biographer of the Emperor and Empress of Austro-Hungary has here devoted her facile pen and her unrivalled knowledge of the subject to the portraiture of the Kaiser as he really is, of his charming home life, and of his sympathetic character—presenting him as the warm-hearted and impulsive man rather than as a keen-minded and astute ruler bent on fostering the prosperity and grandeur of his empire. Illustrated with autograph portraits of the emperor and the members of the imperial family.

Crown 8vo, Deckel Edges, Gilt Top, net, $2.25.

THE CYCLE OF LIFE: According to Modern Science
C. W. SALEEBY

These essays deal chiefly with the greater problems of the universe—the future fate of the sun, moon, and earth, the laws of gravity and the ether, the wonders of the nebulæ, etc. Mr. Saleeby's manner is little short of fascinating, his language clear, and his attitude open-minded, making his volume one of the the most readable and inspiring books of the day.

Crown 8vo, net, $2.00.

JUVENILE

JOSEPHINE
ELLEN DOUGLAS DELAND

This is the story of two little girls named Jo and Georgie, who, coming to live with their cousins, create consternation in the family because they are girls and not boys, as their names would indicate. But they bravely win their way into the hearts of their relatives, and many interesting adventures follow. Illustrated.

Post 8vo, $1.25.

RIVER-LAND
ROBERT W. CHAMBERS

This is the latest volume of the series of nature books, each chapter dealing with the experiences of Peter and Ellen and with some tree animal, or fish growing beside or living in the streams This has proved a capital plan for instilling natural history into children's minds. With eight full-page illustrations in color by Elizabeth Shippen Green.

Cloth, net, $1.50

LITTLE PRECIOUS
GERTRUDE SMITH

This is a companion volume to *The Lovable Tales of Janey and Josey and Joe*, and recounts the further adventures of these charming little people. Miss Smith's stories for children are decidedly original and have been highly successful. With sixteen full-page colored illustrations and pictorial cover design in colors.

Square 8vo, net, $1.30

HOLIDAY EDITIONS

THE CASTLE COMEDY
By THOMPSON BUCHANAN

A dashing young officer, half French, half English, distinguished for his dare-devil exploits, goes in disguise to England, where a price has been set on his life, and surreptitiously visits his mother's family. Falling in love with his beautiful cousin, he gets into a series of thrilling difficulties. The sprightly way in which the story is told, the dashing impudence of the hero, and the charm of the heroine, combine with the beauty of the volume to make a delightful gift-book.

With Illustrations in Color and Marginal Decorations by Elizabeth Shippen Green. Crown 8vo, Ornamented Cloth, Uncut Edges, Gilt Top, in box. net, $2.00

A DOG'S TALE
By MARK TWAIN Author of "Tom Sawyer," "Innocents Abroad," etc.

This famous dog story is now published in a beautiful holiday edition, with pictures in color, in response to the numerous demands for it in book form. It is a powerful piece of fiction, being told entirely from the dog's standpoint, and has made a widespread appeal to all classes of readers. To lovers of dogs—and they are innumerable—this remarkable and sympathetic tale, with its sermon against vivisection, will be most welcome.

With Illustrations in Color by W. T. Smedley. Post 8vo, $1.00

OVER THE HILL TO THE POOR-HOUSE
By WILL CARLETON Author of "Farm Ballads," "Songs of Two Centuries," etc.

This is the poem that, with one or two others, first made Will Carleton famous. The author has written a preface especially for this edition, in which he tells some interesting things about the early vogue and criticism of this poem, and its authenticity as to facts. It is printed decorated, and bound in a way that makes it most appropriate as a Christmas gift.

Illustrated. Marginal Decorations in Color. Square 8vo, in box, net, $2 00.

HARPER & BRO., Publishers, NEW YORK

School Trustees, Principals, Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

The Nation, 208 Broadway, N. Y.

STANDARD AUTHORS IN SETS

Balzac, Brontë, Bulwer, Carlyle, Cooper, Dickens, Dumas, De Foe, Eliot, Fielding, Gibbon, Guizot, Hawthorne, Hugo, Irving, Macaulay, Poe, Reade, Ruskin, Scott, Smollett, Shakespeare, Thackeray, Tolstoi.

Forty Millions

are spent yearly in this country for pianos, and scarcely any family is without a piano or organ.

¶ The expenditure for encyclopaedias is insignificant in comparison; many families are without any, and many have an antiquated, useless one.

¶ Is not an encyclopaedia more necessary in the home than a piano?

¶ The piano can be used only after diligent practice and costly, intelligent instruction. The encylopaedia offers its store of information and entertainment to every one who can read.

¶ If you would make your home interesting, your children intelligent and successful in social and business life, you should have a good modern encyclopaedia at hand to answer the questions arising in reading and conversation.

¶ The New International is the only complete new encyclopaedia issued for more than ten years.

¶ It has nearly double the number of articles, nearly twice as much matter, and is far better illustrated than any work of its kind in the English language.

¶ It is an entirely new work, written by Americans for Americans, though international in its scope.

¶ The names of its Editors, Daniel Coit Gilman, LL.D., President Johns Hopkins University (1876-1902), President of Carnegie Institution; Harry Thurston Peck, Ph.D., L.H.D., Professor in Columbia University; Frank Moore Colby, M.A., late Professor in New York University, guarantee the high character of the work.

¶ A supplementary volume just completed contains courses of reading and study in the encyclopaedia. It classifies the articles on each subject and guides the reader with practical hints to a complete survey of any department of knowledge.

¶ It is unfair to judge The New International Encyclopaedia by a cursory examination. The publishers have prepared an eighty-page book of information about it.

¶ This book may be had for the asking, or you may have one of the volumes sent you for examination—no charge, no obligation, no expense to you, except to answer this advertisement.

¶ It is the cornerstone of the family library, and as such its absence cannot be excused from the viewpoint of price.

¶ We have arranged a system by which you can own this work and scarcely feel the outlay.

¶ Cut out and mail the coupon to-day, that we may send you the eighty-page book of description and terms.

NEW BOOKS NOW READY SCRIBNERS

MUSIC AND OTHER POEMS

By HENRY VAN DYKE

Author of "The Toiling of Felix," "The Builders," etc. $1.00 *net*. (Postage, 10 cents.)

THIS volume (opening with what perhaps is the finest and most elevated of his sustained poems, the "Ode to Music") collects the lyrical and other verse which, for some years past, has been establishing Dr. Henry van Dyke's high place among American poets. Many pieces here included have already, even in their fugitive publication, gone far toward securing the permanent position which this collection will give them.

HENRY SETON MERRIMAN
(3d Large Edition Already)

THE LAST HOPE

THE ATHENÆUM (London) says: "Looking back on his work one would say that 'The Last Hope' is one of his very best novels. It is not often given to a novelist to lay down the pen while at his highest."

THE GIBSON BOOK FOR 1904

Among the maturest and most thoughtful of Mr. Gibson's drawings.

Contains many of the most subtly humorous drawings he has done.

Copyright, 1904, by Charles Scribner's Sons, N. Y.

EVERYDAY PEOPLE

Even a more important work than last year's book.
$4.20 *net*. (Expressage extra).
De Luxe Edition of 250 numbered and signed copies. Each $10.00 *net*.

By H. G. WELLS

The FOOD of THE GODS

THE ACADEMY: "Mr. Wells has a practical familiarity with the facts of science, and this knowledge, combined with his imaginative mind, enables him to command the attention."

A History of the Ancient World

By GEORGE S. GOODSPEED, Ph.D.

Professor of Ancient History in the University of Chicago. Illustrated in colors, with numerous maps and charts. 12mo, $1.50 *net*.

History of Andrew Jackson

Pioneer, Patriot, Soldier, Politician, President

By AUGUSTUS C. BUELL, author of "Paul Jones, Founder of the American Navy." In two 8vo volumes, with two photogravure portraits, etc. $4.00 *net*. (Expressage extra)

Mr. Buell has made a striking full length portrait of one of the greatest leaders of men who ever lived—a figure which for rugged native strength and winning, popular qualities is perhaps unmatched in American history.

Through Science to Faith

By NEWMAN SMYTH, D.D.

Author of "Christian Ethics," "The Place of Death in Evolution," etc. A new edition with new preface. 12mo, $1.25 *net*.

FETICHISM IN WEST AFRICA

FORTY YEARS' OBSERVATION OF NATIVE CUSTOMS AND SUPERSTITIONS.

By the Rev. ROBERT HAMILL NASSAU, M.D., S.T.D.

SINCE 1861, with the exception of a few brief furloughs, the author of this notable contribution to our knowledge of the African negro has lived among the natives in different sections of the West Coast of Africa. Through this period of more than forty years he has been unusually fortunate at all times in winning the confidence of the natives, and has had unexcelled opportunities to make the most exhaustive studies of the varied practices of fetich, in its relation to daily life, religion, government, and theology; its practical effects on the people; the preparation and the classification of all the different varities of fetich in use. With 12 full-page illustrations. $2.50 *net*. (Postage 17 cents.)

ILLUSTRATED BY PARRISH

POEMS OF CHILDHOOD

By EUGENE FIELD. With 8 full-page illustrations in colors and title-page design by MAXFIELD PARRISH. Royal 8vo. $2.50.

The poems which Mr. Parrish has selected for illustration reveal the author in his most varied moods—imaginative, fanciful, tender, grotesque, and humorous. In typography, paper, binding, etc., the book is worthy of both the poet and illustrator.

Robbins & Somerville's Exercises in Algebra
Price, 50 cents

Contains nearly 4,000 examples, intended to supplement those in the standard text-books, which are often insufficient for many classes. These exercises conform to the arrangement of the leading text-books. The grading of the examples has been made with great care, and neither problems of extreme difficulty nor those possessing the "catch" element have been included. Particular stress has been laid upon those subjects which form the basis of later work. There has also been constant effort to present abundant drill on topics in the mastering of which students seem to have the greatest difficulty. The book is generously provided with reviews, which have been compiled with the college entrance examination papers as a constant guide.

Important New Books

PRESIDENTIAL PROBLEMS

By GROVER CLEVELAND

Ex-President of the United States

THIS is just what the title and the author's name would indicate—a clear, vigorous discussion of some of the vital questions which pressed upon Mr. Cleveland for settlement during his years in the White House. These include the Venezuela boundary controversy, the Chicago riots, the bond issue, etc.,—actual crises which taxed the Executive's wisdom, judgment and strength. "Presidential Problems" will rank at once among the works of authoritative interest upon the important topics it discusses.

Octavo, 300 pages, $1.80 net. Postage 16 cents.

THACKERAY'S LETTERS TO AN AMERICAN FAMILY

With an Introduction by LUCY W. BAXTER.

Octavo, 193 pp., $1.50 net. Postage 10 cents.

The most charming of all of Thackeray's letters. Written to different members of the Baxter family of New York, and being a record of both the first and second visits of the novelist to America. Interestingly illustrated with facsimiles of manuscripts and drawings by Thackeray.

THE PRINCIPLES OF ECONOMICS

By FRANK A. FETTER, Ph.D., *Professor of Political Economy and Finance, Cornell University, and Secretary of the American Economic Association.*

Octavo, 600 pp., $2.00 net.

Presents in one volume a summary of the latest contributions to economic study from the simpler problems of individual motives to the larger questions of industrial organization and of social policy.

THE AMERICAN CONSTITUTIONAL SYSTEM

By W. W. WILLOUGHBY, *Associate Professor of Political Science, Johns Hopkins University.* *12mo, 320 pp., $1.25 net.*

The first in a series of eight volumes on "The American State," edited by Professor Willoughby, author of this first volume; and describing comprehensively the manner in which the governmental agencies of the American State, federal, commonwealth, and local, are organized and administered.

The present volume discloses the constitutional character of the American State and explains the status of its various territorial subdivisions, indicating the extent of the power of their several governments.

CITY GOVERNMENT IN THE UNITED STATES

By FRANK J. GOODNOW, *Eaton Professor of Administrative Law and Municipal Science, Columbia University.* *12mo, 320 pp., $1.25 net.*

The second issue in the series on "The American State," containing chapters on "The City as a Social Fact," "City Police Administration," etc. Professor Bowman, Instructor in Political Science at Dartmouth College, who has read the book, considers it "unmatched for terseness and force."

THE CENTURY CO., NEW YORK.

The Monroe Doctrine

By T. B. EDGINGTON, A. M.

OF THE BAR OF MEMPHIS, TENN.

A special study of the Monroe Doctrine and the causes which led to its promulgation. The work is brought down to the present time, a chapter being given to our relations with the new state of Panama.

Octavo. 360 pages. Cloth, $3.00 *net*. Postpaid, $3.18

FIVE POINTS OF EXCELLENCE

Leaving the center of the city from which you start; reaching the center of the city of your destination, over smooth and level tracks; giving rest and comfort; riding beside running waters most of the way; through the centers of population to the gateways of commerce, when you travel by the

NEW YORK CENTRAL LINES

A copy of the Illustrated Catalogue of the "Four-Track Series" will be sent free upon receipt of a two-cent stamp by George H. Daniels, General Passenger Agent, Grand Central Station, New York.

STUDY and PRACTICE of FRENCH in 4 Parts.
L. C. BONAME, Author and Pub., 1930 Chestnut St., Philadelphia, Pa.

Well graded series for Preparatory Schools and Colleges. No time wasted in superficial or mechanical work. The Course (French text with vocabulary) is logical and progressive, combining conversation and composition with thorough drill in Pronunciation, Elementary Grammar, Syntax, and the study of Idioms. *Part I.* (60 cts.): Primary Grade. *Part II.* (90 cts.): Intermediate Grade. *Part III.* ($1.00): Advanced Grade. *Part IV.* (35 cts.): Handbook of Pronunciation for Advanced Grade; concise and comprehensive.

OWNERS of GENUINE SPECIMENS of OLD SILVER, made prior to 1800, who desire to dispose of same privately, are invited to send particulars, photographs, etc., to OLD PLATE, care of Jewelers' Circular, 11 John St., New York.

AUTOGRAPH LETTERS

of FAMOUS PERSONS Bought and Sold.
WALTER R. BENJAMIN, 1 W. 34th St., New York. SEND FOR PRICE LISTS.

STANDARD AUTHORS IN SETS

Balzac, Brontë, Bulwer, Carlyle, Cooper, Dickens, Dumas, De Foe, Eliot, Fielding, Gibbon, Guizot, Hawthorne, Hugo, Irving, Macaulay, Poe, Reade, Ruskin, Scott, Smollett, Shakespeare, Thackeray, Tolstoi.

Send for Descriptive Booklet.

THOMAS Y. CROWELL & CO., New York

The Nation.

NEW YORK, THURSDAY, OCTOBER 13, 1904.

The Week.

President Roosevelt knew, when he called Mr. Henry C. Payne to his Cabinet, after Mr. McKinley's refusal to give him office, that his political standards were much those of Quay or Platt. Hence Mr. Roosevelt was not entitled to sympathy when Mr. Payne failed to do him credit in office. We are assured that, after the gravity of the postal scandals was recognized, Mr. Payne did his utmost to ferret out the offenders. But when the first proofs were brought to his attention he denounced them as "hot air," and did what he could to suppress them, even to the extent of attacking and wrongfully accusing Mr. Seymour W. Tulloch, to whom he never made due reparation. With many genial personal qualities, his first thought was for the party; the public service came next, and he owed his retention in office to Mr. Roosevelt's unwillingness to dismiss a Cabinet officer under fire, and turning to Mr. Bristow to do the actual work of reform.

Secretary Shaw blossomed out on October 5 into a Constitutional pundit, holding in his speech at Indianapolis that it is "by no means certain" that the Constitution gives Congress the right to investigate an executive department of the Government. Congress may, it is true, make the laws governing the administrative officials, but, once made, they have "sole authority." It is a pity that this comfortable doctrine was not discovered long ago. It would have come in uncommonly handy to estop some of the disagreeable inquiries Congress has made—into the Conduct of the War, for example, or into the Crédit Mobilier and Pacific Mail Subsidy scandals. It is really amusing to see a Secretary puffing himself out in this way, as if beyond the reach of the grand inquest of the nation. Mr. Shaw has once or twice come perilously near setting himself above the law, but some one ought to tell him that his high and mighty airs will not be stomached by Congress. "I fancy it would cause a commotion," he says, "if the Chief Executive should demand papers from the files of Congress"; but it would be nothing, we can assure him, to the commotion that would be caused by a Secretary of the Treasury refusing information to a Congressional committee of investigation. He would soon find out that the breath which had made him could also destroy. Secretary Shaw is on the wrong tack. What he should try to convince people is, not that a Democratic House could not lawfully thrust a probe into the departments, but that it would find no rottenness there.

Senator Fairbanks is to speak in Wisconsin under the auspices of the La Follette and not the Spooner Republicans. To this extent the National Committee has reversed the position it took last June when it seated the Stalwart delegates in the National Convention. This is undoubtedly a heavy blow to the faction dominated by the "Federal crowd," led by the two United States Senators and the chairman of the Congressional Committee. Yet according to the standards which the party maintains elsewhere, there would be no excuse for withholding recognition. Even Addicks, in Delaware, because he can produce more votes than the other side, receives recognition in every way that the party and President Roosevelt can give it. It is now perfectly certain that if anybody can "deliver the goods" for the national ticket it is La Follette. He has received the sanction of the highest State court, and in the caucuses of last week he snatched the city of Milwaukee from the hands of his opponents.

"Call off the third ticket," cry the La Follette Republicans of Wisconsin to Chairman Cortelyou. "The Stalwarts were the ones who went to court for vindication. Now that the decision is in our favor, it is time for them to withdraw. If the national ticket suffers, it will be their own fault." Mr. Cortelyou is in the position of a tamer of wild animals who finds two of his charges tearing each other's throats five minutes before the curtain rises, yet he must present to the audience "our happy family, in which savage beasts from all quarters of the globe live together in affectionate harmony." Does any one suppose that the Wisconsin fight can be "called off" by any power on earth? Both sides long ago passed the point where even a temporary truce could be patched up. The differences, while small enough on the surface, are irreconcilable. The withdrawal of the third candidate will not make the Stalwarts vote the regular Republican ticket. His presence in the field is important only because a vote for Schofield will hurt La Follette but half as much as a vote for Peck. The new appeal unto Cæsar, however, has another aspect. It places on the national leaders once more the responsibility of putting their fingers into the Wisconsin mess. La Follette and his partisans had every reason to feel aggrieved at the contemptuous and offensive way in which they were "thrown down" at the Chicago convention. If now the national chairman fails to do what the Governor asks —which, there is much reason to believe, he could not do if he tried—there will be still less ground for the Regular Republicans of Wisconsin to feel any obligation to support the national ticket.

What crimes men will commit in the name of electing a President, we see again in the news from Delaware. The Addicks and the anti-Addicks Republicans have fused—that is, corruption and decency have fallen into each other's arms in order to save the State for Roosevelt. Party pressure has been too strong for common honesty. The fight which the anti-Addicks Republicans have been waging for so many years, in the hope of saving Delaware from the foul hands of a public debaucher, they now give over lest the three electoral votes of their State be lost to the great preacher of political purity and the arch enemy of compromise with sin. Better that thirty or three hundred votes were lost to him than that a single one should be won with the Addicks smirch upon it. The "fusion" in Delaware—this political mixture of light and darkness, honor and shame—was attended by every circumstance of ignominy. Addicks agreed to take a "Regular" Republican for Governor, provided the latter would promise to appoint an Addicks tool Secretary of State. When this infamous agreement was first proposed, the Wilmington *Evening Journal* said of it that not only would it be in plain violation of the Delaware Constitution, but that "the man who would accept on these conditions would be such an obnoxious worm that it would be a proper act to spurn him with our feet." Pleasant reading for Mr. Preston Lea of Wilmington, the "fused" candidate!

A single word of but three letters marks the only important difference between the Massachusetts Republican platform and that adopted by the National Convention, yet this is all that distinguishes a plank which means something from one that means nothing at all. "Commercial reciprocity" the national platform wanted when it could be secured "without injury to American agriculture, American labor, or *any* American industry." One sawmill, one boatload of herrings, could, under this, stand in the way of liberal statesmanship. It took no more courage for a mediæval theologian to refuse acceptance of a "que" than for a New England Republican to reject this little "any." Still, in advocating reciprocity with Canada, there was no such rashness as the Democrats showed in naming coal, lumber, fish, and natural products as the articles

which should be admitted duty free. For ourselves, we rejoice at every sign of Republican revolt against tariff shackles, yet in judgment on Friday's reciprocity plank we would respectfully cite a critic whose "great ability and scholarly attainments" the convention officially recognized, viz., Henry C. Lodge. The convention of which he was master last April declared that "reciprocity with Canada" is a mere phrase until the concessions offered on one side and demanded on the other are stated in detail. Those who demand reciprocity with Canada should furnish details if they desire action." If that remains an intelligent criticism, the Republican and Democratic platforms adopted last week are just the documents to which it should be applied. Senator Lodge was near to tears in his speech to the Convention, but all the stage business of the broken voice and the raised right hand cannot obscure the obvious fact that Lodge has been forced to beat an ignominious retreat on the reciprocity plank. It came down to a question of his eating his own words or having to fight for an endorsement by the Convention, and he showed with alacrity the great purpose for which he had been constructed hollow.

Since reciprocity is to occupy a prominent place in the tariff discussion of this year, it is important that the Democratic attitude toward the Cuban treaty should not be misrepresented. Mr. John Sharp Williams has replied to the insinuation in the President's letter of acceptance that the Democrats are insincere in their advocacy of reciprocity. If a willingness to go farther than your opponent in a good cause is a mark of insincerity, then the Democrats in Congress should be found guilty of it. In the Fifty-seventh Congress their crime consisted in getting the bill amended so as to remove the "differential" duty which protects the Sugar Trust, and in that form the Republican majority was unwilling to pass it. In the last Congress, when Mr. Williams had acceded to the leadership, all the House Democrats but eight voted for the bill, while thirteen Republican votes were cast against it. Thus, on the only specific proposal for reciprocity before Congress in the last few years, the Democrats actually stood for a larger measure of liberality than the Republicans.

Timothy L. Woodruff seems to be the only prominent Republican who openly admits that there is any trouble ahead of his party. The rainbows which gild the skies of B. B. Odell, jr., William Barnes, jr., Francis Wayland Higgins, and Louis F. Payn, the reconciled, when they talk for publication, have faded into the light of common day before Mr. Woodruff can manage to turn his head that way. He thinks President Roosevelt will carry the State of New York, but he does not disguise the fact that "a sharp fight" is being made against Mr. Higgins. If there is any soreness in the Republican party, Woodruff is the man to know about it. At this very minute he is lying outside the breastworks among his bleeding followers, where his eye can note every wound, his ear catch every groan. No marvel that this scene of misery renders him skeptical about the extravagant claims of the Odell managers, based on a "private poll," and about the "developments before election day which will amaze the Opposition and cement the Republicans into a solid and united party." It was ex-Gov. Frank S. Black who, in his speech nominating Roosevelt, sneered at the Democrats for fighting each other rather than the common enemy. Mr. Black follows the method of those church fathers who used to recommend as a spiritual exercise the contemplation first of the sin of the angels, and then the sin of Adam and Eve. If he is interested in the spectacle of factional strife, upon which he philosophizes with so much vivacity, he has but to look about him in his own party.

The theory that Mayor McClellan's removal of the Civil Service Commission was nothing but a political trick is too clever by half. It was not only a "McCarren man" who had to go, but two "Murphy men" as well. In any case, the reasons given for the dismissals are sound and sufficient. Officials who violate the law must not whimper when they are visited by the penalties of the law. And it must not be forgotten that the Mayor's sincerity will soon be in the way of a conclusive test. He is now under double bonds to act similarly in any new cases of the kind brought to his attention. The Civil Service Reform Association will have fresh cause to go to him with every well-founded complaint. He will be bound to follow his own precedent. No doubt the new Civil Service Commission will bear watching. Mr. Coler's record is not inspiring to reformers, but he has the fate of his delinquent predecessor before his eyes.

When Judge Parker quoted a decision of the Supreme Court in support of his contention that the common law provides a remedy for the evils caused by Trusts, he did not realize upon what a feeble reed he leaned. The whole question has been carried to the October term of the *Review of Reviews;* and that august tribunal, the entire editorial board sitting *in banco*, has unanimously reversed the Supreme Court. The opinion, which was delivered by Shaw, C. J., states that the defendant, one Parker, although "a gentleman of fine mental poise," has not shown "a very masterful grasp of national affairs." This, the opinion continues, "was to be expected" from one who had devoted himself exclusively to the humdrum duties of a mere judge. Kindly, but firmly, Mr. Justice Shaw lays down what is now the law of the land, and shows that "the common law has no application to matters of national concern," and that the Trusts can "be dealt with from the national standpoint" only by "the enactment of Federal statutes." This is the end of the matter; henceforth the case of the Rough Rider vs. the Judge is *res adjudicata*. While the question was before the lower courts, we expressed the belief that the weight of authority was on the side of the Judge. That opinion we are now obliged to recall. We admit, with shame, that we had no basis for it except a decision of the Supreme Court; but now that the law has uttered its final word, we hasten to correct the error. Like the House of Lords, the *Review of Reviews* cannot reverse itself; and there is nothing for the Judge to do but to take to the tall grass.

The lynching of a white man at Kershaw, South Carolina, who had himself killed four men at different times and yet gone unpunished, has stirred Southern newspapers to further denunciations of the prevalent lawlessness. They have at last awakened to the fact that so insidious a moral disease must be checked the instant it first shows itself unless the whole surrounding country is to be infected. The Atlanta *Constitution*, the Columbia (S. C.) *State*, the Charlotte *Observer*, and many others are daily calling upon their readers to redeem the South's good name. The *State*, for one, realizes what material injury is being done to the cotton States by the frightening away of capital and immigrants. All this, as we have said before, is highly encouraging. But the Southern newspapers will not do their whole duty unless they are ready to follow the *State's* lead and include in their denunciations the Tillmans, Vardamans, Jeff Davises, and others who seek political honors by abusing negroes and by inciting to lawlessness and race hatred. The latest offender is Congressman J. T. Heflin of Alabama. Speaking at Tuskegee, he said he thought that no harm would have been done if Roosevelt and Booker Washington had been blown up when they dined together. This, he now explains, was only a joke, but he said in earnest that if Mr. Washington interfered in the Congressional contest, "there is a way of stopping him. We have a way of influencing negroes down here when it becomes necessary."

In a noteworthy article in the *Forum* Prof. Kelly Miller calls attention to the readiness with which the entire negro race is condemned for certain crimes,

just as if no white men were ever guilty of them. In 1890 no less than 81 white persons were convicted in the United States of the "unmentionable crime." In the city of Chicago in one year, more white men were arrested and convicted for this offence than there were negroes charged with it in the entire South. In 1902 there were 148 persons arrested for it in New York city alone, as against fifty negroes who were done to death for the crime in the South. But, as Professor Miller points out, nobody comments on the New York or Chicago offenders, or is particularly excited over them, while the whole country is informed of the "black scourge." "If," he adds, "cases of lightning-stroke were advertised with as much horrifying particularity, we should all live in momentary dread of the terror of the sky." A recent study of lynching by a Yale graduate shows that of 1,872 negro victims of mob law, only 35 per cent. were killed on the charge of rape. How many innocent men there were even among them nobody can tell.

Kuropatkin has begun his advance southward, and has already engaged the enemy in force. This shows his entire confidence in the Siberian railroad, whose successful operation has been the marvel of the war. When the first blow was struck, there was a general assumption that the management would collapse. The rails were too light, and there were too few sidetracks to permit the handling of many troop trains. The crossing of Lake Baikal was also an insuperable difficulty; and Japanese spies, Chinese bandits, or daring raiding parties were certain to blow up bridges and cut the line with sufficient frequency to make it unworkable. Finally, it was pointed out that the supplying of an army at such a distance by one frail line of railroad was an unheard-of undertaking. Yet the Siberian railway has done more than was expected of it, having been blocked only for two weeks early in the summer. No spies or raiders have done any injury worth speaking of, and the building of the line around Lake Baikal has just been successfully finished. More than that, Gen. Kuropatkin has had all the rolling stock he needed at his immediate disposal at his end of the line. The comparative ease with which he retreated from Liaoyang, leaving only insignificant stores to fall into the hands of his disappointed pursuers, is conclusive proof of this. And, despite the retention of emergency and hospital trains, the Siberian railway has brought him more and more men with unceasing regularity, while from no source has there been the slightest hint that his men were suffering for want of food or were in need of ammunition. A winter campaign is in prospect.

One thousand millions is the estimate of the cost of the war to Japan made by Count Okuma in a public address at Tokio on Thursday. He doubtless bases this on the belief that hostilities cannot last more than two years, within which time one or the other of the contestants must stop for very exhaustion. Whatever the outcome, the issue has been bravely faced by the Japanese statesmen. Their financial plans have not thus far miscarried in any particular. Not content with providing for the passing hour, they are looking far into the financial future. They have shown our Republican editors and politicians who deny the possibility of retrenchment in national expenditures, that they can use the pruning-knife at a time when nations are generally most reckless in their expenditures, by lopping off $10,000,000 in prefectural expenses. If necessary, they will cut down the schools and hamper popular education. What a comment upon the alleged benefits of warfare, that so progressive a nation must retard its own development because of a dispute with another Power over the property of a third, and burden its people with an enormous debt to be paid by future generations!

That an open breach between Chamberlain and Balfour can long be delayed seems improbable after the former's speech of Wednesday week. There was a distinct note of resentment and warning in it. The Premier's announcement at Edinburgh a couple of days before that he did not favor protection, seems to have nettled Mr. Chamberlain. He himself does not desire "the protection of fifty years ago"; all he wants is that foreigners be made to "pay toll on shipments to the British market"—in other words, the old protectionist nonsense about the foreigner paying the tax. When it came to the question of a colonial conference and waiting for a general election, Mr. Chamberlain was even sharper in his criticism of the Prime Minister. The prospect of "endless delay," with repeated consultation of the constituencies, is naturally distasteful to a man of Chamberlain's years. Others may wait, but he is an old man in a hurry. Besides, he now has full control of the Conservative party organization. He feels that he is master, and that it is Balfour's part meekly to obey.

If anybody wonders how Mr. Joseph Chamberlain finances his protectionist campaign, let him ponder the following incident. A year ago, Mr. White, chairman of the Associated Portland Cement Manufacturers, stated that "if the wisdom and statesmanship of the country should declare that duties on some manufactures should be levied, cement was an article that would cry aloud to be included." The same gentleman has just now reported that the profits of his concern had increased during the past twelvemonth by some $100,000. Evidently, therefore, what his industry is "crying aloud" for is not protection, but swollen gains. And equally evident is the fact that the men who hope to see their profits multiplied by law, are willing to help Mr. Chamberlain get control of the lawmaking body, in expectation of favors to come. In a word, English nostrils already perceive the smell of corruption that has always attended protective tariffs.

English sticklers for purity in public life will have got a severe shock in the election of Mr. Marks for the Isle of Thanet. Though successful by a reduced Conservative majority, this candidate's private character had been openly assailed. He was charged with financial irregularities of a grave sort. So intense was the dislike to having a man of his record stand for Parliament that the London *Times* kicked over the party traces and said that Mr. Marks ought to be defeated; while a letter from the Archbishop of Canterbury was used against him, though it merely insisted in general terms upon the duty of giving a seat in the Commons only to reputable men. But the constituency was doggedly Conservative, and doubtless thought it was better to elect a protectionist under a cloud than a free-trader above challenge personally.

"The German Empire must be very strongly welded together if it is not to be injured by such discussions and happenings," is the view of the Berlin *Vossische Zeitung* of the Emperor's extraordinary action in the matter of the Lippe-Detmold succession. The truth is, that there is friction from time to time between the component parts of the Empire and the Federal Government, and, though Lippe is but a tiny part of the Emperor's domains, his remarkable attempt to influence its affairs is bound to cause uneasiness elsewhere. In Detmold there is natural indignation. The chief minister has dared to "hurl defiance at the forces trying to overturn the present order," and the delegate to the Reichstag would express his views if only the law of leze-majesty permitted. The dynastic questions involved were thoroughly threshed out in 1897 when the late regent was installed, and it is therefore particularly annoying to his subjects to have the Kaiser reopen it now in favor of his brother-in-law, whose pretensions to the regency were unfavorably passed upon by a special court of arbitration composed of six members of the Supreme Court of the Empire. This court held that the late regent was entitled to the succession. It is for a reversal of this carefully rendered judgment that the Kaiser is now so unwisely contending.

"KNIGHTS OF THE BIG STICK."

Word comes from Iowa that the Republicans of that State are to organize paraders for the campaign under the title of "Knights of the Big Stick." The idea is, of course, to brazen out one of the objections to President Roosevelt. There have been instances where a term of reproach has been defiantly taken up and worn as an ornament, but never anything quite like this latest "Iowa idea."

Here is a great agricultural State, sown with schools and dotted with churches. Its senior United States Senator, Mr. Allison, is the great economizer at the head of the Committee on Appropriations. He has been supposed faithfully to represent his constituents in standing for thrift and peace. Yet we see the most sedate and moral among them—at least, men asserting that they are such—ready to embark on a madcap policy of huge expenditures leading to war. Either that, or their proposal is a foolish trifling with the greatest national concerns, in itself almost as unworthy and menacing as the open glorification of war would be.

We say this, because we believe there is a profound and needed truth in a sentence of the "Appeal to the Nations" issued by the Peace Congress on Saturday. It is the one calling upon intelligent people everywhere to "arouse themselves to a finer and more adequate conception of their rights in the determination of the foreign policies pursued by their governments, that they may no longer be involved in foolish and ruinous wars with other Powers." Here is indeed the *fons et origo* of modern wars. They are made not by the people, but by diplomats. They spring not from race jealousies or international hatreds, but from the negotiations, the exigencies, too often from the diseased pride or the political ambitions, of Foreign Secretary or President. Relations between nations are subtly inflamed and secretly poisoned by those in charge of their foreign policy; the people are left in the dark, all unknowing, when suddenly the announcement is made of a strained and acute situation, the press sounds the trumpet, the appeal to patriotism is artfully made, and the country finds itself at war, it knows not how or why.

That is an exact description of some of the most terrible of recent wars. The Boer war was made in the office of Colonial Secretary Chamberlain. He kept not only the English people, but even his own chief, Lord Salisbury, practically in ignorance of the dangerous path he was treading, and they saw not that it led over a precipice until it was too late to draw back. No one can follow the diplomatic negotiations preceding the war between Japan and Russia without perceiving that it was the dictators of foreign policy who brought on the countless woes we have seen. It was true of Russia, at any rate, that her people dreamed not seriously of war, were averse to it, and went into it finally with unconcealed regret and reluctance. They furnished a grim illustration of the power of a haughty or unscrupulous man clothed with great but passing authority, to plunge a mighty nation into mournful disaster.

Such a danger is one from which Americans can boast no exemption simply on account of their form of government. We have no autocracy, but we have a President vested with enormous powers. They are greatest of all, and most perilous because most vague, in precisely the region of foreign policy. Stevens, in his 'Notes on the Constitution,' cites a private conversation he had with ex-President Hayes, in which that experienced man pointed out the possibilities of the indefinite "war powers" in the hands of a reckless or ambitious President. A Cæsar or a Napoleon, if so minded, could easily run his course under them. How imminent the peril of their abuse may be, with the people all unwitting, President Roosevelt showed us in his dealings with Colombia a year ago. In reality, he went to war with that country, of his own volition. Not one of his learned defenders who have talked so much of his Constitutional right to "recognize" the unhatched republic of Panama, has ventured to touch upon Mr. Roosevelt's order to prevent Colombian troops from moving freely on their own territory. That was an undoubted act of war. If the chivalrous President had not picked out an emaciated invalid to beat with his stick, a bloody conflict would at once have followed; and he alone, without act of Congress, by no mandate of the people, would have been responsible for the desolating consequences. As it turned out, Colombia being too weak to resent our defrauding and bullying, Mr. Roosevelt was simply responsible for one of the meanest and most dishonorable acts that ever stained our diplomatic annals.

The moral of the "Appeal to the Nations" is not that foreign policy should be determined in mass meeting. That is not intended by the advice to keep a more jealous eye upon its conduct. It is impossible to strip our Presidency, for example, of its great powers in international relations. But with the great powers should go great prudence, large sagacity, restraint, gravity, a knowledge of the law and a willingness to abide by it. Let us not think of abolishing the powers, but of getting men who will exercise them safely. And when we find that we have a President who recklessly swings his club among all the breakables of the Foreign Office, let not a sober people fail to rebuke him, at the first opportunity, for what is either his incredible levity in an exalted station, or else a recklessness which can only be called criminal. If they show that they are ready lightly to condone Mr. Roosevelt's beginnings of mischief, they cannot complain if, with a popular election as his ostensible warrant, he should let his dangerous policy bring forth its perfect work. In that case, the Iowa farmers and church-going merchants would look in vain for the peace in which their truest interest lies, and would find the Big Stick, of which they propose to make a campaign jest, coming down in sober earnest, but upon their own heads.

THE WAY TO SEEK PEACE.

It is a remark of the great Roman historian that it is easier for evil-disposed men to agree in promoting war than it is to unite those desirous of peace. This truth was illustrated by the Peace Congress at Boston on Thursday. With the aims of that body we are in the heartiest sympathy. Its deliberations have been, for the most part, admirable in tone, and its resolutions went straight to the duty of saving the nations, not only from insensate war, but from being crushed to the earth by insensate armaments in time of peace. Still, when it was a question of following up sound doctrine with individual application, there was a division of opinion and a strange hesitancy in pressing truth to its conclusion. The Congress was willing to seek peace by commendable generalities, but apparently not to pursue it by an unflinching rebuke of those who are seeking war.

The report on the "reduction of armaments" thanked President Roosevelt for his promise to summon another Hague Conference, and expressed the opinion that its "first act should be a plan for the arrest and ultimate abolition of armaments," which the previous Conference had declared to be "a crushing burden on the whole world." Excellent, said one delegate, the Rev. C. F. Dole; now let us do something practical. If we are to disarm, let Messieurs the Armers begin! Accordingly, he introduced a resolution setting forth that, "whereas no European country has the intention of invading an American country, there is no need of suspicion against our neighbors, and there is no necessity for the increase of our naval armaments." Instantly there was heated objection. One of those retired generals who usually furnish the bellicose element in peace congresses, took the floor to protest against such a reflection on the Government of the United States. He "stood there as an old soldier," etc., to say that a huge American navy meant the upholding of the Monroe Doctrine, and that meant peace. So the resolution was voted down.

This convenient lugging in of the Monroe Doctrine as an excuse for arming to the teeth, is an artifice which has been worn thin by too much use. If no for-

eign nation took a step which threatened violation of the Doctrine, even when we had no navy worth speaking of, why these sudden qualms now? It looks very much as if the determination were to have swollen armaments at all hazards, and that the need of sustaining the Monroe Doctrine is simply a pretence. In itself, at any rate, the argument will not bear examination. If a big fleet is our sole bulwark of peace, then we ought already to be at war, since our navy is far surpassed in strength by that of Powers who, according to President Roosevelt, are prevented from attacking us only because they fear us. All this is to turn things upside down, and to convert security into a reason for distrust. This whole conception of the Monroe Doctrine as a great guarantee of peace that keeps us constantly in dread of war, and compels us to endure the burdens of war even when nominally enjoying the blessings of peace, is so absurd that it almost seems as if Pope had foreseen it when he wrote in the "Dunciad" of the place

> " . . . where Folly holds her throne,
> And laughs to think Monroe would take her down."

This contention that immense armaments make for peace is hollow. It will not bear the weight of a good history. The facts make it collapse. This cry is simply a variant of that of ambitious rulers in all ages. Napoleon III. had no Monroe Doctrine, but he had the Empire. "L'Empire, c'est la paix." But everybody knows now what a barefaced lie that was. The display of might provokes rivals; it does not intimidate and certainly does not conciliate them. If enormous armies and great naval strength insure peace, why are Russia and Japan fighting? Take the case of Germany today. Why all these international jealousies on her account; why the irresponsible talk in our navy that "we shall have to lick Germany next"; why the organized campaign of the newspapers and military experts in England to bring on a war with Germany? Simply because Germany has a navy, strong already, and to be made stronger. But for that, it is certain, we should not hear from so many quarters *Delenda est Alemannia*. The point is that the armament which, on the theory, should have greatly increased the chances of peace, has, in fact, diminished them. We look for peace, and lo! a sword.

It is necessary to think clearly and speak frankly about this matter. Peace does not depend upon fear. It goes with good will and mutual respect. Threats are a vain thing for safety. The nations will not embrace each other at cannon's mouth or bayonet's point. Peace kept by the stronger? What is it that has made the history of the Anglo-Saxon race so painfully near Wendell Phillips's description of it as "a drunken revel of blood"? The law of the strong which is, not peace, not forbearance, but aggression and bloodshed. We must clear our minds of this cant about the needless multiplication of the engines of war being really a peace measure. That is not their real design; that will not be their actual effect, unless history needs to be rewritten and human nature is radically changed from what it always has been. Knowing these truths, happy will Peace Congresses be if they boldly utter them. War is a game which kings would not play if their subjects were wise, and it is also, as Shelley tells us, "the statesman's game"; so that it is the duty of those who make and unmake statesmen—namely, the people who have to pay the taxes and furnish their bodies as food for cannon—to insist by voice and pen and vote that war, and the huge armaments that lead to war, shall be kept out of their thoughts and plans.

CONFUSION IN WISCONSIN.

It would have been hard for the Wisconsin Supreme Court to hand down a decision which would have less influence on the political situation than will that of October 5. The outsider, no less than the citizen at home, has longed for the chance to say, after a judicial review of the Republican split, "At last the situation is clear. Now both sides know where they stand." As a matter of fact, the decision makes the situation more, rather than less, confusing. The Democrats have promptly declared that the election of Peck for Governor is now certain, while the Republicans, with equal manifestations of delight, assert that there is no longer any doubt of the State's electoral vote for Roosevelt. Wisconsin thus joins that extraordinary roll of States which the Republicans claim for the national ticket, but concede to the Democrats on State issues.

One thing, at least, can be assumed: no considerable number of the men who burned their bridges behind them last spring and have taken part in the Stalwart campaign during the summer, will vote for La Follette now. It is questionable if many of them ever intended to support even their own respectable third ticket. Those who did, now that the right to the name "Republican" is taken from their nominee, can with clearer consciences vote for the Democrat. If the decision had gone the other way, there would have been at least a sentimental obligation to vote the ticket pronounced "regular," though among the La Follette partisans it would have caused a feeling of resentment against the "Federal crowd" which they might have gratified by "knifing" the national ticket.

In much of the discussion of the Wisconsin complication, critics have failed to realize how overwhelmingly Republican the State was to start with. The percentage of Republican "scratching" which would elect Herrick in this State, would hardly attract attention in Wisconsin. La Follette was first elected Governor in 1900 by a plurality of 103,745 out of a total vote cast of only 441,900. In 1902, with a vote but little more than one-half as large, he had 47,599 votes more than his opponent. The ratio of Republican to Democratic votes in his first election was about as 11 to 7. In 1902 it was about 4 to 3. Thus, if we figure upon the 1900 returns, fully one-fifth of the Republicans must go over to change the result, while on a basis of the 1902 figures the proportion must be about one-sixth.

Nobody knows the exact numerical strength of the Stalwart movement, but it unquestionably includes much more than a fifth of the Republican party. It elected only a little less than half of the delegates to the last State convention. It has the support of a majority of the Republican papers of the State and the services of most of the old party "war horses." The railroads and the manufacturing interests are with it. Counting as a Stalwart every believer in Republican policies who is for any reason opposed to Gov. La Follette, the faction cannot have been very much weaker numerically than that which supported the State Administration.

Yet possible danger to the national ticket may come from the very strength of the faction which the national convention recognized. Say that 20 per cent. of the Republicans must vote for Peck to elect him. Only a mere handful of these need take the trouble to mark their ballots for Roosevelt electors to make the national ticket safe. But suppose two-fifths of the Republicans leave La Follette, and the Democratic Governor gets an overwhelming majority. Then the electoral ticket goes with it, unless a full half of the bolting Republicans vote split tickets and mark every Roosevelt elector separately. In fact, there will be a good number of "fair-minded Democrats" who will vote for La Follette and Parker electors. He would be rash indeed who attempted prophecy on the data at hand, yet there is certainly no reason for abandoning hope either for a Republican Governor or Democratic success on the electoral vote.

The local campaign is now under way, and it shows that in one State, at least, the charge of "apathy" is unfounded. Men who concede the truth of many of the Stalwarts' charges are supporters of La Follette; men who believe in all of the Governor's measures joined in the "bolt" last spring. M. G. Jeffris, the presiding officer of the "rump" convention, fired the opening gun of the Stalwart campaign in Milwaukee the other day. As the *Sentinel* put it, "For the first time since he began his campaign of vilification and misrepresetnation four years ago, the arguments and pretensions of Gov. La Follette have

been met and refuted from a Republican platform by a Republican speaker." His speech dealt almost wholly with the charges against La Follette as an administrator. He dwelt on the shortage in the State Treasurer's office, the high fees charged the Prudential Company by the Insurance Commissioner for an examination. He described the increase in State expenses; denounced La Follette's political methods, as in the use of game wardens to look after his interests; charged him with defaming the good name of the State, and with having secret understandings with the railroads and seeking favors from them while fighting them openly. But as to the measures with which La Follette is identified, half the shots hit no mark. La Follette wants a primary law. Mr. Jeffris was himself opposed to it, yet he pointed out that the Stalwarts were willing to extend the direct primary to 1,100 offices, and joined in submitting to the referendum the more comprehensive bill. On this, the allegation against the Governor is simply that he insisted on all or nothing. La Follette wants a railroad commission, partly elective and partly appointive. The Stalwarts want it to be entirely elective. La Follette wants the railroads taxed on an ad-valorem basis. So do the Stalwarts; in fact, they trace the origin of the plan to Senator Quarles. One sees how issues cross each other and personalities collide in this remarkable Wisconsin campaign.

PROGRESS OF PRIMARY REFORM.

In the present status of the direct-nomination discussion in this country, general arguments on the theory should give place to study of experiments and the working out of safeguards against the incidental evils. Primary reform is receiving attention in a number of States this year. Oregon is to make the first trial of a direct-nomination law passed last June. In Wisconsin the most comprehensive act of this kind ever proposed in a Northern State will be submitted to the voters. In Illinois, Charles S. Deneen, the Republican candidate for Governor, is strongly advocating legislation along the same line, and declares that if he is elected with a Republican Legislature, and primary reform is not accomplished, he shall consider his administration a failure. Minnesota and Massachusetts have, within the last fortnight, nominated candidates by the direct primary.

The Minnesota primaries have been followed by the usual criticisms, which point out three objectionable features: interference with one party's nominations by members of the other, undue advantage to men whose names are widely known; and the display of petty prejudices. The St. Paul *Globe* asserts that the voter who would use the blanket ballot provided by the old primary law to vote for candidates of the other party, now, under the amended law which requires a public declaration of party allegiance, "just as unblushingly demands a ballot of the party to which he does not belong, and does the same thing. We have violated the principle of secrecy of the ballot," it concludes, "without any gain whatever." The Minneapolis *Journal* applies the second criticism pointedly to the overwhelming victory of the extreme "stand-patter," Congressman McCleary. Seventy-five per cent. of the Republicans in his district believe in revision downward, it says, "and with a decided dip at that." There was a sharp fight against his renomination. Yet the opposition vote was only a few hundred. "The people of the Second District sacrificed their political views in a political campaign for the personal benefit of a man they knew and liked." A defeated candidate spoke of another weakness, namely, that "a candidate has small chances of winning unless his name ends with a 'son.'" This is the same difficulty that was met in the aldermanic primaries of Boston last winter, where the leaders could not get the Democratic voters to nominate any candidates who did not have Irish names.

It was promptly pointed out, to the discredit of the primary law, that the notorious "Doc" Ames, whom the most brazen of bosses would hardly dare to offer for an elective office, and who probably would not have had a vote in an open convention, came in third with 5,000 votes in one of the Congressional fights. At the same time, it is fair to note that, by this same primary, the Republicans nominated for Mayor D. Percy Jones, the man who, as president of the aldermen, took hold and cleaned up the Minneapolis city government when Ames ran away.

The direct primary, in short, is neither a failure nor a panacea. When the issues are clearly defined, and the electorate is interested and conscientious, its advantages over the convention are so obvious that there is little to be said on the other side. But when the campaign is listless and there is nothing particular to vote about, the nominations which it makes are no better, and may be worse, than those which an enlightened and sagacious leader would dictate. As people become accustomed to the direct primary, it may work better. Voters will perceive that the same judgment is necessary in the primary as in the election itself. Meanwhile there are details deserving attention.

The most serious difficulty in practice has been to prevent one party from interfering with the other's nominations. Massachusetts and Minnesota require from the voter a declaration of his party allegiance at the polls. There has been strong objection to this in both States, and conscientious men have refused to vote on account of it. One reason for the general satisfaction with the workings of the direct primary in the Southern States is that this trouble is almost entirely absent. It is the practice in many localities to allow any white man to vote in the Democratic primaries. Oregon's new law requires the voter to enroll at the spring election in order to take part in the fall primaries. There is some embarrassment just now because the law was passed after the spring election and no one had the chance to enroll. But the general principle is that of the law in New York, which demands enrolment for the primaries so long beforehand that the contests in the party will not ordinarily have shaped themselves.

The framers of the law which will be submitted to the referendum in Wisconsin sought to avoid the declaration of party preference, and at the same time discarded the blanket ballot. The voter will enter the polling-place and receive from the clerks a bundle of ballots, one for each party important enough to have a column on the regular election ballot. He will mark only one of these, but will fold them all, and, passing out, deposit the marked ballot in one box and the unmarked ballots in another. The inclusiveness of the law may be its strength. It applies to the Governor and all State officers, county officers, members of the legislature, Representatives in Congress, United States Senators, and party committeemen. It is believed that every voter will take an interest in the contest for some one of these positions, and will therefore not throw away his vote purely to embarrass the other side.

Another interesting feature of the proposed Wisconsin law is that relating to party platforms. It provides that the candidates for State offices and for the Legislature shall meet on the fourth Tuesday of September, and there adopt the platforms of their respective parties. The theory of the convention system is that the party first lays down its principles and then selects the men to carry them out. In its immediate workings this law seems to put men above policies, though undoubtedly the campaign preliminary to the primary will bring out the issues sharply enough—when there are any.

THE SPANISH WAR CLAIMS.

Few except those directly interested care any longer about such far-off, forgotten things as the claims of American citizens against Spain, growing out of the Cuban war. Of course, they were one of the reasons we alleged for going to war with Spain. The spectacle of American residents in Cuba being done out of property in amount from $25,-

000,000 to $50,000,000 was one that finally broke down our patience. We fought and conquered Spain; and, in the treaty of peace, our Government agreed to take over and settle by itself all these claims. That done, it proceeded to do its own citizens out of their property more unblushingly than Spain herself.

This may seem a hard saying, but its substantial truth will not be questioned by any one who has taken the trouble to follow the decisions of our Spanish Treaty Claims Commission. Composed of five members, with ex-Senator William E. Chandler as president, it has taken positions completely at variance with the official attitude of President McKinley on the same subject, not to speak of speeches and reports in Congress. The report of the Senate Committee on Foreign Relations, for example, in support of the joint resolution practically declaring war, said that "much" of the $50,000,000 of property in Cuba belonging to American citizens had been "destroyed," and added that the claims already on file in the State Department amounted to $16,000,000. Will it be believed that, after all that, and after this Government had bound itself, by Article VII. of the Treaty of Paris, to "settle the claims of its citizens against Spain," making its assumption of these claims one of the reasons for demanding the Philippines as indemnity, the Commission has taken a view of our liability which practically throws these claimants out of court?

Such is the fact, however. By a majority vote (two out of five dissenting), the Commission has laid it down as "a general rule" that Spain was not responsible for damages caused by "an armed insurrection beyond control." It also has decided that "concentration and devastation" (the very things about which the American people were crying to Heaven in 1897 and 1898) "are legitimate war measures." The legal result of all this is to put the burden of proof upon the claimant, to show, not merely destruction of his property, but also that the Spanish officials had the power, and did not exercise "due vigilance," to prevent its destruction. This will naturally be impossible in nine cases out of ten; and the inevitable result will be to leave hundreds of outraged American citizens without redress.

We are not saying that the opinions of the Commission, in the matters referred to, are not good international law. But this Government was bound, in decency, not to take advantage of them. We deliberately waived them in advance. Concentration legitimate warfare? But President McKinley distinctly declared in his messages to Congress that it was not. On December 6, 1897, he declared that "it was not civilized warfare. It was extermination." He repeated the opinion in almost the same language in his war message of April 11, 1898. But Commissioner Chandler sardonically puts all this aside. He writes with characteristic cynicism in his opinion:

> "The President had not then seen and probably did not anticipate the concentration and devastation by United States troops under Gen. Bell in the Philippines. Possibly if he had supposed that, in addition to arousing just national indignation in order to bring on war with Spain for the liberation of Cuba, he was announcing a new principle of international law, and making a finding of facts happening in war which should be conclusive and binding upon United States courts in all future time, he would have withheld or moderated the soul-stirring utterances with which he began a great war for the freedom and independence of a new nation."

Equally strong was the commitment of this Government to the view that these large claims were not only a grievance, not only a partial justification for going to war, but a valid set-off, after being assumed by this country, to the demand of indemnity that we made upon Spain. Secretary Hay was almost tearful when he telegraphed to Paris: "Surely, Spain cannot expect us to turn the Philippines back and bear the cost of the war and *all claims of our citizens* for damages to life and property in Cuba without any indemnity but Porto Rico!" That is to say, we insisted upon taking the Philippines because we were going to pay these millions in claims of our own citizens. Then we turn about and refuse to pay the claims. Commissioner Maury, in his dissenting opinion, puts the case with cruel exactitude:

> "The United States, with satisfaction thus delivered into its hands by Spain, is a trustee of that satisfaction for the holders of the claims which it thus forced Spain to admit and settle; and its representatives should not be permitted now to defeat them before this commission as claims against itself as trustee, on grounds that are wholly inconsistent with those taken by it when Spain was a suppliant for peace on any terms—grounds that, in my judgment, go far toward making mockery of Article VII. of the treaty and of the Fifth Amendment of the Constitution of the United States prohibiting the taking of private property for public use without 'just compensation.'"

Clearly, these injured Americans would have been better off if we had never gone to war with Spain to redress their injuries. As against the Spanish Government, the Administration at Washington would undoubtedly have pushed their claims with vigor, and it would have demanded the payment of every penny. But when its trusting subjects came to ask that their losses be made good by their own Government, which had solemnly covenanted to do so, they find it swallowing its own words, repudiating its own President, and driving them away empty-handed. Well, at any rate, it is not a very powerful argument for war. A peaceful tribunal could not have done worse by these claimants than the one which, created by a war partly undertaken for their relief, now mocks at their calamity.

GERMANY, ENGLAND, AND RUSSIA.

Foreign observers who have watched with alarm the intense partiality of the English press and public for their Japanese allies, find renewed cause for uneasiness in the determined attacks upon Germany now appearing in Imperialist newspapers. The London *Times* returned to the assault the other day by printing an account of a secret agreement between Russia and Germany in regard to Far Eastern matters. This is said to have been reached during the negotiations for the recently concluded commercial treaty between the two countries. While the anonymous correspondent is not able to give the exact terms of the new understanding, he is certain that it "secures for Russia Germany's support in the ultimate settlement of the terms of peace with Japan." The *quid pro quo* for Germany is a free hand in carrying out the Emperor's scheme of *Welt-Politik* in China "along the lines of least resistance."

Just how malevolent this Machiavelian policy of the schemers in the Wilhelmstrasse is can only be gathered from an article in the *Fortnightly Review*, which is crammed with enough terrible nightmares to please even our sensation-seeking naval jingoes. Far from having designs upon this country, as our Navy Department wiseacres would have us believe, "Calchas" knows by divine inspiration that the one aim and object of the German nation is the destruction of England on land and sea. The friendly meeting of the sovereigns at Kiel is loftily waved aside. The neighborly visit of the German squadron to Plymouth was nothing less than an armed reconnoissance, enjoying "inexplicable opportunities for the study of our coasts and fortresses." These facilities should be restricted at once, while the English fleet should prepare, "with Japanese foresight," "consciously, thoroughly, and with increasing vigilance," to meet the deadly enemy on the North Sea. The real aims of Germany, according to this prophetic soul, are so multifarious as to beggar description in a mere newspaper article. Suffice it to say that Germany intends to carve out a "yellow India" in China; that she has designs on Constantinople; that she would direct Russia's attention to India and Persia after the Czar's exhausting defeat in Mantchuria, to weaken England; that she would make permanent the antagonism between the British Empire and Czardom; that she would force France into the Dual Alliance or make her drop the *entente cordiale*, etc., etc. In short, the history of diplomacy does not record more deep-laid schemes, more subterranean and world-shaking policies than are here credited to the Kaiser and his counsellors.

At the repeated official denials from Berlin the *Times* scoffs persistently. Although the new commercial treaty be-

tween Russia and Germany has not been published, and many German newspapers fear that it is less favorable to their interests than they had hoped, the *Times* knows that Berlin dictated its own terms and that Russia will obtain a loan from Berlin bankers in return. The semi-official press, it condescendingly explains, has received its orders from the Foreign Office, but to carry them out is forced to "grossly misrepresent" the original statements of the *Times* correspondent. All of this may afford profitable advertising for the *Times*, but it neither adds to that journal's prestige nor aids the cause of European peace.

It is, of course, true that Germany is in a position to profit by the Russian embroilment in the East. She has already profited. The serious Russian pressure on her Eastern frontier has necessarily been relaxed by the departure of troops for the East, her shipyards and factories are working overtime to complete Russian contracts, and her merchants and steamship lines have been quick to pick up the business which the Japanese themselves have had to give up for war reasons. Above all, the revelations as to the military and internal weaknesses of Russia have strengthened the hands of the German Fortign Office. The progress of events has made the Russian Bear a more welcome ally since it has become plain that his claws are not nearly so sharp as had been feared. But the fact remains that a large portion of the German public is quite as averse to any binding alliance with Russia as it is wholly free from military designs upon England, despite the friction of the past six years. The great bulk of the nation would welcome any readjustment which would relieve it of the tremendous military burdens it now believes necessary. And the bitter results of the Bismarckian colonial ventures are no encouragement to empire-building in China, even if that country should fall to pieces. The extra military expenditures such a course would involve would be most distasteful and burdensome.

At the same time, the German Liberal papers have been quick to point out that there are grave internal problems and urgent reforms crying out for adjustment—"our people's freedom needs developing," one newspaper puts it—and that their solution will be advanced the minute the fear of war in the East is removed. Far from there being any danger that good relations with Russia would make for a reactionary and absolutist policy, it is contended with much weight that the opposite would be the case in both countries. But all this does not lend so much as a color of truth to the charges of a conspiracy against Great Britain and her interests, or of a fixed intention to pull Russia's Eastern chestnuts out of the fire for her. So important a newspaper as the *Allegemeine Zeitung* resents the suggestion that Germany should follow M. de Lanessan's proposal of mediation. Obviously, such a move would immediately expose her to French and English criticism. Of course, the English anti-German press conveniently forgets how warmly it applauded the Anglo-German agreement, and how universally the world recognizes the Kaiser's notable influence in behalf of European peace. But nobody ever doubted that Imperialism walks hand in hand with insincerity and inconsistency.

TALMA.

PARIS, September 28, 1904.

There is at the present time in France a mania for erecting statues, and frequently statues of the most uninteresting or undeserving people. This mania often serves political purposes, as the statues become the occasion of great speeches. Such was not, however, the case to-day, when a statue was erected to Talma, the actor. Talma has the reputation of having been the greatest actor of the beginning of last century, but it seems a little odd that the necessity of having his marble effigy should have been felt only at the beginning of the new century. There remains nothing of the actor after he has disappeared from the stage. He can hardly be said to have any personality, as he never appears except as expressing thoughts which are not his own. His character loses itself in a hundred characters. He is not a creator; there are in our French annals a few—a very few—exceptions to this rule. The most famous is that of Molière, but he was a man of genius, and when we read him or hear his plays, we don't care what sort of an actor he was himself.

Before having the honor of a statue, Talma had that of a biography, written in 1827. It fell rapidly into complete oblivion, but a new edition has just been printed on occasion of the erection of Talma's statue. The author of the biography was a certain Regnault-Warin, who seems to have been a singular and eccentric character. The only work of his worth mentioning, besides his 'Mémoires sur Talma,' is the 'Mémoires pour servir à la vie du Général Lafayette et l'histoire de l'Assemblée Constituante' (1824), yet he was an incessant writer.

He was born in 1771 at Bar-le-Duc, and before the Revolution broke out he had already written plays. He published at a very early age an Elements of Politics, a Citizens' Library, and a Eulogy on Mirabeau. He was a friend of some of the members of the Gironde, Vergniaud, Brissot, and others, and wrote in their newspapers. He was imprisoned during the Terror, and owed his life to the 9th Thermidor. We find him afterwards trying to prove that the Dauphin, the son of Louis XVI., was taken out of the prison of the Temple (some of the pages he wrote on this subject were used afterwards by the pseudo-Dauphin, Naundorff). He had evidently a taste for mystery, for after his 'Prisonniers du Temple' he wrote a book on the Man in the Iron Mask. It would be needless to give a list of his numberless essays; they sometimes procured him enemies and never much money, since he died in great poverty and well forgotten. The Memoir of Talma was his last work, the only one which is readable in our day with any profit. There is no literary merit in it, but some of the facts preserve a certain interest. Unfortunately, the author mixed matters of some importance with very insignificant and occasionally ridiculous stories.

Talma was born on the 15th of January, 1765, in Paris, where his father was a dentist. He studied diligently in the colleges Louis-le-Grand and Mazarin. His father went to London in the pursuit of his calling, and was joined there for some time by the son, who, however, felt himself drawn to the stage, played in private theatricals, and made himself familiar with Shakspere. Upon his return to France, for one year he practised the same profession as his father; but his vocation became more and more marked, he took lessons of the best actors of the time, and, after serious study, made his début at the end of the year 1787.

After many conversations with the painter David, he formed the project of a reform in theatrical costumes. Some attempts in that direction had already been made by Mademoiselle Clarion, by Lekain, by Mademoiselle d'Hubert; but the tradition which allowed the actors and actresses to play antique parts in modern costume was still predominant. Talma showed himself for the first time in the tragedy of "Brutus" dressed like a Roman, with a real toga and all the accessories of Roman costume. The public was astonished—half pleased and half shocked. Somebody exclaimed, "Why! how ugly he is! He looks like one of those old statues." The spirit of the Revolution favored reform in the theatre. The speeches of the time are full of reminiscences of Rome and Sparta. David was renovating French art; the study of the nude had become the order of the day. Pikes, liberty caps, attributes of the Consuls, ancient shields, symbolized a new order of things. The delicate art of the eighteenth century fell into contempt: dress, furniture, everything was transformed. On the 4th of November, 1789, Talma appeared in a tragedy by Chénier (brother of the unfortunate poet), called "Charles IX.," in the dress worn by the King, scrupulously copied from the old portraits. The success of this very mediocre piece was prodigious. The comedians of the National Theatre, where it was represented, were not all in favor of the reform; most of them were jealous of Talma, and disliked his very advanced opinions. Talma had to fight a duel with one of them. He left the National Theatre, and, with a fraction of the comedians, opened a rival French Theatre.

In 1791, Talma was married to Julie Careau, a wealthy lady, no longer young (she was born in 1756). She had been a mistress of the Duke d'Orléans and of the Viscount de Ségur. At her hotel in the Rue Chantereine, a present from Ségur, she received Narbonne, Sophie Arnould, Louise Contat, Vestris, Dugazon, Mademoiselle Raucourt, She brought to Talma three houses and two children. She soon had two more children by him. The union was not a happy one; Talma was very extravagant and always in debt; he had the reputation of an "homme à bonnes fortunes," and his wife divorced him after ten years of marriage. On the

6th of February, 1801, the divorce was pronounced "at their mutual request, made in a loud voice"; nothing more was required at the time.

A year afterwards, on the 16th of June, 1802, Talma took a second wife, Charlotte Vanhove, the divorced wife of a theatre musician. She belonged to a theatrical family and had been herself on the stage since 1785. She was imprisoned during the Terror, though she had captivated Robespierre (she says so, at least, in a book which she published long afterwards), and she left her prison only in 1794 to enter the Theatre of the Republic. Talma made her acquaintance at that time; she bore on the stage the name of Madame Petit, that of her first husband. She had by Talma two children, one a son, born in 1814, who entered the army and became a cavalry major. After twenty years of marriage, Talma and his wife separated "à l'amiable." Madame Talma left the stage in 1811; in 1828, she was married, for the third time, to Jacques Antoine, Count de Chabot, who had left the army as cavalry colonel. She published in 1836 a book which it would now be difficult to find, 'Studies on Theatrical Art, followed by inedited anecdotes of Talma.' It is in this book that she alludes to the momentary passion she pretends to have inspired in Robespierre.

Talma, at the time of his marriage with Charlotte Vanhove, had already made a great reputation; he had become, so to speak, the representative of a new school of acting. He was much admired by Napoleon. Talma had met Bonaparte when he was only a lieutenant, and again on his return from Egypt. After the 18th Brumaire the First Consul attended all the representations in which Talma appeared, and had frequent conversations with him. When Napoleon became Emperor, he allowed Talma to come sometimes to see him after breakfast. Occasionally he criticised him; he disapproved the manner in which Talma played the part of Nero. "I should like to find in your play the struggle of a bad nature with a good education. I should like you also to make fewer gestures. . . . I cannot praise sufficiently the simple and natural forms to which you have brought back tragedy. When persons of dignity, whether they owe their elevation to birth or to talent, are agitated by passions or pursue grave thoughts, they certainly speak loftily; but their language ought to be true and natural"; and, after an interruption: "For instance, at this moment we are speaking as people do in conversation. Well, we are making history!" All Napoleon's remarks are characterized by an extraordinary faculty for criticism, and it may plausibly be said that Talma owed much to Napoleon's comments; but people would have it at the time that Napoleon also owed something to Talma, and copied his attitudes.

In 1808, Napoleon ordered Talma and his troupe of actors to join him at Erfurt, where took place his famous interview with Alexander. It was on this occasion that Napoleon told Talma that he was to play before "un parterre de rois." A series of representations took place at Erfurt from the twenty-eighth of September to the thirteenth of October. It began with "Bajazet" and ended with "Cinna." In one of these representations, when the verse was recited—

"L'amitié d'un grand homme est un bienfait des dieux,"

the Emperor of Russia, sitting next to Napoleon, turned towards him and bowed to him; the allusion was felt by all and applauded. In 1813, Talma accompanied Napoleon again for a series of representations given at Dresden. In 1814, we find him, after the return of Louis XVIII., reading on the stage very indifferent verses celebrating the new Kng; and after Waterloo he accepted a large gratification from Louis XVIII. He was always in money difficulties, and was obliged at various times to give representations in the provinces, in London, in Belgium. After he definitively left the stage in Paris, he continued to play for a time in the provinces. He died on the 19th of October, 1826, in Paris, and was buried in Père Lachaise.

I have had the curiosity to count the plays in which he figured, outside of the great classical tragedies of Racine and Corneille. I found as many as seventy-three. What an effort of memory, what an amount of trouble and fatigue, is represented by this bare number; and of these seventy-three plays not a single one remains or deserves to remain in the permanent literature of France. Truly, the work of the actor, even of an actor like Talma, has a very disappointing side. The successful actor has intense satisfactions of vanity, but at what a price! And how much truth there is in the admirable pages of Charles Lamb on "The Tragedies of Shakspere, considered with reference to their fitness for stage representation," written after a turn in the Abbey, where Lamb had been struck by the monument to the celebrated Mr. Garrick!

Correspondence.

A WORD OF APPROBATION.

TO THE EDITOR OF THE NATION:

SIR: Allow me to thank you for the editorial in your issue of September 29, entitled "The New York Situation." The feature of your paper that I have most valued, for the many years I have been one of its readers, has been its independence, believing that standing by honest convictions was never to be varied from in favor of party success. This editorial is of value not to the voter of New York State alone, but to every other in the United States who wants to be honest with himself and with his country. Reading it, he should feel thankful that there is one paper, anyway, so straightforward, and take fresh courage for the struggle that is always before us.—Yours, etc., T. J. LE MOYNE.

ISHAM, TENN., October 8, 1904.

Notes.

Macmillan Co. have in preparation a new edition in ten volumes of the Writings of Franklin, edited by Prof. Albert H. Smyth of the University of Pennsylvania. It will contain several hundred new letters and MSS. unknown to former editors. The same firm will issue at once 'William Blake: A Study of his Life and Art Work,' by Irene Langridge, with fifty reproductions from his chief works.

Houghton, Mifflin & Co. are to publish 'Mine and Thine,' poems by Mrs. Florence Earle Coates; and 'Cain: A Drama,' by George Cabot Lodge.

'Romantic Ireland,' by M. F. and B. McM. Mansfield, copiously illustrated by Blanche McManus, is soon to appear from L. C. Page & Co., Boston.

Mr. Jonathan Nield's 'Guide to the Best Historical Novels and Tales' (London: Elkin Mathews; New York: Putnams) enters upon a third edition with much improved arrangement and with a carefully considered list of "Fifty Representative Novels" for approval or criticism. American publishers as well as English are indicated, if not exhaustively. The index of authors and subjects is retained from the second edition. The collection is avowedly select, tempered by the desire to be as widely embracing of historical periods as possible; to fill gaps, poorer work has been admitted occasionally. Perhaps the fifty list is not unaffected by this leniency. At least we think Fritz Reuter's little gem, 'In the Year '13,' might have been taken in by reason of intrinsic worth, to the exclusion either of Shorthouse's 'John Inglesant' or Besant's 'Dorothy Forster.' Mr. Nield's discursive chats with his readers can but propitiate them.

Mr. R. G. Thwaites's "Early Western Travels, 1748-1896" (Cleveland: Arthur H. Clark Co.) proceeds in volume vii. with a reprint of Alexander Ross's 'Adventures of the First Settlers on the Oregon or Columbia River' (1849), in connection with John Jacob Astor's expedition to establish the Pacific Fur Company. This is another Lewis and Clark sequel, and possesses no little interest and authority. As the voyage of the *Tonquin*, begun September 6, 1810, was by way of Cape Horn, we have a glimpse of the Sandwich Islanders; and later the Indians of our north Pacific coast are faithfully described—Ross himself took a wife from them. His testimony is, that, "in the wide field of gymnastic exercise, few Indians—I might say none—have been found to cope with civilized man. In all trials of walking, of running, of fatigue, feats of agility, and famine, even in the Indian's own country, he has to yield the palm of victory to the white man. In the trials of the hot bath alone the savage excels." There are some just observations on the want of preparation on the part of missionaries of the day, and their sectarian warfare. At the end of the volume are Chinook vocabularies.

Sidonia V. Johnson's 'Short History of Oregon' finds its justification in the coming centenary of overland exploration. But compendiums have their pitfalls, and the romance of the railroad which opened to the State a continental gateway is here evaporated into these four frigid lines; "When the last spike was driven on the Northern Pacific Railway in 1883, Oregon had direct transcontinental rail connection with the East."

Tolstoy's pronouncement against the war in the Far East, first published in the London *Times*, has just been reprinted for the International Union by Ginn & Co., Boston, and may be had for ten cents ('Bethink Yourselves'). It comes too late, we fear, for a Presidential campaign document, but it will help train the rising generation to abhor all theories of conduct and all public policies which rest upon human combativeness, whether labelled

Imperialism, Expansion, Sea-Power, or the Strenuous Life.

'Westminster Abbey: Painted by John Fulleylove, R.I., Described by Mrs. A. Murray Smith, with 21 full-page illustrations in color' (London: Black; New York: Macmillan), is in point of text a much abbreviated reproduction of the work by the same author entitled 'The Roll-call of Westminster Abbey.' In each, the historical and legendary records of the Abbey, and of the persons whose monuments it contains, form the groundwork of the narrative, which is skilfully enough maintained as a continuous treatise. In the 'Roll-Call' the history and biography are treated very fully; in the present much smaller book many of the same stories are told in briefer form, and there is a closer adherence to the order of the monuments within, and, beginning with page 121, to the exterior of the building, with its details and its subordinate structures. The illustrations are of a character common to the cheaper modern processes of color-printing. They can give satisfaction to nobody as studies of the Abbey within or without. The half-tone prints in the 'Roll-Call' are, of course, much more valuable as a record. It is probable, too, that many persons will think them more comely. A fairly successful photographic print, keeping all its gradations and intelligible in its details, will please where these slight and vague and untraceable prints, no longer pure black and white, and yet not in any true sense of the word color, will repel judicious students.

Max Beerbohm's folio colored pictorial satires, 'The Poets' Corner' (London: Heinemann; New York: Dodd, Mead & Co.), boldly introduces Omar with his bored Thou, his bough, his loaf, his jug, and his book in the wilderness; and, despite its impiety to the poet, this cartoon is as amusing as any in the book. Others that may raise a smile are Browning taking tea with the Browning Society, Tennyson (focussed large in the foreground) reading "In Memoriam" aloud to Queen Victoria in perspective, and Dante in Oxford. The rest we cannot think inspired humor. They range from Goethe, Wordsworth, Coleridge, and Byron to Walt Whitman and Kipling.

Dante's 'De Monarchia' is a book so important, and at the same time so difficult to understand in the original Latin, that a good translation is a boon, not only to the general literary or historical reader, but even to the scholar. Church's version has long been out of print, and Wicksteed's, privately issued, is not readily accessible. There was, therefore, a real call for such a work as Aurelia Henry's 'The De Monarchia of Dante Alighieri,' published by Houghton, Mifflin & Co. The new translation is a good one; while not quite so literal as Wicksteed's, it is very exact and sufficiently close; and it reads easily, either with or without the Latin text. One might, indeed, if inclined to be hypercritical, find fault with its smoothness, as not accurately reproducing Dante's somewhat crabbed Latin style; it is certainly a relief, however, to be enabled to grasp the author's thought with so little effort. The abundant footnotes show careful research in various fields; they supply the student with a key to the numerous references and citations, an indication of the sources of Dante's philosophical doctrines, and parallel passages from his other writings—all done into English. An index adds to their usefulness. A modest introduction explains Dante's conception of Empire, and sets forth the place of 'De Monarchia' in his life-work. Exception may perhaps be taken to the statement, several times repeated, that the 'Vita Nuova' is essentially a religious treatise. A cautious discussion of the date of composition points toward the period between 1308 and 1313.

The Macmillan Co. is agent for the Cambridge (England) Biological Series of text-books edited by A. E. Shipley of Christ's College. The latest issue is a 'Natural History of Some Common Animals,' by O. H. Latter, M.A., senior science master at Charter House. The main object of the volume is to set forth the natural history of the animals which usually serve as types of animal structure in elementary courses in biology, especially such as are large enough to be studied without recourse to a microscope. Technicalities are avoided as much as possible, and emphasis is laid on the life histories of the various creatures as well as their structure. The series treated of includes worms and leeches, crayfish, cockroaches, dragon-flies, wasps, the fresh-water mussel, snails, frogs, and some internal parasites. The account of the special type selected is supplemented by a list of the British species of the group to which that type belongs, and a reasonable number of well-selected illustrations are scattered through the text. Though the animals treated of are British, most of them have closely analogous representatives throughout the temperate region, and the book may meet the needs of instructors of biology in America as well as northern Europe. The data furnished, as far as we have tested them, appear to be accurate and well selected, and the little manual may be recommended as well adapted for the purpose its author had in view.

In 'Thirty Years in Madagascar' (A. C. Armstrong & Son) the Rev. T. T. Matthews of the London Missionary Society gives an account of his work, largely educational, among the natives. It is replete with incident, partly humorous, showing both the difficulties in dealing with a childlike people not thoroughly weaned from heathen vices, and a practical, common-sense way of meeting them, which makes the book exceedingly helpful and suggestive to all engaged or interested in similar work. Some of the difficulties are peculiar to the Malagasy, for the conversion to Christianity of large districts was due, not to conviction, but to the fact that it was the religion of their rulers. In many places the pastor of the church was the village chief, chosen for his social standing, not for his fitness for the post. There are also numerous instances, in the sketch of the early history of the island, of a steadfast faith in the face of death, such as has characterized the Christian martyrs of all ages. Much space is given to the story of the French conquest and the attempts to drive out the English missionaries, on the natural supposition that they were inimical to the new régime. This is told largely by quotations from a French writer, and ample justice is shown to the fairness of the Governor-General, Gallieni, and his endeavors to right the wrong done the English and their converts when he became convinced that their aim was in no sense political, but simply the welfare of the people. The author apparently is unable to give a word-picture of the country and the distinctive characteristics of the natives, but this lack is in a measure supplied by the numerous illustrations, some of which are interesting reproductions of native sketches.

In his fourth volume exhibiting the Japanese system of physical exercise and self-defence, Mr. H. Irving Hancock treats of Japanese feats of attack and defence in personal encounter, under the title 'Jiu-jitsu Combat Tricks' (G. P. Putnam's Sons), Thirty-two photographs reinforce the text. A study of this book, revealing the rougher side of the art, shows why the boxer has such small chance against the agile user of the hand-edge stroke. How to harden the little finger edge of the hand for smiting and disabling purposes, to the power of which competent witnesses can bear testimony, is here explained with the clearness of a practical teacher, who knows vastly more of his art than of Japanese history or general hygienic conditions among men and women of the empire. Many of the tricks here noted may result in death. Lest some may fear that the publication of such craft secrets will provoke in our cities a fresh outburst of criminal personal assault, worse than that of the sandbagger, we remark that four years is the average time of a course in the Japanese training schools.

The September number of the *Library Journal* contains a notable article by Miss A. R. Hasse "On the Classification of Numismatics." Miss Hasse had been asked to work out a system of classification for a collection of literature on archives; in the course of her studies she made some digressions into neighboring regions and stumbled on numismatics, among other topics. She compares the treatment of this science in the Decimal Classification (both in its original simplicity and its international expansion), in Mr. Cutter's Expansive Classification, and in some European library catalogues. From all these the inadequacy of the theoretical classifications became quite apparent. This is a discovery which, we think, most specialists will make in trying to adapt an "ideal" classification to their own specialties. Any attempt to construct a classification of literature out of your own consciousness will result, if not in failure, in some very curious manifestations. Miss Hasse's criticism that both the Decimal and the Expansive schemes are classifications of ideas and not of books is much to the point. Her article should prove interesting to both classifiers and numismatists. Mr. J. C. M. Hanson's article, "Subject-Catalogues or Bibliographies for Large Libraries?" in the same number was originally written for the *Mitteilungen des Oesterreichen Vereins für Bibliothekswesen*, at the request of its editor, as part of a symposium on the subject. Mr. Hanson argues rightly that not even a very complete collection of special bibliographies can take the place of a well-prepared subject-catalogue of the actual resources of a library.

The *Geographical Journal* for August contains an account of western Uganda, by the Rev. A. B. Fisher, which throws some light on the origin of the natives of that region and their probable contact with ancient civilization. The war-horns, for instance, of the Bahuku, a forest tribe, are minute ivory tusks shaved down and scooped, fam-

ily heirlooms, and handed down from ancient times. "Each had its own peculiar mark: one resembled most clearly the planet Saturn, another the Pleiades, others various hieroglyphic signs. Questioning the folk as to the significant meaning of each, they expressed total ignorance beyond that they were intended for ornamentation by their early fathers." F. J. Lewis shows, with the aid of numerous illustrations and a map, the geographical distribution of vegetation in the basins of the Rivers Eden, Tees, Wear, and Tyne; and Dr. O. Pettersson treats of the influence of ice-melting upon oceanic circulation. Although the subject is of purely scientific interest, he makes the interesting suggestion that a knowledge of the circulation of the Indian Ocean, through surface observations combined with deep soundings as far south as Kerguelen, might furnish a foundation for forecasting the droughts of India.

While Germany has an overproduction of physicians, the reports of the Russian Ministry of the Interior complain of unusual dearth in that country. The St. Petersburg *Medical Weekly* states that at present there are 21,827 physicians in Russia, of whom 21,090 are men and 757 are women. Of these, European Russia has 19,188. Naturally the cities are best supplied—St. Petersburg with 2,272; Moscow with 1,528; Warsaw with 1,043; Kiev with 689; Odessa with 615. In the Caucasus provinces there are 1,224; and in the possessions in central Asia 459. The whole vast Siberia reports only 788. In southern European Russia there are districts where there is no physician for 100 versts around. The reason assigned for this paucity is the poor pay received, physicians being called only in the gravest cases, and many of the common people preferring the service of quacks and superstitious priests. The Military Department complains bitterly that it cannot secure a sufficient number of surgeons for the war. Rather singularly, a decrease in the number of medical students is reported from England also; the number in 1891 having been 2,405 for the United Kingdom, while the latest total enrolment is only 1,538. It will be recollected that Austria recently reported a similar state of affairs.

The first international Congress for the Hygiene of Dwelling Houses and Homes has been called, at the instigation of the French Hygienic Society, to meet in Paris from the 15th to the 20th of October. The premier, M. Combes, has accepted the honorary presidency, and specialists will discuss the various phases of domestic hygiene in six sections. The questions for one section are as to the proper construction of a city house, the garden and the yard, the arrangements for proper supply of air and for winter heating, the disposal of garbage, and the like. Another section will discuss the same question in reference to country homes; a third will discuss the tenement problem; another, schools, etc. The discussions are to be published, and a special house hygienic exhibition will be arranged in connection with the congress. There is already a general International Hygienic Exposition in Paris, running from August to the end of November.

—The current *American Historical Review* is embellished by a delightful "aside" from Mr. Goldwin Smith on "English Poetry and English History." He rapidly runs his finger down the annals of his country from Chaucer to the present hour, characterizing the poetic output of the several periods, and passing summary judgment here and there on individual writers. Shakspere's political opinions come in for notice, and his views of "the mystery of existence and the other world." And when Giordano Bruno visited England and became "the centre of an intellectual circle which sat with closed doors, was Shakspere perchance one of that circle?" The Baconians are dismissed in the sentence, "No person of sense, it may be presumed, doubts that Shakspere wrote his own plays"; the one strong point in their case being the miracle of the product from such an humble origin and education. Of Pope, Mr. Smith says: "Nothing in its way excels 'The Rape of the Lock,' or, indeed, in its way the translation of the 'Iliad,' little Homeric as the translation is." "Unsurpassed in his own line," too, is Burns, "one of the foremost in the second class of poetry," whose character is too much thrust upon our sympathy. Coleridge, "in his peculiar way, may be said to be about the greatest of Anglican divines." Shelley "is not the first of poets in mental power, but he is, it seems to me, the most purely and intensely poetic." Scott's "Marmion" is "the most truly epic thing in our language." Tennyson "was one of the greatest of poets," and "has been called a great teacher. But he has nothing definite to teach." Matthew Arnold's poetry is "simply high art." Browning's "characteristic poems do not give me pleasure of that sort which it is supposed to be the special function of poetry to give." Finally: "We seem now to have come to a break in the life of poetry in England," and "the phenomenon appears to be common to Europe in general. Is science killing poetic feeling?"

—This number of the *Review* is notable in other ways. Professor Edwin G. Bourne discusses the Naming of America in a comprehensive and judicial manner, and examines incidentally the true relation of Vespucius to continental discovery. He has a bone to pick with John Fiske for the latter's too ardent advocacy of Varnhagen's views on the subject. Mr. Worthington Ford contributes some notes discovered by him among the Hamilton Papers in the Library of Congress and acutely determined to be those made by Hamilton during the debates in the Federal Convention of 1787. The clue once found, Mr. Ford was enabled to put them in order and compare them with Madison's, as is here done, with the result that many gaps are filled, as in the case of Randolph's remarks on June 1, from which we quote one item: "Seeds of destruction—Slaves—[*former Continental army* struck out] might be safely enlisted." Under June 6 and 8, there are comments on Madison's theory. "Observ: large districts less liable to be influenced by factious demmagogues than small. Note—This is in some degree true but not so generally as may be supposed—Frequently small portions of the large districts carry elections —An influential demagogue will give an impulse to the whole.—Demagogues are not always *inconsiderable* persons." We may call attention also to excellent papers from first-hand researches on "The First Stage of the Movement for the Annexation of Texas," by Professor George P. Garrison, and on "Nova Scotia and New England during the Revolution," by Emily P. Weaver. The latter suffers by too exclusive devotion to Nova Scotia as at present bounded. Consequently, the writer has overlooked the Revolutionary manifesto of the New England colonists of the St. John River on May 14, 1766, to be found in Kidder's 'Maine and Nova Scotia' and in the Massachusetts Archives.

—The October *Harper's* opens with Edwin A. Abbey's illustrations to "Othello," to which Mr. Swinburne contributes the critical comment. The violence (shall we call it?) of Mr. Swinburne's enthusiasm for Shakspere does not abate with years. The dazzling heights of his praise for the author of "King Lear," two years ago, are fairly surpassed when we are told of the author of "Othello" that "it was his and his alone to set before us the tragic problem of character and event, of all action and all passion, of all evil and all good, all natural joy and sorrow and chance and change, in such fulness and perfection of variety, with such harmony and supremacy of justice and of truth, that no man known to historic record ever glorified the world whom it would have been so utterly natural and so comparatively rational to fall down before and worship as a God." This is interesting, but it is only with a latitude of expression such as that of Mr. Swinburne himself that it can pass under the heading of "critical comment." Henry Van Dyke contributes an essay on the "School of Life," somewhat disconnected, as one might expect, from the subject, but interesting for the original flavor of the sugar with which its ethical pellets are occasionally coated. Lucy Scarborough Conant tries in prose to communicate something of the mystic charm of the sea marshes which inspired Sidney Lanier in his most successful poem, the "Marshes of Glynn." We imagine that most readers to whom that phase of the marsh appeals at all, will agree that the nearer approach to the real heart of the subject was made by the poet. The editor continues his championship of "the direct appeal" in literature, the truth of life free of all masquerade. The literature which falls under the domination of this spirit, we are told, is the only literature which marks any real advance over the achievements of the past. The stirring, picturesque drama which forms the ideal of most story writers is good enough in its way, and its execution often displays high artistic power, but it marks no step forward in the path of human culture. The general movement away from the picturesque, of which this literary movement is but a part, is to find its compensation in greater practical utility so far as the outward investiture of life is concerned; the inward life is to get its gain in the greater freedom from external distractions.

—It is a rare thing, during an important campaign, to find together two such presentations of the issues involved as the October *Atlantic* presents from the pens of Samuel W. McCall and Edward M. Shepard. Each supports the party with which he has been connected in the past, but each with the frank admission of serious weaknesses in the political instrument which he feels constrained, under existing circumstances, to employ. The two are substantially at one on the two most important questions

of current political discussion—the tariff and imperialism; Mr. McCall hoping that the Republicans will follow their few more enlightened leaders in tariff reduction and return to their former faith in the rights of man, Mr. Shepard trusting to the force of historic Democratic traditions in both cases, backed by Mr. Parker's known views and forceful character. If the level of political intelligence and candor were generally as high as it is in these two papers, it would be a safe prophecy that one of the writers would soon be governor of his State and the other would occupy a seat in the United States Senate. Frances A. Kellor contributes a careful study of the Intelligence Office as a means of supplying household service. One of the points most forcibly established is the character of many of these offices as active agents in the demoralization of the young women whom they profess to serve. It would seem that philanthropic agencies might well undertake to supply free of charge the means of communication between householders and help, at least to a sufficient extent to make it entirely unnecessary for any self-respecting girl or woman to resort to any agency where she could not be absolutely sure of honest and civil treatment. An article on the Japanese Spirit, by Nobushige Amenomori, is notable for its frank acceptance of the military ideal, and should be suggestive reading for missionary enthusiasts who have so far forgotten their original character as to welcome armed conflict as an entering wedge for Christianity. "Having early realized that, despite the progress of international law and the humanitarian professions of the Powers of the world, might is still right at bottom in the intercourse of nations, Japan has taken to the study of the modern tactics and other military arts and sciences of the West." Japan will evidently wait for the "more convenient day" when Christian nations themselves shall trust less in the big guns and more in the herald of peace and good will.

—The military papers relating to the American Revolution which were deposited in the Royal Institution of Great Britain by M. Morgann, secretary to Sir Guy Carleton, were calendared by the late Benjamin F. Stevens, and the first volume of his calendar is now published by the Royal Historical Manuscripts Commission. What Mr. Stevens did on the American portion of the Dartmouth papers, and his wide experience gained in preparing his Facsimiles and his monumental Index of American Papers in European Archives, naturally prepare us for a careful and intelligent treatment of the Carleton manuscripts, or, more properly, the British "Headquarter" papers. Matters of supplies and accounts form a principal feature of this first instalment of the calendar, beginning with a document of 1747, and ending with July, 1779. Each commander turned over to his successor the documents needed to carry on the leading subjects of commissariat, exchange of prisoners, appointments and negotiations with the enemy and the Indians. Consisting, as it does, largely of copies, and lacking in the more personal details that lend so much color to history, the material, though of a very important character, has been little used, even Sparks and Bancroft merely sampling its quality. Mr. Stevens died before the calendar was in type, but the proofreading has been very well done by Mr. Henry J. Brown, who was so long associated with Mr. Stevens in his historical investigations.

—The most interesting incident recorded in this calendar is the treatment by Congress of the Convention troops. Burgoyne asserts that he was obliged to surrender because his army "would not fight and could not subsist," adding the rather foolish boast that, had his force been British, he would have made his way through Gates's army. But even Burgoyne was surprised at the favorable terms obtained, at the generous treatment of officers and men, and at the "conduct of Gates in showing me his army" after the capitulation. Differences soon arose over the disposition of the Convention troops, and we find General Phillips protesting against the use of the word "prisoners" as applied to them. "We have considered ourselves as passengers under the sanction and virtue of a Treaty, not as Prisoners." Gates blundered, but that does not excuse the subsequent conduct of the Continental Congress in this matter. There is mention of many papers relating to the Hessian troops in America, to the tricks of the British contractors, who would send over bad flour and mouldy bread in spite of inspectors. The Loyalist corps receive notice, including one to be composed only of Roman Catholics. Affairs in the Southern colonies are prominent, and here is to be found an incident connected with an alleged violation of the navigation privileges on the Mississippi. A strike among the carpenters of the Waldeck regiment at Pensacola because of insufficient pay is graphically described in a letter from Brigadier-General Campbell. This "unmilitary conduct" is matched by the difficulties encountered by the contractors in England through combinations of workmen and "all the licentiousness arising from a superabundance of employment."

—The Committee on the relations between Libraries and the Book Trade, which was appointed at last year's conference of the American Library Association, has done some very effective work during the year of its existence. It has confined its attentions to the libraries, and has issued to date eight small but closely printed bulletins of about the size of a postal card, designed to inform librarians how to get books at reasonable prices. They contain addresses of American and English second-hand dealers and dealers in remainders, and tell how to import books from England and how to buy at auction. In choosing this line of activity the committee has taken a very practical step which cannot fail to be effective. Booksellers are merchants, and their object is to make money. If they find that it does not pay to ignore the request that libraries be treated with more consideration than other bookbuyers, they will presumably mend their ways in this respect. The movement to reduce the discount on books began in Germany. The introduction of the cheap book-post in 1873 gave new impetus to the undersellers, and also to the forces which worked to abolish the discount. During the eighties and nineties a determined fight was kept up between the organized booksellers and the isolated undersellers, which ended only in the present century with victory for the Börsenverein der Deutschen Buchhändler and its affiliated organizations. In Germany as in America the booksellers had particularly antagonized the libraries. In this country the general public seems not to have taken much cognizance of the matter, while in Germany the university men, at least, felt seriously hampered by the new regulations. In the spring of 1903 an Academic Protective Association was founded, and the leader in the movement, Prof. Karl Bücher of the University of Leipzig, issued in the summer, under the auspices of the newly founded association, a book entitled 'Der Deutsche Buchhandel und die Wissenschaft,' which created a perfect storm among the booksellers. He claimed that the book trade had failed to follow the development of modern commerce, that its representatives had tried even to oppose the forces that were transforming it on new lines. The publishing and selling of books was in his eyes merely a commercial and industrial affair like the manufacturing and selling of any other article, while the booksellers always have regarded their craft as more or less of a profession; this claim Professor Bücher ridiculed.

—The booksellers were naturally not long in answering the attack. Their organizations issued formal protests, and the *Börsenblatt für den Deutschen Buchhandel* was filled with articles replying to the accusations of the Protective Association and its spokesman. The matter was finally brought to the attention of the Imperial Ministry of the Interior, and an investigation was ordered as part of the investigation of the Trusts which was being conducted in Berlin under the authority of the ministry. Professor Bücher maintained that the book-trade organizations, in their action to abolish the discount on books, partook of the character of a Trust. This the booksellers denied. The proceedings of the investigating commission have been published ('Kontradiktorische Verhandlungen über Deutsche Kartelle, Heft 7: Börsenverein der Deutschen Buchhändler'). It is an interesting volume, and presents the positions of the two opposing sides clearly and forcibly. Perhaps the most interesting feature is the constantly recurring word duels between Professor Bücher and the President of the Börsenverein, Albert Brockhaus, head of the well-known Leipzig firm of F. A. Brockhaus. The personalities of these two men, both powerful and strongheaded, impress the reader the more as the cause for which each is fighting is not selfish with either. The result of the conference was in the main negative. The question whether the Börsenverein was a Trust was not answered, and the opposing parties both held to their former positions. It was finally voted to refer the questions in dispute, particularly the grievances of the libraries, to a special commission of representatives of both sides. The deliberations of this committee, which met in Leipzig, unfortunately resulted in nothing but a sharpening of the differences. After a stormy session the university men left the room.

SCOTCH CONSTITUTIONALISM.—I.

The Unreformed House of Commons. By Edward Porritt. 2 vols. Cambridge (Eng.) University Press; New York: Macmillan.

The Scottish Parliament before the Union of the Crowns. By Robert S. Rait. London: Blackie & Son.

Of the many writers on English constitutional history few have paid any adequate attention to the Constitution of Scotland and the way it has affected the constitutional development of the whole United Kingdom. One preëminent merit of Mr. Porritt's 'Unreformed House of Commons' is that it traces the history and explains the characteristics of all the three Parliaments which, before the Reform Bill passed into law, had been merged in the Imperial Parliament of the United Kingdom. Contrast Hallam's one chapter of not forty small pages dedicated to the Constitution of Scotland with the nine chapters of some 180 large pages which Mr. Porritt devotes to the Scotch Parliamentary system, and you perceive at once how vast is the hiatus left by so conscientious a writer as Hallam in the story of the British Constitution as it existed down to the time of George III. Mr. Rait's succinct, accurate, and interesting 'Scottish Parliament before the Union of the Crowns' supplies just that accurate statement of ascertainable facts with regard to the Scotch Constitution which an ordinary reader may find it difficult to gather from Mr. Porritt's work. A student, at any rate, who reads both Mr. Porritt's treatise and Mr. Rait's brilliant essay will perceive that a study of Scotch constitutionalism raises more than one question which deeply affects the constitutional development of the whole United Kingdom.

Two inquiries force themselves upon the notice of any thoughtful reader: First, How did it happen that the Union with Scotland, though unpopular in both parts of Great Britain, turned out the most successful achievement of English or, more accurately, of English and of Scotch statesmanship? Secondly, Is it true that, from the time of the Union to the passing of the Reform Act (1707-1832), the will of the Scotch people obtained no effective representation in the Parliament at Westminster? To what circumstances, then, is due the success of the Act of Union with Scotland?

Two points may be treated as past dispute. The Act of Union was planned and carried through by the foresight and the vigor of enlightened statesmen. It was not a measure sanctioned by the voice of the people. If in 1707 the modern referendum had been established either in England or in Scotland, the vast majority of Englishmen would have refused to enter into closer union with a nation whom they thoroughly disliked, and the vast majority of Scotchmen would have declined to sacrifice the national independence, the maintenance of which at any cost had for centuries been the pride of Scotland. The British House of Lords was, in the early part of the eighteenth century, a far more intelligent and liberal-minded body than the British House of Commons, but within six years after the passing of the Act of Union the House of Lords rejected a bill for repealing the act by a majority only of four, and the Duke of Argyll was among the minority who voted for the dissolution of the Union.* But if we may be certain that the Act of Union was not sanctioned by the approval of the people, it has been, if judged by its results, the most beneficial triumph of statesmanship which is recorded in the annals of the United Kingdom. Sir Walter Scott was by sentiment or affectation a Jacobite, but he has left on record that though, had he belonged to the generation which passed the Act of Union, he would have died to prevent its enactment, yet at the time when he wrote he would have died rather than consent to its repeal.

The conditions which contributed to the extraordinary success of a bold but unpopular policy were many. Two, however, which lie on the surface of Scotch constitutional history have hardly received due attention. The Union with England was at bottom the triumph of the Kirk. There were, of course, many members of the Scotch Church, and a limited number of fanatical Presbyterians, who saw nothing but evil in the creation of a single Parliament at Westminster for the whole of Great Britain. They feared, and, as the policy of the Tories in the later years of Queen Anne showed, feared not without reason, that the surrender of Scotch political nationality might place in peril the independence of the Scotch Church; yet the wisest among the Presbyterians perceived that the Union with England was, for the Church of Scotland, little less than a necessity. In 1707 the restoration of the Stuarts was at least as probable as it could have appeared in 1657, but a restoration meant nothing less than a reaction which would make Jacobites and Episcopalians—or, it might be, Papists—supreme in Scotland.

The cry for the repeal of the Union was, as far as Presbyterians were concerned, caused in great part by legislation which in Anne's later years was dictated by high churchmen and Tories. The Hanoverian succession secured Scotchmen against attacks on the Church of Scotland, and Scotch Presbyterians became from that moment consistent if not enthusiastic supporters of the Union. The Church Assembly, moreover, had, as long as there was no restoration of the Stuarts and no union with England, but one possible rival in Scotland. This rival was the Scotch Parliament. During the eighteen years which followed the Revolution of 1688, the Parliament became a real and independent power in the land. Its position may be compared, and also contrasted, with the position of the Irish Parliament during the eighteen years of legislative independence from 1782 to 1800. Could any one be sure that a sovereign Parliament in Scotland might not rival and curtail the moral authority of the Church Assembly? The disappearance of the Parliament left the Assembly without a rival among Scotch institutions. Is it not at least probable that ecclesiastical statesmen who guided the Assembly did not deeply regret the disappearance of the national Parliament?

The Scotch Parliament was never, at any rate before 1688, the embodiment or representative of Scotch national sentiment. To an Englishman it seems almost incomprehensible that the ancient Parliament of Scotland should not have been as much to a patriotic Scotchman as the ancient Parliament of England was to every patriotic Englishman, or even, as in 1782, was the Parliament of Ireland to the Irish people; yet, like all the paradoxes of history, the failure of the Scotch Parliament to become the chosen representative of Scotch nationalism is the result of historical facts. The Parliament was, as Mr. Rait well insists, never the sovereign power; it was not in reality part of the sovereign power; it was an instrument of government; its function was in truth to ratify the acts and the legislation of the person or body who, at a given moment, was the true ruler of the nation. At one time the King, at another moment a noble house or a body of nobles, at another period the Church as represented by the Church Assembly, might command the support of the people and be the true sovereign of the country. The function of the Parliament was to register the sovereign's decrees. From one point of view, indeed, it is hardly an exaggeration to assert that the Scotch Parliament resembled rather a French Parlement than the Parliament of England. Its legislation, which was often admirable, lay in the hands of a committee—the "Lords of the Articles"—which put into form laws approved of by the true sovereign, whether it was the King or the Church Assembly. As a merely representative body, the Parliament was so strangely constituted as to represent far less truly the genuine wishes of the nation than might a patriotic King or than assuredly often did the Church Assembly. Hence popular admiration and loyalty turned in Scotland towards the Crown or towards the Assembly, but never—at any rate before 1688—towards the Parliament. The Stuarts, with all their faults, never failed to obtain the devotion of zealous followers. The Church of Scotland after the Reformation became at every great crisis the true representative of all that was highest and most spiritual in Scotland. To this day cool-headed Scotchmen will grow very hot in defence of Mary Stuart's innocence and virtues; at this very moment an ecclesiastical question affecting the whole status of the Free Church excites more interest in Scotland than any question of legislation or of national policy. But never has one met with any Scotchman who warmed with enthusiasm for the Scotch Parliament. Hence, to the ordinary Scotchman, the transference of parliamentary representation from Edinburgh to Westminster caused a less shock than might have been expected to the patriotic sentiment of an ordinary Scotchman. The Church Assembly, the law courts, all the institutions in which he was really interested, remained unchanged. He had for more than a hundred years been accustomed to the residence of the King in London; he had never had any real concern with the election of members of Parliament. It was at least as easy to cherish feelings of patriotic loyalty towards a Stuart in exile as towards a Stuart living at Whitehall. Nothing was changed except the presence at Edinburgh of a Parliament which, until 1688, had not excited keen interest in the minds of Scotchmen.

Of the material benefits which the Union brought in the long run to Scotland there can be no doubt; but, as a student of Mr. Porritt's book will see, these benefits accrued but slowly. For a time it was arguable that the Union was a failure. Its success was to a great extent due to two considerations. It gave security to the Scotch Church as well as peace to the Scotch people. If it destroyed the ancient Parliament of Scotland, it did not put an end to any institution which commanded the fervent loyalty or embodied the patriotism of the people of Scotland.

RUSSIA'S GREATEST COMPOSER.

Das Leben Peter Ilyitch Tchaikovsky's. Von Modest Tchaikovsky. Leipzig: P. Jurgenson. Vol. I. Pp. 539.

"Do you know, I am not acquainted with any one who is more infatuated with little mother Russia than I am. The verses of Lermontoff which you sent me characterize our country very well, but only one side of it; namely, that intimate charm which lies in the unassuming, somewhat destitute and poverty-stricken, but open and spacious nature. I go farther than that. I passionately love the Russian people, the Russian language, Russian sentiments, the beauty of the Russian face, and Russian manners."

The note of patriotism sounded in these lines is repeated again and again in the letters of Russia's greatest composer which his brother Modest has incorporated in this most valuable and entertaining biography. When Tchaikovsky for the first time left Russia, as interpreter for a wealthy tourist, he wrote to his father: "The passing of the boundary line was a highly poetic and solemn moment. We all crossed ourselves, and the last Russian sentry gave us a 'Godspeed' and made a significant gesture with his hand." Later in his life the patriotic feeling—augmented by homesickness—was often so strong as to prevent him from enjoying the charms of other countries. At Clarens, on Lake Geneva, he writes that the Swiss mountains make him long, after a few days, for the plains, the open horizon, the limitless distances of Russia; at San Remo, while promenading among the olive trees, palms, oranges, heliotropes, and jasmines, he is seized by a sudden impulse to hasten to his room and write a letter expressing his longing for the woods and villages, the fields and steppes, of his native country. At Venice, in November, 1877, he was very angry at the evidences of strong feeling against the Russians shown by the newspapers. One day he bought a copy of the *Gazzetta di Venezia* of a man who was shouting, "Vittoria dei Turchi." A glance showed him that a hundred Russians had been routed somewhere, so he angrily asked the seller: "Where is the victory? Do you call that a defeat?" The following day, when all the other news venders were again announcing a Turkish victory, he came across the same man, who accommodatingly shouted: "Gran combattimento à Plevna, vittoria dei Russi!"

While thus fond and proud of his country, Peter Ilyitch (as his brother always calls him in these pages) treated his aristocratic descent, on his father's side, in a sarcastic if not contemptuous manner, though he rejoiced in its being unmistakably Russian. It must have been a trial to him to know that his mother's father was half-German, half-French, though possibly to this he owed his genius. His domestic affections were as strong as his patriotic feelings; separation from his parents, his sister, his brothers, often makes him weep, and, with one exception, most of his letters are addressed to them. The names of his sister and brothers—Alexandra, Anatole, Modest—always appear in these letters in the endearing diminutives "Sasha," "Toli," "Modi." When his mother left him the first time, he had to be separated from her by force, and then he ran after the wagon and tried to seize the wheels to stop them. He had the great grief of losing her when he was only fourteen years old. She died of cholera, the same disease to which he himself succumbed thirty-nine years later. Judged by her picture, she must have had beautiful black eyes; her face is remarkably good-natured and motherly. It was she who gave him his first music lessons, before he was five years old; but it was an orchestrion which gave him his first musical impressions. This mechanical organ played, among other things, tunes by Rossini, Donizetti, and Bellini, and it was probably due in part to early associations that Tchaikovsky continued to love this music to the end of his life, though his own was so utterly unlike it.

In those days music played a very insignificant part in Russian life. There were no local concerts of importance even in St. Petersburg and Moscow, and the only opportunity to hear good singers or a good orchestra and chorus was at the Italian Opera. It is therefore rather surprising to find that Tchaikovsky's father should from the beginning have favored his predilection for music, and offered no opposition to his choosing a career that gave so little promise of success or prominence. He did put him into a school of jurisprudence established for boys of the middle aristocracy; but when Peter found his studies distasteful, and more and more followed his natural bent, the father interposed no veto, but actually encouraged his choice, even although he showed, after his son had become famous, that he would have preferred distinction for him in official life. Where Peter Ilyitch got his talent is a mystery which his brother is unable to solve; none of his ancestors, so far as known, had ever shown any gift in that line or any enthusiasm for the art. His father was very fond of the drama; up to the age of eighty he frequented the theatre, and was often moved to tears; but as for music, the fact that he played the flute and bought an orchestrion speaks for itself. It is strange, too, that while Tchaikovsky, as a mere boy, soon learned to repeat the orchestrion's tunes on the piano and to improvise pieces of his own, his first professional teacher declared, after a three years' trial, that it would be a great mistake for him to choose a musical career. For the first two years in the law school, moreover, though he did not give up playing, he refers to music only twice in his letters. In short, he was destined, like nearly all the prominent Russian composers, to come to his art after devoting part of his life to another specialty. Usually such a course results in a lack of technical mastery and facility, but Peter Ilyitch was a born manipulator of tones; the trouble, in fact, with his early works, is that he wrote them with too much facility—the easy writing which makes dull hearing.

It was most fortunate for the cause of music that the failure to get a promotion he had hoped for early in his career as a Government official caused Tchaikovsky to turn his back on it and to enter the newly founded Conservatory at St. Petersburg. Here he benefited particularly by the instruction and friendship of Anton Rubinstein, concerning whom this biography gives some characteristic details. Rubinstein spoke several languages, but none quite correctly, not even the Russian. His lectures were improvisations; five minutes before he began them he had apparently no definite plan in his mind; and while their substance was admirable, their literary form was "beneath criticism." He had a habit of assigning his pupils odd tasks: Tchaikovsky was asked one day to arrange one of Beethoven's pianoforte sonatas for orchestra in four different ways; and when the pupil chose the English horn and other unusual instruments and combinations for one of them, the teacher was very angry with him. Rubinstein carefully taught his pupils the use of the modern orchestral apparatus, but in the expectation that they would, like himself, avoid it in their works and confine themselves to the practices of the masters of the "classical" epoch. He never expressed any liking for Tchaikovsky's compositions, but he was fond of him personally, helped him to get private pupils, and when Nikolai Rubinstein—Anton's brother—wanted an instructor in harmony for the Moscow Conservatory, of which he was the director, Anton recommended his talented young pupil, who promptly accepted and went to that city, which for the next eleven years became his home.

The primitiveness of Russian musical life at this period is illustrated by the fact that Tchaikovsky, as professor of harmony at the Moscow Conservatory, received at first only 50 rubles a month. The first month's salary had to be spent for a new suit of clothes, which the director insisted he needed, tidiness not being one of his virtues. Nikolai Rubinstein at once took such a great fancy to his brother's pupil that he made him live with him; he gave him presents, and took care of him "like a nurse," in Tchaikovsky's own words. There were disadvantages in dwelling in the director's rooms—he had many visitors, who disturbed his protégé when he was composing; but it was not till Tchaikovsky was thirty-two years old that he succeeded in breaking away and making a little home of his own—to his great satisfaction, for the trait which in later years made him a hermit was already well established. N. Rubinstein remained his friend to the end of his life; a friend who, on occasion, did not hesitate to exercise the right of criticism. Another of his friends who made use of this right was the well-known critic Laroche. He sometimes went too far, and on one occasion he hurt the sensitive composer's feelings so much that the friendly relations were broken off for years; but it was Laroche who first foresaw that Tchaikovsky was the coming man in Russia. Concerning other men prominent in the musical life of St. Petersburg and Moscow our biographer has many interesting things to say and to cite; his volume, in particular gives one a more intimate knowledge of the real aspirations and achievements of the "new Russian school" than any book so far published for those who cannot read Russian. Tchaikovsky had a great admiration for some of the works of Rimsky-Korsakoff in particular; the sincerely complimentary yet frankly critical letters these two men exchanged are cited in full. Balakireff gave his younger contemporary useful advice, which, however, especially so far as it related to Liszt, was not always followed. Liszt was the real idol and model of the young Russians, who vied with one another in attempts to outdo him in harmonic boldness. Tchaikovsky strongly disapproved the extravagance of some of these men; yet, without having the slightest tal-

ent for diplomacy, he managed to keep on good terms with them. He believed it was but fair to give them a chance, and they retaliated by producing his works on their programmes.

Modest Tchaikovsky states in his preface that the material on which his biography is based includes 4,112 letters written by his brother, and 6,137 letters written to him by 807 persons. This invaluable material has enabled him to give his book all the charm of an autobiography. To judge by the large number of the letters by and to the composer included in this first volume of 539 pages (in the German version made by Paul Juon), most of the letters in question, with one notable exception, are by and to men. Woman plays a most peculiar rôle in his life. That he was not blind to feminine charms is indicated by a sentence in a letter written shortly after he had become a professor in the Moscow Conservatory: "Yesterday I attended the entrance examination; there were many pretty young girls." Once he discovered a niece "more beautiful than any woman I have ever seen," as he writes to one of his brothers; "I must confess that my mind is much concerned with her, which gives Rubinstein occasion for the most tiresome remarks. Whenever we appear at Tarnovsky's I am teased about her." More serious than this episode was his only real love affair, his infatuation with the well-known opera singer Désiré Artôt. He raves over her voice, her art, her grace, and other personal charms, though he admits she is not really beautiful. To his father he writes: "I love her with all my heart and all my soul, and it appears to me impossible to live on without her." The bugaboo of being a "prima-donna husband" does not frighten him, for he intends to continue his career as composer just as she does her career on the stage. The father is willing, and so is the prima-donna; but shortly after she has left Moscow, news comes of her sudden marriage to another man! Tchaikovsky does not appear to have been crushed by this tragic ending of his romance. The two remained friends, and he continued to admire her art; and when she returned to Moscow a year later, a friend who sat next to him at the opera house wondered why he kept his opera glass levelled at the prima donna, as he could not have seen her because of the tears in his eyes.

The other two women who count in his life belong in the realm of actuality which is stranger than fiction. In August, 1876, he suddenly writes to Modest: "I have decided to marry. This is irrevocable." A month later: "I have been thinking of my future; the result is my firm resolution to enter into the state of matrimony with some one or other." Obviously a mere resolution of his intellect; and, what is worse, he confesses that the thought of the change from his cosy, solitary home makes him shudder! But, shudder or not, marry he must. In the following May he became engaged. Chance furnished the bride. One day he received a letter from a girl whom he had met before, confessing that she loved him. "The letter," he writes in a subsequent confession to Mme. N. F. von Meck, "was so cordial, so warm in tone, that I decided to answer it—a course I had hitherto carefully avoided in similar cases." "Her name is Antonina Ivanovna Milkuyova, her age twenty-eight, and she is quite pretty, too; her reputation is untarnished. She lives—from love of independence—alone, although she has a fond mother. She is absolutely poor, and of a medium stage of culture; apparently, too, she is of a kind and affectionate disposition." This is how he relates the story of his courtship:

"When I met her I repeated that in return for her love I could offer her nothing but sympathy and gratitude. But later on I began to reflect on the absolute frivolity of my conduct. If I do not love her, if I do not wish to fan her flame into a still warmer feeling—I said to myself—why did I call on her, and how can this end? From her next letter I concluded that I had gone too far; that, if I were to suddenly turn away from her, I should make her really unhappy and drive her into the arms of a tragic fate. Thus I saw myself placed before a trying alternative: either I preserved my liberty, at the cost of a human life, or I married. I could not but choose the latter. Therefore I went one fine evening to my future wife, confessed to her frankly that I could not love her, but that I would remain her devoted and grateful friend; I described my character to her in detail—my irritability, my changeable temperament, my antipathy to mankind, and, finally, my financial situation. Then I asked if she would be my wife. The answer was, of course, in the affirmative. The horrible tortures I have suffered since that evening cannot be described. Quite naturally, too. To remain for thirty-seven years with an inborn antipathy to marriage, and then to be suddenly forced by circumstances into it, without being in the least charmed by the bride, is terrible."

The consequence of this amazing marriage was that, after a short period, it was followed by a separation for life. "A few days more and I swear I should have gone insane." There was no quarrel; the composer struggled, as he writes, "to recognize all her good qualities," and she prepared a home for him which he liked and occupied a short time. The only light the biographer sheds on the situation is that he speaks of "an abyss of misunderstandings between the two."

A much pleasanter story is that of Tchaikovsky's relations with another woman—a friendship which changed the whole course of his life, and to which the world of art is indebted as much as it is to that between Richard Wagner and Frau Wesendonk. Yet it is almost as strange a story as that of his marriage. He was, like Wagner, improvident; when he had plenty of money, which was seldom the case, he squandered it. His income from teaching and royalties gradually reached 3,000 rubles a year, but he had debts, had a habit of borrowing of his publisher (*à la* Wagner), and yet was always hard up. Through one of his pupils this state of affairs came to the knowledge of a widow, Madame von Meck, whose husband had left her estates worth millions. She was a most enthusiastic admirer of Tchaikovsky's compositions, which affected her more deeply than any other music, and she was eager to help him. Entering into correspondence with him, she begged him to make various arrangements of his pieces for her use, for which she paid extravagant sums; she liquidated his debts, and finally pressed on him an annuity of 6,000 rubles, to enable him to devote himself entirely to composition. Her only stipulation, all this time, was that the composer should make no attempt ever to meet her: "There was a time when I was very eager to know you; but now, the more you enchant me, the more I dread making your acquaintance; I prefer to think of you at a distance, to hear you speak in your music, and to share your feelings." Her request was strictly complied with. At one time we actually have the romantic and amusing situation—which Dumas and Stockton in partnership could hardly have improved on—of Tchaikovsky residing, by special invitation, for several weeks, in Mme. von Meck's princely villa at Brailov, with her servants and everything else at his disposal, while she remains in the city enjoying the delightful letters he writes from her place!

The correspondence between this noble woman and the greatest Russian composer is so extensive that, as our biographer intimates, it may some day be published in a special volume. It is to be hoped it will, for it is of extraordinary interest. Copious selections from it are given in the present volume, and they constitute its most entertaining as well as its most valuable pages. To this appreciative woman Tchaikovsky opened his heart as he did to no one else, telling her of his works, his method of composing, his moods, his love of nature and solitude, his health, his religion, and his opinions of other composers. Those who have read this first volume will await its continuation with eager interest.

Maria Edgeworth. By the Hon. Emily Lawless. (English Men of Letters Series.) The Macmillan Co.

Miss Lawless writes with a frank disregard for precedents. She appears either to have forgotten that criticism of the author's work has always had a prominent place in contributions to the "English Men of Letters Series," or else decided that her author has had enough of that, and so mostly made up her book of matter more immediately interesting to herself. She does briefly notice some of the novels and tales, expressing a few rather positive opinions about their comparative merit—opinions always based on personal taste, without reference to canons of criticism or accepted literary standards. There are occasional intimations of a suspicion that something deemed essential is being slighted, and, on the last pages, a few sentences of delightfully Irish construction, explaining that the writer has not wished to exalt Miss Edgeworth's literary performance, but "to show the woman rather than the wit, the moralist, or anything else of the sort."

The evidence of design is, however, never striking in Miss Lawless's intimately Irish, happy-go-lucky account of what she has read, heard, and thought about her famous countrywoman, about people she lived with and knew, and even about some with whom her connection was very slight. Maria's remote ancestors and her father, Robert Lovell Edgeworth, receive much attention. Miss Lawless is always in a state of irritation with Mr. Edgeworth, because she thinks that he blighted his daughter's imagination, but her irritation helps to make her description of that unconsciously humorous philosopher very lively. In fact, it is plainly her own enjoyment of the case that leads her to dwell upon his love affairs, his experiments in the education of youth and in mechanical invention, his friendship for Mr. Day, revered author of 'Sandford and Merton,' and many other oc-

cupations of a long, phenomenally active, and perfectly virtuous life. Miss Lawless recognizes Mr. Edgeworth's extraordinary fascination for women (a fascination strangely incompatible with such shining virtue), which procured him four wives in rather scandalously rapid succession—one at least, Miss Honora Sneyd, a distinguished beauty—and all above the average in good looks, accomplishments, and character. So fatal was his charm that, according to his own statement, shortly after the death of his first wife (Maria's mother) "it was found absolutely necessary by his hostess to drink *Mrs.* Edgeworth's health in order to dissipate any unwarrantable hopes which might have arisen on his account." His children fell under the spell, and of a family numbering twenty-two we hear of only one who resisted. This insensible youth, Richard (Maria's brother), hated the educational experiments of which he was the victim, came to hate every sort of education and all the smiling order and decorum of the Edgeworth home; so at an early age he disappeared into space, and is heard of only once thereafter, roaming still, vaguely, in America. Maria honored her father supremely, her four mothers scarcely less, and in her case the promise of the fifth commandment was fulfilled, for she lived eighty-two years in the land that the Lord her God had given her.

Miss Lawless's feeling about the extent and uniformly destructive influence of Mr. Edgeworth on his daughter's work, is rather hotly stated:

"Even when not guiding her pen—a piece of parental presumption of which he was perfectly capable — in spirit he hovered over it. . . . Wherever, in her case, the didactic impulse is seen to distinctly overpower the creative one; wherever we find Utility lauded to the skies as the only guide of an otherwise foundering humanity; above all, wherever we find an enormous emphasis laid upon the necessity at all times and places of a due subordination of the feminine to the masculine judgment, there we may feel sure that we are upon his track, and that such sentiments were uttered primarily with a view to the approbation of the domestic critic. . . . He not merely accentuated, he actually lifted into the light of a solemn duty, the most serious of Maria Edgeworth's mental failings—a lack, namely, of imagination."

This is holding Mr. Edgeworth too severely responsible for being his daughter's father. He did not need to guide her pen. She did not resent his didacticism, but, on the contrary, perfectly sympathized with it, and seems to us to have taken great personal satisfaction in the laudation of virtue. 'Castle Rackrent' is the only one of her tales that we know in which she successfully resists the desire to preach or to distort human nature for the pleasure of inculcating a moral platitude or of bringing about an edifying end. Miss Lawless wonders how Mr. Edgeworth kept his fingers out of that pie, but we feel that both father and daughter had one rare moment of clear artistic vision, and that, before that faded, the publisher had the manuscript in his possession.

Miss Lawless thinks that 'Castle Rackrent' is the "best Irish novel or tale that has yet seen the light." It is not a novel, or anything like a novel, but a tale told with great spirit and authority, fresh as if it had been written yesterday, and alas! far more witty and genial than anything likely to have been written yesterday. Among the tales for children, Miss Lawless has some favorites which she praises, and she treats the tales of fashionable life as on the whole a negligible quantity, because she doesn't care for them. She notes with justice Miss Edgeworth's superiority to her otherwise immensely superior contemporary, Miss Austen, in the portraiture of a lady of fashion; but she fails to point out that the characterization of Lady Delacour in 'Belinda,' up to the point where she succumbs to Miss Portman's rage for reform, takes rank with the best portraits of a woman in our fiction. On Miss Edgeworth's place in the history of English fiction Miss Lawless is silent, leaving it to a reviewer to mention that she was one of three maiden ladies who, about the end of the eighteenth century, determined that the English novel should be "pure," and who dedicated and practically chained it to decency—almost to domesticity—for more than half a century. As a writer of tales of the people, her influence extended from Scott to Turgeneff, and has been universally acknowledged.

Of Miss Edgeworth "as a woman" the picture is pleasant and sympathetic, but not complete. Sydney Smith said of her, when she was nearly eighty: "She does not say witty things, but such a perfume of wit runs through all her conversation as makes it very brilliant." FitzGerald describes her when very old as "lively, active, and cheerful as if she were about twenty. Really a very entertaining person." When Scott met her in 1823, he was delighted with her, as for years he had been with her books. Miss Lawless quotes these tributes from the great, but it has not occurred to her to show her "woman" in the act of winning them. Something is done for characterization by the introduction of letters hitherto unpublished—sprightly, natural letters, though one need not agree with Miss Lawless in the opinion that they "are perhaps the very best ever written by a woman in English." Besides these letters of Miss Edgeworth's, several written by a younger sister describing Sir Walter Scott's visit to Edgeworthstown in 1825 appear in print for the first time.

Oddly enough, on closing the book, one is not thinking of Miss Edgeworth, but of Miss Martin, beautiful and unfortunate daughter of the Martins of Ballinahinch. Miss Edgeworth in her old age, making a journey in the west of Ireland, stayed with the Martins. This circumstance interests Miss Lawless "for strictly personal reasons." So she characteristically dashes into the story of Mary Martin, a story of startling antithesis, not easily forgotten. The phrase "for strictly personal reasons" nicely expresses Miss Lawless's guiding motive, and though the result is a book hardly fair to a famous novelist, there are many and ample compensations for the reader.

Old Clocks and Watches, and their Makers: Being an Historical and Descriptive Account of the Different Styles of Clocks and Watches of the Past, in England and Abroad. To which is added a list of ten thousand makers. By F. J. Britten. Second edition, much enlarged. London: B. T. Batsford; New York: Charles Scribner's Sons. 1904.

'Former Clock and Watchmakers, and their Work,' by F. J. Britten, author of 'The Watch and Clockmakers' Handbook,' first appeared in 1894. Altogether, more than 300 new illustrations and the names of 2,000 makers have been added to the present reissue; the reading matter has been divided into chapters, and the section on long-case clocks has been entirely rewritten. Time, and early time recorders such as sundials, clepsydræ or water-clocks, wick and lamp timekeepers, and sand-glasses, are followed by weight-clocks. "So many vague and contradictory records exist as to the invention of clocks composed of an assemblage of wheels actuated by a weight, that any attempt to fix the exact date of their introduction would be mere guesswork." The invention of a portable timekeeper was accomplished by Peter Hanlein or Hele, a clockmaker of Nuremberg, shortly after 1500, although the article was not in general use for a long time afterwards. Specimens of all periods, from the earliest down to the more recent, are described and illustrated, and it is possible to trace the gradual development of the timepiece as we know it, from the crude and cumbersome, though often beautifully wrought and decorated, watches used by our forefathers. "The grotesque and uneven cases applied to most of the early watches clearly rendered them unsuitable for the pocket." This caused the introduction, possibly by the Puritans, of the fob, from the German *Fuppe*, "a small pocket." A short "fob" chain, with a watch of Oliver Cromwell's, is in the British Museum—the first of the kind known.

Chapter V. contains the records of early makers, commencing with Nicholas Cratzer, a Bavarian, born in 1487, "deviser of the King's horologies and astronomer" to Henry VIII. From 1631, when the charter of the Clockmakers' Company was granted by Charles I. to those of the craft who were dissatisfied with their connection with the ancient guild of Blacksmiths, the records, with few exceptions, are those of prominent members of the "Fellowship of the Arts or Mystery of Clockmaking of the City of London," of whose regulations a short sketch is given. To the company's credit, it recognized the suitability of watchmaking as a vocation for women towards the close of the seventeenth century, and in 1715 it sanctioned the admission of a few female members, as also the taking of female apprentices. An account of the Paris guild, and descriptions of "French Clocks and Cases in the French Style, and other Curious Timekeepers," is followed by a chapter, with numerous illustrations, on "The Progression of English Domestic Clocks." The first in common use were of the lantern or bird-cage pattern, supported on brackets, which gradually developed into the bracket, pedestal, or mantel clock. At first they were all made with only one hand, and with thirty-hour movements; the escapement with vertical verge and a balance being used as the controlling medium. About 1658 the pendulum was introduced, quickly superseding the balance and leading to the construction of the long-case variety now familiarly termed "grandfather." The introduction into England of cheap American clocks was disastrous to the old ones, "and between 1850 and 1860 thousands of good serviceable long-case timekeepers were sacrificed, the cases being chopped up for firewood and the substantial brass movements consigned to the melting-pot." Chauncey

Jerome, in his 'Life Written by Himself,' describes the venture of sending a consignment of brass clocks to Old England. They were promptly seized at the Custom House as undervalued, and the Government exercised their "right to purchase the property by adding 10 per cent. to the invoice price." They paid cash for this cargo and for another invoice arriving a few days after, but, "on the arrival of the third lot, they began to think they had better let the Yankees sell their own goods, and passed them through unmolested."

The next chapter is devoted to the mechanism of clocks and watches, but no mention is made of the numerous inventions and improvements on this side of the Atlantic, which had such an effect on the trade in the first half of the last century. The various duties, taxes and licenses, so disastrous to the manufacturers and even owners, are described, and tables of the hall-marks are given, but the marking of foreign watch cases imported into England is ignored, although Francis Upjohn is mentioned as suggesting "distinctive marks on foreign watches, 1780-87." Since 1739 the maker's mark on gold or silver cases has been the initials of his Christian and surname, generally without any shield, as in the case of marking plate.

The remainder of the work is taken up with a list of "Former Clock and Watchmakers," most important to those who collect old clocks and watches, or who may be the fortunate possessors of them. It occupies more than 175 pages, containing the names of 10,000 makers, derived from various sources for which credit is given, with the possible exception of those of American makers, many of these being evidently taken from Miss Singleton's 'Furniture of Our Forefathers.' This list is not intended as a guide to makers of to-day, as, "after 1842, the names are given only of those above mediocrity, or concerning whom some peculiarity is known and who have ceased to carry on business." Among the early American makers noted are James Harrison, of Waterbury, Conn., "founder of the wooden-clock industry, 1790-1830"; Thomas Perry, 1750, and Isaac Heron, 1770 (both freemen of the city of New York, the only ones mentioned); Hiram Hunt, Robbinston, Me., "said to have been the original 'Sam Slick' of Haliburton"; Theodore (Thomas?) Harland, Norwich, Conn.—"to him was apprenticed Ely Terry in 1786"; Calvin (Silas?) Hoadley, Plymouth, Conn., an associate of Terry; Chauncey Jerome, pupil of Terry; Seth Thomas, another of Terry's pupils, and, later, some of the founders of the large watch companies at Waltham and Elgin. Joseph Bonfanti, 1823, and Kerner & Paff, 1796, of New York, were not in any sense makers; the former kept a "Fancy Store," the latter firm a "Music Store."

Mr. Britten's work is a perfect mine of information; it is fully illustrated, well printed, and has a fair index.

Classical and Foreign Quotations. Compiled by W. Francis H. King, M.A., Oxford. 3d edition, revised and rewritten. London: J. Whitaker & Sons; New York: Thomas Whittaker. 1904.

The manner in which this valuable and standard book of reference has been overhauled for its perfecting is detailed in the preface. It may be illustrated in the case of a short letter (G), which in the second edition had fifty items, and now has twenty-seven. This has been effected by the omission of eight mottoes of the British peerage and of twenty-four other quotations, while one has been shifted to another portion of the book. To offset this shrinkage there have been only ten additions. The bulk of the present volume is, therefore, inferior to that of its predecessors: 3,142 to 5,362 items. The slaughter of the peerage mottoes has been absolute throughout the work. Typical, also, are two examples dropped under G, "Guerre à outrance," "Gratia placendi," which belong rather to French and Latin dictionaries. On the other hand, one may regret the editor's rejecting among the "cumbersome top-hamper" the Ovidian "Gutta cavat lapidem," etc., which, by the way, in previous editions, was not accompanied by the form occurring (if our memory serves us) in an inscription in 'The Initials'—

"Gutta cavat lapidem, non vi sed sæpe cadendo."

From this instance we conclude that the judicious will not throw away the older editions, but will retain them side by side with the latest. Finally, the minuteness of the revision appears in the very first line of G, which reads: "Gallus in sterquilinio suo plurimum potest." It now reads: "Gallum . . . posse."

Without further verification for ourselves, we report Mr. King's account that citations from the French are much more numerous than heretofore, the German nearly doubled (there is a stanza from Faust omitted under G, a couplet added), the Italian and Greek likewise extended. That the Greek should be, answers an English rather than a cis-Atlantic need, where quotation from the Greek even in books is on the wane. Mr. King himself quotes from 'Endymion': "Charles Fox used to say as to quotation: 'No Greek . . '"; and reports that the oratorical practice of embellishment from this language, as from Latin, "has fallen into desuetude." The literary practice, too, we should affirm, in the United States, where Greek is no longer a needful approach to a college education. The Greek index, we remark, stands (for obvious typographical reasons) by itself. The English index is common to all the tongues using the Roman alphabet. There is also an English subject-index covering the whole work; but it still requires a pretty search to learn if a phrase, proverb, or bonmot is contained in this collection. It could hardly be otherwise.

On the whole, the tendency in revision has been to enlarge the historical or parallel comment; *e. g.*, "Ne plus ultra" is allowed two lines in the second edition, but gets fourteen in the third. Moreover, it is realphabetized, appearing as "Nec (*or* Ne *or* Non) plus ultra"; and the definition is wholly altered. "No further can be done. The highest possible degree, perfection, greatest attainment" becomes "Farther than this you cannot go. Thus far and no farther. Unsurpassed." Such rectifications and amplifications (still more strikingly exemplified under *Mors*) are of the sort which we may fairly attribute to the collaboration of Mr. Ferdinand Hoffmann of Stockbridge, Mass., whose assistance is acknowledged not merely preëminently in the preface, but in the dedication to one "whose learning is only equalled by the liberality with which it is placed at the disposal of others."

It remains to mention the enlargement of this handsome book from duodecimo to octavo, and to notice the grouping, under the head "Adespota," of more than a hundred quotations transferred from the ranks of the second edition in order to facilitate research for their paternity. Among these are such familiar friends as "Ars celare artem," "C'est plus qu'un crime, c'est une faute," "Corruptio optimi pessima."

In English Homes: The Internal Character, Furniture and Adornments of Some of the Most Notable Houses of England, Historically Depicted from Photographs Specially Taken by Charles Latham. London: George Newnes; New York: Charles Scribner's Sons. 1904. Folio, pp. xxxii., 421.

This is a collection of half-tone pictures from the pages of *Country Life*, the London periodical, some of the plates measuring 8x11 inches actual inside measurement, and none smaller than the width of the folio page. The original photographs are all ascribed to one who has been for many years recognized as an excellent maker of architectural and other out-of-door plates.

The book announces itself as being, in a way, a substitute for that admirable and well-known collection, 'The Mansions of England in Olden Times,' by Joseph Nash, which book—difficult now to procure, in its original state, that of four thin folios with beautiful lithographs from Nash's own drawings—is praised in the introduction to the present work with only such suggestions of its lack of perfect accuracy as the photographer naturally applies to the artistic and enthusiastic architectural draughtsman. It is probable that errors in detail might be found in the beautiful drawings of sixty years ago, but the spirit of the thing was in them, and the good then done and the still greater good they might have done to modern designers is easy to appreciate. On the other hand, the blackness, the light-devouring surfaces of the carefully taken print from the half-tone block, the gleaming aspect of the pages as you turn them, should not distract our attention from the fidelity of the representation, or disguise the extreme importance of the general subject treated, or the pains and good judgment shown in the selection of the examples. There must be 400 of these, and all but perhaps fifty are devoted to interior views; herein also following the example of Nash's 'Mansions.' In the older as in the newer book, it is rather the custom to give one exterior view of the old manor-house or older castle, and then to come with eagerness to the halls, galleries, and chambers within. Here we have, besides, a number of details: a gateway, a gatehouse, the exterior of some great bay window of which the interior has also to be given, or a single bay and its gable selected from the long, many-windowed front.

The reader is not to suppose that the book is exhaustive. Other such volumes might follow, all made out of the same mass of material, and all as important as this. Neither does it follow that even a series of such volumes would be exhaustive. There must be great country houses in England whose owners do not wish to have them published at all, or who may think

that they have been already described and illustrated as much as is reasonable. The proprietor of a "show place" is not always pleased by the fact that the public claims so large a share of his domain. Belvoir Castle is not in this volume, nor is Penshurst, the accepted type of the old English manor house. Knole is absent, and there is no place on earth more attractive to the student of domestic architecture than Knole. Holland House in London and Alnwick Castle in the far north are alike left for future possible volumes, and the associations with both of those great houses are familiar, are as much literary as artistic, and are sufficient to make their presence in some future collection inevitable.

All this is merely to show the limitations of the publication, because they are less visible than its many good qualities. But there is one statement which the reviewer must of necessity make, although with regret, viz., that no plans whatever are given, neither of the house itself nor of the house and grounds, nor of any part or section of the house. Nor are those plans, so desirable in such case, at all easy to come by. We must seek them in Blomfield's 'Renaissance in England,' or in the architectural folios of Belcher & McCartney, or Gotch. The books we have noticed in these pages, 'Famous Homes of Great Britain,' in several volumes appearing successively, also avoid the giving of ground plans or plans of upper stories. And, indeed, it may be assumed that there are two difficulties in the way: the one being the reluctance of house owners to have the interior arrangements analyzed as carefully as is inevitable where a measured plan is to be made; the other the fact that when the photographer goes down to Hatfield or to Moreton he does not take with him a skilled architectural draughtsman. So what we have is this—fifty-five monographs of English mansions, with four or five very large and two smaller half-tone pictures to each, on an average; and a long introduction concerning the general subject, containing briefer notices and single illustrations. Text and pictures are all printed on that irritating high-glazed "coated" paper which the printers of half-tones affect. The text is of the sketchy and conversational character not unfamiliar to readers of such volumes as this, which are quite capable of being used as "parlor table books," and in the present text there is a certain amount of information which is probably trustworthy and is certainly interesting—information about the original foundation of the building and the more or less mythical stories that are told of its after fate. The illustrations every student can imagine for himself. They are, of course, marred and their value to students diminished by the vexatious modern furnishing—the crowd of tables and chairs, hangings, and vases, without which the modern householder of an English-speaking community cannot feel herself to be at home.

The volume has no index, nor any list of plates. There is a one-page table of "Contents"—that is, a list of the buildings, with the page at which is to be found each monograph or briefer notice in the introduction.

Keltic Researches: Studies in the History and Distribution of the Ancient Goidelic Language and Peoples. By Edward Williams Byron Nicholson, A.M. Oxford. 1904.

In this volume Bodley's Librarian takes up once more the discussion of the Pictish problem and related questions in Celtic philology. Between 1893 and 1895 he contributed to the London *Academy* a series of articles concerning the ogam inscriptions supposed to be written in the Pictish vernacular. He tried to show the language to be Celtic, and made a translation in accordance with this theory; but his knowledge of Celtic at that time was so imperfect (as he himself frankly admitted) that his attempt produced very little effect. Undeterred, however, by the failure of his first argument, Mr. Nicholson pressed on with the investigation of the subject, and published in 1898 a pamphlet on "Sequanian"—a discussion of the Calendar of Coligny—and in 1900 an article on the language of the Continental Picts. The present volume contains revised reprints of the two last-named articles, a recapitulation of the results of Mr. Nicholson's previous investigations, and some further development of his theories about the Celts.

The opinions at which he has now arrived may be briefly stated as follows: He holds that Pictish was not only a Celtic, but more particularly a Goidelic language and the parent of Highland Gaelic; that the Picts were never conquered by the Scots, nor their language displaced by the Irish of Ireland; that the Belgic element was more prominent in the population of the British Isles than has been hitherto supposed; that its language was Goidelic, and that Goidelic was also widely spoken on the Continent, "from the Danube to the mouth of the Loire, and from the Tagus and the Po to the mouth of the Rhine." These propositions, as will be seen at once, are in large part inconsistent with the usual opinion about the distribution of the Celtic languages and peoples. Mr. Nicholson has argued for them with much ingenuity, and has brought together a body of material which deserves more careful examination than we have been able to give it. In recording our judgment, then, that the case is, on the whole, not proven, we are aware that we are not offering an adequate criticism of the book.

Mr. Nicholson has profited by the lesson in Celtic taught him by his former critics, and has abandoned some of the erroneous theories in his *Academy* articles. He has also acquainted himself with a good deal of the recent literature on Celtic grammar. But he appears to us still to be far from a trustworthy guide in philological investigations. We do not like his old-fashioned assumption that *h* was inserted "to avoid hiatus" in Pictavian; and still more easy-going, if possible, is his extension of the same explanation to situations in Biturigan where there was no hiatus to be avoided (p. 113). He ought, in our opinion, to have taken more account of chronology in his discussion of Gaelic sound-laws, and to have depended rather less on modern words (even from O'Reilly's discredited dictionary) for the explanation of Pictish forms. His judgment, also, we are often unable to approve. The etymologies he proposes for Mediolanum ("from the stems of Irish *med*, 'weighing-beam,' and Irish *olann*, 'wool'") and for Pelagius (from the root *$<p>el$ to fill, and *agia*, a drove; hence, "owner of many herds") do not increase our confidence in his guesses when he is dealing with utterly unknown tongues.

But, quite apart from any errors of detail in Mr. Nicholson's work, the nature of his subject is such as hardly to admit of the positive conclusions he believes himself to have reached. In his translations of the Rom tablet or the "Biturigan" charm, nearly every word is conjectural, and some of the guessing is pretty reckless; yet on the basis of these renderings he formulates certain sound changes as assured, and classifies the languages accordingly. At times, it is true, he seems to appreciate the incompleteness of knowledge in the field, as when he protests (page 6) against the assumption that Gaulish was a single language of the Kymric type. But the same protest may be made against his attempt to classify "Sequanian," "Pictavian," "Sordonic," and other still less defined dialects as Goidelic. The fact is, that sufficient evidence has not yet been found to justify any such definite classification, though the existence of "q-Celts" on the Continent has been made surer by recent researches. In the present state of knowledge we hold that the use of "Goidelic" to include anything more than the long-recognized branches of insular Celtic simply tends to confusion.

With regard to the insular Picts, we are not persuaded that Mr. Nicholson has found the key to their inscriptions: his translations leave too many inconsistencies unexplained. But he has at least succeeded in reopening the question about the relations of the language. Since Professor Rhŷs's articles on the inscriptions (in the Proceedings of the Society of Antiquaries of Scotland, vols. xxvi. and xxxii.), and Professor Zimmer's study of the matriarchal usages of the Picts (in the *Zeitschrift der Savigny-Stiftung für Rechtsgeschichte*, vol. xv.), the view that Pictish was not an Aryan tongue has rather held the field. The opinion that it was Celtic, which several scholars have continued to maintain as a possibility, has received its first vigorous restatement at Mr. Nicholson's hands, and the case is by no means a weak one. But, for Mr. Nicholson's next inference, that Pictish was Goidelic and the ancestor of Highland Gaelic, the evidence is altogether insufficient, and in part unfavorable. The features cited (pp. 78-79) to show the difference between Scottish Gaelic and the Gaelic of Ireland are unimportant, and the whole discussion of the subject is inadequate. So far as we are aware, no thorough comparison of the Gaelic dialects in Ireland, Scotland, and the smaller islands has yet been made, but Mr. Nicholson seems to us to assume a much clearer linguistic demarcation among them than actually exists.

Money: A Study of the Theory of the Medium of Exchange. By David Kinley. Macmillan Co. 1904.

As the title indicates, this essay is not of a practical character. There is little in it that is historical or descriptive; it consists in a statement of principles and in an elaboration of their consequences. That

such an exposition should be dry is not surprising; but the author's style is clear, and his reasoning consecutive. We cannot help thinking it occasionally inconclusive. When we are constantly asked to "suppose a case," or to "imagine a community," or to "assume a society," we are moved to ask whether all the elements of the problem are included. If we deal with hypothetical communities and imaginary societies, we get conclusions that may be invalid in practice. A single omitted phenomenon may vitiate a whole train of reasoning.

Professor Kinley does not claim to have contributed much that is new to the subject, and he informs us that the field which he attempts to cover has recently been occupied by Professor Laughlin's 'Principles of Money,' and in part by Professor Scott's 'Money and Banking.' But he differs with these authors in his view of the influence of credit, and of the relation of the quantity of money to its value. We can do little more than call attention to a few particulars of the views here taken of these subjects.

No doubt, as Professor Kinley says, people accustomed to use credit machinery will try to increase and improve it rather than add metallic money to the circulation—the example of England is proof enough; but we cannot admit that "no other significance can be attached to the increase in the number of national banks" between 1899 and 1903, and especially to their increase in rural communities where banking facilities did not exist before. There were changes in the law to which much significance attaches, and which tended directly to favor the multiplication of banks. It is going too far, also, to say that there can be no "other economic meaning to the tremendous consolidations of great banking houses which the past few years have seen." Such events have many economic meanings.

It is incorrect, according to our author, to hold that credit has normally no effect on prices. It is also untrue that an increased demand for goods due to credit is precisely similar in its effect to an increased demand due to money. The increase in demand in a measure automatically cancels itself, by a simultaneous increase of the supply of goods, so that the total credit demand does not play directly on prices. But "credit exchange is essentially a return to barter by representative transfers of goods rather than by physical transfers. Hence it saves some expense of transfer. In doing so it diminishes the volume of exchanges made with money, and thus causes an increase in the quantity of money relatively to the volume of work it has to do. Therefore, it lowers the marginal utility of money, or, in other words, raises the level of prices."

Strangely enough, the word "money" does not appear in the index to this volume, and the only definition given consists in an account of the services which it renders. As to the value of money, it varies inversely as its quantity, provided the amount of goods exchanged remains the same. That is to say, the value of money at any moment is determined by demand and supply. But this appears to be true, Professor Kinley maintains, only of inconvertible paper, that is, of money having no intrinsic value. When a precious metal is used, to double its quantity may not halve its value. "The marginal utility of money is a resultant of the demand for money for purposes of exchange, and the demand for the money article for other uses." We may accept this conclusion without feeling, with the author, that its importance cannot be over-emphasized; especially as he proclaims the futility of attempting to establish a relation of simple proportion between the quantity of money and its value. The "rapidity of circulation" of money is declared to be a factor in the maintenance of the price level, rather than in its establishment. The discussion of this point does not strike us as luminous; but, on the whole, the book deserves commendation.

Journalism and Literature, and Other Essays. By H. W. Boynton. Boston: Houghton, Mifflin & Co. 1904.

The briefest of prefaces announces that the substance of these essays has appeared in the *Atlantic Monthly* or elsewhere, but that they have been considerably changed in form for the most part. Certainly they have not been so much changed as to lose that fresh and easy spontaneity which was originally their most attractive feature. The pleasure we derive from them is preeminently that which we expect from conversation about books and related topics with one who is well acquainted with them and likes to talk of them. The essays are all more or less discursive; even those in which the reviewer's attitude is most evident setting the special criticism in a wide frame of general observation.

The most elaborate of the fifteen is that on journalism, and, standing first in order, it may be accepted as the essay to which Mr. Boynton would have us attend most deliberately. Strictly speaking (we are told), journalism has no literary aspect; it has certain contacts with literature, and that is all. "But it happens that pure journalism is hardly more common than pure literature." "Wherever in a journal personality emerges and fully expresses itself, literature emerges." It happens, moreover, that there is journalism in literature as well as literature in journalism. What gives us pause in these discriminations is the assumption that journalism is less journalism when it has the literary quality than when it lacks it. In this connection the late Mr. Godkin offers a troublesome problem.

"The genius of a writer like Godkin cannot be denied; it still presides over the admirable journal which owes its prestige to him. But it was a genius allied with a moral sense somewhat too readily moved to indignation. His was a singular instance of the nature which prefers the ardor of prompt service to the ardor of self-utterance. His work lay, accordingly, upon the border regions between literature and journalism."

Here is less blame than praise, but is it a good judgment? It seems to us that Mr. Godkin's ardor of service was identical with his ardor of self-expression; that the mystic line between the two cannot be drawn. It seems to us that Mr. Godkin's editorials were not a whit less journalism because they had invariably a noble literary form.

Some of Mr. Boynton's incidental observations are the more valuable parts of his discourse, as where we read: "Works of art are not ephemeral because they fail to live forever; we must not be unreasonable in demanding long life for all that deserves the name of literature." We have Mr. Kipling's journalistic literature for a particular example: "Mr. Kipling will eventually rank with a class of writers separated a whole limbo from the greatest creative spirits; one need not in the least grudge them their immediate effectiveness."

In the esssay on "Owning Books" Mr. Boynton, conceding that the private library is a less important factor than it used to be, pleads for small private collections made up of the books one loves and to which one frequently returns. The public library is a cold, impersonal affair; the circulating library is neutral. "No reader's soul is likely to be lost or saved by the weekly advent of four clean books in a red box." Much more might be said than is said for the private library as the toolchest of the literary workman. Under the head of "Pace in Reading" we have instructions in the art of skipping, and, what is better, some excellent suggestions as to reading aloud—to what extent and by whom it should be done. In "Effusions of Fancy" we have a good drive at the literature of the "creditable cancer" and other forms of physical disability or abnormality. The essay on "American Humor" leads up to Mr. Dooley. "Much of the Dooley satire is so good that it must escape the comprehension of many readers who are convulsed by the Dooley phraseology." In Mark Twain, the humorist is found subordinate to the jester. "So far as pure humor is concerned, there has never been a shadow of a boundary line between England and America." Other subjects, treated suggestively, are "Intimate Literature," "Cleverness and Originality," "The Writing Public," and "Reviewer and Critic."

BOOKS OF THE WEEK.

A Notable New Novel.

The Divine Fire.

By MAY SINCLAIR. $1.50.

The life and loves of a London bookseller, who became a real poet. The character of the poet and the strangely assorted people he met are drawn with more than usual power. Humor and sincerity are also said to be features of this unusual book, on which the verdict of the publishers' readers was prompt, enthusiastic and unanimous.

Rec'd OCT 21 190 B.P.L.

THE IMPORTANT BOOKS OF THE MONTH

MONCURE D. CONWAY'S REMINISCENCES

"We are inclined to think that Mr. Conway's 'Reminiscences' will turn out to be the most valuable publication of the season in this department [of biography]; certainly it will have the deepest sort of interest for American readers.

"The only other work likely to vie in personal interest with it will be the collection of letters written by John Ruskin to Charles Eliot Norton."
—*The Dial.*

Two volumes, with portraits and facsimile letters. $6.00 *net.* Postage extra.

COMPROMISES
By AGNES REPPLIER

Brilliant, discursive and literary essays, full of humor and entertainment. $1.10 *net.* Postage 9 cents.

ROUTINE AND IDEALS
By LEBARON R. BRIGGS

Dean Briggs' essays are always practical and helpful to men and women. $1.00 *net.* Postage extra.

FAR AND NEAR
By JOHN BURROUGHS

Outdoor papers containing Mr. Burroughs's observations in Alaska, Jamaica, and on the Hudson. $1.10 *net.* Postage extra.

LETTERS OF
JOHN RUSKIN TO CHARLES ELIOT NORTON

"They reveal the lovable personality of the writer more clearly than it has ever before been shown us."—*The Dial.*

Two volumes, with many interesting Portraits, and other illustrations.

THE AMATEUR SPIRIT
By BLISS PERRY

A plea for the union, in the various activities of life, of the professional skill with the enthusiasm of the amateur. $1.25 *net.* Postage extra.

BITS OF GOSSIP
By REBECCA HARDING DAVIS

Interesting recollections which throw many sidelights on the personalities of New England authors. $1.25 *net.* Postage extra.

THE QUEEN'S PROGRESS
By FELIX E. SCHELLING

True sketches of Elizabethan life in the great age that produced Spencer, Bacon, and Shakespeare. Illustrated. $2.50 *net.* Postage 13 cents.

WOMEN IN THE FINE ARTS

By CLARA ERSKINE CLEMENT

A valuable biographical and critical handbook reviewing the work of women in art, from the 7th century B. C. down to the present day. The book is illustrated by more than thirty reproductions of paintings and sculptures, thus adding to its value. $2.50 *net.* Postage 15 cents.

THE BASKET WOMAN
By MARY AUSTIN

Legendary folk-tales from the California desert, by the author of "The Land of Little Rain." $1.50.

WHEN THE KING CAME
By GEORGE HODGES

A view of the events and teachings of the life of Christ in their true sequence. $1.25.

THE FLOWER PRINCESS
By ABBIE FARWELL BROWN

Wholesome, light hearted stories for little children, charmingly told and prettily illustrated. $1.00.

THE EVOLUTION OF THE HISTORY OF THE
U. S. CONSTITUTION and MONROE DOCTRINE

By JOHN A. KASSON

A clear account of the conditions existing at the close of the Revolutionary War, tracing the successive steps by which the States were brought to agree upon a general convention. And a study of the Monroe Doctrine as time and events have developed it.

BIDDY'S EPISODES
By Mrs. A. D. T. WHITNEY.

A natural, present-day story of the oddities and evolutions of a young girl. $1.50.

THE AFFAIR AT THE INN
By KATE DOUGLAS WIGGIN and others

"A clever-innocent-amusing" account of a little international comedy; by the author of "Rebecca." $1.25.

THE REAPER
By EDITH RICKERT

The story of a wonderful filial devotion, with the Shetland Islands as a setting. $1.50.

AVERY'S SCHOOL CHEMISTRY

Price, $1.20

This book is designed to meet the wants of all secondary schools on chemistry, and to provide a satisfactory text, a sufficient amount of individual laboratory work, and suitable lecture-table demonstrations. It is an entirely new book, and possesses the various pedagogical features that have made the preceding volumes of the Avery series so successful and popular. Clearness and accuracy of statement mark the definitions, directions, and explanations. The experiments are simple and instructive, easily performed, and adapted to the use of inexpensive and easily obtainable apparatus. Unusual space is devoted to chemistry as applied to important industrial processes.

CVENTOS TICOS

Short Stories of Costa Rica

BY

RICARDO FERNANDEZ GUARDIA

Translated from the Spanish by Gray Casement

WITH AN INTRODUCTORY CHAPTER DESCRIPTIVE OF THE PLACE AND ITS PEOPLE

How many Americans know anything of the history, resources, and present condition of the little Republic of Costa Rica? Very few, indeed. The majority confuse the name with Puerto Rico, but as to its location they plead ignorance. Possibly Central America may be more clear to an enlightened class, but generally speaking the people of the great isthmus are as little known as the inhabitants of the remoter states of Africa.

In this volume the author and translator have joined forces in an attempt to give information. The canal which will soon join ocean with ocean will, of necessity cause many to look in the direction of the tropics, for the first time possibly, and the whole world will want information, not as a guidebook or dry-as-dust history, but in a clear and readable narration of facts. These Mr. Casement presents. Señor Guardia incorporates incidents of daily life and action in his tales; the combination is a rare one. The map and very numerous illustrations add interest.

The work is a unique and distinct contribution to the literature of one of the collection of Latin American States, who are in themselves as distinct a type as are we. They are continually becoming better known, and this book will help toward a larger understanding.

Order from your bookseller or direct of the publishers.

THE UNIVERSITY OF CHICAGO PRESS

NEW BOOKS

Religion and the Higher Life

By WILLIAM RAINEY HARPER, President of the University of Chicago.

A collection of addresses, more or less informal, delivered by the author to companies of young men and women. The topics are the practical questions of the religious life that the youth of both sexes are all compelled to consider whether they will or not. The author says in his preface "I have in this way discharged, in a measure, a responsibility which has weighed upon me more heavily than any other connected with the office which I have been called to administer." Some of the more important topics are as follows:

Fellowship and Its Obligation—Service.
Our Intellectual Difficulties.
Religious Belief among College Students.
Bible Study and the Religious Life.

12mo, cloth, $1.25; postpaid, $1.40.

For publication during the first days of November.

Studies in General Physiology

By JACQUES LOEB, Professor of Physiology in the University of California.

These volumes contain the results of Professor Loeb's researches in the general problems of life-phenomena, embracing the author's publications in journal articles and monographs, often now inaccessible, published during the last twenty years. The two volumes constitute the only complete and orderly account of the author's important researches in this field, with occasional notes and revisions. The leading topics which are treated are animal heliotropism and geotropism, instinct and will in animals, heteromorphosis, the limits of divisibility of living matter, regeneration, artificial parthenogenesis, the physiological effects of ions, the effect of salt solutions on the muscles, and the transformation and regeneration of organs. The experiments are presented in a way that is perfectly intelligible to laymen, although the researches appeal primarily to scientists.

In two Parts bound separately.

Part I, 430 pp., Part II, 400 pp., royal 8vo, cloth, with numerous illustrations.

For publication in December. Send for descriptive circular.

OF INTEREST TO STUDENTS AND LIBRARIANS

A History of Matrimonial Institutions

By GEORGE ELLIOTT HOWARD, Professor of History in the University of Nebraska.

The Outlook has said of this work: "This is the most substantial work on its subject yet produced in our country. Scholarly, scientific, thorough, it is an inductive study of the first importance to every student of the primary social question—the question of the family."

The Quarterly Journal of Economics has said: "In the three volumes of this monumental work the learned author has provided the first adequate treatment of the history of human marriage. . . . The volumes bear on every page the mark of wide and painstaking scholarship."

Three volumes, 8vo, art, buckram, *net*, $10.00; postpaid, $10.72.

The Code of Hammurabi King of Babylonia (About 2250 B.C.)

Edited by ROBERT FRANCIS HARPER, Professor of the Semitic Languages and Literatures in the University of Chicago.

The *World To-day* has said of this work: "From every point of view the Hammurabi code is the most interesting find which has been made in Western Asia for many years, and the excellent edition now available will be welcomed by the scholarly public."

The Outlook has said: "Students of Assyrian owe a great debt to Prof. Harper for this learned and carefully edited text of this ancient and interesting code."

Large 8vo, gilt top, cloth, *net*, $4.00; postpaid, $4.28.

JUST READY

Mrs. Roger A. Pryor's **Reminiscences of Peace and War**
By the only Southern woman who was practically within the Confederate camp from first to last during the war.
Published this week. With six portraits. *Cloth, crown 8vo, $2.00 net (postage 21c.)*

Rev. Hugh Black's **The Practice of Self-Culture**
The author of "Friendship," etc., discusses the best ways of equipping the self for service.
Published this week. Cloth, 12mo, $1.25 net (postage 10c.)

Pres. William De Witt Hyde's **From Epicurus to Christ**
A study of personality based on five principles: Pursuit of pleasure, self-control, subordination, proportion, and the Christian spirit of love. *Cloth, 12mo, $1.50 net (postage 11c.)*

Pres. Henry C. King's **Personal and Ideal Elements in Education**
Deals with the function of the college (as distinct from school and university) to teach the fine art of living.
Ready next week. Cloth 12mo, $1.50 net (postage 11c.)

Mr. W. J. Ghent's **Mass and Class**
The author offers a fresh analysis and description of social classes; he rejects the definitions given by orthodox writers.
Published this week. Cloth, 12mo, $1.25 net (postage 10c.)

Mr. Lafcadio Hearn's **Japan: An Attempt at Interpretation**
"Dealing as no other writer in English could deal with mainsprings of Japanese character . . . as pure interpretation it is almost invaluable."—*Boston Advertiser.* *Cloth, 12mo, $2.00 net (postage 13c.)*

Mr. Stephen Phillips's **The Sin of David**
The new play by the author of "Ulysses," etc. Its scenes are in England of the time of Cromwell.
Ready next week. Cloth, 16mo, $1.25 net (postage 8c.)

Mr. Clifton Johnson's **Highways and Byways of the South**
Uniform with "New England and its Neighbors," etc. The book covers the South east of the Mississippi, with even more picturesque interest than the other volumes in this series. *Ready next week. Cloth, crown 8vo, $2.00 net (postage 15c.)*

Mr. Edward T. Devine's **The Principles of Relief**
"By far the most original and valuable book in its general field which has appeared in ten years."—HOMER FOLKS, Secretary State Charities Aid Assoc., Ex-Comm'r of Public Charities, New York City. *Cloth. $2.00 net (postage 12c.)*

Dr. Edward Everett Hale's **Memories of a Hundred Years**
A new edition with three new chapters on Dr. Hale's childhood, youth, and the great causes which have interested him most deeply. *Ready next week. In one volume, cloth, 8vo, $3.00 net (postage 22c.)*

Dr. Herbert Friedenwald's **The Declaration of Independence**
An original study of the origin and meaning of the fundamental document of American history; an interpretation and an analysis. *Blue cloth, gilt top, 12mo, $2.00 net (postage 10c.)*

NEW NOVELS

Mr. James Barnes's **The Unpardonable War**
A clever schemer in "Newspaper Row," perfectly plausible turns in politics and inventions, are utilized as elements of interest in this absorbing story. *Ready this week. Cloth, $1.50*

Miss Viola Roseboro's **Players and Vagabonds**
Spirited and engaging stories in which through their loves and joys and sorrows the player-folk become very real.
Ready this week. Cloth, $1.50

Mr. Jacob A. Riis's **Is There a Santa Claus?**
The answer to this question so frequent from children is put by the author of "The Making of an American" into an illustrated and daintily decorated little book. *Ready this week. Cloth, 75 cents net (postage 5c.)*

Mr. Robert Herrick's **The Common Lot**
"Full of searching insight and absorbing interest . . . sincere to the very core in its matter and in its art."—HAMILTON W. MABIE. *Cloth, $1.50*

Mr. F. Marion Crawford's **Whosoever Shall Offend**
A new novel of modern Italy full of romance and entertainment, equal to the best in the Saracinesca series. *Cloth. $1.50*

Miss Gwendolen Overton's **Captains of the World**
Is a very real addition to industrial novels, an absorbing story and a sane view of insistent modern conditions. *Cloth, $1.50*

Published by THE MACMILLAN COMPANY 66 Fifth Ave., N. Y.

The Nation.

NEW YORK, THURSDAY, OCTOBER 20, 1904.

The Week.

Judge Parker is getting on—he is now a "traitor." This epithet is hurled at him for his emphatic speech of Saturday advocating justice to the Filipinos. But what did he say? Simply what all Americans, those who now denounce him first among them, would have said prior to May 1, 1898. Judge Parker merely did the appalling thing of reiterating the historic American policy. When he said that oppressed peoples ought to be free, even when this country is the oppressor, and that government without consent is repugnant to American principles, he was uttering what would have been thought the merest commonplaces six years ago. Now they are incendiary. But the real flame is of others' setting. As Goldwin Smith said, the United States burned up the Declaration of Independence when it conquered the Filipinos. It did more than that. It relieved Spain, as Judge Parker tersely said, of a thorn which had been in her side for centuries, to thrust it into our own. This is the common view of educated Spaniards. They smile at Uncle Sam's simplicity in entering upon a heritage of trouble. Sooner or later, self-interest will lead us out of the Philippines, if the sense of justice does not. Judge Parker's strong and truthful words indicate a national duty. Those whose love of liberty goes deeper than the lips, should repair to the standard which he has raised.

With lawyer-like seizure of the real point at issue, the Parker Constitution Club's report on the Panama lawlessness of President Roosevelt goes swiftly to the core of that nefarious business. Wasting no words on the Constitutional right of the President to "recognize" the republic of Panama while it was still pawing to get free of the slime of conspiracy—no doubt, Mr. Roosevelt had the power to do that shockingly indecent thing, if he had the conscience to do it—the report singles out the steps which neither the Constitution nor common morals entitled him to take. One was to violate a treaty; the other was to forbid the free passage of Colombia's troops within her own territory. Here was no mere question of keeping transit open across the isthmus. Mr. Roosevelt issued that fifty-mile order which so good a Republican as Senator Spooner admitted that he could not defend. Nay, according to the note which Admiral Coghlan sent to Gen. Reyes, our forces were ordered to prevent the Colombians from landing in *any part* of the province of Panama. This means that President Roosevelt assumed jurisdiction over much more than fifty miles of Colombian soil. To do so was, of course, an act of war, and warrant for it cannot be found in all the argument or all the wit of Mr. Roosevelt's apologists. How startling President Roosevelt's course in Panama was to the older Republicanism, Senator Hoar showed at the time; now, we have ex-Senator Edmunds, with his merciless analysis of the facts and the law, saying that Mr. Roosevelt "dismembered a friendly State to get a canal."

The mere fact that two of the eight Presidential tickets in the field this year are bound to receive nearly all of the votes, is no excuse for forgetting the others. The *Independent* published last week a collection of articles from the Presidential nominees of five of these parties, Populist, Prohibition, Social Democrat, Socialist Labor, and National Liberty. A candidate who has no expectation of being elected is relieved of the haunting fear of committing himself indiscreetly, or making "breaks." This very fact, combined with the earnestness and the exceptional point of view which take a man into one of these dissident movements, makes the articles interesting. A vote for either Roosevelt or Parker must be cast in the vast majority of cases from highly complex motives; but the other candidates make the simplest of appeals. Dr. Swallow has reduced the needs of the situation to one reform; Mr. Watson to eight, which naturally group themselves together; Mr. Debs and Mr. Corregan to a reconstitution of society on lines that are beautifully simple until the details have to be worked out. Although differing more radically from one another than they do from the great parties, the points of view of these candidates are curiously similar in one respect. "The corporations have learned the game of the kings, 'Divide in order to rule,'" says Mr. Watson. "Having split the people into two factions, one called Republican and the other Democrat, the corporations rule the land, first through one of these parties, and then through the other." Dr. Swallow agrees as to the offence, but names another offender. "To divide favors with these parties and thus keep both in the field is the policy of the liquor traffic," he says. "Between the Republican party and the Democratic party there is no difference so far as the workingman is concerned," says Mr. Debs.

In the election of 1900 all the minor parties combined cast less than 4 per cent. of the total vote. They are all hopeful of better things now. Watson's theory that neither Gold nor Bryan Democrats should vote for Parker would logically point to a Populistic landslide. Swallow sees "some hope that from each side there are those who will leave the old, and, coming half way, meet each other as a new organization." Debs says that the Socialist party's expansion to majority proportions is certain. He points to 240,795 votes in 1902, and promises the casting of many more this year. The claim of George Edwin Taylor, candidate of the National Liberty party, that 60 per cent. of the negroes in nine specified States will vote for him, means, by the census figures, nearly 200,000. Both the Socialists and Prohibitionists cast in 1900 and 1902 votes larger than that of Birney, whose candidacy in 1844 drew enough Abolitionists from the Whig party to elect Polk, or than that of John P. Hale, the Free Soil candidate in 1852, and almost as large as that of Van Buren in 1848. And, if the services of minor parties are to be considered, we must not forget that it was the Prohibitionists fusing with the Democrats on one State office that put Mr. Cunneen in position for his present invaluable service in this State.

One of the reasons given for the fight against La Follette was that the sound judgment of the people of Wisconsin favored giving a Governor two terms and no more. Yet the Stalwarts decided last week to keep in the field their own candidate, who has already served two terms, while as an alternative many of them will vote for the Democratic nominee, who is an aspirant for his third. That is the comedy of the situation. The tragic element has been furnished by the efforts of the men who tried to bring about party harmony. When so eminent a pacificator as Senator Spooner has failed pitiably, it is idle to talk of outside efforts accomplishing anything. The failure of the Supreme Court to decide the technical merits of the bolt last spring gives the Stalwarts an excuse for still calling themselves Republicans, but it seems to have brought about a complete exchange of arguments between the two sides. Three weeks ago it was the La Follette men who resented the National Committee's activity. Now, it is the Stalwart who winces. Then it was the Stalwart who declaimed against the candidate who would refuse to give up the fight after a judicial mandate. Now, he is himself galled by the same criticism.

Rhode Island Republicans are disturbed over the outlook. The party has been

badly damaged by revelations of the corruption of the Brayton machine. The leaders are no longer sure of a majority, as is shown by the election of Congressman Granger in 1902 and the election and reëlection of Governor Garvin. Both these popular Democrats have been renominated, and not only they may win for themselves, but their strength may actually imperil the electoral vote. Menaced by this danger, the Republican managers have persuaded Chief Justice Stiness to run for Congress, in the hope that his character and standing may give the party a respectability which it sorely needs. The Chief Justice is on the whole the most dignified and powerful officer of the State; for the Governor has no veto and controls few appointments. His step, therefore, from the bench into the hurly-burly of partisan politics, to enter a contest in which he seriously risks defeat, is evidence that he as well as his fellow-Republicans feel that they are facing a grave crisis.

Governor Odell's attempt to prevent qualified voters in this city from being even registered shows that he will stop at nothing, and at the same time that his perceptions are so dense that he is not aware of the inevitable reaction caused by his high-handed interference. He practically avows that he gave the order which led to the outrages of Friday and Saturday. In the most indefensible and brutal manner, well-known citizens — clergymen, public officials, reputable professional and business men —were met at the registration booths with challenges implying that they were criminals. Men whom district captains of both parties stood ready to identify as residents of the district were rudely accused of trying to violate the law. The thing was done with such wholesale effrontery, with its malicious object standing so plainly confessed, that it can but add to the repulsive implications of Odellism. The right of the State authorities to aid in preventing electoral frauds in this city we have not questioned. The power conferred by the statute is, however, one to be used scrupulously and with a high sense of responsibility. Gov. Odell would wield it as an instrument of partisan terrorism. Where there should be extreme care and fairness in detecting cases of illegal voting, he exhibits incredible recklessness. His hirelings challenge right and left, evidently without investigation or knowledge, and on so sweeping and senseless a scale as to discredit the motives of the whole proceeding. It is the iron hand of the Governor applied to this city—exactly that sort of combination of stupidity and callousness on his part which led despondent Republicans to say in advance: "Well, if Odell concludes to come down here and take us all by the throat, it looks as if there wouldn't be enough Republican votes in New York to be worth counting."

Last December, Messrs. Conrad and Bonaparte, the Post-Office investigators, reported that Cornelius Van Cott had been operating with Heath and Beavers in swindling the Government. Van Cott paid Beavers $4 a day, charged against New York "expenses." Messrs. Conrad and Bonaparte describe the transaction as "fraudulent" and add:

> "We find it impossible to doubt that Mr. Heath, Mr. Van Cott, and Mr. Beavers himself all knew the payment of this additional compensation was expressly forbidden by law, and that it was called 'expenses' to evade this prohibition."

Still, the influence of Senators was strong, and a President who believes that "no man who condones corruption in others can possibly do his duty by the community," kept Van Cott in office. Then a set of inspectors recommended the removal of Van Cott, his son, and twelve subordinates, but Platt stood by them. The President, who despises cravens and weaklings, wanted something milder, and got it from Assistant Attorney-General Robb, who censured Van Cott for allowing the son too much authority. The elder was asked to disgorge $2,100—$1,800 paid to his brother nominally for inspecting mail-boxes and really for doing nothing, and $300 more illegally paid Richard; but he stuck to his place. Richard was forced out, for he had stuffed the post-office with his heelers; he received $3,200 from the Government, but gave most of his time to his private business; he quartered on the post-office, at a salary of $1,500, a ward of Cornelius Van Cott, who, as a stenographer, gave most of her time also to private business. In short, the Van Cott family proved to be an uncommonly thirsty set of leeches. One of the Van Cott henchmen, a postal employee, was arrested with Richard, on Saturday, on a charge of colonizing voters. In view of these latest revelations, no one can deny that the retention in the New York post-office of Cornelius is a public scandal, for which President Roosevelt can offer no defence except his fear of offending Senator Platt.

The threatened boycott of the Pennsylvania Republican party by organized labor is indeed sharper than a serpent's tooth. It is nothing less than incredible that intelligent American workingmen should allow any dispute over terms of employment, any fight against a "scab" State Capitol, to blind them to the great central truth that all the good things they have in the world came to them as the direct gift of the Republican party. All have come in the same way, from their full dinner-pails to the carpets and pianos in their homes. What Republican speech in two decades has failed to mention those carpets and pianos? Do not these besotted Pennsylvanians know that no less an authority than Gen. Charles H. Grosvenor filled more than twenty pages of the *Congressional Record* last winter with an anthology of Mr. Roosevelt's enthusiastic expressions about the laboring man? Look through that supreme repository of political truth, the Republican campaign-book, "Labor and Capital, relative share in prosperity"; "effects of Trusts on"; "Labor Laws in Republican and Democratic States"—such titles abound. Is all this logic, all this statistical material, to be wasted? Senator Penrose has been in conference with the President, and something may be done about it. But the very idea of a labor boycott of the Republican party in that seventh heaven of protection, Pennsylvania, is enough to make even a Rough Rider's blood run cold.

Reports of white-capping in darkest Mississippi continue to come in, albeit belated. The outrages in Lincoln County have been so serious that a delegation of negroes "of the plantation type, farmers plain and simple," appealed last month to Gov. Vardaman. He asked them who had advised them to come to him. They replied that no one had, whereupon he gave them the vague assurance that "the officers of the law would protect them." We hope they will. The Lincoln *Times* gives an account of a meeting of white citizens held to consider these outrages and "in order that the citizens might realize the depths of depravity to which the [white-cap] organization has descended." The executive committee appointed by a previous citizens' meeting last spring reported that its discoveries were "horrifying." "This band (which *once included* many good citizens who have since dropped out because they could not stomach the lawlessness proposed) have not balked at plotting the wholesale destruction of property, or even the assassination of white men whose existence they deemed dangerous to their welfare." The meeting heartily endorsed the crusade against these bandits, condemned "white-capism in all its phases," and agreed "to assist in upholding law and order in Lincoln County." Thus other white Southerners are learning that lawlessness in the treatment of negroes inevitably means lawlessness for whites also.

In charging the Federal grand jury at Huntsville, Ala., on October 11, Judge Thomas G. Jones of the Northern District of Alabama laid down a new theory of Federal jurisdiction over negro lynchings. He set forth his views at length, with frequent citations of authority, but the reasoning is very simple. "Under the Thirteenth Amendment," the judge says, "Maples [the negro murderer taken from jail

and lynched at Huntsville] had the immunity as a citizen of the United States to be protected against lawless violence by the mob of whites to prevent his enjoyment of the right of trial . . . when such violence was directed towards him because he was a negro, with the intention to deprive him of that right." Thus a fundamental distinction is made. If the lynching of Maples was provoked purely by abhorrence of his crime, it would be merely an offence against the State laws. "If, however," the judge charged, "you find something more than a mere felonious purpose to avenge the crime imputed to him, or general malevolence, and that the mob was actuated by the bad spirit that a person of Maples's race when accused of crime should not have the right to be acquitted if innocent, or condemned or punished by the court if guilty, and that the mob hung him to prevent his enjoyment of that right because of his race, his murder by a mob of persons of a different race constitutes a crime against the laws of the United States." Judge Jones wisely added, in laying down this contention, that every officer and juror of the Federal court was an Alabamian, and there was not the slightest reason for jealousy of it as an intruder.

It is for the best that these views should be laid down in the case of a negro whose crime was homicide. Yet Judge Jones, in continuing his charge, showed clearly the impossibility of condemning lynching for the lesser crime while condoning it for the greater. "Can any man, in the wildest flight of the brain," he asked, "picture Robert E. Lee or John B. Gordon, no matter what the charge against the criminal, joining a mob to break down a jail and taking a prisoner out to hang him?" "Can any of us, as conscientious men, deny that . . . there is a deplorable tendency to mob black men for crimes and misdemeanors which, when committed by white men, are allowed to go unpunished or left to the courts to punish?" And the responsibility for much of the lawlessness the judge placed where it belongs. "There are those with us," he said, "who, for notoriety, or to carry some selfish end, always make low appeals to the basest passions of our race, in the discussion of every public question which in the slightest degree touches upon the relations between the races. These men constantly assault the right of equality before the law, by the base teaching that giving a negro his right under the law would result in social equality, though they well know that 'justice without respect of persons' involves neither social nor political right."

One point made by Professor Sumner in his letter printed in Thursday's *Evening Post* should interest those generous souls who defend protection upon the ground that charity begins at home, for nations as well as individuals. Free trade, say they, might be the best thing for the whole world if the whole world could be induced to try it. But if the United States can make more by sticking to protection and let the loss due to an unscientific, inequitable distribution of the world's wealth fall on England or Germany, it would be crazy policy to experiment with free trade. Let the foreigner look after himself. Professor Sumner, however, shows that our present policy of selling goods for export far below the prices asked for the same goods in this country, is helping along our hated rivals at the expense of the American people. If the goods, even at these export prices, yield a profit, which is far more likely than that they are sold at a loss, then our own people, who are paying about 25 per cent. more for them here, are taxed by the Trusts in an outrageous fashion. The horns of the dilemma seem to be about equally pointed.

The Boston Museum of Fine Arts has been compelled to pay duty on the frame of a painting shipped from Montreal and entered at St. Albans, though the picture itself came in free under the tariff-law section applying to educational institutions. The director of the Museum declares it is the first case of his knowledge in which the institution has had to pay duty on a picture frame, but he is told by the Custom House authorities that it will not be the last. Under a very similar section of the tariff law in 1887 the frames for pictures in the Corcoran Gallery were admitted free. The plight of the Museum authorities is indeed pitiable. They denounce the law and its interpretation as unjust, as if that would help the matter, and ignore the simple means by which the most drastic of laws may be made flexible. Has not Massachusetts a Senator? Is he not the closest of personal and political friends to the President? Surely, the heart that was touched by the wailing of the pickled sheepskins, will not turn to marble when Art holds out her manacled hands.

A writer in *Cassier's Magazine*, Mr. Joseph R. Oldham, N.A., disputes Rear-Admiral Bowles's assertion in the last annual report of the Bureau of Construction and Repair, that the time required for the construction of a battleship in this country "compares not unfavorably with the best results obtained in foreign countries, namely, Great Britain and Germany." He points out that the American battleship *Ohio* was two and a half years on the stocks, whereas the *Rivadiva*, bulit at Genoa by an Italian firm, was launched within thirty weeks from the time the keel was laid. A larger ship, the *Libertad*, was put overboard at Barrow-in-Furness within forty-one weeks from the beginning of construction. One of our latest battleships, the *Louisiana*, was contracted for October 15, 1902, to be contructed in forty-one months and to be delivered ready for sea in March, 1906, a period of three and one-half years. The *Connecticut's* keel was laid in March, 1903, and she was launched September 29, 1904. Mr. Oldham asserts that if there were not such constant changing of the plans by the Board of Construction, the superintending constructor, and the contractors, and so much time lost in trying to harmonize the changes, a battleship could be built in twelve months, and at half the cost. Mr. Oldham himself has seen a 5,000-ton cable steamer constructed, launched and completely finished, with all her complicated machinery, within three months from the date of the contract, largely because the builders had matured designs which were in no way altered. Mr. Oldham may take too rosy a view of our builders' ability, but he clearly proves that our wasteful Government methods are not confined to the Post-Office Department and the navy yards.

The engagement south of Mukden precipitated by General Kuropatkin's advance last week, and barely recorded as we went to press, has been incessant until now, when we are still unable to announce anything decisive of the battle or the campaign. On both sides there have been blows to receive as well as to give, strategic positions have been lost, taken, and retaken, guns have been captured. No successful flanking movement is reported, and the situation is something in the nature of a deadlock; at least the advance is stayed. The fierce nature of the fighting, and the extraordinary losses, are compared to those of Liaoyang, with an increment; but exact information in either case is unobtainable. Some discount must be made in view of the lack of unbiassed testimony and of the highly romantic nature of the conflict itself; but we may be sure that none of the horrors of war are wanting. They are to be perpetuated, to all appearance, during the winter. The approaching reinforcement of the Russians will be met by that of their opponents, and if there be bankruptcy neither in men nor in money, the process will assume the phase of simple attrition—as in the last stages of our civil war—when the nation which has most human lives to sacrifice will prevail. Here is obviously Russia's advantage, and her all-rail communication and steady service really bring her armies nearer to the seat of war than Japan's. Still, no forecast is now of much value. Meanwhile, the fate of Port Arthur is undecided.

TAFT ON THE POWER OF THE PURSE.

Secretary Taft's speech at the Union League Club on Thursday night was mainly a defence of extravagance. The facts he admitted; he could not well do otherwise with the Treasury reports before him. Responsibility for the great heightening of the cost of government, however, he refused to accept for his party. It was, rather, a kind of mysterious and fated "tendency upward" which had played the mischief with the accounts. Besides, if you would but adopt "one way of looking at the increase"—namely, to compare the growth of expenditures with the growth of wealth—you would not be so sure that there had been extravagance. The fact that we are rich enough to endure lavish outlay makes it appear, when you come to think of it, very like frugality.

We think Mr. Taft makes a mistake in minimizing the serious problems in government finance which this country must promptly face. If he is a member of the next Administration, he will have to give anxious days to devising ways and means—including new taxes—to enable the Treasury to meet its obligations. Glance again at the record of bad financiering.

So recently as 1897, the last year before the Spanish war, the total expenditures of the Federal Government were no more than $365,774,000; but in 1900, after the smoke of battle had cleared away, it was found that the outlay stood at $487,713,000 in a time of peace. The hope was then expressed that the national finances would return to something like ante-bellum conditions; but, instead of shrinking, the expenditures steadily increased until in 1904 they rose to $582,403,000, or, deducting the $50,000,000 chargeable to the Panama Canal, to $532,000,000. Thus it appears that the aggregate outlay has advanced from $365,774,000 in 1897 to $532,000,000 in 1904, and an examination shows that the principal cause was an increase of some $134,000,000 in the cost of the army and navy. Civil expenditures have risen by some $32,000,000, arguing extravagance in every department of the Government; but the chief factor has been the growth of military outlay.

Until the present year, the prosperous condition of business had enabled the Government to meet its growing liabilities without difficulty. Imports had been large, and, by 1903, the customs receipts had risen to $284,000,000—an increase of some $108,000,000 over the figures for 1897. So, too, the internal revenue, even after the repeal of the temporary war taxes, stood at $230,810,000 in 1903, as compared with $146,688,000 yielded by the same taxes in the last year before the Spanish war. In fact, the aggregate receipts from customs and excise increased by no less than $192,000,000 between 1897 and 1903. In the latter year, with expenditures which amounted to $506,000,000, the customs and excise receipts stood at $515,000,000; and, with the $45,000,000 derived from land sales and miscellaneous sources, the Treasury was able to show a handsome surplus. In 1904, however, expenditures advanced to $532,000,000 or $582,000,000 if the Panama payments be included, while the receipts from customs and excise dropped to $494,000,000, and miscellaneous revenues did not increase. The result was a deficit of nearly $42,000,000, if all expenditures be included, or a small surplus of $8,000,000 if the Panama payments be excluded. In whatever way one reckons, the increasing expenditures have at last overtaken our present revenues. The growing deficit for the current fiscal year bids fair greatly to exceed the $23,000,000 estimated by Secretary Shaw.

So grave a financial outlook, Secretary Taft is dimly aware, will be held by the simple-minded to reflect upon the Administration. He warns them, however, that they must fix the responsibility elsewhere. It is not the Executive, it is not even the Republican party, that must be blamed, but Congress. Congress, says the Secretary solemnly, has "the power over the public purse." If there has been extravagance, the fault must lie in the body which alone has the power to vote away the public money. Now coming from a man who professes to be a realist in politics, looking at things as they are, unmoved by theories, this strikes us as singular. What has the vague governmental abstraction to which Secretary Taft refers, got to do with the actual practice at Washington? Very little.

In the first place, he knows, and everybody knows, that it is policy which determines appropriations. No maxim is more familiar. It has been in the mouths of chancellors of the exchequer and finance ministers from time immemorial. People in England blamed Sir Michael Hicks-Beach for not having lived up to his pledges of economy. He squarely met the challenge. It was not his wish or work, but the policy adopted by the Government, which had swelled the estimates. Reform your policy, and then you may talk about reforming your finances. It is this unquestionable truth which really fixes the responsibility for our plight upon the Republican party. Not only has it enjoyed unopposed power for seven years, but its policies have been confessedly expensive. It boasts of doing things in a large way. To "keep money in circulation" and to provide all sorts of openings for contractors to get rich out of the Government, has been its constant and almost avowed practice. It scorns doing things "on the cheap." Hence the fact that loose control of the finances and a lavish habit have come to be associated with a Republican Administration. It is its wasteful policy which makes wasteful finance.

Furthermore, Mr. Taft cannot be so innocent as not to know how the party organization, and combinations within it, have long since broken down his fine-spun distinction about Congress retaining the power of the purse. It is the Republican machine which now has that power. Expenditures, appropriations, votes of money for special interests, are controlled by party pressure, reinforced by a system of log-rolling. What power of resistance has a partisan Congress when a partisan President sends to it a pension order? If the party leaders held back, they would promptly be "sent for." At the White House they would be told that the measure was vital to the party's success, and that they must vote for it. The Executive has a thousand ways of "getting at" them. So of the appropriations for a big navy and for new offices and increased salaries—Congress is not left to deliberate independently on such matters. They are first "fixed up" by party leaders; and when the money is voted, the roll-call is that of Congress, but the determining power is that of the Republican organization. It is this obvious, this glaring fact of an insidious partisan machine having obtained control of all departments of the Government, in a way practically to obliterate their independent functions and to weld them all into a unit in the execution of the mandate of the party bosses, which makes Secretary Taft's harking back to the Constitutional theory of the division of powers seem almost fantastic. One may expect to hear him gravely expound, next, the doctrine of the consent of the governed in the Philippines!

"POPULAR CHORDS."

"If President Roosevelt is reëlected and an American citizen is in peril anywhere on this globe, there will be another similar act of war." Thus spake Attorney-General Moody in Jersey City last week. His audience "arose and cheered." It was evident, noted the admiring reporter, that Mr. Moody had "touched a popular chord."

No doubt; but the question is whether it is a chord he should have stooped to touch; whether a Cabinet officer, feeling his responsibility as he should, ought to be so ready to split the ears of the groundlings with wild and whirling words about war. If making a "popular chord" vibrate is the test of statesmanship, Mr. Moody would have to yield the palm to many a sand-lot orator. Vulgar and inflammatory appeals of which the Attorney-General would be ashamed, often produce more frenzied applause than that which attended the above flourish. He, as one of the judicious, would grieve at the spectacle of a Bryan, a Watson, a Debs setting the galleries roaring. Yells of delight do

not prove a sentiment sound in their case, nor do they in the case of the Attorney-General. A well-graced actor, capable in all the niceties of his art, will not arouse such tumultuous cheering as can easily an uncouth player in a Bowery theatre by means of some banal or coarse utterance. Mr. Moody himself would probably be above sending such a clap-trap telegram as that of President Roosevelt to the Chicago Convention—"Perdicaris alive or Raisuli dead"—yet he could not deny that it thrilled a popular chord. The real question is whether it was not a chord which ought to be muted instead of thrilled.

A false and low conception of patriotism underlies all these Chauvinistic appeals to the mere sense of national bigness and force. The patriotic spirit which such words as those of the Attorney-General tend to evoke is too much like that of the Hungarians fifty years ago, as reported by Madame Mohl to Senior. A German living in Hungary praised the people to her as being so intensely "patriotic." "Are they honest?" "Oh, no; they do not know what honesty means." "Are they just?" "No, they do not know what justice means, but they are so patriotic. We Germans have nothing like their patriotism." "Does it show itself in caring for the welfare of their people?" "Not in the least; it shows itself in wearing the Hungarian dress, in speaking the Hungarian language, and in lamenting the loss of their privileges."

Hungary long since outgrew that kind of patriotism, which goes only with the rawest stage of national development. Crude self-assertion of the sort Mr. Moody echoed in his speech befits solely a parvenu among the nations, uncertain of itself, doubtful of its reception by others, and convinced that the only way to win respect is by bluster and insult. The Attorney-General would never think of regulating his private life by such standards; why should he, then, his action and utterance as a public man? As a matter of fact, we know that, as law officer of the Administration, he would never think of plunging into a war in behalf of an American citizen in peril anywhere on this globe. The first thing he would do would be to inquire patiently into the facts: Was the man actually an American; was he in peril for having violated a law of the local jurisdiction; if he had been wronged, would not an apology and redress be forthcoming from the foreign government concerned; would it not be enough to point out what international law prescribed in the case, without a moment's thought of indulging in braggadocio? As Attorney-General, that course, we have no doubt, is the one which Mr. Moody would be personally inclined to follow. Why is he not as stump-speaker also?

The question takes up deep into the perils to which the popular orator is exposed, especially in a partisan campaign. There was some reason in Carlyle's denunciation of political speakers. Not one of them could utter the truth, he averred; they could only flatter the prejudices and inflame the passions of their hearers. Similar was the implication of Mr. Beecher's recipe for popular preaching—when you had nothing to say, just yell loudly. It is always easy to get a cheer. Only observe the fustian morality which sets the theatre clapping, from orchestra to top gallery; only note the crude half-truths, the superficial resorts, the unfair personalties which drive the ordinary political meeting mad with applause. Any speaker can have that tribute, if he will lower himself to it. But ought not an educated man like Attorney-General Moody, a public officer charged with great responsibilities, to care more for the right instruction of the people than for their unthinking plaudits? Ought he not to maintain before them that a nation is great only when its walls are laid in justice and buttressed with fair dealing, and to leave rash talk of war to the untaught or the unprincipled? There exists a deeper popular chord which it ought to be the pride of every enlightened statesman to touch; for the people reverence just action and will praise magnanimity in man or nation, and will pin their faith, in the long run, not to the demagogue who would fool them to the top of their bent by boasting of their ability to whip any country on earth, but to the sober and high-minded leader who will tell them that their true triumphs and glories are those of justice and peace.

JUSTICE AT LAST.

Thanks to President Roosevelt, justice has at last been meted out to the man who, above all others, has been responsible for the deficiencies in the Steamboat Inspection Service which made the *Slocum* disaster possible. James A. Dumont, after having been tried by himself and pronounced innocent on September 23d last, has been tried, found guilty, and sentenced to dismissal from the service by the impartial investigating commission of army and navy officers and civilians constituted by the President. With Dumont go Robert S. Rodie, the supervising inspector of the Second District, and Thomas A. Barrett, one of the local inspectors. More than that, the President directs that their successors overhaul the local office from top to bottom, removing all men who are unfit for their positions.

But the report did not stop with these recommendations. It is a review of the whole situation, bearing out completely the revelations made by the *Evening Post* in the winter of 1903. The only result then was the appointment of a successor to Dumont in Washington and the transfer of his evil influence to this port. At that time a good deal of Dumont's political pull, with which he had successfully defied all the numerous efforts since the days of Secretary Sherman to bring about his removal, was still in working order. However creditable Mr. Roosevelt's action since the catastrophe—and we would withhold no deserved praise—it must always remain a biting commentary upon our administrative methods that, with the facts all before the officials, it was still necessary to sacrifice a thousand lives to bring about the dismissal of the guilty and that reorganization whose necessity every interested person was aware of. The reorganization has now only just begun. If the Secretary of Commerce is lulled into fancied security after merely dismissing Dumont and his fellows, comparatively little will have been accomplished. There is need of new laws and new regulations. Some system of holding the inspectors to account for their work is absolutely essential. There must be a different method of paying them, and an arrangement by which they will be relieved from duty when disqualified by age. As the Commission points out, there also must be a statutory power to bring home to individual owners a criminal liability when their vessels have been improperly navigated.

In the *Slocum* case the Commission naturally found that the owners were "censurable in a high degree for the inadequate and improper conditions" on their boat, and that, whatever "their technical legal liability, they and their executive agents bore largely the moral responsibility." The inefficiency and cowardice of the master and crew, the lack of proper inspection, the rotten fire-hose and life-preservers, and the bad judgment of the pilot in beaching the ship were other reasons for the appalling loss of life. All this would be bad enough if it related to only one ship. But the Commission's report is full of warnings as to the future. It declares that there are many similar vessels doing service whose construction is as faulty as that of the *Slocum*, which "was not abnormal," but "typical." To remedy these conditions there must be unceasing efforts for a long time to come. The public is so satiated with horrors of all kinds that it speedily dismisses from its mind even so ghastly and needless a tragedy as that of the *Slocum*. It is, therefore, all the more the duty of the responsible officials to devote their energies to sweeping reforms, no matter what the expense or trouble to which steamboat-owners be put. The Secretary of Commerce can personally have no more important work for a year to come than the overhauling of the inspection service until it becomes a genuine credit to the nation. Such a result is not at all impossible of attainment, and it may mean

the saving of thousands of lives now imperilled.

One lesson must not be overlooked, namely, the need of bringing into such an investigation outside experts in no way connected with the department of the Government under the probe. The one dissenting opinion in the report before us is that of Mr. Uhler, the present head of the steamboat inspection service, who intercedes in behalf of Robert S. Rodie. When the local board sat upon its own case under Gen. Dumont's guidance, it gave an admirable instance of what "reforming from within" means. It carefully censured everybody except its own guilty inspectors; threw nearly the whole blame on the crew; falsified the facts; lied as to one of the coroners, and from beginning to end tried to shirk its own responsibility. No matter how desirous of altering a bad state of affairs the President or the head of a department may be, there is an inevitable, often an unrecognizable, bias on the part of men in office. Insensibly they are swayed by a feeling of loyalty to their fellows even when these are caught red-handed. There is a certain pride in their department which would rather hush up unpleasant facts than honestly confess the stain and openly wipe it away. And then, once you start an investigation, no one can tell what revelations will come out. Those in the seats of the mighty may themselves be hurled to earth. Hence the necessity of calling in some examiner whose pulse will not beat a whit faster whatever the neglect or corruption he uncovers. Just what the President did, with such admirable results, in the *Slocum* case should have been the procedure in the Post-Office frauds. A committee of Congress, at least, should have been entrusted with the duty of bringing out the facts. Instead, an anxious President and his worried party, in obvious dread of what might reach the light, decided to reform "in our own way and at our own time." As a result, no one believes that the process was either thorough or complete.

"ILLEGITIMATE VICTIMS" OF WAR.

So serious have been the German losses from typhoid fever in Southwest Africa that the mutterings of discontent in the press have now become a chorus of protest. It is bad enough, the critics say, that the prestige of the service should have been lowered by military blunders of various kinds, but that the medical department of the finest army in the world should have failed so lamentably in its efforts to safeguard the health of the troops is nothing less than disgraceful. To this the Government has made an unofficial reply that the possibility of a dangerous epidemic was foreseen; that seventy physicians, many of them bacteriologists, have been dispatched to the front, together with elaborate filtering and distilling apparatus. The defenders of the Government also point to the recall of Major Glasenapp, the commander of a field force which was practically wiped out by typhoid, as a sign that the authorities are prepared to hold commanding officers accountable for the health of their men.

This is locking the stable door after the horse has been stolen. There are 170 cases of typhoid now in the base hospitals of the colony, and the daily report of deaths shows that new arrivals are as subject to the disease as the men who have been in the field for a year. On a small scale the Germans are enacting over again the American experiences in our little war with Spain, and those of the English in South Africa. In our campaign only 268 men were killed by Spanish bullets, while 3,862 perished in hospital—the victims of our military and medical inefficiency. Since the beginning, wars have had their "illegitimate victims" by the thousands. One need but recall the scourging epidemics which swept through Europe in the wake of the Thirty Years' War to see that a campaign at that time invariably visited its punishment upon victors and vanquished alike, even when the bloodshed was over. But with national epidemics a thing of the past, the question has arisen whether armies also cannot be freed from the terrible diseases which have hitherto accompanied them.

To this question, Major Louis L. Seaman, who served as a volunteer surgeon in 1898 and has just returned from Mantchuria and Japan, has but one answer. In his address delivered before the Association of Military and Naval Surgeons at their St. Louis meeting last week, he declared that typhoid, enteric fever, and dysentery are preventable, and maintains that the Japanese medical officers have proved this beyond all doubt. From personal observation he reports that the "conspicuously empty beds" of the contagious and infectious wards of the great Japanese hospitals "voice more eloquently than words the most important lesson of the war." Dr. Seaman saw only a few cases of disease of the respiratory system, only three of typhoid in Mantchuria, and only occasionally a case of dysentery. Of the many thousands of patients in the hospitals he visited, not a baker's dozen were suffering from diseases of the digestive organs. In fact, there were but a few medical cases all told.

This extraordinary result Dr. Seaman attributes to three causes: the powers given to the Japanese medical officers, their preparation for war, and the excellence of the ration furnished to the soldiers. The Japanese are the first to recognize the true value of an army medical corps. "The medical officer is omnipresent." He is with the advanced scouts, carrying his microscope and chemicals, testing and labelling wells so that the army shall drink no contaminated water. Towns are at once safeguarded by the bacteriological experts on each divisional staff, and no soldiers are billeted where there is the slightest danger of infection. In camp the medical officer is unceasing in his efforts to instruct the men in their care of themselves. As a result, although operating in an extremely unsanitary country, the Japanese situation is the very reverse of that of the French in Madagascar in 1894, where of 15,000 men 29 were killed by bullets and 7,000 by preventable diseases. "Every man who dies in our army," said a high Japanese officer to Dr. Seaman, "must fall on the field of battle."

It was this general's belief that the Russians would lose four men by disease for every one killed, and he counted upon this difference in the health of the two armies to neutralize the superiority of Russian numbers. That he had good ground for his expectation would also appear from what Major Seaman has to say about the lack of Russian preparation for hostilities. He learned that the surgeon-general at Vladivostok said, the night before Togo's first attack: "Oh, there will be no war. If Russia expected war, I should be the first to know it, so my hospitals could be in readiness. As it is, I have never been so short of supplies as I am to-day." Major Seaman declares that Verestchagin himself, "familiar as he was with war in its most brutal and bestial aspects," must have been horrified at the immorality and drunkenness which everywhere marked Russia's preparation for the uplifting and glorifying "supreme triumph" of war. "Sodom and Gomorrah — the current synonyms of Port Arthur and Vladivostok in the Orient—were temples of virtue in comparison to the debauchery, licentiousness, flagrant immoralities, and openly flaunted vice recently practised in those cities." A better preparation for every disease known to armies is hardly conceivable.

Dr. Seaman severely blames our own army for its blindness to the changes now under way, for its failure to give the medical corps an adequate representation on the General Staff, or to send medical observers to join the Japanese army. He thinks the contrast between the faces "full of health and hope" of the gravely wounded Japanese and the "poor, wan, emaciated, and almost hopeless faces" of our own victims of mismanagement—"unwounded and illegitimate"—should stir the War Department to undertake a complete reorganization and remodelling of the medical service.

PREVENTION OF RAILROAD COLLISIONS.

During the first six months of 1904 no less than 388 passengers have been kill-

ed on American railroads. It is a black record. The potential causes of railway wrecks are constant. The engineer forgets an order to meet another train at a certain station though the order is in writing and is presumably pinned up before his eyes in the engine cab. The conductor of the train has a copy of the same order, but he forgets it, or is unable to prevent the engineer's error. A train is directed to wait at a certain station for two other trains from the opposite direction, and it waits for only one of them, then going on to its destruction; or the order says that a certain station must be reached within a certain time, and the time is misread or miscalculated. There is nothing mysterious about the causes of these collisions which now agitate the public mind.

About 15 per cent. of the railroad mileage of the country has the block system, the well-approved method under which the number of collisions is enormously reduced; but, on the other 85 per cent., passengers and trainmen—particularly trainmen—are added to the death list month after month and year after year with distressing regularity. If the people are to make their indignation effective, attention must be concentrated on one class of accidents—collisions, which constitute the great bulk of the disasters that give American railroading so bad a reputation abroad.

There is practically only one remedy—the block system. All railroad managers know this. They put the block system in force on their busiest lines, thus justifying the assertion of the Interstate Commerce Commission, in its last annual report, that this is the only recourse. The only reason for the absence of so simple a safeguard is the cost; but this plea is greatly overworked. One prominent railroad manager said, not long ago, that the block system had been introduced on several hundred miles of his road at an increase in the pay rolls of the telegraph operators and signalmen of only 3 per cent. This was not one of the largest trunk lines, and the protection afforded was less complete than that which we find on some of the Eastern trunk lines and on the well-equipped railroads of England; but it did greatly reduce the collisions and the death lists.

The block system means that no train starts on any part of the road until the line is ascertained to be clear of all other trains *for a known distance*. Without the block system, trains running in the same direction can be kept safely apart only by holding them a certain number of minutes at stations, and by the use of the discredited red flag; while on a single-track line the avoidance of collisions between trains running toward each other depends upon unerring adherence to the time-table, or, when trains are behind time, on perfect care and vigilance in asking for and reading telegraphic orders; unfailing memory of rules, time-tables, and the superiority of different classes of trains, and attention to diverse distracting duties under the most trying circumstances of weather and overwork. The block system, on the other hand, makes all trains of equal importance (as regards safety), makes the "danger points" fixed instead of variable, and does away with errors from defective watches, misreading of time-tables or written papers, and forgetting telegrams.

Consideration of the block system does not (at present) require notice of such refinements as the automatic stop, used in the subway to check a careless motorman. Neither can there be much profit in considering, just now, the question of overwork of trainmen, or of the influence of the trade unions. It is true that, when traffic is unusually heavy, trainmen will, for the sake of earning large pay, remain on duty too many hours. The officer in charge is tempted to permit this, or at least to wink at it, because he thereby prevents a blockade. The spirit of the trade-union agitations has weakened some trainmen's sense of responsibility; and many trade-union leaders are culpable for concentrating their attention on pay and hours and grievances, to the neglect of efficiency. But the majority of collisions are due to the error or neglect of men in good health and not overworked. The Government bulletins are full of cases of collisions where those responsible are reported as having good past records.

It is fair to say that in some quarters progress in adopting the block system has been delayed by the desire to wait for the invention of more perfect apparatus. American railroad officers believe—though Englishmen have not yet adopted this view to any extent—that the ideal block system is the automatic. It costs very much more to install than does apparatus for the non-automatic or manual system, hence managers do not easily get the necessary appropriations. But this waiting attitude is indefensible, for the crying need is the immediate adoption of *some* block system; the use of manual signals pending the perfection or more general approval of automatic signals. One prominent trunk line whose approved standard is the automatic, has yet put in the manual system on many miles.

The dilatory policy of the railroads has now continued for so many years that they can find no fault if Congress takes radical action. The Interstate Commerce Commission, in its last annual report, laid before Congress a definite measure, and there has been no adverse criticism of it. On the contrary, the manager of one important trunk line declared his intention of preparing to comply with a law like that proposed, which contemplates complete block signalling within five years. The Interstate Commerce Commission is the most appropriate body to exercise governmental supervision in this matter. With all its faults, it has done fairly well with the Federal statute of 1893, making automatic couplers and airbrakes compulsory everywhere. The people of the country have a right to require of railroads a reasonable assurance of safety, and the way to enforce this right is now quite plain. The railways have had their chance to make a good showing; too many have neglected it, and their showing is appallingly bad. Unless the managers act of their own motion in adopting safety appliances, the only thing they have to expect is a mandatory law with heavy penalties for its violation.

OUR EDUCATIONAL PROBLEM.

Comptroller Grout's reactionary attitude, and the rumor that the Board of Education is partially yielding to it, are the latest symptoms of a prevalent failure to understand the meaning and motives of the modern educational movement. Even to the Chancellor of our State University and to Prof. Barrett Wendell, the alert educator appears to be a person engaged chiefly in adding "frills" to our time-honored educational garments, as it were in pure pedagogic sportiveness; while to Messrs. Crosby and McIntyre, the Comptroller's experts, he is the victim of a timid gregariousness—of "a certain *esprit de corps*, or tendency to sympathize with and even defend whatever the educational associations of the country may, for the time, seem to approve, however inadvisedly." (The sense is a trifle obscure, but the scorn is unmistakable.)

A popular system of education, we read in the Comptroller's reports, aims "to provide a course of instruction and study best calculated to secure the highest average of intelligent citizenship." The best test of the efficiency of such a system is that it shall succeed in sending out, from the elementary school, "graduates having a practical knowledge and habitually correct use of the English language, together with such knowledge of mathematics, geography, and history as may be reasonably expected." These are the "essentials"; and any "special" studies which interfere with the healthful acquirement of these must be excluded as involving a waste of time and money and a loss of efficiency. "There can be no knowledge, training, or accomplishment, however desirable, of sufficient relative importance to warrant its acquirement in the public schools at the expense of what is called a common-school education." Of a similar tenor was Chancellor Whitelaw Reid's Convocation Address, which called forth a hearty "Amen" from the New York

Times in an editorial on "'Fads' in Education."

Intelligent citizenship! Is that to be nurtured by an education adapted to the production of tally clerks and cash girls—an education which gives no outlook upon the vast industrial civilization of our time, quickens and aids no aptitudes other than those of the pen and the tape-measure, awakens and feeds no interests that are humanizing and civic? Genuine education is scarce begun: the tools of education are furnished—little more—to be used selfishly or socially, criminally or worthily, according as the development of the moral faculties, the sentiments, the energies, the aspirations of the child is directed.

It is assumed that education is mainly a matter of the intelligence, whereas it is more fundamentally a matter of the emotions and the will. Of a truth, it is because education has failed to touch the heart and imagination, to nourish "admiration, hope, and love," and to discipline the will—has concerned itself so little with the real essentials of citizenship, with character, with honesty, loyalty, reverence, service, self-respect, self-control, idealism—that it has done so little, comparatively, against the forces of corruption, lawlessness, selfishness, and vulgarity which are rampant among us. The Old Education of a simpler social and industrial order achieved some of these things, though not so much by the school as by those other agencies, the home, the church, the broader type of vocation, which have long been failing us and must now be so often replaced by the school. *Must*, we say, because this is no matter of choice, but of national necessity. Democracy cannot prosper with parts of men for its pillars; it must produce whole men or perish. And it must do so despite the tendency of modern industrial life to develop and use mere fractions of men—mere "hands," the makers of small parts of things, mere cogs in the great commercial wheel. And it is upon its educational agencies, upon its potency as an educational institution and influence, that the State and the nation must rely to produce the men and the leaders of men upon whom its destinies depend. It is because the Old Education now promotes a narrow, routine intelligence, with the emphasis on drill, habit, and memory, whereas Democracy demands reason, judgment, observation, originality, that it must give way to an education which is liberally directed towards these ends.

The modern educator flatly denies the primacy of the so-called "essentials" in early education. The young child has far more important matters to attend to than desk and book-studies. These do too much violence to the natural powers of the child, who is not a sedentary and still-life creature, but one who learns and grows largely through play and activity, through the handling and shaping of things, through imitation and experimentation. Instead, therefore, of being a hindrance to the "essentials," when he is old enough to begin them, in his second or third school year, the "special" studies, if they are properly pursued, respect the child, break the outrageous monotony of desk work, bring zest and interest into the schoolroom, and instead of hindering actually promote progress in the "essentials."

Conventional educational values must be revised in the light of new standards. There is too much naïve ignoring of the real and well-known causes of our present failure to accomplish the results we have hoped for in the elementary school—namely, greatly overcrowded classes, which preclude individual attention; the poor physical condition of the children, due to underfeeding and unsanitary conditions in the tenements; the foreign nationalities (twenty-seven in one school), and their varying standards of living and manners, and, we must add, the still insufficient equipment of our teachers, for which the too low standards of our training schools are partly responsible. It will no doubt be said in reply that the Old Education at any rate succeeded in producing worthy and powerful men and women. Undoubtedly; but mainly because, coöperating with the meagre forces of the school, were other educational forces mightier than they—the old-fashioned home, gone from the city and so fast disappearing even from the country, the old forms of domestic industry, the old trades and crafts, the old free life with nature at the door, the direct contact with the simpler productive activities of the world, the old folk-lore and folk-song, and all the popular arts. We have discovered that we must find substitutes for these educational forces. The New Education is in part an effort to provide them.

THE GREAT POLITICAL STRIKE IN ITALY.

FLORENCE, October 2, 1904.

On the thirty-fourth anniversary, September 18, of the entry of the Italian troops through the breach of Porta Pia into Rome, we spent the morning in the Piazza della Signoria or wandering through Via Calzaioli to the Duomo, trying to get reliable news of the "general strike" officially declared "terminated," but affirmed to be still continuing at Milan. The interprovincial telephones had been silent for days; telegrams with answers prepaid had remained unanswered; the Florentine papers, which, notwithstanding the partial strike, managed to appear regularly, printed telegrams from four to fourteen hours old. Private letters from Milan written on Monday, the 19th, affirmed that the strike had been absolute and universal, and that, despite the "orders of the Labor Exchange" to end the strike and return to work, the majority of the workers had refused to obey, and insisted on prolonging it at least until the evening of the 20th-21st; in proof, they pointed to the fact that for five days not a single newspaper had appeared in Milan, that the Syndic himself had been unable to get his manifestoes printed, and that he had been obliged to lithograph them. Perfect order reigned, and, with the exception of the assassination of one Dr. Gadola by a common criminal now in safe custody, no blood had been shed either of civilians, police, or military, nor any attack made on private or public property. Incredible as the facts announced appear, it turns out that they are perfectly true, and whereas a week since we should not have hesitated to scoff at the announcement of a general strike in any single city of Italy, still less in several cities at once, we have to record an absolute five-days' strike in Milan, and strikes more or less general in Genoa, Turin, Venice, and Naples, and, shortest and mildest, in Florence, thanks to the excellent ordinances of the ex-wounded Garibaldian prefect, Annaratone, of the municipality, and of the citizens in general, who left it to the workmen and shopmen to come to work or to stay at home, many declaring that in either case their daily wage would be paid as usual.

Your readers may remember my letters to the *Nation* in March, 1902, from Rome, on "The Railway Strike in Italy," in which the pledges given to the nation by the young King in his first speech to Parliament were enumerated; and that of last May on "The Italian Socialists," the failure of the attempted general strikes in Rome and Florence—in both of which appeared my conviction that, as in England during the Chartist agitation, as in France always and quite lately, so Italy would fail miserably if any attempt should again be made. In the congress of the International Socialists at Amsterdam, though the general attention was fixed on the personal duel between Guesde and Jaurès, the uselessness and damage of a general strike as a weapon of economical progress were emphatically dwelt upon; only Ferri (and that incidentally) maintained that it was a weapon to keep in reserve in a political crisis. The Dresden motion of 1900 was reaffirmed by a majority, it is true. "No compromise with bourgeois governments or classes; nay, relentless war of the masses against the classes" was proclaimed. Yet Jaurès maintains his ascendency in the Socialist arrondissements in Paris; and Turati, in the *Critica Sociale* (August 16), demonstrated to our *then* entire satisfaction that at Amsterdam, as at Bologna, the victory of the *intransigenti* was merely apparent. The mere list of reforms which they themselves demanded, he said, could not in any country be secured by the Socialists alone; even the Germans, with their three millions of Socialist electors, are showing symptoms of impatience at the compulsory "orthodoxy" which renders their immense number useless, paralyzed as they are by the feudal organization of Germany. Little thought Turati, as he penned the twenty-six columns of report and criticism, that, before he could publish another number of the *Critica*, he, as Socialist leader, would be compelled to participate in a general strike, and, as member of Parliament, accept the responsibility of proclaiming the termination of that strike; to find himself and colleagues vic-

toriously defied by Labriola, the intransigent victor at Bologna, who induced the workmen of Milan to prolong the strike in defiance of the deputies of the extreme Left and also of the president and executive of the Labor Exchange in Milan! But so it happened; and if the leaders of both Socialist factions—if the radicals and republicans—were taken by surprise, taken prisoners, we may say, by their Benjamin elect, the proletary, how can any blame be cast on either the local or central authorities for their ignorance of the spirit that was abroad?

Blame or praise matters little now, but certain it is that on Thursday, the 15th of September, there was perfect calm, at least on the surface, throughout the country, and tidings of "the happy event" were alone awaited with curiosity. The young King is popular, "Elena of Montenegro" equally so; hence a real desire that the Queen should give birth to a son and heir to the Italian crown was prevalent. The desire was gratified on the evening of the 15th, but the news only reached the public on the morning of the 16th, when Humbert II., Crown Prince and Prince of Piedmont, received a really hearty national and international welcome. Rumors of a general strike reached Florence towards evening, but no one believed them till a late hour, when the *Corriere della Sera*, of date Friday the 16th, announced that a general strike had been proclaimed and commenced in Monza, and that, precisely at the moment of the entrance into the world of the future sovereign, the "sovereign people of Milan" had ordained not only a general but a universal strike, as a protest against the repeated massacres of the unarmed proletary by the royal army and the carbineers. Let who will deny the fact, this first sudden peremptory declaration was spontaneous and genuine.

News had come from the island of Sardinia that, owing to a labor dispute at the mines of Buggerru, two companies of troops had, without provocation, fired upon some five hundred strikers, who belonged to no league or union, and actually while their leaders were in conference with the masters; that two miners had been killed, three severely wounded, and several others more or less hurt. The Genoese workmen, who had lately been restless and turbulent, protested, held meetings, but reached no specific decision. Then from Castelluzzo came tidings of another massacre, by carbineers, of certain peasants who were holding an orderly meeting to pay their shares and take their lots in land assigned to the agricultural coöperative association lately established. They were perfectly orderly, and the room in which about sixty were assembled was left open. The brigadier asked for the list of the members, which might be an inoffensive measure on the part of a syndic or even a chief of police, but on the part of the carbineers was a mere arbitrary abuse of their uniform. The secretary refusing their demand, the brigadier declared all the peasants in arrest, and fired and killed two, while his comrades fired on the fugitives, who thought only of escaping to their homes. This fresh outrage, this fresh "proletary blood" shed with apparent impunity, so enraged the people that the vague proposition for a general strike was put forward when tidings of the Buggerru catastrophe first reached the continent. Stormy meetings were held at Sestri Ponente, near Genoa, and at Milan, where, at eleven at night on the 15th, the general strike was declared, and on the morrow commenced in earnest; all seemingly accepting the motion of the "Labor Exchange," "whose members, on account of the blood shed anew by the assassins of the homicidal Government, decide on a general strike in token of their indignation and abhorrence, and in order to prevent henceforward the intervention of the military in conflicts between labor and capital."

In rough numbers, the population of Milan is half a million, the workingmen above fifteen years of age are 116,000, the number of members of the Labor Exchange at the end of 1903 rather more than 30,000; hence if only these members had gone on strike the interruption of the business of the great industrial city would hardly have been apparent. But, by the unanimous confession of the entire press when, after five entire days of enforced silence, the newspapers reappeared, the entire business of the city was suspended; even the newspapers printed during the night of the 15th-16th, and dispatched by train to the provinces, were not distributed in Milan. The *Secolo*, while strongly stigmatizing the effusion of blood, had disapproved the proposal of the strike, suggesting instead the union of all the liberal and democratic forces of the nation for the installation of a Government pledged to the prevention of further bloodshed; observing that if, after the violent scenes of 1898, a general strike had been resorted to, to-day the Government and the municipality would be in the hands of clerical moderate reactionaries. Nearly the same language was used by Turati in a public meeting held on Friday, but he was hissed by the vast multitude assembled and the strike was voted unanimously.

It should be borne in mind that no question of labor conflicts arose, so that when the decision was carried to the mills, factories, warehouses, and shops, to the tram offices, etc., the workmen merely informed the employers that they abandoned their work as a protest against the slaughter of their fellow-workmen; that they had no cause of complaint against themselves.

No one believed at first that the strike would last more than twenty-four hours. The employers offered not the slightest resistance, and the meetings held in the Arena of 20,000 to 30,000 people embraced all classes, who united in protesting against the abuse, even the use, of the military on the occasion of labor disputes. Had the strike ended on Friday or even on Saturday, the "protest" must have arrested the attention of all Italy, because it would have appeared what it really was, a universal cry of indignation against the use of the national forces in conflicts between class and class. But in this, as in most cases of sudden popular tumults, the leaders had let loose forces they could not control, and the real people, bent on a practical issue to their protest, listened now to this, now to that suggestion. While the distribution of Milanese newspapers was prohibited by the Labor Exchange, papers from the other provinces were sold as usual. In the evening a lithographed manifesto from the Sindaco, signed by all the assessors, was posted. It recognized the noble indignation that agitates the souls of the citizens, who are begged to oppose violence with calm, to confine their protest within serene limits and civic virtue, and concluded: "We, your representatives, are at one (*solidali*) with you in protesting against the slaughter of these latter days, in your resolution to prevent their repetition. This very evening your mayor will start for Rome to inform the Government personally of your indignation, trusting meanwhile that you will remain calm and soon return to the work that you have abandoned in a painful moment."

Here, then, we have the tacit approbation of the citizens and the open adhesion of the municipal representative to the "indignant protest of the working classes against shedding the blood of their fellow-workmen." The Edison electric workmen remained at their posts, and not one was molested, though no special protection was afforded them. Some of the gas workers struck, others remained at their posts, also unmolested. The master bakers' union appealed to their men to return to their work, observing that "one day's strike was a protest equal to that of several; that to deprive Milan of bread was to inflict the heaviest suffering on their own class; and that while they should endeavor to supply the city even if the men persisted on strike, if their efforts fell short of the public necessities the blame would fall on them and their counsellors." All the working bakers returned to their task unmolested. At first it was asserted that all the railway workers had resolved to join the general strike, and many possibly did so; but, for reasons not yet wholly explained, they were by their directive committee ordered to remain at or return to their posts, and the order was obeyed, though at Genoa and at Venice partial strikes occurred.

Towards evening the cry was raised, "Down with Giolitti! Let the strike continue till he is dismissed," and the cry was echoed in the second immense mass meeting in the Arena. The vigilance of the workmen must have abated, for the *teppisti*, as the scum and riffraff of the populace are called in Milan, began to ply their trade. Cabs were stopped, restaurants and cafés which had remained open were compelled to close, and when the proprietor of the famous old Casanova Birreria refused to close, and the waiters and some of the public took his part, a sort of free fight ensued, in which the party of order would have had the best of it if one of the *teppisti* had not knifed and killed Dr. Gadola. On Saturday morning a fresh public meeting was held; indignation was expressed at the murder committed, and Turati exhorted the people to end the strike and return to their work. Lazzari announced that on the morrow a meeting of the extreme parliamentary Left would be held in Milan. To shouts of "They must dismiss Giolitti!" Turati replied: "The Deputies cannot promise you the head of Giolitti or of any one else; the resignation of any minister depends on the majority in Parliament; we can demand its reconvocation—nothing more." Meanwhile the press association requested immediate permission for the printers, compositors, etc., to return to their work, so that the citizens to whom bread for their bodies had been accorded, might also have bread for their souls. But the "Federazione del Libro" (Milan branch) refused permission, affirming that they must remain united with other workmen until the proclamation of the end of the general strike.

At midday came the following telegram from the Sindaco Barinetti, at Rome, to

the assessors of Milan, which had to be published in lithograph:

"CITIZENS: The Home Minister has taken action in order to repress the abuse by the military; the carbineers suspected of guilt have been subjected to penal procedure and arrested. The Minister has also taken steps to hinder the authorities from intervening in conflicts between capital and labor, leaves full liberty for all manifestations, refrains from intervening (save in cases of danger) in public meetings. These assurances having attained the aim of the strike, I trust that calm will be everywhere maintained and that all will return to their work."

That the telegram was authentic there can be no doubt, and it is more than confirmed by Giolitti's letter to the mayor of Turin in answer to his telegram expressing the indignation of the municipal Socialistic councillors at the massacres of Buggerru and Castelluzzo. It is too long to translate as a whole, but too remarkable a document to be passed over in silence. The President of the Council and Home Minister replies "explicitly and instantly to the telegram sent in the name of the Socialist councillors of the illustrious city of Milan," repeating that he has for the last three years constantly affirmed and maintained the absolute right to strike, and the non-interference of the military in labor disputes. He explains the painful incidents of Buggerru and Castelluzzo as wholly independent of the Government; affirms that as long as he is at the helm he will enforce obedience to the law by all, and invites the honorable councillors to reflect on the radical change in home policy effected by himself, and the enormous difficulties that he has had to contend with in order to secure to the Italian proletary the benefits that have accrued to them (presumably in their occasional victories over their employers). Hence he asks whether they can suppose that he intends "by insane violence to neutralize such splendid results, and feels sure that they need no recommendation to maintain order, to prevent any disturbance which would compromise the cause of liberty indispensable to the material welfare, to the moral and material progress of the popular classes." When the syndic's telegram and the Minister's letter reached Milan on Sunday morning, no doubt was felt that the strike would cease at once. Public meetings had been held *ad libitum;* no troops had appeared; the police had simply arrested all disturbers of public order. Two days' loss of wages is a serious loss to men who live from hand to mouth; the proprietors had been patient, at least outwardly; was it wise or prudent to try their tempers further? The directors of the Labor Exchange decided in the negative, and isused a manifesto *commanding* the members of the extreme Left to instantly reorganize parliamentary action, to pursue obstruction to its utmost limits, to prevent all legislative work until Giolitti was removed and a law passed prohibiting the presence of the military on the scene of labor conflicts; then *ordained* the close of the strike and the resumption of labor on the morrow, Monday, the 18th inst.

Meanwhile the members of the extreme Left, Socialists, Radicals, and Republicans, who had arrived at or were already in Milan, held a meeting in the town hall, and, after a couple of hours' discussion, voted the following order of the day: "The Deputies of the extreme Left assembled in Milan note with heartfelt pleasure the generous awakening of popular energy in defence of the lives of the working classes; they confirm the convocation of all the members of the extreme Left for Wednesday next, 21st inst., in Rome"; resolve to demand the immediate convocation of Parliament to discuss the conduct of the Government and its responsibility, affirming on their own part that the recent ferocious repressions are unworthy of a liberal Government, and hence that the present Ministry cannot possibly remain in power. Moreover, they pledge themselves to propose legislative measures which shall make it impossible for the military to turn their weapons against the people, and to obtain their passage by obstruction and by all possible methods. Immediately after this meeting the secretary of the league of resistance, accepting the decision of the Labor Exchange and the order of the day of the extreme Left, invited the Italian proletary to end the strike at once and return immediately to work.

All anxiously awaited the grand reunion of the extreme Left in Rome, and, general as was the expectation, the delusion was universal. Space forbids us to note the various deliberations of the various factions in their separate meetings. At a general meeting of Radicals, Republicans, and Socialists on September 21, "ferocious systematic repressions" were declared unworthy of a Liberal Government; hence the impossibility of the continuation of the present Ministry. The immediate convocation of the Chambers was voted, and a deputation chosen to demand it from the Speaker. Then a fresh meeting for the 16th of next October was decided on. *Voilà tout.*

Giolitti, who had remained impassive during the strikes, gave no sign or token that he was aware of the meeting of the extreme Left. The president of the Chambers, Speaker Biancheri, came to Rome and summoned the members of his staff to consult in regard to the immediate convocation of the Chambers. The Council were of opinion that they were incompetent to decide the question, the only time that the House had been convoked without the authority of the Ministry being in 1870, when the Speaker acted on his own authority. Requested to give at least their opinion as to the demand, they unanimously agreed that immediate convocation was unnecessary and inopportune. This opinion was at once communicated to the delegate of the extreme Left, and thus the only practical proposal of the extremists has ended in smoke. As to the closing of the session and an immediate appeal to the country, so far as Giolitti is concerned he may never have heard of such a proposal, for any attention paid to it in his official and officious organs. Hence the professed aim of the general strike—to obtain the dismissal of the Ministry, the dissolution of the Chambers, and a general election—has utterly failed, and the three parties are laying the respective blame one on the other.

J. W. M.

Correspondence.

INDIA AND THE PHILIPPINES.

TO THE EDITOR OF THE NATION:

SIR: Secretary Taft begins his account (in the *Churchman* of October 1) of the Government educational work in the Philippines with the statement that its chief end is to "prepare the people under our guidance and control for popular self-government." This, he maintains—with what object it is difficult to see—is in direct contrast to the English colonial policy in India, which is to keep the people in ignorance, because this is essential to contentment under a strong paternal government. In support of this accusation of intentional neglect he gives statistics including the number of pupils under instruction, wrongly quoting the figures of the census of 1891 as those of 1901, which are more than a million greater.

This error, however, is of little importance in comparison with his apparent ignorance of what has been done to promote education in India in the last fifty years as shown in Lord Curzon's Minute on this subject. The Viceroy truly says that the existing system of education "seeks to satisfy the aspirations of students in the domains of learning and research; it supplies the Government with a succession of upright and intelligent public servants; it trains workers in every branch of commercial enterprise that has made good its footing in India; it attempts to develop the resources of the country and to stimulate and improve indigenous arts and industries." Although Lord Curzon does not state in so many words that the system has for its object the training of the Indian people for popular self-government, it is difficult to see wherein it fails in this respect. And as a matter of fact, the Hindoos are more and more admitted to a share in the government, and the number of native officials in proportion to the English is, I believe, far greater than that of the Filipinos to the Americans.

There is a fundamental contrast between the two educational policies to which the Secretary does not allude. In the Philippines "the teaching is all in English," in both the primary and secondary schools. The English language is put first among the subjects taught, and "the only texts used are English texts." In primary education in India, "English has no place, and should have no place," are the Viceroy's emphatic words—not because the speaking of English will be a help to independence, but because the teaching of a foreign language to children under thirteen in order to instruct them in that language, would be wasting precious time and stunting their mental growth. The outcome of the American system, if it is maintained, unless all human experience fails, will be, not a people fit for self-government, but simply a Malayan species of Baboos.

I will add that the Secretary's only reason for making all the instruction in English is the fact that there are twelve dialects, and in order to have "a reasonable, intelligent public opinion" "the people must be educated to think alike and in a common language to express the thoughts that they have on the subject of good government." It would be pretty hard to say

how many generations it would take to bring this about in the English language, if it were conceivably possible.

JAMES MASCARENE HUBBARD.

BOSTON, October 12, 1904.

GOETHE AND SECRETARY TAFT.

TO THE EDITOR OF THE NATION:

SIR: Secretary Taft, in his rôle of defender of extravagance in public expenditures, challenges comparison with another Minister of War, to whose achievements in that capacity a recent biographer pays enthusiastic tribute. It is true, the country is Weimar, and the time more than a hundred years ago; but the Minister is Goethe, and if extravagance is a good thing *per se*, it ought to be good at all times and in all places. Let us hear what Bielschowsky, in his most interesting life of Goethe, just completed, says of his management of the two departments of finance and war:

"Kalb had administered the 'Chamber,' that is to say, the department of finance, very poorly. The Duke therefore dismissed him from office, in June, 1782, and entrusted Goethe with its management, provisionally, as both thought, but for many years as it turned out. This complicated task was all the more difficult because Goethe found the office in a state of confusion. He soon felt how great a burden he had imposed upon himself. Most conscientious as he was, he realized the full gravity of his undertaking. As President of the Chamber he was the very head of the administration, and among his many serious problems the most serious was his struggle with the Duke. The Duke was no spendthrift, but a generous prince, who spent freely, enjoyed playing the host, and would not be bound by the limits of his private revenues in his expenditures for the chase and his travels. He therefore spent usually more than his income, and the Chamber had to provide for the deficit. Goethe put a stop to such extravagance. When he noticed, after the lapse of half a year, that Bertuch, the private secretary of the Duke, had spent more than he was entitled to during that time, he stopped all further payments, and told him very bluntly that he would have to manage differently during the rest of the year. 'I must have order, or I shall resign.' He achieved his object, and with considerable satisfaction he wrote to Knebel towards the close of April, 1783: 'My management of the finances has been more satisfactory than I thought possible a year ago. I am lucky and successful in my administration, but then I adhere firmly to my plans and my principles.'"

So much for Goethe as financier. He was equally successful in his management of the War Office:

"He found the department of war in the utmost confusion. The officials were neglectful, the routine of business disorganized, accounts and documents thrown together pell-mell. But he was not discouraged. . . . And after two years and a half not only was his department in the best of order, but the corps of officials was reorganized and so thoroughly trained that everything ran smoothly; and in spite of the Duke's military crotchets (*Makaronis*) Goethe succeeded in reducing the army of Weimar by half—that is to say, from 600 to 310 men."

GUSTAV POLLAK.

NEW YORK, October 14, 1904.

CHAUCER AND THE BIBLE.

TO THE EDITOR OF THE NATION:

SIR: There is one curious instance of the freedom with which Chaucer appropriated to his own use all that he found in his reading, which has not, so far as I am aware, been noticed by the commentators. At line 282 of the B version of 'The Legend of Good Women' we read:

"Behind this god of love, upon the grene,
I saugh comynge of ladyes nyntene
In real habit, a ful esy paas;
And after hem com of women swich a traas,
That, sin that god Adam had maad of erthe,
The thridde part of mankynd, or the ferthe,
Ne wende I nat by possibilitee,
Had ever in this wyde worlde ybe;
And trewe of love thise women were echoon.
Now whether was that a wonder thing or noon,
That right anoon as that they gonne espye
This flour, which that I clepe the dayesye,
Ful sodeinly they stinten alle at ones,
And kneled doun, as it were for the nones,
And songen with o vois, 'Hele and honour
To trouthe of womanhede, and to this flour
That berth our alder prys in figuringe!
Hir whyte coroun berth the witnessinge!'"

Apparently this was suggested by the vision described in the seventh chapter of the Revelation of St. John. There we have first a definite number, "an hundred and forty and four thousand," followed by "a great multitude which no man could number" of those "which came out of great tribulation." The whole company worships the Lamb, and cries with a loud voice: "Salvation to our God which sitteth upon the throne." The word "hele" of Chaucer is a very fair rendering of the Latin "salus," which stands in the Vulgate text of this passage. A closer parallel to the words of the hymn sung by Chaucer's good women, however, is found in Revelation xix. 1: "Salvation, and glory, and honor, and power unto the Lord our God."

That Chaucer was familiar with this passage of the Revelation may be proved, if proof be necessary, by the fact that in the Man of Law's tale of Constance, itself the legend of a good woman, he quotes directly from Revelation vii. 3:

"Who bad the foure spirits of tempest
That power han t'anoyen land and see,
'Bothe north and south, and also west and est,
Anoyeth neither see, ne land, ne tree?"

Respectfully, ROBERT K. ROOT.

YALE UNIVERSITY, October 12, 1904.

Notes.

Dana Estes & Co., Boston, will be the American publishers of Prof. Leo Wiener's translation of Tolstoy's Complete Works in conjunction with Messrs. Dent, London, and conformably to their Balzac. Besides a biography, Professor Wiener furnishes an alphabetical "thought-concordance," more than 100 pages long, to the contents of the twenty-four volumes. There will be 150 full-page illustrations. Many of the pieces have hitherto never been rendered into English.

The Saalfield Publishing Co., Akron, O., have in preparation twelve volumes of "useful, curious, and entertaining literature pertaining to the medical profession," and to be offered them with the coating of "The Doctor's Recreation Series." Mr. Charles Wells Moulton will be editor-in-chief.

Prof. Angelo De Gubernatis, who in 1901 produced a 'Dictionnaire International des Écrivains du Jour,' useful but not impeccable, has in preparation an International Lexicon of Contemporaneous Authors of the Latin Peoples. It is to contain, also, in an appendix, the names of all authors of non-Latin nations who have done independent work in the history, literature, and art of the Latin peoples. Gubernatis addresses an appeal for material to all the friends of his new venture. The Munich *Allgemeine Zeitung* expresses the hope that the Roman littérateur will do more thorough work than heretofore.

Next year three centuries will have elapsed since the appearance of the first part of 'Don Quixote,' and the Spaniards have decided to commemorate this anniversary on a rather grand scale by the publication (1) of a cheap popular edition of 'Don Quixote' by the Spanish Academy; (2) of an abridged edition for study in secondary schools; (3) of a still more condensed edition for the common schools; by a contest, with special awards by the Academy, for the best critical editions of a number of the minor works of Cervantes; by the production of several of Cervantes's plays in the Teatro Español; by the restoration of the chapter of the Church of St. Mary in Alcala, where Cervantes was baptized, and the establishment of a Cervantes museum in Alcala; by the establishment of a Cervantes Institute by Spanish literary and art societies to serve as a refuge for superannuated needy writers and artists; and by university festivities in honor of the poet. The President of the Spanish Ministry is chairman of the arrangement committee.

In his 'Essays of Lamb' (Ginn & Co.), Prof. G. A. Wauchope of South Carolina College has industriously edited selections from 'Elia,' 'The Last Essays,' and 'Critical Essays,' that will be useful for classroom purposes. Had the editor availed himself of Lucas's admirable labors he might have made his annotations more illuminative with less exertion. However, in his Library References there is no sign that either the Lucas or the Macdonald edition of Lamb has reached Columbia, S. C. Perhaps this staggers one less than to read: "It is not exaggeration to say that in [Lamb] English prose style reached its climax, and this view is now generally accepted" (Introduction, p. xxvii.).

A second edition of T. J. Lawrence's 'War and Neutrality in the Far East' has appeared within three months of the publication of the first, which was noticed at length in these columns (Macmillan). The book has been considerably enlarged, and its added pages now discuss the very interesting questions raised during the past summer. These are, chiefly, the taking of mail-bags from the *Prinz Heinrich* and their transfer to the *Persia*; the case of the vessels of the Russian volunteer fleet which got out of the Dardanelles as commercial vessels and immediately changed themselves into ships of war and began to stop neutrals; the cases of the *Allanton* and *Knight Commander*. What Mr. Lawrence has to say about the *Allanton* takes the form of a scathing review of the judgment of the Vladivostok prize court. He insists that the decision itself involves a glaring violation of international law, and especially of the rule that the penalty for carrying contraband ends with the voyage. Of the various pretensions as to contraband put forward by Russia since the war began, the author says that they amount, when taken together, "to little less than a prohibition of all sea-borne trade, export as well as import, between her enemy and neutral Powers." But these extreme pretensions have been accompanied by an equally remarkable willingness to waive them under diplomatic pressure; in the case

of the *Knight Commander*, a neutral prize was sunk by the captor, apparently without excuse, while the British Secretary for Foreign Affairs declares that "the language of the Russian Government justifies us in hoping that these acts of destruction of neutral prizes are not likely to be repeated."

Wolf von Schierbrand's 'Germany, the Welding of a World Power' (Doubleday, Page & Co.), portions of which have appeared in various magazines, is a compilation such as would be expected from an industrious and experienced newspaper writer. The author has well employed his opportunities for becoming familiar with German conditions, and has produced a book full of useful information, most of which is, in the main, accurate. Its value from a literary point of view, however, is impaired by its style, which follows the most pronounced American newspaper models. The sub-title of the book indicates that its author's training as a writer of English consisted in equipping him with the vocabulary in which a detective is spoken of as a "sleuth" and a fast steamship as an "ocean greyhound." He actually uses these and similar expressions.

Mr. Bradford Torrey discourses pleasantly in his 'Nature's Invitation' (Houghton, Mifflin & Co.) of what he has seen on his walks in regions as widely separated as New Hampshire and Arizona. No bird seems to escape his observation, and his acquaintance with these fellow-creatures is of prodigious extent. Of the flora he has less to say, but most of us would do well to listen to his casual utterances. Upon one point Mr. Torrey is justly resolute: Nature's invitations are to be accepted only with the qualification "weather permitting." "When a man sets forth on an out-of-door pleasure jaunt, his prayer is for weather. . . . In the mountains, if nowhere else, weather is three-fifths of life." The book is slight enough; but no one can read in it without getting some hint that will make his rambles more profitable.

The guides of the northern lakes and woods form a perennial source of material for the journalist and book-maker, but the quality of the result depends altogether upon the sympathetic insight of the writer. A Van Dyke can get at the best that is in these men of the woods, interpret their essetial qualities of heart and mind to almost any class of readers, and still leave them possible human beings. Mr. H. S. Canfield, the author of 'Fergy the Guide, and his Moral and Instructive Lies about Beasts, Birds, and Fishes' (Henry Holt & Co.), has not tried to be a Van Dyke. Sinking contentedly below the higher levels of humor, he allows his protagonist to pour forth some three hundred and fifty pages of such frankly impossible yarns as one may hear in a corner-grocery crowd of uneducated smart boys. It would require the tucking in of a large amount of genuine wit and philosophy to save such a book, but the real wit and philosophy are not very striking features of the compound, in the present case. One finds not infrequent suggestions of the influence of Charles W. Chesnutt's 'Cunjer Woman,' but "Fergy" is far below the measure of old Julius as an entertaining liar. Any one of the separate chapters might pass muster in the Sunday supplement of a modern daily newspaper, but *in extenso* no garrulous barber could be more tiresome than "Fergy."

A handy little 'Synopses of Dickens's Novels' has been made by J. Walker McSpadden on the lines of his 'Shaksperian Synopses,' and comes to us from T. Y. Crowell & Co. There is first a chronological conspectus, with some bibliographical details, of the novelist's productions; a summary of each novel, preceded by the same details amplified, a statement of the scene, and a cast of characters. The volume closes with an index to characters, with reference simply to the novel. All this may be praised, but Mr. McSpadden should not say that "no list of his [Dickens's] characters . . . has been available." We have at our elbow the volume of the Globe Edition of Dickens issued in 1869, by Hurd & Houghton, containing besides 'The Uncommercial Traveller' and 'Master Humphrey's Clock' a "General [Descriptive] Index of Characters *and of their Appearances*," with precise references. Moreover, it is much fuller than Mr. McSpadden's, whose index begins with Akerman. The other gives "Adams, head boy at Doctor Strong's, with a turn for mathematics, *David Copperfield*, ii., 24, 38, 45, 77-78, 81," and three others similarly particularized. This is followed by an "Index of Fictitious Places, Popular Sayings, etc." The edition we suppose to be out of print, but Pierce's 'Dickens Dictionary,' to be had of Houghton, Mifflin & Co., is the more thorough work of which Mr. McSpadden may well say "Pereat qui ante nos."

There has come to hand the first (October) number of a periodical of large quarto size, entitled "*Kind und Kunst:* Monatsschrift für die Pflege der Kunst im Leben des Kindes." It is published by Alexander Koch at Darmstadt, and number one has, bound in, a title-page for the whole annual volume (October, 1904, to September, 1905), and also an ornamental preliminary title-page with an elaborate pictorial display. Examination shows that the editors will address themselves to mothers and governesses and teachers of young children; and to help them in their task there is also a children's department, a "Kinderwelt," with (in this number) a fairy story which is apparently original and new, and certain very clever verses to read at the baby's bedside. Other departments show how drawings can be made, by the teacher or by the child, or both, some of these being silhouettes. Then there are photographs of rational toys, with the maker's name attached, and a great number of photographs having no connection with one another and without explanatory text—evidently specimens merely of snapshots of children with lambs, with picture books, and perched in trees, taken by the amateur photographer.

In the *Revue de Paris* for September 15 appears the second part of Ibsen's letters to Georg Brandes. These fifteen letters cover a quarter of a century, 1873-1897. Ibsen is not a good correspondent. When he is engaged on a play, he writes no letters and reads no books. Every alternate December during the above period he was producing a new drama, but even to Brandes he could not write freely about the work into which he was putting all his energies. These letters will be of no use to his literary biographer. The translator, Mme. Rémusat, is actually uncertain, as she shows by her question marks, what the plays are to which Ibsen now and then makes a grudging allusion. In 1873 Brandes had sent Ibsen his translation of John Stuart Mill. Ibsen thought Mill both pedantic and unscientific, and could not understand his friend's interest in an author who reminded one of Cicero and Seneca. Later on, Brandes settled in Copenhagen, and with his brother founded a review, the *Nineteenth Century*. Ibsen, always hostile to the cantonal idea and an ardent apostle of the Scandinavian spirit, could not sympathize with his friend's Danish "exclusivisme"; but in the end he wrote for the review a series of rhymed letters on the intellectual tendencies of the day. Rarely does Ibsen declare his principles in a letter. "La minorité a toujours raison," he wrote in 1882, when a very small minority tolerated his "Ghosts." When the last letter was written, in 1896, Ibsen was planning to settle himself on the coast, between Copenhagen and Elsinore, "dans un endroit découvert d'où je puisse apercevoir les grands bateaux venant de loin ou s'en allant au loin." For he found that in Christiania "tous les chemins sont fermés, toutes les voies sont barrées à la communication de la pensée. . . . Ici, près des fjords, est ma terre natale, mais . . . mais . . , où est ma patrie?"

Dr. Emil Schlagintweit contributes to *Petermann's Mitteilungen*, number five, an interesting account of Tibet and the leading facts of its recent history. Other articles are a summary of the meteorological results of the observations of the Swedish Antarctic expedition under the leadership of Dr. O. Nordenskjöld, and a continuation of the descriptions of the geology of Kamtchatka and the Argentine province of Buenos Aires. The principal contents of number six are Dr. H. Steffen's account of the Baker-Fiord in west Patagonia, and the narrative of a recent journey through Shantung and Kiang-su, by Walter Anz. While, in this latter province, Herr Anz found the ways infested with robbers, and every one went armed, in the other the multitude and activity of the men building a railway made him almost forget that he was in China.

The bibliography of the geographical literature of 1903, published as the extra September issue of the *Annales de Géographie*, is now a substantial octavo volume of 320 pages. The number of entries, 937, does not accurately represent the extent of the work, for under one title several publications are often catalogued. Under number 595, for instance, are displayed eight titles of books or scientific papers by Sven Hedin. The descriptive and analytic notes to the great majority of the entries by the editor, M. L. Raveneau, and his fifty-four collaborators give the work exceptional value for reference. Among the subjects of growing interest and importance, as shown by the number of publications, is colonization. Under this head one may get an excellent idea of what is being done by the different countries to develop their colonial possessions. The index of authors contains more than 2,000 names.

Some time ago the City Library of Cologne issued a pamphlet written by its director, Dr. Adolf Keysser, and entitled 'Die Oeffentlichen Bibliotheken und die Schöne Literatur.' The special reason for

its publication was to enlist booklovers and authors in the Rhine province in behalf of the collection of Rhineland literature, which for years has been this library's specialty; but it is also of general interest, as indicating the view which the "scientific" librarian in Germany takes of the "modern" library movement. "If the large public libraries," the author says, "are to satisfy all literary needs, they have an extensive, many-sided task before them. They are to serve not only research, but also the distribution of the results of research, for the enlightenment of the multitude and for the promotion of political and professional education; they are, finally, to assist the spread of ethical and æsthetic culture, as far as this can be gained through the study of literature." The author makes a plea for collecting everything produced by writers of a given territory and everything relating to the territory, in poetry and fiction, as well as in other branches of literature.

The new Catalogue (of non-fiction) which the Trenton Free Public Library has sent out contains an announcement that deserves to be widely imitated. It is provided that "the number of non-fiction works that may be drawn on an individual card is determined largely by the needs of the reader and the character of the works requested for home use." This is a most liberal and farsighted policy, and should tend to stimulate serious reading among the users of the library. The note following this statement—"Special privileges on application"—shows that the trustees and librarian of this institution mean that it shall really serve *all* the people.

The Presidential address of Dr. Percival, the Bishop of Hereford, before the Educational Science Section of the British Association, being largely drawn from his personal experience as head master of Clifton and Rugby, and president of Trinity, Oxford, contains much that is of general interest, though his main theme is the defects of the English system. Among the prominent causes of these defects are the general lack of interest in education, the excessive influence of tradition, and the want of systematic training of teachers. Treating of elementary education, he characterizes the petition of 14,718 medical practitioners for the introduction of simple hygienic teaching, including instruction on the nature and effects of alcohol, as "one of the most important educational documents" of the time. The ignorance of the lower classes as to the primary laws of health, and the fashionable cult of athleticism by the middle and upper classes, have this significant result: "at one end of the scale, neglect of the rudiments of sanitation, the loss of the *corpus sanum*; at the other end, the idol worship of athleticism, the depreciation of the intellectual life, and the loss of the *mens sana*."

Of the dead who have made their mark, we have space only now and again to speak fittingly. The youth of promise must needs fare still worse. Such a one, Mr. Trumbull Stickney, instructor in Greek at Harvard, passed away on October 11, leaving a great void in the thoughts and feelings of his intimates. Our readers know something of his scholarly work performed in Paris while earning his degree of *docteur ès lettres*, and may recall two letters of his to the *Nation* from France in Nos. 1951 and 1956. Mr. Stickney's literary, like his linguistic, talent was brilliant and gave much to expect in maturity. His person and his character were alike charming.

—Among the first grants made by the Carnegie Institution was that for a 'Guide to the Archives of the Government of the United States in Washington.' The volume was prepared by Mr. C. H. Van Tyne and W. G. Leland, and has now been published under the direction of Professor McLaughlin of the Bureau of Historical Research. Each department and its various bureaus were examined, and the result shows that a surprising quantity of historical material has been stored in various places, under different rules of management, and, it must be confessed, with great ignorance of its value and relation to like material elsewhere. Not only the purely Executive records have been surveyed, but the historical collections of manuscripts that have been purchased or received by gift from time to time and, for want of a central depository, have been placed wherever space could be found. Naturally, the knowledge to use these papers was not available, and in some cases they have received little or no attention from the busy officials in whose keeping they were. For the first time some information is obtainable regarding the size and nature of the collections, their location and the rules governing their use by students or investigators. The survey has been well done, and in arrangement could hardly be improved. A full index and bibliography increase its utility as a work of reference.

—As the more important of the collections of historical manuscripts have been transferred from the Department of State to the Library of Congress since the preparation of this guide, the Library and the War Department are the two great depositories of such materials. There is, however, a great difference in the use made by the two of their stores. The War Department has much that is properly historical—like the Confederate Records and what was captured during the civil war. The student is not only forbidden access to them, under the plea of want of space, but the officials of the Department do not know what they have in the boxes, files, and vaults of manuscripts in its charge. This situation is fully described by Mr. Leland, who, in default of access to the collections, was obliged to depend upon the few references in printed reports. The Library of Congress, on the other hand, is open to all, and, under its capable head, it is utilizing its immense material for the benefit of the public. Its newspaper collection is bound and indexed; its manuscripts are rapidly being calendared and listed, and its books are well classified and catalogued. There is every reason why the historical material from other departments should be placed in its keeping, and this policy is emphasized by the results of the examination made by Messrs. Van Tyne and Leland. A similar guide to State records is preparing under the auspices of the American Historical Association.

—This year's conference of the American Library Association being international in scope, the editor of *Public Libraries* conceived the happy idea of making the October number of that journal an international number. It consists of articles describing mainly the modern free public library movement which has spread over Europe during the last ten years, largely as an outcome of the acquaintance which European visitors gained with American libraries during the Chicago World's Fair. This is especially true of Germany, and the movement in that empire is most fittingly described by the man who has been chiefly instrumental in bringing it about, Dr. Constantin Nörrenberg, city librarian of Düsseldorf. Among the other countries represented are Austria, Switzerland, Holland, Denmark, Sweden, and Japan. The article on "Modern British Libraries" is by the late Miss M. S. R. James, for many years librarian of the People's Palace in London; afterwards, and until her recent death, connected with the Library Bureau in Boston. In addition to this paper, which describes recent developments, both in the British Islands and in the Empire, there are special papers on libraries in South Africa and New South Wales, and on "Public Libraries in London." Of timely interest is a paper on the "Honolulu Library and Reading-Room Association." A. A. Granfelt writes of the "Popular Libraries of Finland" in a way to arouse the greatest sympathy with this struggling people; pathetic is his description of the ups and downs of a small parish library. Among the American contributions we note the introductory article by Mr. Dewey, who briefly reiterates the well-known data of the library movement in this country since 1876.

—Simultaneously with the Peace Conference in Boston, the American Unitarian Association publishes in six volumes a new edition of Dr. Channing's Writings. The time is fit, for it was in Dr. Channing's study that the first American Peace Society was organized, and no aspect of his works has more immediate interest than that which is turned towards war with a fixed intensity of opposition. Externally the edition is very attractive, and the letterpress surprisingly so, considering that the plates are those of the six-volume edition of 1841-43. The change from a duodecimo to an octavo page has an agreeable effect. Mr. Chadwick's introduction is an elaborate condensation, in thirty-eight pages, of his 'William Ellery Channing,' published a year since, with little verbal reminiscence. It aims to trace the lines of Channing's growth up to the time of his earlier publications, and to relate his writings to his personal history and the times in which he lived. There is less emphasis, as there should be, on Channing's theological than on his philanthropic and social activity, with special emphasis on his anti-slavery work. His relations with Garrison are described as "a mystery that defies solution." Of his social aspirations we read: "It is not extravagant to hope that, on the social plane, the progress of society for a long time to come will be the progressive embodiment of his spirit and the progressive realization of his particular ideas, hopes and plans." It is the confirmation of this view afforded by these writings that amply justifies their republication, and makes them deserving of the attention of all who are engaged in sociological studies or in philanthropic work. The openness of Channing's mind and the breadth of his religious sympathy have many striking illus-

trations, and they have never been excelled.

—In comparison with the abundance and quality of the other exhibits from Japan, at the Louisiana Purchase Exhibition in St. Louis, that of the Educational Department is rather disappointing. It emphasizes the fact that, from the grand conception of 1870, the trend has been away from culture and the humanities to technical and industrial training. Of the eight universities planned, but two are founded, and only one is fully worthy of its name, but in the useful arts and sciences the development has been enormous, and the exhibits—from Dr. Kitasato's bacteriological section to that of meteorology or penology—are very creditable. The Department of Education has issued, in connection with its display in St. Louis, a volume of more than five hundred pages in nine parts, treating of primary, secondary, superior, art and technical education, and that also for the blind, deaf and dumb; of libraries, museums, educational societies, and textbooks; and of education in the Hokkaido (Yezo, etc.) and Formosa. It is not consecutively paged, but is rather a bundle of pamphlet reports, is liberally illustrated in half-tones, which show the outdoor and indoor life of the pupils from kindergarten to university, and give one a vivid idea of the progress made in school equipment and comfort. The sitting of five million youths daily on chairs, instead of on their own doubled-up legs on floor matting, with richer diet and regular exercise, must, after a century or so, show an increase in stature of the entire nation, as has already occurred in the army and navy. One of the most encouraging features of the whole situation is the powerful influence exerted on the Mom Bu Sho by intelligent men and women interested in educational art and science, who, by means of the societies and publications, keep the Department and its methods and general policy out of partisan politics. The increase and appreciation of educational facilities in Formosa and Yezo for the races other than Japanese, as well as for the unfortunate in the empire at large, are hopeful facts here shown in detail.

—All Mexico has been thrown into a turmoil—withal, a tempest in a teapot—by the publication of a book attacking Benito Juarez, whom the Liberals—or, in effect, the Government, Federal and State—are scrupulous about calling the *Benemérito de las Americas* (Well-deserving of the Americas), always in extra large and heavy capitals. This book was written by a so-called Liberal, a man who has for some years sat in the Federal Congress; but it was hailed with acclamations by the clerical press, which has been keen in its revival of past rancors, and it has thrown the Liberal party into paroxysms. The author of 'The True Juarez' is Francisco Bulnes, an engineer by profession, but for some years chiefly noted as perhaps the first orator in the country. Pure Latin in style, this book purports to be a critical review of the acts of Juarez, especially in connection with the French intervention. To some extent it is so, though the author has considerably misused the patterns of historical writing which he set before himself; probabilities, and even surmises, grow into absolute facts, and constant use is made of insinuations having scant bases of authority, so far at least as revealed. His diatribe, as it may fairly be called, is as far removed as possible from scientific reasoning and impartial criticism.

—The notable thing in the discussion he has provoked is that little attention has been paid to the contents of his work. Here and there, some one has challenged its assertions about Juarez's private life, or its accuracy as to his relations with his own followers, with the French and English ministers, and with the United States. But generally the first object of the excited Liberals who have rushed into the fray seems to have been to heap epithets on Bulnes, the second to proclaim Juarez a man too sanctified in patriotism to admit of criticism—a god on a pedestal, not a man. It is doubtful if the majority of these critics, in the press and at mass meetings, have yet read the cause of their commotion. One looks almost in vain in the Mexican press for an intelligent criticism of the book. Two mass meetings were held in the capital, one showing a disposition to mob the traducer; also shortly thereafter a mass meeting of students of the Government's law and other schools. Meanwhile, Congressman Benito Juarez had been considering what was incumbent upon him to do to "vindicate the honor" of his father. He finally referred the question to a "committee of honor" (the designation is rather significant), composed of prominent Liberals. After a long and grave deliberation in the house of one of them, they informed the younger Juarez that he ought to leave the defence of his father's honor in the hands of the Liberal party, and he issued a pronunciamiento to the public, in which he agreed to do so, stifling his sentiments of relationship, as he virtually stated. Five books in refutation of Bulnes were then announced as in preparation, and two have already appeared.

—The movement to introduce an intellectual reform among the Parsis of Bombay has lately culminated in the formation of a society called "The Gātha Society," the first meeting of which took place on the 10th of September of last year at the Framji Cawasji Institute, Bombay, with the Rev. Dr. D. Mackichan, Vice Chancellor of the University of Bombay, in the chair. Upon that occasion a lecture was read by the Vice-President of the society, Mr. J. C. Coyajee, late Senior Fellow of Elphinstone College, upon "The Spirit of the Gāthas," and this, after having appeared in the *Oriental Review* for October, 1903, has been reprinted in the form of a pamphlet, and is now republished as the first number of the Society's publications. An interesting quarterly review, animated by the same spirit and aims, has meantime appeared. It is called the *Zartoshti*, and is bilingual in Gujrati and English. Its first numbers show a thorough spirit of criticism and are very practical. For instance, the Ahuna Vairya prayer, a greatly revered fragment, is treated, together with all the various modern translations of it. One of the editors, the Rev. Manockji N. Dhālla, a Parsi priest of character and distinction, proposes to pass two years in Oxford for the purpose of perfecting himself in the higher criticism of his subject. That he is to be supported during his stay there by a few wealthy Parsi gentlemen of Bombay adds some interest to the circumstance.

WALTER PATER.

Walter Pater. By Ferris Greenslet. (Contemporary Men of Letters.) McClure, Phillips & Co.

For a biographer, Mr. Greenslet has chosen an infelicitous motto, but, by dint of paying no attention to it, he has produced a memoir at once sympathetic, discriminating, and acceptable. The chronicle of a hidden and dateless kind of life demands the skill of the poet or the novelist rather than of the historian, or else that very delicate and subtle art which is shown at its highest in Pater's own 'Marius,' in his 'Emerald Uthwart,' or 'The Child in the House.' These, together with some of the essays and 'The Imaginary Portraits,' constitute the true sources for his biography—for the history of his personality and his spiritual growth. Mr. Greenslet, therefore, depends mainly on such authorities, and furnishes in addition a few facts and dates as the framework of his judicious appreciation. These serve to place Pater in his environment, and to account to some extent for the development of a growth so unusual and exquisite.

Pater came of a family of Dutch extraction, settled in England in the eighteenth century, in which the custom had prevailed for generations to bring up the boys as Catholics and the girls as members of the Anglican Church. His father, a well-to-do physician, was the first of the family to break away from this tradition and to quit the Church of Rome without adopting any other form of faith. But the infant son, quite evidently, was reared under the traditional family influences, in that refined and secluded household which is pictured in the sketch entitled 'The Child in the House.' The house was in Enfield, a quiet suburb four leagues from London. At the age of fourteen, a slow, serious boy and a dreamer, he was sent to King's School at Canterbury, which probably furnished the setting and environment of his 'Emerald Uthwart.' Thence he passed to Queen's College, Oxford, where he devotes himself especially to philosophical studies, and trains his pen carefully by daily translations from Sainte-Beuve and Flaubert, or by poetic versions from Goethe, from Alfred de Musset, and from the Greek Anthology. He comes strongly under the influence of Ruskin and of Goethe; and the mark of the latter certainly was ineffaceable. From the year of his graduation (1862) to 1886, he remains closely connected with Oxford, as tutor and subsequently as University Fellow. He varies his residence by an occasional visit to Italy, or by travels on the Continent. Apparently he never visited Greece, though his sketch of Attic scenery in the 'Hippolytus Unveiled' is absolutely unsurpassed for vividness and perfect appreciation of tone, atmosphere, and color. It is a little curious that, with all his grasp of Germanic and Romance literature, he never was able to speak with ease any language but his own.

While living at Oxford as a University Fellow, his intimate friends were such men as T. H. Green, Professor Nettleship, Principal Caird, and Swinburne. He is described as shy and reserved—at times, to the verge of rudeness; and yet compan-

ionable with his intimates and a favorite with the students. In these he took a deep and conscientious interest, spending his time and thought freely on them and offering them frequent hospitality. His rooms were arranged with taste, but without luxury. His life, well ordered and simple, exemplified the noble austerity of his philosophic creed. His habits of composition were slow and painstaking—painful, indeed, with travail of spirit and many revisions. His style reveals too clearly, at times, in its tortuosities, the traces of these struggles.

Between his studies in philosophy and the width of his tastes and sympathies, he swayed, naturally, and veered in his religious views. While still an undergraduate at Oxford, he thought of becoming a Universalist clergyman. Notwithstanding the extreme skepticism—the paganism, even—of his essay on Winckelmann, he had, as might be expected, a sympathy with the æsthetic charm of the rites of the Catholic Church. As he grew older, he became more conservative; and some of his friends think that had he lived he might have ended his days in the quiet fold of some country living. His rationalism, in fact, advanced definitely toward a Christian mode of thought. The attitude of cocksure skepticism which would pronounce the Christian scheme absolutely false, he regarded as unphilosophic in its positiveness. He preferred, as he says, "to open wide the door of love and hope"—to trust himself to the raft of faith, and to risk the voyage of life in company with "many worthy priests and with millions of good Christians, who will always on such grounds continue to form the nucleus of a church." This attitude was never better expressed than in his review of 'Robert Elsmere.'

Though he grew up in the very storm and stress of the movement of modern science, it is remarkable how absolutely this whole province was alien to Pater's mind and tastes. He admits its pursuits, it is true, among the classes of activities which are open to his ideal Cyrenaic. But, apart from this casual allusion, there is nothing in his writings or in his biography to intimate that he knew anything or cared anything about its methods, its discoveries, or its advances. Not only was he, to all appearance, indifferent to its beneficent utilities —to the angelic ministrations, for instance, of medicine and surgery—but he has not a word or thought for that splendid sweep of intellect, of insight, and imagination, that genuine divination, by which the physicist, using the most powerful instruments of mathematics, penetrates the secrets of nature, calculates the ultimate constitution of the molecule and the atom, and makes the dreams of the alchemist something like a reality. This realm of thought did not appeal in the slightest to his imagination. Either he was ignorant of it or he ignored it. Yet, just so far as he left it outside of his ken and sympathy, he fell short of the example and the practice of his many-sided master, Goethe. Goethe was himself a physical investigator of genius. Pater was as indifferent to physical science as Darwin was to the humanities. And in this deliberate indifference and aloofness there was for him, it must be admitted, a certain instinctive propriety. The most recondite analysis of an atom or a sun, aided by the most powerful calculus, seems to have no relation whatever to the secrets of the human mind and heart. The late Lord Salisbury doubtless enjoyed the diversion afforded by his chemical laboratory; but he never got a hint from it as to the noble art and craft of statesmanship. The biologist and the pyschologist, with all their apparatus and experiments, have hardly brought a ray of light to the workshop and the processes of a Shakspere or a Balzac. Much less can the study of the physical sciences, which we now style "practical," contribute one jot toward the knowledge or the management of men.

Pater's talent for analysis is to be seen everywhere—in the 'Appreciations,' and especially in the 'Imaginary Portraits.' He has a fancy, like Hawthorne, for dissecting and reconstructing the movements and traits of a somewhat bizarre and complex nature—such as his Denys L'Auxerrois, or the Apollo in Picardy—fantastic creations, both of which he built, or rather blew like bubbles, out of a hint furnished by Heine. But no neater or stranger specimen of his gift can be cited than his portrait of Sebastian Van Storck—the solitary and reserved aristocrat, frozen on the peaks of his own cold and high aspirations, who, becoming enamoured of the philosophy of Spinoza, rejects human love, spurns fastidiously the cosy nest of domestic affection to which poor Mademoiselle Van Westrheene would beckon him, and pursues the ideal of a calm intellectual indifference, "of which he was the sworn chevalier." A touch of human frailty, a relenting ray of sunset, warms this strange figure, as he retires for meditation to a desolate tower upon the sands, where in the midst of a great inundation he loses his life in saving that of a little child. From such a portrait, doubtless, there look out upon us some stray lineaments of Pater's own character and experiences.

Great as was his gift, however, in this direction, he was first and foremost an artist by temperament—that was the basis of his endowment. He looked at life and the world through the artist's eyes. That temperament colored and informed even his philosophy. Every one of those notes which are so conspicuous in 'The Child in the House' is echoed and prolonged in the 'Marius'; the same characteristic *motifs* recur and are expanded in this mature work, which describes a pilgrimage of the same spirit through the distant lands of antiquity —distant, indeed, in time, but hardly foreign to his trained and scholarly imagination. His own soul had already made all the wanderings of Marius; his peculiar qualities, his personal views, are reflected in many of these chapters.

The step which Marius makes from a strict and fastidious Epicureanism to the earliest pattern of Christianity is not so very long, and the way is not unintelligible. Pater's own definition and conception of the system of philosophy which might end in such a goal, is worth a few words of exposition, because Pater really lived by it and is explained by it, and because the standard of life which it presents is perfectly rational and intelligible. To catch the flying moment; to pack it full of sensation, of intellectual activity, of choice and varied experience—even of noble pain or sorrow, or affections that may imply sorrow as well as pleasure: to adorn life and make existence a kind of beautiful order and music; to live days that are "lovely and pleasant"—this was the ideal which he thought might become an "inward mystic piety," a kind of religion. The intrinsic beauty and value of such a life is secure, whatever may be the past or the future, the origin of our being, or our destiny to come. These noble energies might embrace the pleasures and the pursuit of art and of science, of religious enthusiasm or political activity, of taste and curiosity which satisfies itself by its own activity—the life even of a Seneca or an Epictetus; in short, whatever of human life may be heroic, impassioned, ideal. So far may it lie from the gluttony and Epicurism of Dante's Ciacco that it may be summed up in the formula, "My meat is to do what is just and kind."

No ethical scheme is necessarily contemplated in this ideal. As Pater expressed it originally in his appendix to 'The Renaissance,' it might issue in the sort of existence which Tennyson has pictured in "The Palace of Art." Lest it might prove a stumbling-block to his young friends, he withdrew his earlier statement of doctrine, and finally remodelled it in an austere form, intruding into his scheme a real morality. It must embrace the artistic conscience—the aim at perfection. Its pleasures must be noble, must not be cruel. It must eschew indolence; it must make the utmost of the "here and now." Expressed in these terms, his doctrine has its own truth, its necessity and its compulsion. So comprehensive, in fact, is this latest revision of Pater's Cyrenaicism that if we were to search for a type which fits it thoroughly we could hardly do better than fix upon the late Mr. Gladstone. "The Grand Old Man" himself would have resented the classification, and would have scorned to be numbered with such company; but a glance at his own journal will justify our statement. He was, of course, first and foremost what we call a "man of action"—that was his mission. He used all the power of his genius for moral and religious purposes. He was occupied greatly, as he himself says, "in working the institutions of his country." When we hear of his filling his day with a Cabinet meeting, followed by a committee meeting and a speech in the House—that is what we expect, and it is natural to learn that another day is occupied with snipe-shooting, and a breakfast with Rogers, or Milne, or Wordsworth. But, mixed with these occupations and distractions, and filling every nook and cranny of time, he is reading Cicero, Augustine, Goethe's "Iphigenie"; he is writing an essay on Justification. He closes the day with music, or a "dose of whist," followed by some cantos of the "Purgatorio." This man of action is really solitary, something of a hermit; his inmost companions, his "Doctors," are Aristotle, Augustine, Bishop Butler, Dante. These, and names like these, are the secret springs of his action. Dante above all is his mentor and master, and out of Dante this idealist chooses the "Paradiso." At the same time he is Chancellor of the Exchequer; he retrieves the decaying fortune of the estate at Hawarden; he knows more of the brewer's trade than the brewers know themselves. He works sixteen hours a day, and, as Sir James Graham remarks, he could do in four hours what it would take any other man sixteen to do. This, surely, is a varied activity and intensity of

experience which makes the most of every pulse-beat; this is to be present "always at the focus and to burn with a gem-like intensity." It fulfils more perfectly than Pater's own life the ideal which he sketched in his famous *envoi* to the volume on 'The Renaissance."

Mr. Pater's mission has largely to do with tastes and their cultivation. The late Matthew Arnold used to say that conduct and questions of conduct make up three-quarters of human life. Pater might not claim so much for the domain of taste and culture, though, in a sense, he might claim everything for a method which aims to make noble and fruitful the inner life of man. Yet if it touched a man's pleasures and recreations, only, by way of refining and elevating, it would still deal with a large proportion of every day. The labor-unions are willing to surrender one-third of man's whole span to recreation, to "play." Few of the rest of us can spare so much; but what we can spare might be made precious, packed with high and pure delights, such as Mr. Gladstone used to snatch, such as Pater eloquently preaches. Though it begins at another side of human nature, his preaching finally meets that of the pulpits more than half way, for Pater is much more genuinely of the tribe of Plato than of Aristippus. Even pleasures he takes, so to speak, seriously, austerely: they must be worthy of a rational being, possibly of an immortal being. The scheme and vision which he offers may seem to the Philistines foolishness—the merest and vaguest moonshine; his voice and message faint and alien, preposterously faint; but the more preposterous, perhaps, the deeper the need. His is one of those still small voices that call us back to things beautiful and enduring; it is a faint and distant bell that tolls in some deserted shrine the passing of ideals, or summons to the worship of things forgotten for the moment, but of the essence of man's soul and spirit, and hence imperishable and divine.

SCOTCH CONSTITUTIONALISM.—II.

The Unreformed House of Commons. By Edward Porritt. 2 vols. Cambridge (Eng.): University Press; New York: Macmillan.

The Scottish Parliament before the Union of the Crowns. By Robert S. Rait. London: Blackie & Son.

Is it true that from the time of the Union to the passing of the Reform Act (1707-1832) the will of the Scotch people obtained no effective representation in the Parliament at Westminster? To this inquiry the reformers of 1832 gave with no hesitation whatever an affirmative answer:

"'From the Tweed to John O'Groat's, throughout the whole length of that country,' said Brougham, when the Parliamentary Reform Bill for Scotland was before the House of Lords in 1832, 'there is not within the memory of man the knowledge of anything like a popular election. As far back as the records of authentic history go, there never has been anything deserving the name, or even approaching to a popular election, anything like an election for borough or city, anything which would convey to the mind of an Englishman, or a Welshman, or an Irishman, a notion of what an election is.'"

English constitutionalists have for the most part accepted Brougham's rhetoric as representing not only a part but the whole of the truth; nor can any one who examines the system of representation which, created before the Union, continued in existence till 1832, wonder at the belief that it provided the people of Scotland with no means for expressing the will of the Scotch people. Looked at from the point of view of an English Liberal, the system exhibits nearly every defect which could possibly be found in any scheme of parliamentary representation. The number of Scotchmen represented at all was ridiculously small. It is difficult to obtain, even from Mr. Porritt's elaborate treatise, a clear account of the actual number of the Scotch electors, but, from different statements scattered up and down his book, one may infer that the Scotch electorate did not in 1831 consist of more (though it may certainly have consisted of less) than 5,000 persons. Patronage was universal. "In 1816, Edinburgh had its patron, and so had each of the fourteen groups which, with Edinburgh, elceted the fifteen members from the burghs to the House of Commons." The members of the electorate were distributed in the most eccentric manner. In one of the counties, it was said, there were only nine electors. At an election at Bute, only one person attended at the meeting, except the sheriff and the returning officer. This one person took the chair, constituted the meeting, called over the roll of the freeholders, answered to his own name, and finally moved and seconded his own nomination, put the question to the vote, and was unanimously returned. The electors in the burghs were not the inhabitants of the town, but members of small and close corporations which were not really elective, but which filled up their own number by coöptation. The electors in the counties were for the most part local landowners, but this was not necessary. A gentleman who had owned land in a county might, by going through the proper legal formalities, part with his land and yet retain his electoral rights.

As was to be expected, the members who represented, or, if you prefer, misrepresented, the limited body of electors, used their position for their own advantage. The forty-five members from Scotland were the constant supporters of the Government of the day. In the time of George III. they added considerably to the power of the Crown. But they did not give their services for nothing. A lord advocate, such as Dundas, managed the Scotch representatives with all the skill of a trained wirepuller. He knew personally every man who could influence a Scotch election; he knew what each supporter's influence was worth, and he paid for it in appointments given to such supporter or to the supporters' friends and adherents. Can any one wonder that, to Whigs denouncing the anomalies of an unreformed Parliament, it naturally seemed that the Scotch representative system was little better than a plan for misrepresenting the will of the Scotch people? Nor in 1830, when the electors of Scotland were for the most part Tories and the mass of Scotchmen who did not constitute part of the electoral body had become Whigs or Radicals, was it unfair to assert that the members for Scotland opposed rather than represented the wishes of the Scotch people; but it must, on the other hand, be remembered that the condition of things in 1830 was exceptional, and that it is by no means clear that, during the eighteenth century and the earlier part of the nineteenth century, the political sentiment of the people of Scotland differed greatly from the sentiment of the men who, under the strangest of systems, were sent to London to represent a country by the majority of whose inhabitants they were certainly not elected.

A student of constitutions who has realized the difficulty of inferring from a formal analysis of any institution what would be its actual working, will hesitate to accept Brougham's rhetoric or the Whig tradition as a completely true answer to the question we have under consideration. If we want to know whether the wishes of the Scotch people were effectively represented in Parliament, we shall do wisely to put aside any theory we may have formed as to the principle of representative government, and direct our attention to the teaching of history. We shall then find that certainly, in some way or other, the will of the Scotch people did exert a very marked influence on the determination of any question which obviously affected Scotch interests. The forty-five Scotch members undoubtedly gave support to every successive ministry, but then this support did not extend to purely Scotch questions. The Scotch members formed in regard to such questions something like a Scotch Parliament:

"The very unpopularity," writes Lecky, "of Scotchmen drew them together, and in this class of questions they showed themselves singularly shrewd, tenacious, and implacable in their resentments. The admirable habit of conferring together on purely local matters, and adopting a common line of policy before the discussions in Parliament, which has given the Scotch contingent nearly all the weight of a national legislature, was early adopted."

And this "national legislature," while by its combined and vigorous action exerting an influence out of proportion to its numbers on the ministers of the day, certainly did on critical occasions represent Scotch feeling. The murder of Porteous rightly excited vehement indignation in England, yet the measure inflicting punishments upon Edinburgh for popular connivance with an atrocious crime was, by the fierce opposition of the Scotch members, reduced to the imposition of a moderate fine for the benefit of the widow of Porteous. The proposal to punish Edinburgh was never forgiven, and, as Lecky points out, the animosity of Scotch legislators hastened Walpole's fall. An English member who, on another occasion, used language in Parliament felt to be an insult to Scotchmen, was deprived by the Scotch vote of his seat on an election committee. Another instance of the parliamentary power exerted by Scotch feeling is to be found in the successful opposition headed by Sir Walter Scott to the suppression of Scotch one-pound notes. The ministers of the day who proposed a change which was very possibly wise, and was certainly not intended as an affront to Scotchmen, were Tories, little disposed to yield to popular agitation. They were supported by a large Tory majority. But, for all this, the wish of Scotland made itself felt in Parliament, and Scotland to this day enjoys the privilege of having the nastiest and dirtiest little notes to be found in the United Kingdom.

The Scotch members, moreover, obtained for their country the inestimable benefit of being left, as regards Scotch affairs, to

itself. At the time of the Union, Scotland was already provided with institutions, and especially with an educational and ecclesiastical system, which admirably suited the wants of Scotchmen. The social condition of Scotland was in the main sound. The very best thing for Scotchmen was to be left alone. Two things they needed: free trade with England, and a wide career for Scotch energy and talent. The first was given to Scotchmen by the treaty of Union; the second was gained for them by the astuteness and vigor of their parliamentary representatives. If this be remembered, even the selfishness, we might almost say the greediness, of Scotch members who supported every Government in turn, on the implied understanding that Scotchmen were to receive an exorbitant share of official appointments, may be regarded in rather a more favorable light than that in which it is looked upon by Whigs who cannot forgive the constant support given by Scotch members to George III. and his favorite Ministers. That the members sent from Scotland to Westminster were men bent on pursuing their own personal ends, that they cared little for the general interest of Great Britain, that their presence at Westminster did not raise the tone of English politics, is pretty certain. Dundas, with his merits and his faults, was a typical Scotch politician; but by Scotchmen and even by Englishmen much may be forgiven to Dundas and men like him because they certainly strove to promote the welfare, if not exactly of Scotland, yet of a large number of Scotchmen, and did open careers for their countrymen in which Scotchmen rendered great service to Great Britain. It was no bad thing that Scotch energy and honesty found employment in the government of Britain's Indian dominions. Whether the tacit compact by which Scotch members supported any Ministry that gave a large share of official appointments to Scotchmen, was or was not in the long run beneficial to Great Britain, is a matter with which Scotchmen in the eighteenth century concerned themselves but little, and which we need not discuss. All that need here be maintained is, that this kind of compact was part of a policy which approved itself to Scotchmen. The political vices with which Englishmen reproached Scotch members arose, not from the failure of these members to follow the wishes of their countrymen, but from the tendency of Scotch members to represent only too truly the desires, not only of the electors of Scotland, but of all Scotchmen who took an active part in public life.

Any man, then, who looks historical facts in the face, must come to the conclusion that while the Scotch representative system was full of anomalies and vices, yet during the eighteenth century at any rate the will of the Scotch people did obtain effective representation in the Parliament at Westminster. From this conclusion he may draw the further inference that just as the very best of constitutions which philosophers or statesmen can frame cannot of itself ensure the welfare of a State whose inhabitants do not possess the virtues necessary for the discharge of the duties of citizens, so the most ill-contrived of polities may suffice to ensure the prosperity of a vigorous people who possess a large amount of civic virtue. He may also find in the actual prosperity of Scotland during the latter part of the eighteenth century and the beginning of the nineteenth the explanation and even the justification of the aversion felt by men as patriotic and wise as Sir Walter Scott for any scheme of wide constitutional reform. No man assuredly ever loved Scotland better or was better acquainted with the Scotch people than was Sir Walter. He knew and even exaggerated the merits of his countrymen; he knew that somehow or other Scotch virtues had been fostered and Scotch prosperity had increased under the faultiest of parliamentary institutions. He, and Tories like him, dreaded so-called reform because they believed that it might sweep away many of the virtues and decrease the welfare of Scotchmen.

THE BRITISH SCHOOL AT ATHENS.

The Annual of the British School at Athens. No. IX. Session 1902-1903. The Macmillan Co. 1904.

No archæological publication is awaited with greater interest than Mr. Arthur Evans's annual accounts of the progress of his excavations at Cnossus in Crete. From the first, in 1901, these reports have been models of promptness and precision, with sufficient plans and illustrations from photographs to make the text clear. In his reports of his early excavations, Dr. Schliemann was prompt, but not precise nor systematic; the accounts of many other explorers have been clear and scientific, but published only after long delay. The Cretan explorations of the Italians at Phæstus and Hagia Triada have received less attention than they deserve because their publication has been incomplete and rather inaccessible.

At the close of the first year's excavations on the site of Cnossus, in 1900, Mr. Evans thought that his work there was about half done, and at the opening of the excavations in 1903 he hoped to complete the undertaking that year; but his discoveries of last year were as unexpected and interesting as any since the first, and the field of exploration was largely extended. A considerable part (pp. 35-59) of this report is devoted to the Central Palace Sanctuary and its great temple-repositories, in which were found not only important inscribed clay tablets and impressions of seals, but a mass of objects of faïence ware, with evidence that the palace had a factory for such ware—a prehistoric Sèvres or Meissen. Vases, cups, and bowls of divers shapes were found, with ornamentation of foliage, flowers, and fruit, flyingfish, nautilus, etc. Far the most important of the objects found here, however, were faïence figures about a foot in height of a "snake goddess," and two female votaries, accompanied by other votive objects, robes, and girdles, in the same material. In this repository was "a cross of fine-veined marble and of orthodox Greek shape," nearly nine inches in width. This is conjectured by Mr. Evans to have been the central cult-object in this shrine, corresponding to the "Sacral Horns" on the very much ruder "Shrine of the Double Axes," which was discovered and published a year earlier, and he presents a conjectural arrangement of the shrine, with the goddess on one side of the cross and her votaries on the other, votive robes hung on the wall, and a mass of ornamented cockle-shells in the foreground.

The goddess entwined by serpents and adored by votaries with serpents in their hands will doubtless rouse mythologists to the consideration of her chthonic and other relations. Mr. Evans is inclined to believe that he has found in her the original Aphrodite, and that her worship spread from Crete to Paphos and to Cythera, to Gaza and to Eryx. But the women's garb, singularly modern in some respects, may interest even a wider public. Lady Evans has given a description of it in modern terms. The goddess seems to be wearing three garments: "a skirt made without gathers . . . decorated with horizontal lines," "a double apron or 'polonaise,' made without fulness, reaching to the knee at the back and front, and rising to the hips at the sides," "decorated round its edge by a 'guilloche' pattern," which may be embroidery, and "a tight-fitting jacket-bodice, made of rich stuff, decorated, apparently, in embroidery, with a pattern formed of volutes." "In front the bodice is cut away in a V-shape from the shoulders to a point at the waist, leaving the neck and both breasts absolutely bare," not unlike the bodice figured on a silver hairpin from the third Mycenæan grave. "From just below the breasts the edges of the jackets seem to be braided in curved patterns, and laced across from this braiding by cords." The head is covered by a high cap or tiara, and the hair falls to the shoulders in long locks. The garb of the votaries is similar.

Important for comparison are terra-cotta figurines discovered last year by the British at Petsofa, near Palæcastro, in Eastern Crete, and published in this Annual. Though the headdress and skirt differ, the figures are in harmony as to the covering of the upper part of the body—at least, in this, that the breasts are exposed, though the woman wears a waist or a bodice. This is a capital confirmation of the observation, apparently not yet published, of a distinguished Berlin scholar a year ago, that the female figures on the gold seal rings found by Schliemann at Mycenæ (which, from the ordinary reproductions in plaster or by photographic process, seem to have no covering for the upper part of the body, though their skirts are so elaborately fashioned) really wear a light, sack-like garment which does not cover the bosom, but may be distinguished at the sides, near the arms. The skirts of the Mycenæan and Cnossian ladies are alike in being flounced, but the Mycenæan ladies had no such laced bodice as that worn at Cnossus, nor such a high Medicean collar as was the fashion in eastern Crete. The Petsofa women apparently wore hoops (in the second millennium B. C.)—a mere abundance of petticoats would hardly account for the bell shape of their skirts—and their gown seems much more a single garment than does the garb of the snake goddess. Mr. J. L. Myres finds relations between the bodice and skirt worn in Crete and those from the (early bronze age) tumulus of Borum-Eshöe in Denmark, with the differences to be expected from the difference of climate; he also illustrates the headgear of Eastern Crete by the "plate-hats" of recent fashion books. Though the goddess has a matronly de-

velopment, her waist is exceedingly small, and her outline would satisfy the most fashionable dressmaker of the present year. As at Mycenæ, the men's garb is less elaborate, being in general only a loincloth. Clearly the dress of the women cannot be reconciled with that of Homeric Greece, though if Aphrodite wore such a bodice when she went to call Helen from the Great Tower of Ilium, she might have been recognized by "her lovely breasts" (Iliad iii. 397) in spite of her assuming the face of an old woman.

The newly discovered inscribed clay tablets allow stricter definitions to be made with regard to the early writing. The linear script, as was to be expected, is proved later than the pictographic script. Of the two varieties of linear script, class A is found to have been used during the first period of the later palace. Class B is believed to be parallel to class A, and not derived from it. Mr. Evans thinks that the change from the one to the other indicates not an ethnic break, but a dynastic revolution. What has been accomplished toward the decipherment of the tablets, the report does not intimate. A fragment of a tablet is figured which formed part of the inventory, and represents one of the ewers and basins found in the repository.

At a little distance from the palace, Mr. Evans discovered a Royal Villa, an elaborate structure which had certainly three floors, and probably four. Its *megaron*, with raised tribunal, gypsum throne, and a balustrade before this, and a lamp of lilac-colored gypsum about three feet in height on the steps, is believed by Mr. Evans to be the original type of a royal hall, from which the later basilica was descended. The likeness is certainly striking, but several links seem still to be missing in the historical chain. This villa was not destroyed by fire, like the palace, but was abandoned, plundered, and left to gradual decay.

As for Mr. Evans's Theatral Area—broad steps at right angles to each other—he makes out a very plausible case for its use for public shows, *i. e.*, for dances or pugilistic contests; it would not do for the contests with bulls, suggested by the frescoes found two or three years before. The bastion in the angle between the steps may, as he thinks, have held the canopy for the royal party. On these steps about 500 spectators might have been seated. But why the semi-circular form should not have been adopted, is not clear, and the discussion of these steps cannot be separated from that of the similar steps at Phæstus, for which the material does not seem to be ready.

Mr. Evans calls attention to the evidence of close relations between Crete and Egypt—clumps of crocuses used in decorations as adaptation of clumps of lotus flowers, and a painted jar with papyrus reliefs; but he does not touch the important question of the relation between the earlier and the later civilization of Crete. Evidently he is waiting for new evidence. The fact that the earlier palaces both at Cnossus and at Phæstus were destroyed by violence, so that they had to be entirely rebuilt, when joined with the obvious superiority of the so-called Camáres pottery over the early Mycenæan which followed it in use, would suggest not only a struggle and conquest, but also the introduction of a new people. Mr. Evans seems to hold strongly to the continuity of race, and to the development of the "Mycenæan" civilization in Crete. He has better information on this subject than any other scholar, and gratitude for the facts which he supplies should give patience to wait for evidence for some inferences.

The magnitude of the excavations at Cnossus has obscured unduly the importance of the other British excavations in Crete. In this Annual, Mr. Bosanquet, Director of the British School at Athens, and his associates give an excellent account of the second season's work at Palæcastro, at the eastern end of the island. Here they have uncovered no palace—perhaps we have Cretan palaces enough, at Cnossus and at Phæstus, with the royal villas near the one and a few miles removed from the other—but the remains of an early prosperous town, with a still earlier cemetery not far away. The narrowness of the streets, of which few are wider than twelve or fifteen feet, need not mislead us to suppose this a mean town; the houses were not high, and doubtless horses were not used in the streets, and no great width was necessary. The pottery found here is even more beautiful and more varied in design than that at Cnossus. A lovely fruit-stand, of Camáres ware, painted red and white, about a foot in height, was found complete. Mycenæan conical "fillers," charmingly decorated, tankards, and mugs, in great variety, form such a collection as had not been known before. Not only in garb but in other matters, too, the old Cretans were strikingly "up to date": several dishes were found, of elegant shape, combined with fire-boxes which could be filled with burning charcoal; this was "prevented from falling out by stopping the big hole with clay, air being supplied through the smaller holes," and these vessels served the purpose of the modern hot-water plate, keeping food warm.

In addition to the Cretan reports, Prof. W. M. Ramsay has a long article on Pisidia and the Lycaonian frontier, rectifying on fuller information the boundary line which he drew in his 'Historical Geography of Asia Minor,' in which work the Pamphylian frontier and many towns were set too far north. Mr. Dawkins contributes "Notes from Carpathos," after a three weeks' visit to that island, with a special study of primitive wooden locks and of the principles of inheritance in the island. Mr. Wace furnishes a discussion of Apollo on the Omphalos, and Mr. Tod edits a hitherto unpublished Attic decree, of about 303 B. C. The Annual closes with a brief account, and plans, sections, and elevations, of the little church of the monastery at Daou Mendeli in Attica. The book has a satisfactory, though not full, index.

Life and Letters of Edward Byles Cowell, M.A., Hon. D.C.L. Oxon., Hon. LL. D. Edin., Professor of Sanskrit, Cambridge, 1867-1903. By George Cowell, F.R.C.S. Macmillan Co. 1904.

One wonders at first why this book was written. The life-history of a shy student whose chief interest lay in editing Sanskrit texts could appeal to the public only by accident. If chance had made Cowell a conspicuous figure in the Sepoy rebellion, through which he lived unobserved in India, or if he had mingled with men of affairs after returning to Europe, there might have been more obvious reasons for exhibiting his life. But above all he was a quiet, reserved, unassertive scholar, who disliked publicity and devoted himself to his work and wife, differing in no respect from many other modest men of even greater reputation, whose lives and family correspondence are their private property. It is eminently fitting that we should have a life of Hunter, who was a public man and somewhat of a politician as well as a scholar, and one feels that Max Müller belonged in a sense to the public for which he catered; but Roth and Weber and Whitney and Cowell—these were men of a different stamp, and one can but think it almost indelicate to expose to the eyes of a public from which such scholars withdrew themselves the intimate details of their private lives.

With this protest, however, it must be said that the present biography has a charm of its own. Being forced, as it were, to view this life from within, one finds it complete and satisfactory; and after all, when the squeamishness which is felt at first is suppressed and one has learned to know the scholar as a man, one must admit that it is a pleasure to have had the experience, despite the details which seem to be needed in order to fill the volume, or rather to fill out the picture. That Cowell was accustomed to say, "Why, *dear* me," and to pronounce extra*or*dinary, as if it had six syllables, are pretty petty facts, such as are appropriate to a family reunion when one revives memories of one's relatives. But other characteristics—Cowell's love of home, his appreciation of poetry, his distaste for Browning's verse because "it does not give one the pleasure and quiet rest which really beautiful poetry naturally does," his simple goodness and lack of all affectation—these fit in together and make a very pleasing portrait of a man who worked hard and lived serene, satisfied to win approval from his conscience and his colleagues.

Perhaps the most striking incidents in the career of this venerable Sanskrit scholar were his marriage with a woman much older than himself, and his friendship with Edward FitzGerald. Cowell left school at sixteen and spent nine years in a counting-house, where he would probably have remained to the end of his life if his wife had not incited him to undertake a university career. He went to Oxford at her instigation. There he gained culture, "but not the Cambridge kind of scholarship." He was a natural student, but lacked initiative. His sprightly and confident wife made him what he was externally. She insisted on his genius finding its proper place, and she succeeded. He got a post in Calcutta and afterwards in England. He wrote mainly for Sanskritists, and always remained the best type of profound scholar, being widely known as the editor of many Sanskrit and Pali works, as a translator of Persian poetry, and as the author of historical studies. That is all there is in Cowell's life. FitzGerald's friendship and letters form a considerable part of it as described in this volume. From Cowell the Laird of Little Grange learned Persian and was wont to call the professor his master (a title Cowell admitted), as well as overpraise him, which he gently resented. "Exaggerated praise," he says, "is not well. This praise is *not true*, and so I shrink from it."

If ever this book goes into a second edition, its author, who is a cousin of the late

Professor Cowell, should have some Sanskrit scholar revise the proof-sheets. The learned professor at Cambridge would have been shocked at several points had he been privileged to read his own biography: Deussen not Denssen (p. 328 and repeated in the Index), is the name of a well-known German Sanskritist. On page 358, Kaurnudi is for Kaumudi. Still worse is the repeated mistranslation (pp. 381, 382), "Thou art thou" for "That art thou" of the famous and oft-quoted epitome of Vedanta philosophy, *tat tvam asi*, "Thou art that" (Brahma, the All); as Professor Cowell himself paraphrases, "Each is himself a part."

A History of Ottoman Poetry. By the late E. J. W. Gibb. Vol. III. Edited by E. G. Browne, Professor of Arabic in the University of Cambridge. London: Luzac & Co. Pp. xvi., 382.

With each new volume of this work, the greatness of our loss in the too early death of its author is becoming clearer. Professor Browne is editing the remains most rightly with a scrupulous self-repression. To draw from him a footnote of protest requires something, for him, so serious as a complete ignoring of Qa'ani, the Persian realist of the last century. Evidently, on this point, Mr. Gibb agreed pretty closely with Paul Horn, as the latter's 'Geschichte der Persischen Litteratur' shows, and disagreed with Professor Browne. But apart from such temptation, Professor Browne's footnotes are mostly melancholy indications that the contents of this volume must have been written some time before Mr. Gibb's death, and would, in the event of his life, have been expanded and revised in the light of fuller sources which had become open to him. Thus, several times there stands in the text a regret that such or such a *diwan* had been inaccessible, and we learn below from Professor Browne that the very book needed had been acquired at a later date. Nothing could make more clear the fundamental character of the work done by Mr. Gibb, based essentially on MSS., and the extreme difficulty which any student of this subject must meet in collecting his sources. Possessed of considerable private means, Mr. Gibb was in precisely the position to be able to carry on such researches.

Again, the object of the book is becoming plainer. The weight of the mass of translated poetry is making itself felt. In fact, on one side, the book may be viewed as an anthology of Turkish poetry strung on a thread of criticism, literary history, and biography. So, if there is in this, as the author confesses, a "somewhat depressing monotony," there is also revealed for the first time a great body of genuine literature and a most singular development of æsthetic art. It will come to most readers almost with the shock of the ludicrous, that the supposedly savage and sensual Turks should have developed and clung for centuries to a poetic art which could be thus described:

"The aim of succeeding generations of poets has been to build up a literary idiom as remote as possible from the speech of every-day life, an idiom from which everything Turkish that could be eliminated should be removed, and into which everything Persian that could be introduced should be brought. The result of all this is that the language wherein these poets wrote is, and always has been, utterly unintelligible to the vast majority of the people. The poets wrote for themselves, or at most for one another; not for the public, whom they altogether ignored. And this highly artificial idiom, which now at the close of the classic period, after the efforts of some three centuries and a half, we find flourishing as the literary dialect of Turkey, is beyond all question extremely beautiful. So deftly has the rich but delicate Persian embroidery been worked upon the Turkish background that the two, while each remains perfectly distinct, form one harmonious though resplendent whole. The scope which it affords for artistic skill in the choice of words and in the manipulation of phrases renders this idiom a delicate and subtle instrument in the hand of a master; and to such as can appreciate it there is an æsthetic pleasure in the study of poems like those of Nef'i or Na'ili, considered solely and simply as works of art, without regard to any meaning their words may convey."

It is this art, then, which Mr. Gibb's exceedingly clever translations reproduce most faithfully for us. Their very abstruseness and preciousness make their value as interpretations.

But such an art could not last. It was bound by successive refinements, in its lack of contact with life, to pass the point of intelligibility, through the Persian embroidery covering and concealing the Turkish material and background. Poetry cannot live which is absolutely separated from spontaneousness and requires a special training to understand it. The mystery in this case is that the method should have lasted so long, and should so evidently have attracted and subdued all the poetic impulse of the Turks. But with the close of the present volume we begin to see its end. We are carried from A. D. 1520, when the reign of Suleyman the Great marked the widest extension of Turkish empire and the culminating point of Turkish poetry of the type just described, to 1712, the year of the death of Nabi, in whom we find this classic age growing into an age of transition, and the objective genius of the Turks themselves beginning to find utterance. The way is being opened to the succeeding romantic period, and to that intensely modern period in which Turkish literature now moves. It will be learned with regret that Mr. Gibb's account of this modern school was left very incomplete. On Kemal Bey, for example, perhaps the most weighty of its three pioneers, there is only a number of pencil jottings. Yet this modern development in Turkish is one of the most interesting phases of the awakening of the East. In it, and in it alone, has Turkey sincerely joined the European world, and in it the change has been as absolute as any made by Japan in other fields. With it, too, Mr. Gibb was thoroughly in sympathy and closely in touch, and our regret is, therefore, the greater that his unique opportunity and equipment should have left so little fruit. There is no one now, it may be safely said, who can give in English the appreciation which we might have had from him.

The American Constitutional System: An Introduction to the Study of the American State. By Westel Woodbury Willoughby. The Century Co. 1904.

This is the first of a series of volumes bearing the title "The American State," and designed to describe in detail the organization and operations of the governmental agencies of the United States, Federal, State, and local. It prepares the way by a very good examination of the constitutional character of the American State. It is not strictly a law book, but a statement of the general principles in accordance with which the legal powers of governmental agencies are exercised. For instance, there is an analysis of the general relation between the Federal and State Governments; a discussion of nullification, secession, and reconstruction, and the Constitutional status of acquired territory. Here the author follows the courts, and the result is an elementary hand-book of Federal Constitutional law, with all necessary citations scrupulously given. In addition to this there is enough history to connect the exposition with the author's theory of the "Federal State"; for this we must refer the reader to the book itself. It can hardly be set forth in a few words. We do not ourselves attach to it the importance which it holds in Mr. Willoughby's view.

The author is one of those writers on government who are wedded to the belief that, to understand the operation of a government, the first necessity is to fix upon an absolute sovereign somewhere. This step presents peculiar difficulties in the case of the United States, because here we have a Government avowedly Federal, formed by States once confessedly sovereign, and still treated as legally sovereign within the sphere of action in which they have not delegated their sovereignty. Lawyers say that the Government of the United States is one of "delegated powers," and that in many respects the States are still sovereign, while internationally and for many other purposes the only sovereign is the United States. But Mr. Willoughby is not satisfied with this, and goes so far as to speak of the States as "simply governmental or administrative districts of the United States." The theory does not seem to us to be an integral part of the book, nor to find support in those decisions of the courts to which we must all look in the long run for the true exposition of the foundations of our institutions, and on which most of Mr. Willoughby's superstructure rests.

The Evening Post says

"The title not only fits the book, but is equally applicable to those who read it. The delight of Mr. Loomis's stories is the utter lack of seriousness with which he takes life. . . . Many glittering little bits of humor side by side with various open attacks upon the follies and foibles of mankind."

More Cheerful Americans

By CHARLES BATTELL LOOMIS

THE PRODIGAL SON

The Novel of 1904 will appear Nov. 15. 12mo, Ornamental Cloth, $1.50

HALL CAINE

KATE OF KATE HALL

By ELLEN THORNEYCROFT FOWLER. 12mo, Ornamental Cloth, $1.50

Several hours of solid pleasure are contained between the attractive covers of this most enjoyable book. The "superdainty" heroine has a variety of suitors, and marries the right one without knowing it. Eventually she is very glad. The dialogue varies from the sprightly to the brilliant, but is always interesting. The heroine is entrancing, but not more so than the book.

THE MISFIT CROWN

By FRANCES DAVIDGE. 12mo, Ornamental Cloth, $1.50

This is a book which works up to a splendid climax. It tells of the triumph of idealism over love, but in a human and interesting way. The author has had the rare tact and ability to put the reader in sympathy with each one of her characters. Three men surround the heroine. One she marries, one she loves, and the other loves her.

The Nation.

A WEEKLY JOURNAL OF POLITICS, LITERATURE, SCIENCE, AND ART

Established in 1865, *The Nation* was a pioneer as a journal of literary and political criticism of the highest order, conducted free from the control of party, school, or interest of any sort. It has long been a recognized authority at home and abroad. The list of contributors includes most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. *The Nation's* departments are:

THE WEEK. Brief Comments on the most important current events, domestic and foreign.
EDITORIAL ARTICLES. Careful and moderate discussion of prominent political and social topics.
SPECIAL CORRESPONDENCE. From all quarters of the globe, by intelligent and trustworthy observers.
OCCASIONAL CORRESPONDENCE. Letters to the editor on every subject germane to the scope of the paper.
NOTES. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
REVIEWS OF BOOKS. By able writers and scholars (mainly specialists) of both hemispheres.
FINE ARTS. Competent criticism of art exhibitions and works of art, the drama, etc.

The style and form of the paper are chosen with a view to the most suitable shape for binding, and a set of *The Nation* preserved, bound, and indexed makes the most complete and readable record of current events of importance in the political and literary world available for the American Public. Two volumes are completed annually. The index and title-page accompany the last issue of each volume.

SUBSCRIPTION PRICE—$3 per year postpaid in the United States, Canada, and Mexico; $4 a year postpaid to other countries included in the Postal Union. Subscriptions for a shorter period taken at the yearly rate. Remittances should be made by check, draft, or money order, payable to *The Nation.* Specimen copies sent free at any time on request. Address

THE NATION, 206-210 Broadway, N. Y. City.

LONGMANS, GREEN, & CO.'S NEW BOOKS

Style in Furniture

By R. DAVIS BENN. With 102 Plates by W. C. BALDOCK. 8vo. $6.00, *net*. By mail, $6.24.

While no pretence is made to provide a complete and exhaustive history of furniture, it is the author's aim to convey a knowledge of those national types that are still to be met with in auction salesrooms, dealers' shops, or old family mansions, and which are being perpetuated to-day by designers, and manufacturers who draw upon time-honored sources for inspiration. Characteristic examples of the various phases of all styles are presented and dealt with.

Notes on German Schools:

With Special Relation to Curriculum and Methods of Teaching. By WILLIAM WINCH, M.A., late Scholar of St. Johns College, Cambridge, &c. Crown 8vo. *Net*, $1.50. By mail, $1.62.

Queen Elizabeth, Amy Robsart, and the Earl of Leicester

Being a Reprint of the Scarce Historical Work, entitled 'Leycesters Commonwealth,' 1641. Edited by FRANK J. BURGOYNE, Librarian of the Lambeth Public Libraries. Fcap. 4to, $2.50.

*** *500 copies only printed. Prospectus sent on application.*

The Bernards of Abington

And Nether Winchendon: A Family History

By Mrs. NAPIER HIGGINS. (4 vols.) Vols. III. and IV. 8vo. $8.00.

The Wampum Library of American Literature

Edited by BRANDER MATTHEWS, Litt.D. (Yale), Professor in Columbia University. Crown 8vo. Cloth, extra. Price per volume, $1.40 *net*. By mail, $1.54.

The WAMPUM LIBRARY OF AMERICAN LITERATURE is planned to include a series of uniform volumes, each of which shall deal with the development of a single literary species, tracing the evolution of this definite form here in the United States and presenting in chronological sequence typical examples chosen from the writings of American authors. The editors of the several volumes provide critical introductions, in which they outline the history of the form as it has been evolved in the literature of the world.

AMERICAN SHORT STORIES. Selected and edited, with an Introductory Essay on the Short Story by CHARLES SEARS BALDWIN, A.M., Ph.D., Assistant Professor in Yale University. Pp. xii.+333. [*Ready*

AMERICAN LITERARY CRITICISM. Selected and edited, with an Introductory Essay, by WILLIAM MORTON PAYNE, LL.D., Associate Editor of *The Dial*. Pp. xii+318. [*Ready*

AMERICAN FAMILIAR VERSE. Vers de Société. Edited, with an Introduction, by BRANDER MATTHEWS, Litt.D. (Yale), of Columbia University. Pp. xx+308. [*Ready.*

Modern Musical Drift

A New Volume of Essays. By W. J. HENDERSON, Author of "The Story of Music," etc. Crown 8vo, $1.20 *net*. By mail, $1.30.

CONTENTS.—PARSIFALIA: I. A Pure Fool in the New World; II. Ethics and Æsthetics; III. The National Religious Drama.—DER RING DES NIBELUNGEN: I. A Futile God and a Potent Devil; II. The Woman and the Serpent; III. Backworlds Gods and Over-Woman—ISOLDE'S SEWING WOMAN; RICHARD STRAUSS: I. The Historical Survey; II. The Æsthetic View; III. What does it All Mean?; IV. Strauss and the Song-Writers.—AUX ITALIENS: I. Italian Opera of To-day, II. The Classic of the Unprogressive.—THE ORATORIO OF THE THEATRE.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

THACKERAY IN THE UNITED STATES

By General JAMES GRANT WILSON, author of "Life of Gen. Grant," "Bryant and His Friends," etc.

2 vols. 8vo, cloth, $10.00 *net*.

Japan paper edition, limited to 35 copies, $20.00 *net*.

General Wilson has given the public two interesting volumes filled with numerous illustrations, facsimile letters, and drawings by Thackeray. A large part of this material appears in this work for the first time, and throws much light upon Thackeray's two famous visits to this country.

ORIGINAL JOURNALS OF THE LEWIS AND CLARK EXPEDITION

Edited by REUBEN GOLD THWAITES, LL.D.

The work also includes the original Journals of Sergeant Charles Floyd and Private Joseph Whitehouse, and much other valuable material relating to the expedition.

NOW FOR THE FIRST TIME PUBLISHED IN FULL AND EXACTLY AS WRITTEN

The Work will be Issued in Three Forms, as follows:

Regular Edition, illustrated with portraits, views, maps, plans, and facsimiles, in 7 volumes, octavo and atlas of maps, 1 volume, oblong octavo, in all 8 volumes octavo. Price, *special net*, $60.00.

OUTLINES OF THE HISTORY OF ART

By Dr. WILHELM LÜBKE, Professor of the Polytechnic Institute and at the Art School in Stuttgart. Edited, minutely revised, largely rewritten and brought up to the present time by *Russell Sturgis*, A.M., Ph.D., F.A.I.A. Fully illustrated with 660 line cuts and 117 half-tone plates, 2 vols. 8vo, $10.00 *net*.

Mr. Sturgis has done this work in a most careful and satisfactory manner, adding much new material to the original and altering much of the old text, with the conscientious desire to make the book what Dr. Lübke would probably have made it had he been writing at this date and in America.

An entire section devoted to Art in the 19th Century has been written, bringing the work down to the present time.

THE CORRESPONDENCE OF WILLIAM COWPER

Edited by THOMAS WRIGHT, Principal of Cowper School, Olney, author of "The Town of Cowper," "The Life of William Cowper," etc.

4 vols. 8vo, $15.00 *net*.

This is the first complete edition of Cowper's letters ever published. Mr. Wright is the founder of the Cowper Society, and his "Life of William Cowper" is recognized as the standard work on the subject. A Cowper Museum was established at Olney at the Cowper Centenary (April 25, 1900) which is rich in Cowper MSS.

DODD, MEAD & COMPANY, Publishers, NEW YORK

The Nation.

NEW YORK, THURSDAY, OCTOBER 27, 1904.

The Week.

Mr. Cleveland has lived long enough at Princeton to acquire something of the "iron heel" which Dr. Holmes associated with that academe; and he set it heavily down upon current Republican pretences on Friday evening. The remarkable enthusiasm which marked his first public appearance in the campaign was not more a personal tribute than a bearing witness to the sound political doctrine for which he stands. Grover Cleveland is the man above all others to resent and riddle the Republican assumption of a monopoly of the public virtues. What hypocritical tongues are now saying of the inability of Parker and the Democratic party to give the country good government, was said by them just as positively of Mr. Cleveland in 1884. His eight years of office should have laid that calumny forever. On the tariff question, Mr. Cleveland's speech sought out again the Republican sore spots which he knows so well. Bred in a clergyman's family, he knows how to hurl the Scriptures at an opponent; and his characterization of the tariff Dives patting himself on the back because he allowed Lazarus the crumbs which fell from his table, was as effective as apt. The whole speech, in fact, with the demonstration that Mr. Cleveland's peculiar hold upon the confidence and honor of the business interests of New York is undiminished, cannot fail to have a stimulating effect upon Judge Parker's canvass.

Again has Judge Parker shown that it is not entirely safe to hurl challenges at him. "Where are you going to begin economizing?" demanded President Roosevelt. "Do you dare to talk about reducing the army?" "Certainly I do," replied Judge Parker on Friday. And, what was still more unkind, he proceeded to give excellent reasons why it should be reduced. It costs more than twice what it did seven years ago. Then we were at peace; now we are at peace. Nobody said the standing army was not big enough then; the burden of proof is on those who maintain that it ought to be larger and twice as costly now. To say, as some Republicans do, that it would be dangerous to reduce it, is to say that Grant and Hayes and Garfield and Arthur and Harrison, their own Presidents, were guilty of imperilling the country by keeping the army so small. As Judge Parker forcibly says, if we are to have a policy of militarism at home and adventure abroad, the army is not too big—is not half big enough. If, however, we are to walk in the old paths of peace, there can be no doubt that the swollen army estimates offer themselves invitingly to the pruning-knife. And he was equally convincing in his references to that catch-all, "miscellaneous expenses." A multitude of sins of extravagance lie covered there.

Senator Knox trod on delicate ground last Thursday when, at the Union League Club, he undertook to praise the present Administration for creating a Federal department for the supervision of corporations. As the ex-Attorney-General explained, the head of the Department of Commerce and Labor had power "to gather such information and data as will enable the President to make recommendation to Congress for additional legislation, and to compel the giving of testimony and the production of such books and papers and the making of such reports as may be necessary for the purposes of investigation." Now we presume that Republican orators would not be "pointing with pride" to the new Department unless they believed it to have been efficient. If it is efficient, it has collected a great deal of "information" about the inside workings of corporations. Yet all the information which that Department has gathered has been and is in the possession of the gentleman at present holding a position one of the customary and legitimate duties of which is to collect a campaign fund. The more efficient the Department has been, the greater the impropriety of the ex-Secretary's present position. We are entirely willing to believe that in his dealings with the heads of corporations Mr. Cortelyou has taken scrupulous care to "speak softly." None the less his former colleague's praise of the Department of Commerce and Labor means, if it means anything, that its head possessed a "big stick," whether he used it or not.

"Speak ye comfortably to Jerusalem, and cry unto her that her warfare is accomplished"—this is the motto adopted by most campaign orators. "Victory," they cry, "is already within our grasp. At the polls we shall be proved innocent of the crimes of which we are accused." Elihu Root, however, is the *enfant terrible* of his party. He has frankly told the members of the Union League Club that "there is a serious question about the election of Governor," that he fears the ticket is in grave danger. In behalf of Lieut.-Gov. Higgins Mr. Root protests. "His nomination came to him unsought. He is no man's man; he is his own man. It is a very hard and very cruel thing that he should be borne down by unjust aspersions." The aspersions to which Mr. Root obviously refers are the charges that Mr. Higgins is Odell's man, that he represents the Administration which is now appealing for a fresh lease of power. If the suspicion that Mr. Higgins is Odell's man is such a terrible injury to a virtuous and independent candidate, why not strengthen him, the rest of the ticket, and the whole Republican organization in this State by retiring Benjamin B. Odell, jr., from the leadership? At present the Governor-Chairman is worse than an old man of the sea sitting upon the neck of his party. Mr. Root's fears that the load may prove too heavy are only too well founded.

In his address on October 19 Mr. Elihu Root quoted Judge Parker's question whether the Republican party would give tariff regulations to the Filipinos "under which they can exist." He then replied by asking the Judge whether he had examined the Philippine Tariff law, enacted September 16, 1901, by the concurrence of Filipinos and Americans, "enacted with sole reference to the interests of the Philippine people, imposing tariff duties lower than they had ever had in the islands before," and approved by Congress without criticism or objection by any Democrat. This is as pretty a piece of pettifogging as has come to our notice for a long while. What Judge Parker meant admits of no doubt. His question related not to the tariff adopted for the islands by the Philippine Commission, but to the high customs duties which keep Filipino goods out of the United States. This dodging of the real issue is all the more interesting since it was this same Elihu Root who, as Secretary of War, in his annual report for 1902, "earnestly urged" that the duties levied in the United States upon Philippine products be reduced to 25 per cent. of the Dingley tariff rates. He added that the "ills which have recently befallen the people of the islands call urgently for active and immediate measures of relief."

A year later this same Elihu Root "earnestly renewed" this recommendation, saying:

> "As matters stand at present, we have practically deprived the Philippines of their Spanish market, and we have so arranged the tariff laws of the two countries that American consumers are making money at the expense of the Philippine revenues. I submit that there is no just reason why the people of the Philippines should not be treated with some fair approach to the advantages which are awarded to the people of Porto Rico and the Hawaiian Islands."

On February 27, 1903, President Roosevelt himself sent to the Senate a special message in which he "very earnestly" asked that "this matter receive the immediate attention of Congress, and that the relief prayed for be granted." He

asked for action on the tariff "not merely from the standpoint of wise governmental policy, but as a measure of humanity, in response to an appeal to which this great people should not close its ears." Included in this message was a cablegram from Gov. Taft, which said: "Necessity for passage House tariff bill most urgent. The conditions of productive industry and business worse than in November, and growing worse each month. . . . All political parties, including labor unions, most strenuous in petition for tariff bill. Effect of its failure very discouraging." But the Republican party, as represented in Congress, paid not the slightest heed to the appeals of Root, Taft, or Roosevelt, of whom it is so proud. The tariff Shylocks refused to let any considerations of humanity prevail. Since his party thus stands condemned by the words of its own leaders and by himself, it was a piece of peculiar effrontery for Mr. Root to stand up and convey the impression that, thanks to its wise management, conditions in the Philippines are little short of millennial.

"Independence is their cherished ideal," said Dr. Frederick W. Atkinson, ex-superintendent of public instruction in the Philippines, at Lake Mohonk, on Thursday, "and that they may ultimately realize the ideal is, I believe, the *unexpressed* purpose of those who have undertaken the tutelage of these peoples." This, according to the rules laid down for political discussion by the Republican party, is about as far as an American citizen may go without crossing the "treason" line. He is privileged to say, as Dr. Atkinson does, that he believes some one else thinks of Philippine independence as a desirable thing in the indefinite future. He must not say, if in any official position, that he favors it himself, nor that any other person in authority has put it into words. We ourselves think that Dr. Atkinson's address is on the danger line. Parker's speech of a fortnight ago is now being read by every bloodthirsty Moro and Igorrote. These Orientals are notoriously adept in black and occult arts. Is there not danger that they may read by a sort of clairvoyance some of these "unexpressed purposes" of the authorities, and thus become "unsettled"? If our splendid colonial structure is so delicately balanced that, like an Alpine avalanche, a single word spoken aloud will topple it over, people who even think "independence" ought to be carefully watched. Wherein, after all, has the Republican policy changed since Mr. Dooley wrote: "It is our purpose to give them a government suited to their needs, which is small, and generally to do as we blame please with them, making up our minds as we go along"?

The Republican National Committee has now given to Gov. La Follette of Wisconsin the most complete recognition. When a famous spellbinder is sent into the State, not only will he speak under the auspices of the La Follette faction, but he is also expected in his peroration to couple the name of the Governor with that of Mr. Roosevelt. By implication, the latest order requires also that the speaker shall be silent as to the services of the two Republican Senators, Messrs. Spooner and Quarles. The National Committee began the campaign with a unanimous decision for the Stalwart faction; next declared its intention to remain strictly neutral; and now throws all its influence on the other side. The party which gives aid and comfort to Addicks in Delaware because he can marshal more votes than the other side, cannot, however reluctant, refuse to help out the cause of a man who gives such fine promises of "delivering the goods" as La Follette. Yet this decision by no means makes plain sailing for the national ticket. If anything, it affronts the Stalwarts more grievously than the June decision did the La Follette men. Before the announcement that the National Committee would lend a hand in the election of La Follette as well as that of Republican electors, the Milwaukee *Sentinel*, the chief Stalwart organ, observed that "the La Follette following, made up as it is of all sorts and conditions of men, 45 per cent. of whom are not Republicans and never will vote for Republican Presidential electors, will not suffice to keep Wisconsin in the Republican column."

By biding his time and employing Pinkerton detectives, Governor Heyward of South Carolina has bagged five out of the six white men charged with lynching a negro at Eatonville, South Carolina. One of them is the town marshal of Eatonville, and the others are farmers. All of them are now in the State penitentiary to prevent an attempt at rescue. We do not think that there will be any. This was a peculiarly atrocious case, described by the Charleston *News and Courier* as "a shocking crime committed on slight provocation." As a matter of fact, there was no provocation at all. The negro had merely threatened to spank one of a crowd of drunken whites. For this he was arrested, fined $5, and locked up for safe-keeping. That night he was taken from the jail and killed, his body being horribly mutilated after the manner of the Sioux and Apaches. There were sixteen wounds inflicted before the victim was thrown into the water—all inflicted because he threatened a low white man! It is to the credit of the South Carolina press that it vigorously denounced the crime and supported the Governor in his efforts to punish the guilty.

On Monday a Federal grand jury, in response to Judge Jones's charge, indicted several alleged members of the mob that lynched Horace Maples in Huntsville, Alabama, on September 7. The jury stated that Maples's color alone made his killing possible, as he would not have been lynched had he been white; and declared that punishment must be inflicted and the law upheld, for "the white people of this section feel that they owe a duty to the negro race." All this is very gratifying, though there must be very considerable differences of opinion as to the legal right of the Federal grand jury to interfere. The jury itself seems to have had doubts, for it admits that its action may be regarded as "outside interference," but explains that something had to be done. At Statesborough something is likely to be done at last, for Judge A. F. Daly, in charging the grand jury of Bulloch County, declared that the lynchers were murderers as much as their victims, the only difference being that the lynchers were the bolder slayers. Coming after the cashiering of the militia captain whose cowardice, or worse, made the lynching possible, it really begins to look as if the chief offenders might meet with the punishment they deserve.

Each building trade here has its own union and its own contractors' association, between whom working agreements have existed for years. The general arbitration treaty, which really constitutes an appellate court, specifically says that these numerous sub-agreements shall continue in force. In the last year we have had several glimpses into these sub-agreements. In the bricklayers' strike, for instance, it was shown that the local workmen had for years pledged themselves to put in fireproofing only for employers with whom they were already affiliated. The purpose was to give the mason builders a monopoly, and especially to keep out of New York a corporation operating in other large cities. The recent decision of Magistrate Ommen in the cut-stone case has an important bearing upon this point. He found that the workmen and the employers had entered into a conspiracy to control the output. The masters employed only specified unions; the unions worked only for contractors who were in the combination. Any outside contractor was promptly forced in by strikes, or otherwise. The Cut-Stone Employers' Association by this means so controlled the situation that they combined on all competitive contracts. The prices charged were so high that the "successful bidder" was able to turn back 10 per cent. of his profit into a common treasury. This was shared equally by unions and employers. "The representative of the journeymen," the decision reads, "testifies that the journeymen considered it to be their duty

to protect the interests of their employers against unjust competition and the cutting of prices; that the higher the prices the employers received, the higher the wages were. I suggested that these high prices affected the public, who had to pay them; to which he answered that Commodore Vanderbilt had once said something about the public."

Weinseimer's conviction on the charge of extortion is another triumph for the District Attorney's office. His trial adds little to our knowledge of labor unions. So long as there are contractors willing to make "presents," there will probably be rascally walking delegates ready to accept them. The unions, however, make a better showing in the Weinseimer than in the Sam Parks case. Parks, it will be remembered, became a greater hero the more the indictments piled up against him. He still maintained his leadership in the Building Trades Association; led the labor-day parade after his conviction for extortion; was paid honors of state at the Kansas City Convention of his International Association while waiting a new trial. He was not deserted until, a confessed blackmailer and a consumptive wreck, he was taken away to die in Sing Sing. Weinseimer, however, from the day his guilt became apparent, was abandoned by his union associates. Apparently, the unions have learned that public confidence is a valuable asset, and that to win it they must eliminate walking delegates with $80,000 bank accounts. This is a gain; and it is to be hoped that building employers will, on their part, make a needed progress towards better methods.

The statement that Mr. Alfred Hertz, the conductor of "Parsifal" and the other German works given at the Metropolitan Opera House, is to be forced to join the Musical Mutual Protective Union, calls attention once more to the impudent and tyrannical methods of that union. It is difficult to see much difference between these methods and an ordinary "hold-up," except that in one case a man's life is threatened and in the other case his livelihood, if he doesn't pay up. Perhaps the law will interfere in time, when the offenders, emboldened by their success, shall carry their system to its logical conclusion. There is really no reason why the singers should be allowed to escape blackmail when all the players and conductors are levied upon. Why not point the pistol at the prima donnas, the tenors, baritones, and bassos? Why not boycott all the living composers who do not promptly pay up and wear the badge of slavery? Why not refuse to play for any manager who does not put a union label and pay a union tax on every ticket he sells? And why not leave in a body whenever a critic enters a theatre or concert hall who has not paid his "initiation fee" of a hundred dollars? The possibilities of earning an honest penny in this way are limitless, and the Musical Mutual Protective Union is making but a bungling use of its opportunities.

Professional counsellors in the closet may expect another rebuke within a few weeks. A general election will be held in Canada on November 3. There was a time when Mr. Laurier (he was not then Sir Wilfrid) had altogether too much time for closet study. Certain speeches on free trade delivered both before and after he became the leader of the Liberal party would indicate that he came under the enervating influence of experts. He appears to have been quite incapable of "thinking Imperially" or of realizing that expediency and opportunism are all-sufficient. Eight years ago he took office as Prime Minister of the Dominion, and since then friends whose activities are not by any means confined to the closet have widened his perspective. Now he thinks Imperially, sees Imperially, and, as many a grateful corporation will testify, he does things. He was elected on a platform so distinctly academic that its principal plank was one demanding radical reform of the high protective tariffs imposed by his opponents. For a time the closet counsellors were confident. The oil and binder-twine duties were reduced. There was talk of other reductions, incidentally of reductions of majorities at the next election. About this time Sir Wilfrid Laurier saw the great light of expediency.

The tariff on woollens was raised, and the steel manufacturers were given not only higher duties, but bounties as well. It may be mentioned in passing that the workers in one of the large steel plants which had benefited largely by bounties, advanced the ridiculous plea that, as competition from the United States had been shut out, and as a portion of the taxes which they paid had been given to their employers in bounties, they had a right to expect wages more nearly approaching the scale obtaining in Pittsburgh. They promptly received protection—from a body of Government militia. How far Sir Wilfrid has advanced during these eight years may be judged from the fact that he proposes that any future modification of the tariff shall be made by the friends of the protective system. In his opening speech of the campaign he said: "There shall be no revision of the tariff until there has been ample investigation, until consideration has been given to every class of the community, to the producer and to the consumer. All classes of manufacturers will be heard and will give their advice, so that the Government will have the best possible advice." The leader of the Conservatives, Mr. R. L. Borden, puts forward his tariff proposals in two words, which, while they would doubtless seem indefinite to the cavillers of the closet, are sufficiently suggestive to all who do things. "Adequate protection" is his slogan. It is distinctly good, as containing much of possibility and not too much of promise.

Even the Pope was surprised at the great majority which Premier Combes obtained in the Chamber in support of his anti-Clerical policy. It portended a speedy movement to abolish the Concordat altogether, and this very week we are to have the text of the proposed measures for the separation of the Church and State. M. Combes made a skilful appeal to national feeling as against outside meddling, even by the Supreme Pontiff. The attempt had been made, he said, to discipline a bishop, both a Frenchman and a Republican, by a tribunal which the laws of France did not recognize. He also made much of the alleged departure of the present Pope from the policy of Leo. Such Parliamentary and political tactics, combined with the feeling against the Church which exists to a certain extent in France, may easily lead to the strange spectacle of a Catholic country supporting its Government in cutting loose from the Holy See.

The incident, in the North Sea, of the outgoing Baltic fleet firing upon innocent British trawlers, had a tragic aspect and a nationally inflammatory effect. In reality, however, it was far less calculated to embroil England and Russia than the attempt to control contraband on merchant vessels. Russia may go to the verge of international law in her efforts to cripple Japan, but she could never purposely seek to draw England into hostilities along with her treaty ally. It is apparent that the Russian admiral had a motive of self-preservation not yet revealed, even if he lost his head. We are also reminded how panicky is the boasted "sea-power" in face of floating mines and destroyers, and what folly it is to go on building these costly battleships, as tender as an eggshell when tapped in the right quarter. The moral is not alone for Russia, whose nervous blunder can probably be disavowed with a clear conscience, and will be expiated. On the whole, British phlegm was never more admirably shown than in the calm with which the public received the bloody news, so grotesque, at the same time, as to be incredible. The press has naturally been bellicose in demonstration, and the British fleets have had to be set visibly in motion, but the mob and the exchanges have alike been unexcitable.

THE CONSPIRACY.

Senator Culberson of Texas, at the Reform Club's Parker meeting in Carnegie Hall on Thursday evening, produced the promised Panama surprise when he read the following letter written by President Roosevelt to Dr. Albert Shaw, editor of the *Review of Reviews*, twenty-five days before Panama seceded from Colombia:

"*Personal.*

"WHITE HOUSE,
"WASHINGTON, October 10, 1903.

"MY DEAR DR. SHAW:

"I enclose you, purely for your own information, a copy of a letter of September 5th, from our Minister to Colombia. I think it might interest you to see that there was absolutely not the slightest chance of securing by treaty any more than we endeavored to secure. The alternatives were to go to Nicaragua against the advice of the great majority of competent engineers—some of the most competent saying that we had better have no canal at this time than go there—or else to take the territory by force without any attempt at getting a treaty. I cast aside the proposition made at this time to foment the secession of Panama. Whatever other Governments can do, the United States cannot go into the securing by such underhand means the cession. Privately, I freely say to you that I should be delighted if Panama were an independent state; or if it made itself so at this moment; but for me to say so publicly would amount to an instigation of a revolt, and therefore I cannot say it.

"With great regard, sincerely yours,
"THEODORE ROOSEVELT.

"Dr. Albert Shaw, Editor *Review of Reviews*, No. 13 Astor Place, New York."

That there was gross injustice, and an unexampled disregard of law and treaty, in the President's course towards Colombia, competent and fair-minded men have been compelled to conclude from the evidence. But they, and the professors of international law who have pointed out the illegality of the President's seizure of Panama, never charged that he was guilty of double-dealing. His own blunt assertion of an intention to do whatever he pleased was bad enough; but if deceit lurked behind, the matter was much worse than was supposed.

It is true that a part of Mr. Roosevelt's letter to Dr. Albert Shaw had been printed. We may say that the whole of it has been in our possession since last November. It was sent to this office, in confidence, by a friend of the President's. That was the amazing thing. This stark admission of a purpose to "take the territory by force," if necessary, was considered by the President a complete answer to the charge that he had taken it by guile. What could be more alarming, as revealing the state of mind of the Chief Magistrate of this nation? The defence was but an aggravation of the original accusation. It was alleged that he had conspired against Colombia, and the answer was that he was prepared to take her property by force! Never was there a more startling revelation of the incendiary ideas in the President's head.

A second question, however, amounting to an issue of veracity, is raised by another phrase in the letter to Dr. Shaw: "I cast aside the proposition made at this time to foment the secession of Panama." Made by whom? Was Editor Shaw proposing to lead a filibustering expedition, like another Walker? Was the Frenchman Bunau-Varilla, whose bad repute stands written in the official documents of his own country, urging the President to promise that use of American warships which was afterwards made, and which Bunau-Varilla pledged himself to the conspirators on the Isthmus would be made? Was Señor Duque, who now says that he "knew" the Administration would support him and the other Panama revolutionists, making a "proposition" to the President? Were any agents of the Panama Company doing it? Some one made the proposition. Who was it? And how, after this admission to Dr. Shaw that he was privy to the plan in advance, could the President inform Congress, as he did three months later, that "no one connected with the Government had any previous knowledge of the revolution except such as was accessible to any person of ordinary intelligence who read the newspapers"? Was the "proposition to foment the secession of Panama" made to the President by the newspapers? To all these questions a speedy and conclusive answer is imperatively required.

A very deadly parallel was constructed by Senator Culberson between a statement in the President's message to Congress and a letter of Secretary Hay's to the Colombian Minister. This letter, it should be added, was not sent to the Senate with the other pertinent documents. Mr. Culberson affirms that it was kept secret for a full year. In it the Secretary made, by direction of the President, a statement flatly contradicted by Mr. Roosevelt himself in his message to Congress. Here is the exhibit:

HAY TO HERRAN.	ROOSEVELT TO CONGRESS.
"I am directed by the President to say to you that in his opinion the 'reasonable time' allowed him by the statute to conclude negotiations with Colombia for the construction of an Isthmian canal has come to a close, and cannot be extended."—January 21, 1903.	"As events turned out, the question of reasonable time did not enter into the matter at all. . . . And yet there had not been a lapse of a reasonable time—using the word reasonable in any proper sense—such as would justify the Administration going to the Nicaragua route."—January 4, 1904.

The truth seems to be that the Secretary was nettled at the miscarriage of his badly managed diplomacy; that the President was wild to get a canal by hook or by crook; and that they turned eagerly to the project of dismembering Colombia. What sort of impression will this letter of Mr. Roosevelt's make upon people in Hayti and San Domingo and Venezuela? With all those countries we have troubled relations. In all of them Americans have great money interests, and are urging the President to intervene in their behalf. Has he written privately to some other friend, "I freely say to you that I should be delighted" if there were a revolt in Venezuela or San Domingo or Hayti? The similar sentiment which Mr. Roosevelt expressed in regard to Panama was so flagrantly improper that it is no wonder his apologists thought it better to leave that part out of their version of the document. Delighted to see a friendly nation broken up! When South Americans read that, they will ask, "Which of us is safe against this plotting American President?"

BELATED PANAMA SCRUPLES.

All the official denials of serious trouble with our new-hatched republic on the Isthmus are themselves denied by the President's letter of instructions to Secretary Taft. Admiral Walker, Gen. Davis, and Minister Barrett have each in turn pictured Panama as a little paradise of contentment. This pretence, however, is now brushed aside by Mr. Roosevelt. He informs us that the residents of the Isthmus are "alarmed" at the attitude of this Government, which they fear intends to injure them in both pocket and pride; and accordingly he resorts to the extraordinary step of sending the Secretary of War on a special mission to compose their ruffled feelings. That there should be in Panama such a thing as "distrust of the American Government" fills the President with grief and pain. It is all a little late, astute Panamanians might say, pointing out that they naturally dread lest the man who swallowed the Colombia camel will not too carefully strain out the Panama gnat.

It is clear that the principles laid down in the President's letter are exactly the opposite of those he acted upon a year ago in dealing with Colombia. If he had been then one-half as scrupulous and conciliatory as he professes to be now, he would never have embarked upon the policy towards Colombia which Senator Hoar and ex-Senator Edmunds described as practically that of a highwayman. Only listen to the considerate man: he even renounces rights which "a just construction of the treaty" might enable us to assert. Last November, he was fairly torturing a treaty to read into it his preposterous claim of power to break up Colombia—all in the way of the purest friendship. To-day, he will waive a clear grant of power, out of fear that its exercise might injure our good name, or that foreigners might be given the impression that the United States had a President ready, in his own language, to "take things into his own hands."

We cannot wonder that the President is ashamed to take advantage of the letter of the treaty with Panama. The people of Panama had nothing to do with its

drafting. The work was done by John Hay and that shameless and discredited French adventurer and conspirator, P. Bunau-Varilla. The juxtaposition of those two names at the bottom of the treaty is not one of which the American Secretary of State can be proud. It is known exactly how Bunau-Varilla came to sign for Panama. A commission of real Panamanians was on the way to negotiate a treaty—had, in fact, actually reached New York—when the *soi-disant* Minister of Panama at Washington signed the treaty before it was dry. Every one remembers how its modification was afterwards prevented, in both Washington and Panama, on the plea that it must be ratified as it stood, lest it fail altogether. We say, therefore, that for the President to insist upon the strict enforcement of a treaty which was practically forced on Panama, would be about as decent as for a money-lender to seize the furniture of a widow because she had not paid him 124 per cent. interest on the chattel mortgage, as his contract called for.

It is obvious that the President's letter is given out not wholly in the public interest. Its intent as an electioneering document is plain. The people are expected to see in it a refutation of the charge that President Roosevelt is aggressive in international relations. In so far as this betrays a sensitiveness to criticism, and a willingness to give a tacit pledge of amendment, it is gratifying. Mr. Roosevelt has unquestionably disturbed many sober-minded Americans by his headlong and high-handed course towards Colombia. He has caused widespread apprehension—that sort of uneasiness which Tacitus, by a happy though unconscious prophecy in his very phrasing, called the *strenuosissimi cujusque periculum.* Now, apparently, the President is trying to remove that fear—or, at least, to reduce as much as possible its adverse effect upon his political fortunes.

This is of a piece with several other recent attempts to convince the public that Mr. Roosevelt is "safe" in his conduct of foreign relations. President Wheeler, for example, gave it out as "good news," on his return from Washington, that Mr. Hay was to be kept in charge of the State Department. The implication was that he would exercise a conservative influence upon a rash President. This reminds one of the promise which Lord John Russell made when he took Palmerston into his Government in 1846, that he would "control" the meddling Foreign Minister and prevent his policy from becoming dangerous. It did not turn out that way. Palmerston's policy was quite along the lines of Roosevelt's idea of "policing" weaker countries, and his "general interference" in Portugal, in Italy, and in Greece, not only brought England to the verge of war, but made her disliked and antagonized throughout Europe. Lord Russell found at last that the only way to "control" the pernicious activity of Palmerston was to turn him out of the Cabinet, which he accordingly did.

Mr. Roosevelt, in fact, might do worse than make a careful study of Palmerston's career. Popularity, no doubt, is to be won by any public man who will make a vehement assertion of his country's claims as against all others. Palmerston was, in his day, the idol of all English Chauvinists. He swung the Big Stick, and the cheers for "Old Pam" were as frantic as for "Teddy." But what was the net result of his foreign policy? To make England at once weak and hated. The contemporary shouting of the multitude cannot offset the historical verdict on Palmerston, which is against him. His conception of diplomacy was, as Sir Robert Peel declared, to use it "to fester every wound, to provoke instead of soothing resentments, to place a minister in every court of Europe for the purpose, not of preventing quarrels or of adjusting quarrels, but for the purpose of continuing an angry correspondence and promoting what is supposed to be an English interest by keeping up conflicts with the representatives of other Powers." And Gladstone, in the great debate in 1850, boldly met Palmerston's swagger about *civis Romanus sum*, by asking:

> "What then, sir, was a Roman citizen? He was the member of a privileged caste; he belonged to a conquering race, to a nation that held all others bound down by the strong arm of power. For him there was to be an exceptional system of law, for him principles were to be asserted, and by him rights were to be enjoyed, that were denied to the rest of the world."

If President Roosevelt's letter of instructions in regard to the treatment of Panama shows that he has seen the error of his ways, and means hereafter to display magnanimity and patience towards the weak, instead of a disposition to browbeat and crush and despoil them, it may be taken as a happy augury.

HELP FROM THE PHILIPPINES.

We cannot imagine fair-minded Republicans approving the course of the Administration in calling upon the Governor of the Philippines to help it in the election. That government which was to "know no politics" we see now that the Republican party regards as a valuable political asset. Secretary Taft's demand upon Gov. Wright, and the latter's dutiful reply, have some aspects that are comic, some that are indecent. In one way, the exchange of telegrams amounts to about this: "Are you making a mess of your work? TAFT." "I don't think I am. WRIGHT." But, in another sense, there is something positively improper and offensive in using several hundred dollars of the public money to pay for a Republican campaign document. In other words, what was predicted when we entered upon our annexation of distant islands has already come to pass. They are flung as a make-weight into the scales of a Presidential election. In the most unblushing partisan spirit, official reports are ordered so as to help the party in power.

Narrowly inspected, what does this vindication of the Philippine Commission by itself amount to? Secretary Taft, recalling how he himself was compelled to make unfulfilled predictions to aid McKinley in 1900, telegraphed over an opinion about conditions in the islands quoted by Judge Parker from a recent investigator on the spot. This opinion Gov. Wright ostensibly controverts, but practically confirms. It was charged that, at their "worst," American officials in the Philippines have been "dishonest, corrupt, and despotic." All that Gov. Wright denies is that "any considerable number" have been. He admits a "number of defaults," but proudly reports that the Government has suffered no loss, since it was "protected by insurance." Gov. Wright states that the "defaulters, with a few exceptions, appeared prior to the inauguration of the law"—that is, the civil-service law. But the report of the Philippine Civil Service Board for 1903 shows that thirty-nine persons had been removed from the classified service "for cause." The notorious cause is embezzlement.

Gov. Wright also, to the ear, denies that the Philippines are in a bad way agriculturally. In reality, he admits it. It should be noted, in passing, that the statements on this point, made by the observer whom Judge Parker quoted, were no stronger than those of that old Philippine expert, John Foreman. Gov. Wright concedes that there has been "a reduced area of cultivation" with "considerable distress," and that the exports (almost wholly agricultural) "fell off" during the fiscal year ending June 30, 1904. Thus does our Philippine Balaam, summoned to curse Judge Parker, come very near to blessing him.

On the question of suppressing newspaper criticism and censoring the native theatres, Gov. Wright's denials are again tantamount to admissions. The Philippine Commission would never think of censoring plays—unless, of course, they contain such "insurrectionary" sentiments as the one suppressed a year ago. So, too, editors are perfectly free to criticise, though they go to jail, along with those two American newspaper men who were condemned as seditious, without a jury, and appealed in vain to the Supreme Court in Washington. Similarly, about the ravages of the ladrones. "Not true," cables Gov. Wright, which he immediately explains to mean that "there are only four or five ladrone leaders," and that there are "still a number of small bands prowl-

ing about." Call you this denying the charges?

Gov. Wright's single round and unqualified denial is of the assertion that taxation is oppressive. But on that question we have some impartial and competent evidence in the November *Atlantic*, at the hands of Mr. Alleyne Ireland. As a student of colonization and an avowed Imperialist, he has been making an expert study of our administration of the Philippines, and comes to the conclusion that it is one of the most wrong-headed, blundering, and burdensome governments ever imposed upon helpless natives. After showing that the Filipinos have to pay 46 per cent. of the value of their exports to support a rule forced upon them, Mr. Ireland adds:

> "That a country should have to pay 46 per cent. of the value of its total industrial product for the privilege of being governed is obviously absurd; and although a dependent tropical government is always expensive, from the fact that the administration is very much better than could arise naturally as a product of native activity, that of the Philippines is much more expensive than it should be.
>
> "Comparing the cost of government, on the basis adopted above, with that of five British dependencies in various parts of the tropics — Ceylon, Barbados, British Guiana, Trinidad, and the Federated Malay States — the average is 27 per cent., as against 46 per cent. in the Philippines."

Mr. Ireland's article is, in reality, a very destructive criticism of our methods in the Philippines. From the beginning, he argues, they have been a medley of good intentions and ignorance, the chief effect being "blindness to local conditions and contempt for universal experience." He thinks that if the officials in the islands—and President Roosevelt along with them, we may add —only knew something of what successful colonization really is, they would not boast so much of having given a model to the world. As it is, they have no basis for intelligent comparison:

> "To give a single example: I was shown in the Philippines some of the most wretched roads I have seen in fifteen years of colonial travel, and was asked with pride whether the English had ever done anything like that for the benefit of their colonial subjects; and when I replied that you could travel a thousand miles in an automobile in the Federated Malay States on roads as good as the Massachusetts State roads, my statement was met, if not with absolute incredulity, at least with the last degree of surprise. It was the same thing in a hundred matters."

Secretary Taft's dragging of Gov. Wright into the campaign would not have been creditable even if it had been successful. Its flat failure will, we hope, prevent further improprieties of the sort. Facts are the last thing the Republicans should try to bring out. Their true line of argument is to say that the American people have become "tired" of the Philippine question, and do not want to be reminded again that, as Mr. Dooley remarks with biting sarcasm, "our own late gloryous war" was "like gettin' drunk an' bein' fined twinty million dollars or a hundred years in th' Philippeens."

AN OVERRATED SPEECH.

The reputation which some men build up on the slenderest of foundations is astonishing. Take the case of Mr. Vanderlip, formerly Assistant Secretary of the Treasury, and his address before the Illinois Bankers' Association on October 18. It has been everywhere commented upon as a noteworthy deliverance, and Mr. Vanderlip is referred to as one of the acutest of financial critics; yet will it be believed that, in attempting to analyze the sources and conditions of American prosperity, he left out the main cause? He never once mentioned the tariff! This, of course, of itself fixes Mr. Vanderlip's true rank as a thinker. He is nothing but a shallow sophister. The common or wayside Republican stump-speaker would be ashamed to display such ignorance. To speak of the financial resources and industrial growth of the United States without tracing all to that one first cause, least understood, the tariff, is to be as mad as an undevout astronomer.

It is really painful to find a man of Mr. Vanderlip's standing groping about for obscure and inoperative causes when the explanation of the whole is as clear as daylight to any man who will open his eyes. Our ablest publicists have given us the unquestioned truth; and they will experience a shock when they read of his crude opinion that our recent prosperity was intimately dependent upon the establishment of a sound currency. "Poor man," they will say; "still in the beggarly elements! Doesn't he know that the Dingley tariff was enacted before any financial legislation after what he calls 'the definite verdict of the people' in 1896? And of what earthly use is it to have a gold standard if you have no tariff to make us all rich?"

In some of the statistics which Mr. Vanderlip presented, there was here and there what looks unpleasantly like a suppression of a vital truth. For instance, Mr. Vanderlip said, in enumerating our actual resources, "We have a corn crop worth $1,000,000,000." Yes, but why was he not frank enough to tell us that it was all grown under the fostering influence of a protective tariff? One glance at that sacred oracle which enshrines all our hope—the Dingley tariff—should have put him on the right track. Section 227 reads, "Corn or maize fifteen cents per bushel of fifty-six pounds." We do not say it was positively dishonest in Mr. Vanderlip to conceal this duty on corn, but we ask fair-minded men what is to be thought of one professing to be an authority on finance, who has the effrontery to go to Illinois, where every farmer *knows* that a duty of fifteen cents a bushel grows more corn than all the fertilizers used in agriculture, and to discuss the value of the crop without once laying the credit of the whole at the feet of Dingley and the Republican party? Well, we may be sure that the sturdy Republicans of the West saw through Mr. Vanderlip's fallacies. It is not so stated in the dispatches, but we have little doubt that when he spoke so superficially of our wheat crop worth $412,000,000, some instructed person in the audience—a man, say, who had received the pure milk of the word from Senator Fairbanks—whipped out his tariff Bible and cried out, "Credit to whom credit is due! How much wheat could we have raised had it not been for section 234, 'Wheat, twenty-five cents per bushel'?"

We really have not the heart to pursue Mr. Vanderlip's misleading statistics further. Such a very little twisting would have made them sing the praise and glory of protection that his refraining will inevitably arouse suspicion. This will be heightened by his unguarded admission that "the result of the Presidential election," whatever it be, contains no element of business danger. This is pretty cool, coming as it does after the clear proof, which some even of the youngest of Republican orators have been able to make, that Judge Parker's success would mean instant and widespread misery. Mr. Vanderlip pretends to be well informed, yet he appears to be ignorant of the very a b c of financial wisdom, the very kindergarten of tariff doctrine, as laid down by President Roosevelt. The latter carefully explained in his letter of acceptance that, if he is not elected to keep the tariff "pat," the wage-worker will be "either turned adrift entirely, or his wages will be cut down to the starvation-point." Yet Mr. Vanderlip ignores that high and disinterested authority!

Perhaps the very worst of his blunders remains to be mentioned. He affirmed that the experience of the past ten years has taught Americans the wholesome lesson that "there is not a new political economy." This is distressing. We go to this wide-awake man of the market-place, and we only find him talking like one of President Roosevelt's despised counsellors of the closet. We had supposed that the facts were understood. Political economy, it is well known, was a cunning invention of Englishmen, designed to enable them to prevent foreigners from becoming as prosperous as they. But, even putting this aside, we should like to know how a science devised and adopted for a country having only 50,000 square miles, and neither prairies nor Niagara Falls, can be fitted to a majestic country of more than 3,000,000 square miles, without a ruin. Mr. Vanderlip is ludicrously wrong. We *have* made political economy all over. We have shown the world how to sell without buying, how to get rich by taxing ourselves, how to save money by

squandering it, how to make huge profits out of customers whose trade we have destroyed. The United States has made the old political economy as obsolete as one of Cleopatra's bonnets, and has developed a system independent of the musty writers of long ago—yes, independent even of arithmetic and common sense. But Mr. Vanderlip, pretending to be an American with his face to the future, denies us this glorious power to break the old moulds, and tries to discourage us by saying that we, children of destiny, time's noblest offspring, have got to do business just as if we were a lot of stupid Englishmen or plodding Germans! He evidently needs a thorough course of Republican campaign oratory.

BABES AND SUCKLINGS.

Two pieces of news that will interest all parents and educators have recently come from Chicago. The children in a grammar school objected to one of the teachers and organized a strike. The affair was managed in the most approved manner. A cordon of pickets, none more than fifteen years old, was stationed about the building; outside this line five or six hundred boys and girls, wearing "union" badges, hooted at the "scabs"—the name applied to the teachers who gazed from the school windows. An infantile walking delegate was on patrol, cautioning his pickets not to yield to either mother or father. It was in Chicago also that some older pupils were equally determined to assert their rights, though they appealed, not to brute force, but to the courts. The Board of Education, in order to break up the nuisance of secret societies in a high school, passed a rule that no member should participate in literary and athletic contests. Certain students and their obedient parents promptly applied for an injunction against the enforcement of the rule, on the ground that it was "unjust" and "vicious." In this particular institution there were ten Greek-letter societies, which, it is averred in the complaint, "stimulated loyalty."

All this reads like a fairy tale to men who have reached the age of thirty-five. These ancient *laudatores temporis acti* wag their heads sadly over the degeneracy of the times, and lament that youth is no longer held with a strict hand, as when they were boys. The official spokesman of these melancholy graybeards is Principal Henry L. Boltwood of the Evanston Township High School, Illinois. Mr. Boltwood lives near enough to Chicago to watch the doings there of the heirs of all the ages in the foremost files of time; and he apparently believes that the temper exhibited in Chicago, though it may not have found such emphatic expression elsewhere, exists throughout the country. In a recent address he said: "College athletics and college secret societies are the special features of college life which are injuring the secondary schools."

In developing his thesis Mr. Boltwood argues that the children in our secondary schools, aged from twelve to eighteen, are eagerly imitating the most objectionable features of college life; and he enumerates hazing, betting on athletics, cheating in order to keep on athletic teams, and "cheap imitations of college fraternities, especially in the things in which the college societies are most at fault." To this indictment another count has been added by Dr. Luther Halsey Gulick, physical director of the New York city public schools, who protests against the growing evil of professionalism in school athletics. All this expert testimony can hardly be disputed, for it confirms the belief of people who, though they may have watched the secondary schools less carefully, have nevertheless been much disquieted by unhappy tendencies.

One cause of complaint can never be removed—the youthfulness of the young. The exuberant silliness of adolescence has always been the theme of philosophers as well as of satirists, and it will continue to provoke admiration till the human race becomes extinct. But conditions in the year of grace 1904 are in some respects different from those of 1880—to go back to a prehistoric epoch. To-day the newspapers are giving wider publicity than ever before to the performances of college students; and the facts in which the public seems most interested relate to boyish pranks and athletics. Our football gladiators are sharing with Roosevelt and Parker the distinction of being the foremost men of America. Their pictures adorn our dailies and weeklies; the condition of their muscles is detailed by the column; and their games are minutely reported. Were the captain of the Harvard or the Yale team to sprain an ankle, the accident would be displayed with the startling headlines which are reserved for elopements in high life and other events of transcendent and national importance. All this ink and paper has its effect on the imagination of a boy who lacks that exquisite sense of proportion which invariably distinguishes his elders. The ingenuous lad really thinks a college athlete is a person of consequence, worthy of the fuss made over him; he acts on the sincere conviction that a defeat in athletics is a real blow to the prestige of a college or school; and he never dreams that election to a "swell" Greek-letter society may not be worth several years of assiduous boot-licking.

The result of this distorted view, according to Mr. Boltwood's observations, is a lowering of the morale of the secondary school, in athletics, in amenities of social intercourse, and in studies. The school is broken up into small rival cliques, which strive to secure for their members prominent places on the teams, which give expensive receptions and dances, which snub the "outside barbarians," and which consistently subordinate study to play. Mr. Boltwood's depressing conclusion is, that, while the secondary school is now suffering because its pupils are imitating the follies of college "men," the college will in turn suffer "from a lowering of the character of its recruits." In fine, the college and the school are chasing each other down a seemingly bottomless hill.

There is, however, one factor that has not been taken into the reckoning. Though the public is now daft over college athletics, the mania must sooner or later run its course; we cannot go on at the present pace forever. If our American colleges are to retain the support of serious people, they must do something to check the excesses of athletics, the reckless squandering of time, strength, and money. Our contests must cease to be huge financial enterprises; and parents must tire of butchering their sons to make a Boston or a New York holiday. When the reaction sets in, it will be an undisguised blessing to students of all ages, from the post-graduate school to the kindergarten.

SHAKSPERE AND THE SYNDICATE.

One swallow does not make a summer, and one Shaksperean revival does not necessarily portend the dawn of a new era of the higher drama upon the stage. Nevertheless, the production upon an elaborate scale of three great Shaksperean plays for a season's run in a circuit of syndicate theatres has in it a good deal of cheerful significance.

For the last decade, at least, the stage has been falling into deeper and deeper discredit with the better class of playgoers, who are its most substantial support. In that time there have been a few good new plays and some good individual performances, but the number of both has been steadily diminishing. Of popular successes, of course, there have been many, but a large proportion of these must be ascribed not to inherent merit, but to various kinds of sensationalism, personal notoriety, artful advertising, lack of competition, and a gradual debasement of public taste. But, on the whole, the financial results were satisfactory to the managers. Their system was slowly but surely killing the goose which laid their golden eggs; but so long as there were eggs they were content and confident. Last season, however, there were no golden eggs at all. The goose had been fed too long upon promises and expectation only, and stopped laying. To quit metaphor, the situation in which the managers found themselves was this: They had conceived the notion of making the dramatic output of one continent serve for two. Plays that

had succeeded in London, Paris, or Berlin must, they argued, succeed in America also. Therefore, a monopoly of these plays and of the best local theatres must lead to fortune. What was the use of bothering about native talent, of encouraging native dramatists or raising a body of American actors? Actors of real or wholly fictitious reputation could be imported if needed, as easily as plays, and all the United States beguiled with drama at second hand, a little worn, perhaps, but stamped with European approval.

It was a pretty and attractive scheme, and it was put into operation with remarkable executive ability. But it had the fatally weak point, that it paid no heed to the inevitable failure, sooner or later, of the supply, not only of plays and dramatists, but of actors. You cannot raise crops, season after season, upon soil that has been overworked and never fertilized. The coöperative managers were too thorough in their operations. They reaped, and reaped, and reaped, without paying any heed to the growing exhaustion of the land, until they found themselves suddenly confronted with conditions of almost absolute barrenness. Of the score or so of dramatists who had been permitted to share the profits of the fat years, some had retired to enjoy a moneyed leisure, others had worked out their rather thin vein of inspiration, some were dead. Of promising new men to take their places there was scarcely a sign. The deadly policy of monopoly, by choking competition, had throttled effort, so far as competent writers were concerned. It had done more than this. By its short-sighted system of forced long runs, it had practically put an end to the production of real actors; that is to say, of men and women capable of any histrionic achievement greater than the perpetual reproduction of their own personalities in minute variations of the modern social drama.

Twenty-five years ago the American theatre was thought to be in a parlous state, but in New York, Boston, and Philadelphia there were still houses where first-rate interpretations of masterpieces could frequently be enjoyed. They are almost unknown to-day. Everybody knows the shifts to which contemporary managers have been driven to disguise the poverty of their literary and dramatic resources—the manufacture of stars by advertisement, the exploitation of social scandals and immorality, the crude dramatizations by hack-writers of trashy but popular novels, the lavish displays of millinery to attract the women, and all kinds of sensation and scenic extravagance to please the gallery. True lovers of the theatre and believers in its artistic and civilizing mission have noted, not without a growing hope and expectancy, the increasing inability of these pernicious expedients to satisfy the public demand for solid and rational entertainment. The financial disaster in which so many theatrical enterprises were overwhelmed last winter was significant of public discontent.

The syndicate managers are shrewd men, who cannot be altogether oblivious to the meaning of these signs. One lesson they must have learned from painful experience, and that is that a good play which was successful when well interpreted in one city, is by no means certain to prove equally profitable when badly performed in another. The fate of "Ulysses" was a case in point; and many others might be cited. That Shaksperean plays gorgeously mounted and carefully acted will almost always pay, Mr. Beerbohm Tree has abundantly proved in London. The magic of the poet's genius exercises its spell even when the power of the medium to interpret it does not rise much above the level of mediocrity. It is almost an axiom that a great play, with its universal appeal to human intelligence, will, if moderately well given, prove more profitable to the box-office than any shallow, flashy piece of no general interest. There is just a chance that this truth, a platitude to all students of theatrical history, has been recognized by the syndicate managers. If they can be brought to realize that the play is the thing, it will not be long before they realize also that they need actors, not mere tailor's blocks, if their elaborate fabric, which has no solid foundation, is not to collapse in indistinguishable ruin.

Herein lies the true importance of their present Shaksperean enterprise, which has begun well. If it prospers they will extend it, and a group of Shaksperean actors will gradually arise. But there will be no such consummation unless the companies are permanent, and this would involve a return to something like the old stock system and a partial revolution in the syndicate methods of management. A stock company without a permanent home would be an anomaly, and the syndicate may be compelled to adopt this view by mere force of circumstances. Training schools for actors of some sort they must have, or go out of business. Should they be reduced to this extremity, a result which is not entirely beyond the bounds of possibility, stock companies would be formed everywhere by the exigencies of the situation, and some of them unquestionably would be Shaksperean.

THE ARKANSAS COTTON BELT.

HELENA, October 10, 1904.

A geological excursion through the Cotton Belt of northeastern Arkansas has, to a Northerner, much beside scientific interest. Indeed, such an excursion probably offers better opportunities for observing the sociological conditions than would a trip made for that special purpose. All the more is this true where the geology has much to do with the sociological problems.

One of the most puzzling geological problems of the Mississippi Valley is found in Crowley's Ridge, which runs from the vicinity of Cape Girardeau in Southeastern Missouri, to Helena, in Arkansas, a distance of about 200 miles. This long, low elevation nowhere rises more than 200 feet above the plain of the upper part of the old delta of the Mississippi, which begins at Cairo and gradually increases in width until the Gulf of Mexico is reached. Here, on the Arkansas side, this delta is from fifty to sixty miles wide, and much of it is overflowed in high water. The overflow, however, is largely from small tributaries to the great river rather than from the Mississippi itself. A curious phenomenon is presented by the St. Francis River, which rises not far from Cape Girardeau, where it is separated from the Mississippi by so low a pass that the flood of the main stream sometimes overpours into it, and so furnishes to the tributary a volume of water which is out of all proportion to the local rainfall.

As a consequence of all this, a wide belt of land bordering the Mississippi in Arkansas is peculiarly adapted for the raising of cotton and other agricultural products which demand a soil enriched by occasional overflows of silt-bearing water. It is through the centre of this belt that Crowley's Ridge runs, dividing it into two nearly equal parts, the St. Francis River being about half the way on one side of it and about half the way on the other. The basis of this ridge is a deposit of tertiary gravel, but it is everywhere overlaid by a capping of loess from twenty to fifty feet thick, which is as much like that deposit where it appears in largest amount and gives fertility to the valley of the middle Missouri, to the wheat belt of Southern Russia, to the irrigated portions of Central Asia, and to the plains of Northeastern China, as two peas are like each other. If, as seems most probable, this is mainly a water deposit, its envelopment of Crowley's Ridge points to a general subsidence of the lower Mississippi Valley, during late glacial or post-glacial times, of more than 200 feet.

Unlike most of the highlands of the Southern States, Crowley's Ridge has in it elements of fertility almost equal to that of the vast flood-plain above which it rises; but as it is heavily covered with timber and is more subject to droughts, its cultivation has been delayed. It is interesting to observe, however, that the population which is spreading over it largely consists of colored families, who give remarkable signs of industry and thrift. Around their comfortable cabins were ever-enlarging fields, which were in process of clearing by the rather slovenly but perhaps economic method of girdling the trees and suffering them to stand for a number of years while successive crops of cotton were luxuriating in the virgin soil.

One of the most cheerful sights which greeted our eyes was that of the numerous bevies of neatly dressed negro children, with school-books under their arms, wending their way to some school-house in a sequestered nook which had escaped our notice. Arkansas has not, indeed, a high reputation for its expenditure in support of schools, either white or colored, but nu-

merous indications like this, in the country districts, added to that of the large and flourishing colored schools found in Helena, give one much greater hope for the negro population than is derived from the representations of some of the Northern missionary societies. It was especially gratifying, in attending the largest colored church in Helena, to observe that the preacher addressed his audience (consisting mostly of young people) in a manner which indicated a fair degree of educational development, and that, among the notices which he gave out, one of the most prominent was of the opening of the public schools upon the following day, and his advice that his hearers should make the most of them by being on hand at the beginning.

This religious service was itself an indication of prime importance in helping one to form an estimate of the future of the colored people. There are, it is true, numerous colored congregations of the old style, where much can be seen that is amusing and ludicrous; but it would be no more fair to judge the negroes by the most unprogressive members than it would be to judge the white race by their lowest stratum. It should be set to the credit of the colored people that there are in this small city several well-attended congregations where the singing and the preaching compare fairly well with the corresponding exercises of the average congregations in large portions of the country settled exclusively by whites. It is these congregations which are setting the pace for the others, and are working most surely for the ultimate advancement of all.

But, going back to the cotton districts, it was significant to notice that nearly all the work done in the more productive portions of the district was by colored people, and that to a very creditable degree they are coming into possession of the lands in small holdings, the owners of the estates renting or selling almost exclusively to negroes; the poor white population, for one reason or other, cannot compete with them in the cotton fields. This is largely the case, we were told, for social reasons. The negroes so predominate that a self-respecting white family of the working class is bereft of society in the cotton fields, and so the whites are more and more retiring to the less productive higher land beyond, where they eke out a precarious existence in simpler modes of agriculture. It is certain that the negroes are to possess the cotton belt of the South.

Saturday is a great day at Helena. Though the city itself contains but ten or twelve thousand inhabitants, by the middle of Saturday afternoon it seemingly contains fully twice as many, the addition consisting mainly of colored people from the outlying districts who have come in to spend a holiday. They came in all ways imaginable—on foot, on horseback and muleback, riding donkeys, and driving cattle harnessed to broken-down wagons; but there was also a goodly sprinkling of strong Studebaker wagons carrying large families of happy children, and not a few covered buggies containing fond lovers or newly married couples. It was altogether one of the gayest scenes imaginable. For the most part the people were neatly dressed, though not always with the most fastidious taste. We saw no drunkenness or street brawls, while long before sundown every road was hidden by a cloud of dust raised by the happy returning crowd.

On inquiry of several men who have been engaged in business for more than thirty years in Helena, we were assured that the signs of thrift among the colored people of that vicinity have increased materially within the last five years—so much so, indeed, as to mark a new epoch in their history. A director in one of the three banks of the city said that, in his bank alone, there were 400 colored depositors with deposits ranging from four to four thousand dollars, and that there has recently been a marked improvement in the tenacity with which they held on to their bank deposits. His opinion was, that the depositors in one of the other banks were more numerous than in his, so that, probably, the total number of colored depositors would be 1,200. Another gentleman, of equally long residence and wide business connections, said that he had had much experience in selling land in small holdings to the colored people, and that he had observed within the last few years a marked improvement in the promptness with which they were paying their indebtedness. Especially was this noticeable in connection with the recent high price of cotton. The increased receipts were not being squandered, but were applied towards discharging their mortgages and improving their property. In one case, where he had sold 1,500 acres in small holdings, every one had been paid for.

A study of the whole situation also leads an unprejudiced Northerner to be less severe in criticising the attitude of the Southern whites on the question of negro suffrage. Friendly Northerners who have been for thirty years doing business in the region say that when they went there all the offices were in the hands of the colored people, and that the public business was being conducted in a way that would lead to the speedy ruin of everybody. It was an absolute necessity that it should be rescued from the hands of the negroes. When asked what would be the effect of unrestricted suffrage at the present time, the reply was promptly given, that it would result in the return of the colored people to all the offices and the practical disfranchisement of the more intelligent property owners, with a repetition of carpet-bag rule.

Still, strange to say, the negroes do not seem to bear resentment against the white people for taking the reins of government into their own hands as they have done, but are everywhere on the most friendly terms with them. Indeed, this is one of the most striking characteristics of the race, as was illustrated in some painful observations on board a river steamboat coming down the Mississippi. Nothing could be imagined more harrowing to one's sense of justice than the tones of voice and the insulting language with which the mates ordered the stevedores about when engaged in the arduous labor of transferring freight from the steamer up the steep incline of the gangplank to the improvised landing upon the bank. Every tone and word was designed to humiliate the person addressed. At one time, when there was a little hesitancy, a heavily leaded stick was thrown with angry vigor into the midst of the company, who were vainly striving to lift a heavy burden; and yet there was never a murmur or complaint or any signs of resentment from the overworked roustabouts.

Perhaps, however, one's sympathies are likely to be overwrought on such occasions, for it was remarked that when no work was to be done the overseer spoke kindly to the men, and even fraternized with them. Furthermore, the men were paid $2 per day with board and lodging, which we observed was so attractive that when the boat was making up its crew there were several times as many applicants as positions, and the clamor to obtain the places was such as would do credit to a Wall Street exchange when stocks were booming.

On the whole, we are led to believe that the Southern problem is not so different from labor problems in general as is sometimes supposed. The forces at work for the elevation of the colored people are the same as those which are inherent in all civilization, and are now tending with increased force to elevate the race with little regard to the question of suffrage, which is suppressed for a season through the excessive fear of the whites having its origin in conditions which will eventually pass away under influences that cannot be resisted. The negroes of the South are in the main amply protected in their civil rights—as much so as women and children are in ordinary communities. A negro can collect a debt as easily as a white man can. They are also improving their educational facilities in a striking degree. They are acquiring property; they are slowly learning business habits, and they are more and more commanding the respect of the business men who are dealing with them. Taking a long look into the future, one cannot be doubtful of the result. We shall eventually have a colored population at the South which will command the respect and confidence of all.

G. Frederick Wright.

Correspondence.

THE "PEONAGE" LAWS OF THE SOUTH.

To the Editor of The Nation:

Sir: You may be interested to know that the Supreme Court of Alabama has recently held that the "peonage" law, under which negroes were fined and imprisoned for violating certain kinds of contracts, is unconstitutional. The case is reported in 37 Southern Reporter, 332 (advance sheets published October 15, 1904).

A similar law was held by the Supreme Court of this State, a few years ago, to be constitutional. It is a disgrace to the State, and it ought to be carried on up to the Supreme Court of the United States, where it would undoubtedly be declared void.

Yours very truly,

J. W. Hawthorn.

Ruston, La., October 17, 1904.

THE HOUR AND THE SCHOLAR.

To the Editor of The Nation:

Sir: A Wall Street broker sent word the other day to his friend, a college instructor, that he didn't see "how any sane man could vote for Judge Parker." The other man could not conceive how any clear-minded student of history and economics, de-

pendent on a fixed and scanty income, could hesitate so to vote. Mr. Cleveland seems to him the sanest man in the country, Mr. Shepard the sanest of New York politicians. The recent speech of the one, the *Atlantic* article of the other, should relieve the broker's mind as to his friend's mental health, at least.

Nearly all of us heartily like and admire Col. Roosevelt; but most men realize no less that his nature and temper point out for him a very different sphere of activity. He has frankly abandoned the leadership he so rashly assumed in the assault on the worst features of the tariff. In that direction the Judge is the only hope of reformers. Nor is the Republican Senate a perfectly secure barrier to progress. Next year a bill of a hundred words, or single bills still briefer, according free cattle, free coal, free iron, free copper, might be something more than good politics. Would the Massachusetts Senators, for instance, ignore a national popular mandate, and urgent instructions from their home Legislature, and oppose such measures?

But why—and for that query this letter was begun—why is no academic voice heard clearly in this economic, social, and moral crisis? The tariff is a question, mainly, for experts. A dozen such could be named from Morningside, New Haven, and Chicago alone. Their general alignments are not unknown; to suppose them indifferent is absurd. Can it be that the financial hopes and needs of institutions, as seen by their executives, are weighty enough to secure silence?

"Nearer comes a hungry people." Mr. Carnegie is not alone in realizing that the enormous increment of national wealth should be, must be, will be, more equitably distributed. The attempt to save or restore by legislation the sturdy, independent middle class, the free farmer, artisan, and tradesman, will certainly be made. If the indomitable forces of liberalism have wise and prudent leaders, all this may come gradually, peacefully, normally. But if the Gracchi be put to silence, Marius is always ready. Even Cæsar may be already born.

The supreme need of the hour is the need of all hours. Politics should not be absolutely controlled by "practical men." The wisest, the most philosophic thinkers and students, the Bryces and the Morleys, should, and in any rationally organized commonwealth would, win, in middle life, positions so honorable, so secure, even financially so comfortable, that thereafter the strongest and plainest utterance of salutary truth, however unpalatable and unpopular, would be their chief remaining ambition and duty.

Who and where are such American scholars? W. C. L.

October 23, 1904.

Notes.

The first attempt to edit scientifically any of the books of Eliot's famous Bible and to bring them within the easy reach of scholars and the general public will be made in 'The Proverbs of Solomon, King of Israel: From Eliot's Indian Bible,' edited, with introduction, notes and vocabulary, by Alexander F. Chamberlain and William Wallace Tooker. Soon the statement may disappear from the public prints that the last person who could read Eliot is dead. The tercentenary of Eliot's birth falls in 1904, and this work will form one tribute to his memory. The difficulties of the task are such that no exact date of publication can be announced.

Francis P. Harper is on the eve of bringing out 'The Life and Writings of Father Pierre-Jean De Smet,' from his unpublished manuscript journals and letter-books and his printed works. This Flemish missionary to our Western Indians had extraordinary opportunities in the period 1838-1872 of studying our aborigines, and the four volumes which have been edited by Major Chittenden and Mr. Alfred T. Richardson fit in alike with St. Louis's celebration of itself and with the Lewis and Clark commemoration. Portraits, views of old trading posts, and maps will accompany the text.

The Macmillan Co. have nearly ready the first volume of a revised edition of Grove's 'Dictionary of Music and Musicians'; an enlarged edition of Dr. E. E. Hale's 'Memories of a Hundred Years'; 'The Declaration of Independence,' by Herbert Friedenwald; 'The History of Columbia University,' now celebrating its 150th anniversary; 'The Practice of Self-Culture,' by the Rev. Hugh Black; 'The Christian Opportunity,' being sermons and speeches delivered in America by Dr. Davidson, Archbishop of Canterbury; and 'Players and Vagabonds,' by Miss Viola Roseboro.

Forthcoming from Dana Estes & Co., Boston, are Alexander Dyer's 'Glossary to Shakspere'; a Life of Shakspere, by W. J. Rolfe; a 'Shorter History of Ancient Egypt,' by Percy E. Newberry and John Garstang; and 'Japan: The Place and the People,' by G. Waldo Browne.

The Whitaker & Ray Co., San Francisco, will publish directly 'The History of California and its Missions,' by Bryan J. Clinch, in two volumes, with more than forty illustrations.

'The Makers of Modern Fiction,' by Prof. J. W. Dawson, is in the press of Thomas Whittaker.

Thomas Y. Crowell & Co. are at the season's forefront among republishers, with Defoe's Works in sixteen duodecimo volumes. Each contains an etched frontispiece, and Defoe's text is preceded by an introduction from the pen of Mr. G. H. Maynadier, of Harvard's English department. This part of the editing is conscientious and informing, while the stamp of the University Press inspires confidence in the accuracy of the letterpress. This is not in any sense, nor is it intended to be, a luxurious edition, but one reasonably within the reach of all who buy books. The external appearance is neat and unpretentious.

Messrs. Crowell also send us a long row of reprints fitted for the same shelf with the foregoing, and part of the series "no gentleman's library should be without." We can barely enumerate them—Boswell's Johnson; Lockhart's Life of Scott; Mrs. Gaskell's Life of Charlotte Brontë; Cross's Life of George Eliot; Irving's Lives of Columbus and of Mahomet; Farrar's Life of Christ; Harrison's Life of Poe; William Morris's Poems, selected and edited by Percy Robert Colwell; and standard fiction like 'Gil Blas,' Bulwer's 'Rienzi,' Lever's 'Harry Lorrequer,' Miss Austen's 'Pride and Prejudice,' and Ware's 'Zenobia.' All these have at least a frontispiece embellishment, and are simply printed and bound.

We will mention here that the same house has brought out Tolstoy's 'Bethink Yourselves!' in attractive form and solid binding, so that this tract is now being doubly circulated in the United States. We know of no country in which the following passage could be pondered more profitably: "A soldier said in answer to my question: 'And how if the enemy attacks what is sacred?' 'What do you mean?' I asked. 'Why,' said he, 'the flag.' And if you endeavor to explain to such a soldier that God's commandment is more important, not only than the flag, but than anything else in the world, he will be dumb, or will get angry and report you to the authorities."

The sixth edition of Dr. C. W. Dulles's 'Accidents and Emergencies' (Philadelphia: Blakiston) is an admirable volume, illustrated, devoid of the usually useless elementary anatomy and physiology that so often encumber such books. It excellently instructs laymen in the relief of the commoner injuries. One of its pieces of important advice, that deserves wide circulation, is: "Live wires held by the sufferer may be short-circuited by dropping (not laying) across them a metal bar, like a poker or crowbar."

Houghton, Mifflin & Co. complete with a ninth volume, 'New France and New England,' the set of the late John Fiske's history of the American Colonies in the illustrated edition. We have from time to time praised the discrimination used in providing portraits, plans, maps, scenery, titles of old books, maps, autographs—everything authentic and helpful, and nothing more imaginary than old prints (as here of Champlain's encounters with the Indians) which have a curious and antiquarian value. The present illustrations are strictly in line with the former. A good example of the mode of choice is afforded by those which accompany the chapter on Salem witchcraft. We will single out for mention the photo-engraving after the supposed oil portrait of Marquette that turned up seven years ago in Montreal. Though disputed, it is probably as good a likeness as some of its fellows having a printer's label. The volume is very handsomely made.

Funk & Wagnalls have, since our recent notice of Walter Sichel's 'Disraeli: A Study in Personality and Ideas,' become the American publishers of this work.

The veteran musical critic, Mr. George P. Upton, a translator also in many fields, is adapting from the German for A. C. McClurg & Co. an attractive little set of "Life Stories for Young People," as, Beethoven and Mozart by Franz Hoffmann, William Tell by Ferdinand Schmidt, and the Maid of Orleans by Frederick Henning. These narratives have been well calculated for youthful minds past infancy, and Mr. Upton's version is easy and idiomatic. The German illustrations have been taken over, but they are all fanciful, and we should have liked instead (or in addition) portraits of the two composers, the Maid in some modern French statuary, the Lake of the Four Wood Cantons, etc. However, we would not be grudging in our commendation.

We have received a generous handful of volumes in the "Oxford Modern French Series," edited by Leon Delbos, and publish-

ed by H. Frowde. They are thin crown octavos, decently bound in buff, and excellently, if compactly, printed; and are very reasonable in price. Each has an author's biography in front and notes at the end. We are thus provided with extracts from Balzac ('La Vendetta,' etc.), Alphonse Karr ('Autour de mon Jardin'), Lamartine ('Histoire des Girondins'), Chateaubriand ('Mémoires d'Outre-tombe'), Tocqueville ('Quinze Jours au Désert,' etc.), Sandeau ('Mademoiselle de la Seiglière'), Hugo ('Bug-Jargal'), and Gozlan ('Château de Vaux'). The series deserves the attention of educators, since the aim is to provide a high grade of models for translation into flawless English.

'My Chinese Note-Book,' by Lady Susan Townley (London: Methuen & Co.), is a perfectly clear and compact narrative of her interviews with the Empress Dowager of China and the Mantchu princesses of the Court in Pekin. Part I., or one-half of this book of more than 300 pages, contains an historical résumé, with a sketch of the three religions of China—the moral, ideal, and material, or Confucianism, Buddhism, and Taoism. It is refreshing to find the compiler using critical authorities, and realizing the comparative lateness of real history and the mythical character of most of the pre-Confucian annals. The lady's brief travels were mostly in the Pei-ho valley, and up the gorges of the Yangtse River. Her most interesting and very vivid chapters are those describing her more intimate experiences with the court ladies and Empress, as she sat on the *kang*, amid the ticking of many foreign clocks, and ate sweetmeats as she chatted. One touch of feminine nature makes the whole world kin: we read of the grand dame who makes all China tremble, but, nevertheless, always carefully sees that no robber gets under the bed. Besides two slave girls sleeping on the floor of her room at night, others watch outside the door. The poor Emperor is kept down severely, and made to know his place. The book is well illustrated, and probably gives the best, as it is the liveliest, account of feminine life at court, and especially of the new woman in China educated abroad. Chinese maids of honor have already been given audience while arrayed in Parisian costume, with a courtesy instead of a kowtow. An automobile presented to royalty by a progressive viceroy is probably *non grata*, partly because of the necessity of the Daughter of Heaven sitting behind the driver, and partly because of the woful lack of paved streets in dusty Pekin.

The Chicago Exposition was signalized by the publication, through the American Library Association, of an annotated A. L. A. Catalogue ('Catalog') of 5,000 volumes suitable for a small public library. This work had a marked success, appealing not only to librarians, but to private purchasers and even to students. Before the St. Louis Exposition has closed, we now have a reissue, or rather a complete new Catalogue, designed for 8,000 volumes, under Mr. Melvil Dewey's direction, and classified according to his decimal system. It is essentially an English collection, few foreign works being admitted except in translation. It is in two parts, one classified, the other arranged in dictionary fashion by author and subject. Annotations of appraisal, moreover, and hints of contents accompany the first division, and the authority for each is ascertainable from a table. We need say nothing more of so meritorious a work than that it issues from the Government Printing-Office, under the auspices of the Library of Congress, which, together with the American Library Association and the State of New York, has helped to bear the cost of the enterprise. Future editions are anticipated, when an attempt will be made to indicate the books desirable for a library of 1,000, 2,000, and 5,000 volumes respectively. In the two catalogues of 1893 and 1904, fiction rates at 16 per cent. of the total number of titles. Biography, literature and history stand next in order, each at 13 per cent. plus.

Another, if an humbler, A. L. A. Annotated List is Miss Caroline M. Hewins's 'Books for Boys and Girls,' which now appears in a second edition revised (Boston: A. L. A. Publishing Board). There is nothing better of the kind, and it is made fairly *readable* by the compiler's talks by the way, which are worth pondering.

We can also report the appearance, from the Victoria University Library, Toronto, of a 'Bibliography of Canadian Fiction (English)', by Lewis E. Horning and Lawrence J. Burpee. It makes a pamphlet of eighty-two pages. Slight biographical sketches are reserved for Canadian authors, born or naturalized. Many of these are well known on this side of the border. The publisher is William Briggs, Toronto.

'A Primer of Library Practice for Junior Assistants,' by George E. Roebuck and William Benson Thorne, bears the imprint of Messrs. Putnam, but is English-made and intended. Its summary historical survey of the establishment of public libraries in the United Kingdom and of the legislation to that end is supplemented by the full text of the culminating Act of June 27, 1892. In practical details, while much useful information is conveyed, the instruction will seem rather primitive on this side of the water, where library appliances are so much more highly developed. Still, for that reason, the comparison will be profitable, even of the technical terms employed, *e. g.*, "manuscript catalogues" for card catalogues. Another thing that will strike library assistants here is, that in England they are assumed to be of the male sex only.

Petermann's Mitteilungen, number eight, opens with an account of an archæological journey through the Libyan desert to the Siva oasis, by Prof. G. Steindorff. Its most interesting incident was the visit to an ancient temple, in good preservation, on whose walls were Egyptian reliefs representing the Pharaoh and the ruler of the oasis presenting their offerings to the gods, at whose head was "Amon-Rē" or Jupiter Ammon. Pharaoh's name, according to the interpretation of his inscription, was Achoris, which would make the date the fourth century B. C., and Professor Steindorff has little doubt that this is the sacred spot where Alexander the Great was greeted by the priests as the son of God. Capt. Jerrmann, in a description of his travels through the rubber district of East Bolivia, gives many entertaining sketches of the people and their customs, especially those of the rubber collectors. The map accompanying this paper has a peculiar interest as being the last work of the well-known cartographer, Dr. B. Hassenstein.

Education in the eastern Sudan is making encouraging progress. In the Gordon College at Khartum there is a primary department in which 120 boys are taught in their native tongue according to the Egyptian curriculum. In the technical school, which is equipped with a complete apparatus, there are boys of fourteen and upwards who can read and write and know some arithmetic. The university course is intended mainly for the training of young men of the better classes, sheikhs' sons, etc., to become teachers of village schools and kadis or judges of the Mussulman courts. This class, says a correspondent of the London *Times*, it was thought would be the most difficult to attract to any school or college, "but there are sixty of them attending classes now," and making remarkable progress. "Well dressed, clean, and bearing themselves like Arab gentlemen, they are a credit to themselves and to the college." In addition to these three courses of education, there is a laboratory and a museum. The primary school at Omdurman, on the opposite bank of the Nile, has 220 pupils.

From a recent official report on the condition of Ceylon, it appears that the average annual excess of revenue over expenditure for the past seven years has been five hundred thousand dollars, the amount for 1903 being nearly a million. This excess has been spent on great public works designed to develop the resources of the island, especially on railways and irrigation. The foreign trade has increased 70 per cent. in the last ten years, the exports to foreign countries, mainly of tea, 370 per cent. In this increase Russia leads, while last year Germany took more than treble and the United States more than double the values taken in 1893.

In a recent convention of the Royal Academy of Belgium, M. Mansion made a warm plea in the name of science for the new non-inflected Latin invented by Peano of Turin, as meeting all requirements for an international scientific language. The Italian professor, who had already invented a remarkable system of mathematical ideography, in his new linguistic venture has discarded case-endings, numbers, gender, and person, as was contemplated by Leibniz; and, in addition, the endings of the tenses and the moods. The *copia verborum* is taken from the Latin or its modern representatives; all words are unchangeable; the construction is that of the neo-Latin languages. Latin without inflections M. Mansion regards as the final outcome of a natural linguistic development, and he considers Peano's invention vastly superior to Volapuk or Esperanto. He denies that any of the modern languages, even the English, can ever become the international language of the learned world. This must be an artificial language. His paper is entitled "Latin sans flexion de Peano comme langue internationale de l'avenir," and appears in the *Bulletin de la Classe des Sciences*, 1904, No. 3.

—Mr. Henry Bradley takes the floor in the current quarterly issue of the most interesting periodical in the world, the Oxford English Dictionary (H. Frowde). He introduces the letter M with the usual preliminary discourse on this alphabetic sign. In enumerating its meanings as an abbreviation—and first for proper names—he fails to notice the American librarians'

cataloguing convention, by which "M:" stands for Mark. This fixed observance might well be recorded in connection with succeeding letters. While the fullest rubric of the present section is Make, which demands thirteen pages or thirty-nine columns, and requires a phrase-key at the end, and is surpassed in the entire Dictionary only by Go, the characteristic of our words in M is the great store drawn from African, Oriental, and South American sources, as a glance at the first five pages will show. Abundant, too, are words derived from names of persons and places—Macadam, Mackintosh, Macassar (oil), Maccoboy (snuff), Mackinaw (blanket), Macaulayism, Machiavellian. This last form, as a substantive, turns up in 1568, as an adjective in 1597, with Machiavel midway in 1570. The relief of the British garrison at Mafeking in May, 1900, prompted the newspaper coinage of the verb to Maffick, to express the British populace's rejoicing over the event, with a speedy extension to mean indulgence in "extravagant demonstrations of exultation on occasions of national rejoicing." Gen. Napier's Abyssinian victory at Magdala in 1868 furnished a name for a red aniline dye, as did the bloody field of Magenta in 1859. By a whimsical contrast, Malakoff was made a brand for crinoline.

—The article on Mamma is a good example of this Dictionary at its best, etymologically and historically. With regret we read that while the educated in England have probably always stressed this word on the last syllable, in the United States the stress on the penult is the more usual; and "a prevailing pronunciation" with us is *momma*. Differing practices appear again in the case of Mail. "In England the word in ordinary use is limited to the dispatch of letters abroad, as, the *Indian mail*, etc.; or as short for mail-train. . . . It is retained as the official word for the dispatch and delivery of inland letters where the general public uses *Post*." The verb To Mail is purely American idiom. Much light is thrown on what is English idiom or usage in several places in this section. "In the main" is now the accepted form of the phrase, and is at the front (1628) in the quotations. But at intermediate points "for," "on," and "upon the main" were ventured. If English idiom—that is, the genius of the language—justified these constructions, usage in the long run rejected them: they are English, yet not English. On the other hand, Main, for 'the chief part,' as "the main of the morning news," "the main of us," would never come natural to an American; it is English idiom in a restricted sense, foreign to American usage, and still "good English." The modern usage of Make, in the sense of 'to compose, write as an author,' is, says Mr. Bradley, "difficult to reduce to rule. It is common to speak of making a sonnet or an epigram; but it would sound odd to speak of 'making' a tragedy or a novel, except with some added phrase, as in 'Some one has made a tragedy on the subject.'" What bars the way? Further along, we come to Make in reference to locomotion or travel, as, to make an excursion, expedition, journey, voyage, one's way, etc., etc., in sufficient quantity; yet presently we encounter the barb-wire fence. "English idiom is apparently capricious in excluding many locutions which would seem to be parallel with these; we cannot, *e. g.*, use *make* with object a *ride*, a *walk* (*cf.* German *einen Spaziergang machen*)." So here we have English as distinct from Teutonic idiom. Moreover, "make a ride" is grammatically correct, and might be English, but it isn't. Foreigners will take warning. So they will note that Ma'am is "used at court instead of *madam* in addressing the Queen or a royal princess." As etiquette is idiom, we will close with another instructive quotation under Majesty: "It was not until the seventeenth century that *your majesty* entirely superseded the other customary forms of address to the sovereign. Henry VIII. and Queen Elizabeth were often addressed as 'Your Grace' and 'Your Highness,' and the latter alternates with 'Your Majesty' in the dedication of the Bible of 1611 to James I." The inconsistent syntax of this and other similar words, with reference to the second and third person in accord, and to pronouns, is duly pointed out.

—In a recent number of the *Réforme Sociale* M. René Lavollée renews the lament over the depopulation of the rural parts of France. The great cities grow at the expense of the rest of the country, and the small ones grow at the expense of the hamlets. These are, in general, smaller in size than they were a century ago. During the five years ending in 1901 the population of the rural departments decreased by 766,823; out of eighty-six departments, sixty-two were thus affected. During the last half-century probably not one in ten of the small communes has increased in population; the loss has generally amounted to one-quarter or one-third. Moreover, the death rate in the cities compared with the country is as 3 to 2. The movement is not accounted for by the introduction of railways, as it has become more extensive during the last twenty-five years. No doubt the introduction of labor-saving machines has made it practicable to cultivate the soil with fewer men; the product may be greater now than ever before. Allowing for this cause, we still find that the barbarous system of compulsory division of estates, the enormous taxes on the transfer of land, and the system of military service would suffice to produce the effect. There is little inducement to build a permanent homestead so long as the law threatens its destruction when the next generation succeeds. Until this law is improved the birth rate in France will decline and the population be maintained only by foreign immigration. Of course, the effect of life in the barracks is prejudicial to the institution of the family. The habits of soldiers are not such as to make them desire to cultivate the soil, and the peasant's boy is apt to try to find a place under the Government or in domestic service rather than to return to the farm.

—The "American Sportsman's Library" can hardly be said to have made any great gain in its recent addition of a volume on 'Guns, Ammunition, and Tackle,' by various authors (Macmillan). Capt. A. W. Money's opening chapter, on the "Shotgun and Its Handling," is marred by a defence of the amusement of live pigeon-shooting from traps. It is admitted that such shooting is cruel "from the humanitarian point of view," but the humanitarian himself is assailed as an unpractical person who does not really know the difference between cruelty and its opposite. Fortunately, American sportsmen are rapidly reaching a level of ethical intelligence which enables them to discriminate between genuine hunting, with due regard for the game, and the useless slaughter of live birds in what is essentially target shooting. The chapter on the "Theory of Rifle Shooting," by W. E. Carlin, will doubtless interest the expert whose knowledge of advanced mathematics is still subject to command, but nine out of ten of the class to which the book as a whole appeals will find themselves entirely unable to grasp any large portion of Mr. Carlin's discussion. The colored plates of trout, salmon, and bass flies are charmingly done. The art of the illustrator seems to have reached the limit in this particular field. Nature herself could never dress up a Kotoodle bug to compete with the exquisite millinery of Mr. J. Harrington Keene. But we turn from these brilliant plates with real pleasure to the full-page illustration in black and white which faces page 424—a bewhiskered old fellow in battered hat and shirt sleeves leaning restfully against a tree on the river bank, a can of worms at his feet, two setlines tied to stakes near by, and a crooked hickory pole in his hands, "determined to get something." Not that we should hold this up as the proper ideal for the gentleman who wishes to become an angler; but when an ordinary mortal reads a treatise on "tackle" which scarcely recognizes the existence of anything under that name whatever except the artificial fly, it takes a powerful antidote to restore a normal balance.

—'Shelley: An Essay,' by Adolphus Alfred Jack (London: Constable), is, in the language of the author's note, "an attempt . . . to answer the question, Who is Shelley, and what is the attitude in which, to understand him, we ought to approach his poetry?" It cannot be said that Mr. Jack is an altogether efficient guide for a person capable of asking "Who is Shelley?" Nor is his endeavor to fix in a phrase the quality of Shelley's poetry final. His exposition of the clear-eyed Shelleyan view of nature, the antithesis of the Wordsworthian fallacy, is perfectly convincing; his appreciation of individual poems is always excellent; yet when he comes to consider the mould of Shelley's mind as a whole, his notion that "Shelley sees things so clearly that he does not see them clear," is, if we take his meaning correctly, applicable to himself. The fact seems to be that so to imbue one's self with the Shelleyan atmosphere as to become a sympathetic analyst of it, is to make the practice of objective criticism a matter of the extremest difficulty. But Mr. Jack has given us an essay which will provide the initiate student of Shelley's poetry with very suggestive reading. The hundred-odd pages of his essay are compact of that sincere, reposeful scholarship of which Oxford seems to keep the secret still. It is a very sweet and clean piece of writing, admirably low and even in tone, heightened at intervals by a startlingly vivid phrase, as, for example, where it is said of "Adonais," "Throughout the poem the words death and died hoot their continual lament."

—'The Expansion of the Common Law' is the title of a volume of lectures delivered by Sir Frederick Pollock to American law

schools last year (Boston: Little, Brown & Co.). Prefixed to the course of 1903, as being "sufficiently germane to the matter to serve as a general introduction," is an address delivered in 1895 before the Harvard Law School Association on "The Vocation of the Common Law." The book covers a wide field, and is full of admirable specimens of the author's style. It is a review of the whole process by which the Common Custom of the old local courts of England has been developed into a great modern system of jurisprudence. It touches on a host of subjects, such as equity and trial by jury, which are involved in this process, and the history and proper position of which in our *corpus juris* have been made clear only in our own time. It is hardly necessary to say that whatever Sir Frederick Pollock touches he makes interesting. The simplest lecture is that on "The Foundations of Justice," in which he dwells upon certain features of our courts as derived "from the earliest justice of our ancestors." These are—publicity, neutrality (*i. e.*, our courts judge between parties upon proofs which they respectively bring forward, and exercise no inquisitorial powers), and independence, both in interpretation and in jurisdiction. The lecture on "The Law of Reason" is remarkable for the suggestion that, in the Common Law, reason plays much the part taken by the Law of Nature in other systems. Oddly enough, he is able to confirm his view by a passage from 'Doctor and Student,' hitherto, he thinks, entirely overlooked. The Student, being asked by the Doctor of Divinity what he has to say of the Law of Nature, makes answer: "It is not used, among them that be learned in the laws of England, to reason what thing is commanded or prohibited by the Law of Nature, and what not, but all the reasoning in that behalf is under this manner. As when anything is grounded upon the Law of Nature, they say that Reason will that such a thing be done; and if it be prohibited by the Law of Nature, they say it is against Reason, or that Reason will not suffer that to be done."

TWO STUDIES OF NAPOLEON.

Napoleon: A Short Biography. By R. M. Johnston. A. S. Barnes & Co. 1904.

Napoleon. By Theodore Ayrault Dodge. Boston: Houghton, Mifflin & Co. 1904.

The jaded student of an endless bibliography may find it hard to believe that any one should come forward with a book which appears to differ in scope and treatment from all existing works on Napoleon. It is the impossible that happens, and two Napoleonic novelties have been produced almost simultaneously by writers using the English language. Mr. Johnston's "Short Biography" is conceived in a spirit and written in a style which marks it off from existing sketches of the Emperor's career, while the divorce which Mr. Dodge makes between politics and war gives a distinctive tone to his account of the great campaigns.

Mr. Johnston's book is popular history of the best class—scholarly, readable, and acute. When we call it readable we would emphasize and strengthen a term which is so frequently used in an equivocal sense. It is not only possible to read this volume, but it is difficult to deny one's self the pleasure of an uninterrupted perusal. We quote the first paragraph as an example of the directness and selective skill which are observable throughout.

"In the history of Napoleon Bonaparte we plunge into the characteristic at the very outset—the date of his birth. He was born either in 1768 or 1769; probably, but not certainly, in the latter year. As late as in 1796, when he married, the date of his birth was given as February, 1768; later it was fixed at the 15th of August, 1769. This is not a matter of vital importance, yet it is not without interest, for two reasons. In the first place, it is typical of Napoleon's methods that he should have placed the celebration of his birthday at the same date as that of the Virgin Mary's, which is one associated with rejoicing and merry-making in all Latin countries. Another interesting point in this connection is that in 1768 the Island of Corsica, the home of the Bonapartes, was Genoese; a year later it was French. If Napoleon was born in 1768, he was born a Genoese; if in 1769, a Frenchman."

That signs of rapid composition are sometimes to be met with we shall not deny, but the narrative has dash, movement, and constant vitality. These qualities, added to the writer's grasp of his subject, render the essay an excellent introduction to Napoleonic literature.

One grave danger which Mr. Johnston escapes is the temptation to moralize. In a book of less than 50,000 words there is no room for reflections on the manifold issues that grow out of Napoleon's policy and conduct. Without pretending to maintain a tone of colorless impartiality, Mr. Johnston compacts his comment into a very brief space. What his own judgment of Napoleon is may be largely gathered from the character sketch which occurs in the first chapter:

"He was given to violent bursts of temper, the occasional outbreaks of a nearly superhuman mental energy and of a temperament easily swayed to passion by personal and selfish considerations. He was perhaps the greatest egotist the world has ever seen, with the result that he often applied his indomitable will and magnificent qualities to very low aims. Judged hastily and by certain traits alone, he might be thought to be little more than contemptible—thus, in the matter of veracity. He viewed lying from a strictly utilitarian point of view, and always said just what was convenient, so that his history, written from his own statements, would be little better than fiction. He played cards as he conducted warfare, obtaining every advantage he could, legitimate or otherwise."

This is a passage which one might expect to find in the pages of Seeley, but Mr. Johnston is much more open-minded than his English predecessor, and interprets Napoleon's genius with fuller sympathy. For example, when speaking of the Emperor's correspondence, he says:

"In the thirty-two volumes published officially one might nearly say that there is not a superfluous word, not an embellishment. Conciseness, energy, decision, perception, stand out with overpowering force from every page; and it may quite properly be said that the Correspondence of Napoleon is a great literary monument. It is safe to be predicted that it will be read when the names of Chateaubriand, of Delavigne, and of Lamartine are well-nigh forgotten."

We should be glad to show, were it possible for us to do so within present limits, how Mr. Johnston enforces the main facts of Napoleon's life by appropriate detail and lucid explanation. His account of military operations is particularly clear, and many readers will be indebted to him for their first real knowledge of the tactics which were developed during the wars of the French Revolution. Especially minute knowledge is revealed in his discussion, however brief, of the *causes célèbres* in which each incident has become the nucleus of a polemical library. In general, Mr. Johnston holds a middle course, or rather he is too conservative to be led away by exaggerated hypotheses simply because they are new. Thus, for example, he rejects the theory that Napoleon was an epileptic, or modifies it until its peculiar significance has vanished. At most, he observes, Napoleon was a very slight sufferer, and no epileptic ever showed greater clearness of intellect. "Historically speaking, to say that he was epileptic is probably untrue, and is certainly irrelevant and misleading." To give a further indication of Mr. Johnston's general attitude, we may instance his comment on the execution of the three thousand Turkish prisoners who were taken at Jaffa. After citing the exculpation offered by purely military critics, he concludes: "This may be true, but it might also be pertinently asked: Was not the unprovoked attack of France on Malta and on Egypt at least as great a subject for reproach? Is it not far more important to award blame for the waging of an unjust war than for what is only a military incident, of debatable necessity, occurring in the course of such a war?"

The public has an unfortunate tendency to admire the large books which it never reads—perhaps on the principle *omne ignotum pro magnifico*. We endeavor to give the present sketch some prominence, partly because it shows strong signs of talent, and partly because most readers will find it lucid though not voluminous. The wars and character of Napoleon are such common topics of conversation that, to say the least, it is desirable for every one to know something about them. Every historian who keeps his ears open knows how much drivel is talked by the "well-informed man" about the Emperor of the French, and cannot escape the conviction that not one in ten is familiar with the distinction between the 13th Vendémiaire and the 18th Brumaire. To all who would acquire the essential facts by the shortest possible cut, Mr. Johnston's volume can be recommended, and, unlike most short cuts, this is a safe one to take.

Where we have found so much to praise, we shall hardly be accused of captiousness when we repeat that, in technical matters of style, Mr. Johnston has not quite found his proper level. So far as essentials are concerned, his manner is excellent. He has the ease and rapidity which are needed to do justice to the breadth of his information and the precision of his ideas. But, unless our diagnosis is quite incorrect, facility of expression has been accompanied by a certain neglect of revision which, though slight in itself, is still noticeable. At the same time we must be sure to make our last word one of appreciation, for Mr. Johnston has gifts of clear thought and plain, incisive speech.

Col. Dodge writes on a much larger scale and addresses a totally different audience. While narrowing his field to military affairs, he expands his detail so considerably that, though his work is eight times longer than Mr. Johnston's, he only reaches the Peace of Tilsit at the close of his second volume. Having essayed to produce a 'His-

tory of the Art of War,' he moves forward from studies of Alexander, Hannibal, Cæsar, and Gustavus Adolphus, to an exhaustive examination of Napoleon's campaigns. Frederick the Great is passed by for the moment, but will be taken up without further delay, and dealt with in the light of the important researches which have been undertaken by the German General Staff. The point of departure for the whole *opus* is a rooted belief that warfare can be studied to advantage only in the original conceptions of the great commanders—or, as Napoleon himself puts it in the passage which Col. Dodge has taken for a motto: "La tactique, les évolutions, la science de l'officier de génie, de l'officier d'artillerie, peuvent s'apprendre dans les traités; mais la connaissance de la grande tactique ne s'acquiert que par l'expérience et par l'étude de l'histoire des campagnes de tous les grands capitaines."

As an exponent of the Napoleonic campaigns, Col. Dodge is descriptive rather than theoretical. He is less concerned to measure Napoleon by a yardstick of his own than to show what actually happened in the field. Whether from a sense of indebtedness to Jomini and other predecessors, or from the nature of his conception, he explains much more than he dogmatizes. Thus these volumes, best suited though they are to readers of some professional training, do not outsoar the powers of the ordinary civilian. Among the chapters of greatest interest are: "Tactics and Administration at the End of the Eighteenth Century" and "Formation for Battle" at the time of the Third Coalition. Here Col. Dodge sets forth with terseness and insight the principles upon which war was conducted under the Directory and Empire, gathering up countless threads of detail into a single strand. Elsewhere—that is to say, through the main body of the work—he follows out one campaign after another with an almost unparalleled minuteness. "There is no work in any language which goes into the military side of Napoleon's career so fully as the present volumes." Such is the statement of Col. Dodge's publishers, and in support of it they might have pointed to nearly 300 pages on the campaign of 1796-97, and more than 300 pages on the War of the Third Coalition. Each action is described with a fulness which occasionally tends to obscure the main issue, and encumbers the text with a host of minor names.

The chief merit of Colonel Dodge's study is its exhaustiveness; its chief shortcoming as a contribution to history is the author's neglect to show us how he got at his facts. Making many thousand statements which cover a wide range of biography, movements, and statistics, he has not appended to his text a single footnote. In many cases we can see from his quotations that he has used good authorities, but he would have rendered his more serious readers a service by giving them chapter and verse on important questions. There are many histories in which footnotes may well seem pedantic and unnecessary, but where the value of the performance hinges upon the accuracy of the materials employed, it is desirable to show that these materials have been tested. The data for the Napoleonic period require the most elaborate examination, and at too few points does Colonel Dodge give us hints of conflicting evidence. In his preface he speaks with warm and deserved approval of Prof. Oman's 'History of the Peninsular War.' His own work has many valuable qualities, but it would have been distinctly improved by a firmer adherence to Prof. Oman's methods of research. To say that Colonel Dodge's 'Napoleon' is simply a compilation would be unfair and misleading, for it shows traces of careful thought in conjunction with wide reading. Our cavil is that it would have resembled compilations still less had a fuller indication of processes been furnished.

Colonel Dodge's opinion of Napoleon as warrior and man can be made out by a careful synthesis of detached passages. In no place, however, does he offer a systematic criticism of the Emperor's genius or put him into line with his peers—unless we except the following comment upon Frederick:

"The picture of Napoleon at Sans-Souci is one which will for ever impress the lover of the great King of Prussia. While Napoleon reverently uncovered his head when he stepped within the portal of the narrow Potsdam vault, where, beside his testy but honest father, rest the ashes of this great man, he whose lineage and whose character were incomparably lower than those of the dead hero could yet not refrain from taking Frederick's sword and belt, as well as other strictly personal relics, to send to the Invalides, where were yet a few of the French soldiers who had fled from Prussian skill and valor at Rossbach, as their victors' sons were now fleeing from theirs."

But, after all, Colonel Dodge's aim is to delineate the strategy of Napoleon as depicted through his marches, even where this involves an account of the routes which were followed by the different corps. On the topographical side the book is strong, and Colonel Dodge's grasp of geographical detail in its relation to strategic purpose constitutes his best claim to rank among the historians of Napoleonic warfare. The maps and illustrations with which both volumes abound are serviceable, though they do not pretend to be of the most elaborate kind.

WAR AND PEACE.

War and Peace. A Novel. By Leo Tolstoy. A New and Complete Translation from the Russian, by Constance Garnett. In 3 volumes. McClure, Phillips & Co.

Those to whom 'War and Peace' stands at the very head of historical novels will welcome a new translation. Those to whom it is a weariness of the flesh—and such exist—will marvel that Mrs. Garnett's version is hardly off the press before announcement is made of still another produced by Professor Wiener and to appear ere long. At the present moment there are at least three attempts to satisfy English readers with a competent rendering of 'War and Peace.' The latest styles itself "complete," but there is no preface to indicate the shortcomings of its rivals in this particular. We have made a rough computation on the assumption of solid pages, and arrive at 654,400 words for Mrs. Garnett; 640,460 for Nathan Haskell Dole's version; and 587,100 for Clara Bell's. Without undertaking to distribute these differences by comparison either mutual or with the Russian, we shall confine ourselves to three parallels from which the respective qualities of accuracy and (above all) of style may suggest themselves. Many more—far too many for our space—would be required to make such suggestions conclusive.

We will begin with a French criterion, namely, Napoleon's sharp censure of Murat for proposing an armistice to the Russians retreating upon Olmütz. The original text accompanies Mr. Dole's translation, which we quote from the Crowell edition of 1898. There is no substantial discrepancy in the three translations; the example is mainly of style:

Garnett, 1:205:

"It is impossible to find terms in which to express to you my displeasure. You only command my advance guard, and you have no right to make any truce without my order. You are causing me to lose the results of a campaign. Break the truce immediately and march upon the enemy. You must make a declaration to them that the general who signed this capitulation had no right to do so, and that only the Emperor of Russia has that right."

Dole, 1:243:

"I cannot find words to express my displeasure. You merely command my van, and have no right to conclude an armistice without orders from me. You are making me lose the advantage of a campaign. End the armistice instantly and march on the enemy. Explain to him that the general who signed this capitulation had no right to do so—that only the Emperor of Russia has this right."

Bell, 1: 274:

"I cannot possibly find words to express my vexation. You command only the van, and have no right to propose an armistice without my orders. You have made me lose the advantages of a whole campaign. Break the armistice at once and march on the enemy. Have it explained to him that the general who signed the capitulation had no right to do so, that no one has the right but the Emperor of Russia."

Our next test is drawn from the description of Natasha's introduction upon the scene of the story. Here divergences will be remarked; but again the chief insistence should be on the skill of the translation. In Mr. Dole's version, to be noticed is the freedom with which the passage is reconstructed and the long sentence broken up.

Garnett, 1: 43:

"The dark-eyed little girl, plain, but full of life, with her wide mouth, her childish bare shoulders, which shrugged and panted in her bodice from her rapid motion, her black hair brushed back, her slender bare arms and little legs in lace-edged long drawers and open slippers, was at that charming stage when the girl is no longer a child, while the child is not yet a young girl. Wriggling away from her father, she ran up to her mother, and, taking no notice whatever of her severe remarks, she hid her flushed face in her mother's lace handkerchief and broke into laughter. As she laughed she uttered some incoherent phrases about the doll which was poking out from her petticoat."

Dole, 1: 52:

"The little maiden was at that charming age when she is no longer a child nor yet a young lady. She was full of life, but not pretty. Her eyes were black and her mouth was large; her bare childish shoulders were rising and falling in her bodice from the excitement of her race; her dark locks were tossed back; her thin arms were bare; she wore lace-trimmed pantalets, and her low shoes displayed her slender little ankles. Tearing herself away from her father, she ran to her mother, and, giving no heed to her stern reproof, hid her blushing face in the lace folds of her mother's mantilla, and went into a fit of laughter. The cause of her laughter was the doll which she took out from under

her skirt, trying to tell some fragmentary story about it."

Bell, 1: 61:

"The little girl, with her black eyes and a wide mouth, was plain rather than pretty, but to make up for it she was amazingly full of life; her shoulders were still throbbing in her low frock from her breathless run; her black curls, all in disorder, were thrown off her face; her bare arms were brown and thin; she still wore long trousers trimmed with lace, and had low shoes on her little feet. She was at the age, in short, when a little girl has ceased to be a child, but when the child is not yet a conscious maiden. She slipped away from her father and threw herself against her mother without heeding her reproof; then, hiding her blushing face in the lace flounces of the countess's wrap, she went into fits of laughter, and began a long, incoherent story about her doll, which she took out of the skirt of her frock."

Finally, we place side by side a pathetic battle episode of which Kutuzoff is the central figure:

Garnett, 2: 502:

"I did not consider I had a right to conceal from your highness what I saw. . . . The troops are completely routed. . . ."

"You saw? You saw? . . ." cried Kutuzov, getting up quickly and stepping up to Woltzogen. "How . . . how dare you! . . ." (making a menacing gesture with his trembling hands), he cried, with a catch in his breath. "How dare you, sir, tell *me* that? You know nothing about it. Tell General Barclay from me that his information is incorrect, and that I, the commander-in-chief, know more of the course of the battle than he does."

Woltzogen would have made some protest, but Kutuzov interrupted him.

"The enemy has been repulsed on the left and defeated on the right flank. If you have seen amiss, sir, do not permit yourself to speak of what you do not understand. Kindly return to General Barclay, and inform him of my unhesitating intention to attack the French to-morrow," said Kutuzov sternly.

All were silent, and nothing was to be heard but the heavy breathing of the gasping old general. "Repulsed at all points, for which I thank God and our brave men. The enemy is defeated, and to-morrow we will drive him out of the holy land of Russia!" said Kutuzov, crossing himself; and all at once he gave a sob from the rising tears.

Dole, 4: 321:

"I did not feel that it was right to conceal from your serene highness what I have been witnessing. The troops are wholly demoralized. . . ."

"You have seen it? You have seen it? . . ." screamed Kutuzof, scowling, and leaping to his feet and swiftly approaching Woltzogen. "How . . . how dare you? . . . ." and he made a threatening gesture with his palsied hands, and, choking, he cried: "How dare you, dear sir, say this *to me?* You know nothing about it. Tell General Barclay from me that his observations are false, and that the actual course of the battle is better known to me, the commander-in-chief, than it is to him."

Woltzogen was about to make some remark, but Kutuzof cut him short:

"The enemy are beaten on the left and crushed on the right. If you saw things wrong, my dear sir, still you should not permit yourself to say what you know nothing about. Be good enough to go to General Barclay and tell him that it is my absolute intention to attack the enemy to-morrow," said Kutuzof sternly.

All was silent, and all that could be heard was the heavy breathing of the excited old general.

"They are beaten all along the line, thank God and the gallantry of the Russian army for that! The enemy are crushed, and to-morrow we will drive them from the sacred soil of Russia," said Kutuzof, crossing himself; and suddenly the tears sprang to his eyes and he sobbed.

Bell, 5: 87:

"I do not think I should be justified in concealing from your Highness what I saw. The troops are completely routed."

"You saw—you saw that?" cried Koutouzow, starting up with a fierce frown; with his trembling hands he gesticulated threats, and, almost choking, exclaimed:

"How dare you, Sir, tell me such a thing as that? You know nothing about it! Go and tell your general that it is false, and that I know the true state of things better than he does."

Woltzogen would have interrupted him, but Koutouzow went on: "The enemy's left is driven back and his right badly damaged. If you saw wrongly, that is no reason to tell a falsehood. Go and tell General Barclay that I intend to renew the attack to-morrow!" No one spoke; there was not a sound but the old man's hard breathing. "He is repulsed on all sides," he added; "and I thank God and our brave troops! The victory is ours, and to-morrow we will cast him forth from the sacred soil of Russia." He crossed himself and ended with a sob.

Whatever else may be inferred, it is clear—even from the last sentence of the third extract—that this work of genius calls for an English genius to interpret in our idiom.

In the Crowell edition, tables of contents are furnished for the several books, a very useful and indeed necessary clew to the labyrinthine structure of the story. In Mrs. Garnett's scheme these find no place, and the perpetual running-title is "War and Peace." Neither publication has an index, yet this great romance cries for one; or maps, equally to be desiderated. Some luxurious edition of the future may even be supplied with portraits of the historical personages who mingle with the creatures of Tolstoy's imagination, and are so handled as to appear not less real and not less fictitious. The Crowell edition gives in volume one a list of the principal characters, with an indication of the proper pronunciation of their names. For reading aloud, this aid is essential. It might be extended in the index which we crave. In closing, we remark that Mrs. Garnett's volumes are much the handsomest; Clara Bell's the most convenient to hold.

A History of England. By the Rev. J. Franck Bright, D.D., Master of University College, Oxford. Period V. Imperial Reaction, 1880-1901. Longmans, Green & Co. 1904.

With a fifth volume, which begins at Gladstone's return to office in 1880, Dr. Bright closes his meritorious sketch of English history. Fully recognizing the inherent difficulties of his task, he observes towards contemporaries an attitude of studied impartiality. While we should not be unwilling to hazard a guess concerning his private opinion on such questions as the preferential tariff and imperialism, we cannot tax him with twisting the arguments he would oppose, or seeking to do aught but present the views of each party from its own standpoint. In one passage he observes that "the province of history is neither to prophesy nor to encourage, but to note characteristic types and tendencies." The presence of the selective faculty, which Dr. Bright possesses in a considerable degree, is particularly evident throughout this concluding volume. Politics and war, rather than social development, form the subject, and it becomes the author's function to discuss briefly a few salient topics out of the thousands which thrust themselves upon his attention. Dr. Bright's choice is good, his comments are moderate without being colorless, and he is successful in avoiding any strong suggestion of the 'Annual Register.'

To each of the volumes in this series a distinctive title has been assigned. The first section, reaching from Roman times to the accession of Henry VII., is styled "Mediæval Monarchy," the survey of Tudor and Stuart rule receives the name of "Personal Monarchy," and the period which extends from the revolution to the death of William IV. is regarded as the era of "Constitutional Monarchy." The age of Queen Victoria gets two volumes—the "Growth of Democracy," closing at 1880, and the present book, which finds its main motive in "Imperial Reaction." We mention these titles because they throw some light upon Dr. Bright's point of view, and also because we wish to show that he takes 1880 for the great dividing date within the Queen's reign. So long as Gladstone remains in office it is difficult to mark a divide between democracy and reaction, but probably most observers would agree that, during the last ten years of his life, whether in office or out of it, he was striving against current tendencies. Dr. Bright, though a chronicler and not the exponent of any political creed, seeks to give his narrative some unity by accentuating the idea of an imperial reaction.

Not long ago Dr. Garnett distinguished between political pessimism and the note of anxiety which has of late been so audible in the utterances of English public men. Dr. Bright apparently is not a pessimist, but he too is ready to enumerate the grounds of solicitude. In the following sentence, for example, the allusion to the "weary Titan" is all but explicit: "Whether Great Britain is still capable of expanding or even of maintaining its existing expansion, or whether the hour has arrived when, as in other empires, the very greatness of its acquisitions and its wealth tends to overstrain its strength, and leads toward a course of decadence, is a question not to be hurriedly decided." In dealing, however, with the causes of unrest, Dr. Bright is brief and the considerations which he advances have little novelty. Of greater interest are the signs of reaction as he names and describes them. The desire for increased territory, the growing importance of the House of Lords, the ritualistic movement, the increased love of amusement, and the current admiration for military life, stand chief among the symptoms of national feeling which he notes and with most of which, it is clear, he does not sympathize. "Ambition and the love of rule, belief in extended empire, in restricted and selfish commerce, in the superiority of military life, in the value and importance of the privileged classes, and the substitution of symbolism for higher spiritual creeds, are marked characteristics of the time, and are exactly those things which the last century prided itself on having left behind."

Himself a clergyman, Dr. Bright's words on the direction of ecclesiastical tendency derive special weight from his position. He sees a majority of the Anglican clergy

bent on reproducing the ritual of the seventeenth century, and a distinct section of them repudiating the name "Protestant." In view of these facts, he considers that all attempts to effect a reconciliation of churches are futile, since at no time has the antagonism between the English Church and the Nonconformists been more pronounced. But Dr. Bright has a harder rap for the High Church party than is administered through his allusion to their dislike of the word "Protestant." Many of them, it is well known, combine a lenient attitude towards modern thought with ecclesiastical practices which were in vogue before the Reformation. "It does not tend," says Dr. Bright, "to the healing of this dislocation [among the sects] that a large body of enlightened churchmen have adopted in many respects the liberal views which marked the Broad Church in the middle of the last century. Liberality of doctrine and of criticism are useless as solvents of religious differences so long as they go hand in hand with mediæval ritual and claims to exclusive privilege." We see that our author in his remarks upon ecclesiastical affairs limits his statements to the Established Church, although the Nonconformist conscience gets due credit for its activity at the time of Parnell's appearance in the divorce court.

The two other features of contemporary life in England by which Dr. Bright seems to be most deeply impressed are the love of amusement and the exaltation of the army. The idea that work should be got over as quickly as possible is, in his opinion, gaining ground, or rather it has spread so widely as to embrace the whole community. Everywhere there appears "this excited pursuit of relaxation," which ignores the more serious things of life and drives people to scenes of gayety. "The love of pleasure and excitement, acting in connection with some other causes, has played a great part in changing the entire character of English rural life; the agricultural laborer of the last century has almost disappeared. There are many villages in which young men, or even men of middle age, are scarcely to be found; the work is carried on by old men, and by lads waiting their opportunity to follow their predecessors into the cities." Dr. Bright's comments on the growing cult of things military might well have been uttered by a Liberal of 1870. He sees the England which, but a few years ago, had decided that war was an unmitigated evil however great the duty of defence might be, begin to praise the warlike virtues and to talk of conscription as desirable in itself. Here we witness the encroachment of the reaction in its most objectionable form. The advance of civilization is based on a recognition of the fact that the arts of peace stand on a higher plane than war, which, in Dr. Bright's unvarnished phrase, is "a return to the crudest forms of savage life." When a country, having once outgrown the desire for purely military glory, falls back to the idea that the army offers the brightest of all careers, it naturally sets its face towards the Middle Ages, the era when this conception was dominant. Here we get reaction undisguised.

While we find Dr. Bright's criticism of current tendencies the most prominent passage in this volume, we have read his review of English politics with much interest. Though the subject is rendered difficult by its nearness, its complexity, and its association with party feeling, he has approached it with a freedom from bias which is seldom found among historians of their own times.

Frederick the Great and the Rise of Prussia. By W. F. Reddaway. G. P. Putnam's Sons. 1904.

The distinguishing feature of this book is Mr. Reddaway's clear sense of Frederick's limitations. The overflowing energy, the military skill, the quick response to public duty, are all in sight, and so pronounced that most devotees of the strong-man theory are dazzled by them. When Mr. Reddaway depicts the King's shortcomings, he does not merely inveigh against his moral defects; he criticises with some severity the quality of his mind. After every subtraction has been made, the energy remains, and upon it alone the claim to greatness may well be founded; but there are errors of judgment and warping prejudices which detract a good deal from Frederick's reputation for sagacity. Mr. Reddaway gives a clear and vigorous account of his hero's career, but, as we have said, the volume is marked chiefly by its candid admission of defects.

In a chapter entitled "The Problem of 1740," the alternatives which presented themselves to Frederick at his accession are discussed from the broad standpoint of European politics. "It is one of the most grotesque facts in history," says Mr. Reddaway, "that the Emperor William II., when he cried, 'Our future lies upon the water,' should have been uttering as prophecy what ought to have been commonplace for a century and a half." Then follows a long comment upon Frederick's neglect to pursue a colonial policy when even Charles VI. was making Ostend the centre of an Imperial East India Company, and when the Baltic lands were ready to supply a hardy breed of sailors. The Great Elector had founded Great Fredericksburgh on the Gold Coast, and equipped a fleet which fought the Spaniards on the high seas. Why was it that Frederick, who revered the memory of his great-grandfather, should have turned his eyes from the sea while potentates of lesser resources drew profits from their colonial possessions? Mr. Reddaway accounts for this lack of interest in maritime expansion partly on the ground that Frederick lacked the inspiration drawn from travel, and partly by reference to his mistaken views of political economy. A king who believed that his gold hoard was the best symbol of national wealth, was not likely to spend money on doubtful ventures for the upbuilding of trade.

Generally speaking, Mr. Reddaway would limit Frederick's sagacity to matters which lay within the immediate range of his vision. He had no idea that progress meant anything more than administrative improvement, or that the doctrines of the American Revolution could forebode organic change. In the world of pure speculation, also, he seems to have made little headway. "As a thinker," says Mr. Reddaway, "Frederick falls very far short of greatness. Though he struggled all his life with the problem of the World and its Maker, he convinced himself only that Nature furnished irresistible proof of an intelligent creator, but that the idea of an act of creation was absurd." While he retained his admiration for Voltaire as a man of letters, he could see nothing in German literature, least of all in Goethe. Most surprising of all was his contempt for science.

" 'Is it not true,' he demanded of D'Alembert, 'that electricity and all the miracles that it reveals have only served to excite our curiosity? Is it not true that the forces of attraction and gravitation have only astonished our imagination? Is it not true that all the operations of chemistry are in the same case?' Euler himself had failed to make the fountains at Sans-Souci play successfully, and the King jeered at geometricians as the very type of the pig-headed. In the campaign of 1778 an officer who trusted his theodolite in preference to his eye was bidden to go to the devil with his trigonometry."

These strictures may not seem to touch essentials, as Frederick was a man of action. Taking him, however, within his own range of politics, Mr. Reddaway finds much to censure. His disbelief in the existence of honesty led him to mistaken calculations regarding Augustus of Saxony in 1756 and the amount of support which Louis XV. was likely to give Austria during the latter part of the Seven Years' War. He was equally unfortunate in his estimate of women. "Prussia suffered severely for his belief that Maria Theresa was pliable, Elizabeth of Russia incapable, the Pompadour insignificant, and Catherine II. shallow." That he gained much by skilful tactics in an age which favored opportunism, is obvious; but Mr. Reddaway finds little to say on behalf of a political diagnosis which saw danger in the Court of Austria, discountenanced an alliance with the German princes, and looked to Russia as the one desirable ally. Worst of all was Frederick's lack of insight into the true functions of government. Mirabeau, much as he admired the smooth working of Prussian bureaucracy, saw that under a foolish prince Prussia would collapse as surely as Sweden had done. Under an ordinary absolutism the autocratic power of the Crown is not exercised by the monarch in person. Frederick, who appointed the non-commissioned officers and fettered the civil service, forms an exception to this rule, and it is his constant intermeddling which brings down upon him the severest condemnation of our author. "He was not profound enough to see that the machine which he labored to render indissoluble, was such that only an unbroken series of monarchs as gifted as he could guide it. Nor was he wise enough, though he knew that the next steersman of the State would be a fool, to alter the machine so as to give it some power of self-direction."

The German admirers of Frederick are willing to swallow a great many camels—moral and otherwise—a practice in which Carlyle also shows remarkable facility. When Droysen says that he was morally justified in seizing Silesia, we see how far patriotism will carry the scientific historian. In the face of such panegyrics as are wont to be heaped on the cynically perfidious sovereign, Mr. Reddaway's strictures will do no harm. Prussia gained power by Frederick's lawlessness and trickery, and his sole monument, apart from his record in the field, is the territorial aggrandizement of his country. To the larger interests of German nationality he was perfectly indifferent, and he applied to politics the methods which enable a modern speculator

to make his fortune by wrecking a railway. Of course, when this sort of thing is done in politics, plausible extenuations can be found without much trouble. The best thing in Frederick's character was a grim devotion to his work; but even here he does not rise above Philip II. and many others to whom business is a necessity. Mr. Reddaway gives him full credit for energy, military genius, and tactical acumen in politics, yet we are unable to see aught but a bitter sarcasm in his concluding sentence: "As long as the German Empire flourishes and the world is swayed by the principles of its founders, so long will the fame of Frederick the Great remain secure."

We have confined our notice to a single, though it is the salient, aspect of this book. It only remains to say that, as a student of the period, Mr. Reddaway is well informed, and that as a writer of narrative he is more than ordinarily incisive.

Dukes and Poets in Ferrara: A Study in the Poetry, Religion, and Politics of the 15th and Early 16th Centuries. By Edmund G. Gardner, M.A. E. P. Dutton & Co.

Since J. A. Symonds died, no other Englishman has written as satisfactorily as Mr. Edmund Gardner on the Italian Renaissance and kindred subjects. He not only knows his material, but has caught the spirit of the times—a spirit so hard for the modern Anglo-Saxon really to enter into—so that he is peculiarly well fitted for the task which he has now set himself, namely, to trace the story of Ferrara from 1400 to the death of Tasso in 1595. The present volume covers the 15th century and closes with an account of the early reign of Alfonso I.

There are many respects in which this book deserves a cordial welcome. In the first place it gives for the first time in English an account, detailed, consecutive, and interesting, of the Italian State which ranks after Venice, Florence, Milan, and Naples among the Renaissance republics. Ferrara has been neglected by our historians, and yet it had a strongly defined individuality, and it exercised an important, sometimes even a deciding, influence on political combinations in Italy. As the duchy was never sufficiently powerful to take the initiative in conquest, its forte lay in waiting, in compromises, in knowing when to join an alliance and when to hold back; and its career illustrates admirably how a small state could preserve its independence even when cast among a pack of larger and hungry neighbors, each of whom longed to devour it.

The House of Este, which ruled Ferrara for two hundred years, was more fortunate, or more dexterous, than any of its contemporaries, both in the continuity and in the duration of its power. It saw the rise and fall of the Scaligers at Verona, and of the Visconti and the Sforza at Milan; it was already established before the Medici gained control of Florence, it witnessed the extinction of their main line and the degeneration of Tuscany under their bastards. Mr. Gardner furnishes ample material for studying the growth of the family into power, and for comparing its policy and its individual members with those of the other despotic houses, so that we can determine how far personal qualities and how far the exigencies of time and place caused the Duchy of Ferrara to differ from its rivals. The species despot is the same everywhere, but it has many varieties, and of these the Estensian was one of the most enlightened. The Lords of Ferrara, as Mr. Gardner says, made it their policy, like the Medici, "to dazzle their subjects with pageantry, perhaps less from artistic motives than from a desire to impress upon them the splendor and the glory of their illustrious house." This is some compensation for their tyranny, and differentiates them from the brutal Carraresi and Baglioni, or the atrocious Ezzelino da Romano.

Of the Estensi described in this volume, Duke Ercole, who reigned from 1471 to 1505, is the most remarkable. He it was who raised Ferrara to a high political place, and made it a centre of culture. He typifies the ideals of the Renaissance at its culmination. He protects poets, painters, and scholars. He is pious and skeptical. He seeks guidance of Savonarola; he builds a convent for Sister Lucia of the Stigmata, and almost worships her. Yet in his political relations he is crafty, and in his private life he is no model of virtue, although he cannot be charged with either the inordinate licentiousness or the cold-blooded severity of some of his forerunners. Take him for all in all, he is perhaps the most agreeable despot of his age, always excepting the Duke of Urbino; and Mr. Gardner has done well in making a detailed study of him.

The reader who is not familiar with the spirit of the Renaissance may be somewhat puzzled at first by the absence of broad views, or generalizations, round which to group the multiplicity of special facts; but in pursuing this method Mr. Gardner illustrates in the best possible way the individualism of the Italian republics. They had no far-seeing policy, only self-interest, with a resultant opportunism. As the wishes of the people did not count, the whim, often hysterical, of the Duke was carried out unchecked. Mr. Gardner succeeds admirably in reproducing the kaleidoscopic effect of such conditions. Not that he slights the deeper forces at work—for life was not all on the surface; and especially in his chapters on art and literature he brings out the more permanent elements. Nowhere else in English can one find so thorough an account as he gives of Boiardo, the earliest of the great Italian epic poets; or of the founders of that Ferrarese school of painting which has only lately had proper attention paid to it. While he is enthusiastic for his subject, Mr. Gardner is always temperate in particulars. He does not blink the horrors, nor exaggerate the splendors, nor does he linger over the bestialities of such monsters as Alexander VI. His judgments are usually charitable. Of Lucrezia Borgia, for instance, whose coming to Ferrara to be the bride of Alfonso I. is one of the striking events in his story, he takes the least damaging view. He has produced so excellent a work, in spite of the difficulty of making a clear story out of a multitude of details, that we may look for equal success in his second volume, which will deal with less complex politics and will have for heroes Ariosto and Tasso.

Shelburne Essays. By Paul Elmer More. First Series. G. P. Putnam's Sons. 1904.

All but one of these essays have appeared elsewhere. The exception is not the least important of the series, if it is, as we suppose, the last, "The Religious Ground of Humanitarism." The name, "Shelburne Essays," is an affectionate reminiscence of the New Hampshire town upon the Androscoggin in which for a time Mr. More made for himself an hermitage and gave himself up to meditation upon literature and life in a more epicurean than ascetic fashion. All these essays draw their illustrations from, and refer their allusions to, a wide range of reading and study. Especially does the Hindu note recur with a frequency at first astonishing, but, as we proceed, with the familiar countenance of an expected friend.

The subject of his first essay, "Thoreau," is approached through a long avenue of verdurous thoughts and fancies which makes a pleasure of delay. Reading 'Walden' in his mountain solitude proved an experience comparable with Mr. More's reading of the Odyssey by the seashore, the place interpretative of the book. His special plea is that Thoreau's essays, more than those of any other descriptive writer, are a natural outgrowth of a feeling deep-rooted in the historical beginnings of New England—"the wondering awe of men set down in the midst of the strange and often threatening forces of an untried wilderness." But his most interesting discovery, or interpretation, is that Thoreau is differentiated from the nature poets of the last century by his lack of pantheistic reverie, which is certainly "important if true" in view of the once common intimation that Thoreau had not only "grown the Emerson nose," but all the features of his mind with an assiduous imitation. Mr. More's praise of Thoreau on this head is significant of his own reaction from the pantheistic character of Oriental thought.

The second essay, "The Solitude of Nathaniel Hawthorne," finds in Hawthorne's writings from first to last a succession of variations on the theme of solitude. "No single tale, however short or insignificant, can be named in which, under one guise or another, this recurrent idea does not appear." The danger is that so much insistence on one aspect of Hawthorne's work may tend to obscure other aspects which are of equal if not greater importance. Further, it occurs to us that Mr. More's fondness for the literary parallelism sometimes attracts him to analogies that are overstrained. His suggestion that Miriam in 'The Marble Faun' commits Beatrice Cenci's crime, has, no doubt, been widely entertained. When he writes that 'The Blithedale Romance' is "in every way the slightest and most colorless of the Hawthorne novels," he expresses an opinion to which Mr. Howells is radically opposed; but there is, perhaps, something of excess in both the minimizing and the maximizing view.

The attempt to trace the literary origins of Hawthorne and Poe to a common root in the moral experience of the American people has in it a touch of hardihood, so different were the early experiences of the two men, and so different severally the outcome of their powers—Hawthorne's so intensely moral, Poe's so purely intellectual and unmoral. Neither the Emersonians nor the Eddyites will be pleased with Mr. More's finding Emerson responsible for Christian Science and similar vagaries, but it is certain that the Eddyites have often found the Emerson scripture to their purpose, though Mrs. Eddy protests that her

indebtedness is not to Emerson, but to Miss Sarah J. Bodwell, the principal of Sanborn-ton Academy.

An essay on Carlyle commends Froude's biography of the undoubting Thomas as "one of the two great biographies of the language." The interest of Carlyle's life is found to centre in his Hindu belief in the illusion of existence, contrasting with an emotional consciousness, egotistic, self-assertive, wholly foreign to the Hindu mind. A chapter upon English verse makes its principal appeal to technical students of prosody, but a secondary to all who are interested in the proper reading of poetry. An elaborate review of Arthur Symons's poems finds that decadent poet equally sincere and sickening; but the sincerity is not so obvious as the morbific quality. There are two essays on the Celtic Revival which abound in sound discriminations, with a frank preference for the late Lionel Johnson to Mr. Yeats as representative of the new Irish school.

Quite the most interesting of Mr. More's Essays is "The Religious Ground of Humanitarianism." It is at the same time the least satisfactory. A careful examination of the Gospels brings out the contrast of their moral idealism with the temper of our modern life. To which shall we cleave? Mr. More's answer is that the teachings of Jesus were merely "counsels of perfection," not requiring general obedience. "His kingdom was not of this world, and there is every reason to believe that he looked to see only a few chosen souls follow in his steps." This seems to us a more lame and impotent conclusion than flat refusal to obey the precepts of Jesus because they are too high and hard for us to realize.

Comitium, Rostra, Grab des Romulus. By Eugen Petersen. Rome: Loescher.

An exceedingly interesting and important contribution to the yet undetermined history of the Roman Comitium and its adjacent structures has herein been made by the first secretary of the German Archæological Institute in Rome. His chief conclusions are based upon a careful examination of literary sources in connection with the remains under and in the neighborhood of the Black Stone discovered by Boni in 1899. The Column and the Cippus with the archaic inscription are among the earliest of these remains, and date back to the "regal period." With them are to be classed scanty remnants of a *suggestus*, consisting of a flight of five steps, some 24 metres long, surmounted on the south by a platform about four metres broad. Column and Cippus stand close to the western end of the steps, which run precisely east and west. The surmounting platform is bounded on the southern side by a retaining-wall of incompletely polygonal outline, concave toward the steps. This wall is to be regarded as the bounding wall of the Comitium ascribed by Cicero (Rep. II., 17, 31) to Tullus Hostilius. Furthermore, Column and Cippus lie in a north-and-south line which just clears the western corner of that rectangular structure to the south of the "Tomb of Romulus" which has been called by some archæologists an "altar." This north-and-south line was the axis of the original Hostilian senate-house, which, to make possible the determination from it of noon and sunset mentioned by Pliny (N. H., vii., 212), cannot have stood as far to the north as Hülsen and others have thought. It must rather have occupied a site partly under and partly in front of the later Secretarium Senatus (Sta. Martina). The Comitium was therefore not substantially reduced in size by the building of the Curia Julia, but was always small.

To the republican period belong the "Tomb," with its vanished lion-guardians, the "Altar," and another *suggestus* with steps and platform, of which a few traces yet remain. These steps, however, run in an arc, of which the "Tomb" and "Altar" may or may not have stood precisely at the centre. But the "Altar" is no more nor less than the Rostra of the Republic, erected first in 338 B. C. The name Rostra was, however, applied not infrequently to the entire hemicyclic structure at the centre of whose outer edge it stood, precisely as also the ancient writers sometimes speak of the Forum when strictly only the Comitium is concerned. The earlier retaining-wall continued in part to bound the platform of the republican *suggestus*, which furnished ample space for statues and for the seats of spectators at funerals and other public celebrations in the Comitium. The "Tomb," with its lions, was erected in the fifth century B. C., and was mutilated probably by the Gauls in 390 B. C. After their departure the monument was not restored, but the former accumulation of sacrificial offerings and débris was heaped upon it. The remains of the tomb itself were thus buried from sight, but the area above it remained open for offerings till Cæsar's time.

The orientation of Rostra and Tomb corresponds to that of the pavement of travertine blocks extending from east to west in front of Sta. Martina and S. Adriano (though at a different angle), but does not correspond to the orientation of Cippus and Column, and therefore to that of the royal senate-house. The travertine pavement doubtless marks the area immediately in front of the Sullan curia. But as the Tomb was constructed in the fifth century, the early senate-house had perhaps even by that time given place to another lying at a different angle, and no longer, therefore, in strict orientation to the points of compass. Its site perhaps extended somewhat under S. Adriano as well as under Sta. Martina. Sulla built his senate-house with the same orientation, and to his time is to be attributed the travertine pavement mentioned above. For the building of the Curia Julia the radial axis was swung yet a little further around, giving the orientation that the denuded core of S. Adriano still preserves. In connection with the other changes then carried out around the Comitium, the pavement was finally extended over the site of the Tomb, which was marked as an everlasting memorial by the quadrate of black marble. This Black Stone was oriented with reference to the front of the new senate-house, and not to that of the Tomb, which also it only in part covers.

With the discontinuance of offerings at the grave of the founder of the city came the establishment of the worship of the founder of the Empire. To the republican rostra, with its encompassing arc, and the altar-tomb of Romulus, succeeded the Rostra Julia, with its hemicycle embracing and sheltering the altar raised on the spot where, from the ashes of his funeral-pyre, Cæsar entered the ranks of the gods. The correspondences are no mere chance, but as purposeful as that less subtle scheme which perpetuated the reminiscence of the vanished republican Rostra by building another at the western end of the Forum with an adorned platform toward the Forum itself, ending on the opposite side toward a smaller area in a series of inward-curving steps.

Such are the main outlines of the interpretation given by Prof. Petersen, on the one side, of the curious and scanty remains from the older period; on the other side, of a number of literary sources. The specialist will need to pay careful attention to the lively argument advanced. Even Prof. Petersen concedes that we can no longer believe the *templum* to be a precisely outlined and oriented piece of ground. Is it not possible that modern archæologists are pushing too far the argument from the orientation of other things?

How to Collect Old Furniture. By Frederick Litchfield. London: George Bell & Sons; New York: Macmillan. 1904. Pp. xiv., 169.

On a former occasion we have reviewed Mr. Litchfield's 'Illustrated History of Furniture,' and he is also the editor of a revised edition of Chaffers's 'Marks and Monograms on Pottery and Porcelain.' He is known to readers of his books, and to those persons who use them rather for reference than for reading, as one who takes the dealer's rather than the antiquarian's view in matters of decorative art. Much the same spirit appears in the book before us. There is no great learning shown, and fortunately no affectation of learning. There is no attempt at tracing with any minuteness the growth of style, the modifications of design or the influence of one nation upon another. The pages are devoted to a quasi-historical following up of furniture from the Renaissance in Italy through the Jacobean period for England, through the Empire for France, and in a similar fashion for Italy and Holland. Further chapters deal with the eighteenth and nineteenth centuries in England, this part of the book being set out on a more extensive plan than what has gone before. Chapter VIII. deals with "faked furniture," with some clever remarks on the possibility of detecting work which is new or partly new, and there is a chapter of "Hints and Cautions." Another, of "Notes and Explanations," occupies pages 145 to 164, and in this we read of lacquer, with a very inadequate account of it; of intarsia work, with a misleading confusion between tarsia and certosina. Here, too, are a mistranslation of *chaise longue*, which, at least in the French vocabulary, is not used for one very peculiar kind of seat and for that alone; definitions worth recording of Pembroke Table and Sutherland Table; and a long account of the habits of buyers at auction, and their way of preventing the competition of unexpected outsiders—all trustworthy in appearance, and all entered under the term, "The Knock-outs."

We should advise no one to use this book as an authority, for it is, as indicated above, often careless in its statements; but it is capable of giving a great deal of informa-

tion to any one who will risk the precise accuracy of this statement or that, or who will check the assertions by more carefully made books. As for the illustrations, they are largely in half-tone prints taken from well-chosen originals, and offer to the reader sixty or seventy excellent pieces of ancient furniture presented in an intelligible way. It is explained that most of the originals are in the museum at South Kensington "in order that the [London] collector may compare," etc.; but really the pieces are simple, and are well shown in the pictures. Not one exceptional work of art, in sculpture or inlay, is offered. The little text cuts may be disregarded, although some of them are taken from the respectable originals published by famous furniture-makers of the past.

A Dictionary of the Targumim, the Talmud Babli and Yerushalmi, and the Midrashic Literatures. London: Luzac & Co.; New York: G. P. Putnam's Sons. 2 vols., 4to.

The author of this colossal work, which was begun in 1878, and of which the first fascicle came out in 1886, might well have said of himself with pride, *Usque ad Plaudite vivendum*—one should live till the curtain is rung down; for he died within a week after reading his last proof-sheet. The dictionary is very full, and could not have been written as it stands unless the compiler had read pretty carefully the whole of the vast literature named in its title. He had, of course, the benefit of what was done by many predecessors, from Rabbi Nathan, who about the year 1100 wrote the Aruch, to the late works of Jakob Levy and of Alexander Kohut of New York. Many of the rare vocables and rare meanings of the more common vocables occur in disputed and corrupt readings; it was therefore necessary, in the preparation of the dictionary, to have at hand a comparative table of these discrepancies. This work had been done for the Babylonian Talmud, the most important part of this literature, by Raphael Rabbinowicz, as Dr. Jastrow acknowledges in his preface.

This is the first Talmudic Dictionary written in English, and the English is faultless except in the rendering of law terms; it seems as if a man trained for a preacher were specially unfitted for the business of the lawyer. Thus, the word *Aharayoth*, a very common law term, has a twofold meaning. The more usual is the lien which, under the Talmudic law, a bond attested by two witnesses creates on all the landed estate and slaves owned at the time of its delivery by the obligor; the other meaning is the warranty of title contained or implied in a deed for the conveyance of land. Dr. Jastrow knows both meanings well enough, as he shows by his citations and his English renderings, but his definition runs thus: "*Surety, esp. mortgaged property, or property which may be resorted to in case of non-payment* (even if sold)." Again, in defining *Miggo* (216a), it is called "a legal rule by which the statement of a *deponent* is taken for true, etc.," where evidently a *defendant* stating his defence is meant, not a deponent—that is, a witness.

The quotations are well chosen to throw light on difficult and important passages. It is not, however, the defining part of the lexicon round which the battle of the learned rages, but the etymological, and there are no books whose contents offer greater room for honest difference than the Talmud and Midrash, with their composite jargons. The Mishnah is a sort of decayed Hebrew, mixed with many Aramaic forms and vocables. It contains not a few words that are plainly Greek; very few Latin words, but some very important law terms undoubtedly Babylonian. The Talmud proper, or Gemara, aside from the quotations of Mishnah and Baraïtha imbedded in it, is Aramaic; the Jerusalem Talmud is written in the Western dialect, mixed with a great deal of Greek and some Latin; the Babylonian Talmud in the Eastern dialect, mixed with some Babylonian and quite a number of Neo-Persian words. Foreign elements, such as Greek and Persian, look rather strange when clothed in Hebrew letters, and are sometimes disguised almost beyond recognition. But Dr. Jastrow was a thorough Greek scholar, as behooves a Prussian Doctor of Philosophy; he had, moreover, the Greek derivations of Talmudic words before him in the works of his predecessors, from John Buxtorf down to Kohut. It was not ignorance of Greek, like that of the Babylonian rabbis in the Talmud, which made Dr. Jastrow seek Hebrew or Aramaic roots for Greek names and vocables, but a certain whim of the scholar; and he showed the same aversion to derivations from Latin and from Persian. Dr. Gustaf Dalman, whose short dictionary for Talmud, Targum, and Mishnah was published at Frankfort in 1901, in his preface does full justice to Dr. Jastrow's merits, but "regrets the violence with which he forces Greek and Persian words upon Hebrew and Aramaic roots." It is annoying to meet these *coups de force;* but the caprice finds vent in hardly as many as thirty cases, while thousands of words from the Greek are followed by their true originals in Greek characters.

Among the more important instances in which the author denies the Aryan derivation are the following:

Simta, 'sidewalk,' had for centuries been referred to Latin *semita*, and indeed may be read Sémita; from this same Latin word the Arabs have borrowed the courses of the stars—plural *azimuth*.

Zug, 'a couple,' generally compared with the Greek ζεῦγος, 'a team.' As there are verbal roots, z.u.g., 'to pair,' both in Aramaic and in Arabic, Dr. Jastrow may possibly be right here.

Epikoros, 'an aggressive infidel'—evidently the name of Epicurus, the well-known Greek philosopher. The author tries to connect it with the Aramaic and Neo-Hebraic *hefker*, 'abandonment,' but is clearly wrong.

Istasith, 'civil commotion,' 'party strife,' the Greek στάσις; Jastrow prefers a reading *Istanith*, and finds an Aramaic root for this by assuming a non-existent conjugation, which he calls Ispeël.

Pithgam, 'command,' 'word,' which is Biblical, but most common in the Targumim, is by Bible scholars derived from Old Persian *pratigama*, Neo-Persian *paigam*. Jastrow finds for it a Hebrew root not otherwise known.

Ten-du, words of uncertain meaning, which Rashi says are Persian and mean 'bodies two' (*du*=two), Dr. Jastrow renders "burden of grief."

The author is acquainted with Babylonian influences, but he recognizes only the words most clearly and indubitably drawn from that source—not, for instance, *shetar*, 'a written contract,' the verbal root of which is in Assyro-Babylonian the only one for 'to write,' while in Biblical Hebrew it occurs only in *Shoter*, 'a writer,' *i. e.*, an official; nor *Aris*, 'a tenant on shares,' the Babylonian *irrishu*, 'a cultivator or tenant farmer.'

In short, Dr. Jastrow allows the derivation of any Talmudic word from sources other than Hebrew or Aramaic only when the foreign origin of that word is beyond all doubt..

The Cult of the Chafing-Dish. By Frank Schloesser. London: Gay & Bird.

The chafing-dish in the hands of a highly trained cook is a practical toy, capable, within limitations, of contributing to the gayety of life; but in the hands of an amateur it merely puts another burden of responsibility on the overtaxed digestive organs. Let us take Mr. Schloesser's formula for the making of a matelote of eels, a classical dish of whose delightful possibilities Marmontel tells us in the introduction to his story 'Les Bateliers de Besons.' The liquid of a matelote of eels is a béchamel; as a *liaison* or thickening to his sauce Mr. Schloesser indicates "a walnut of butter and a tablespoon of flour." This, incorporated into the matelote without any previous treatment, would merely contribute to the incongruity of the mess. To show how impossible it is to do justice to a béchamel in a chafing-dish, or even to approach it, we will give the correct method of making this sauce, as an example of its complex composition and the care required in preparing it. We neglect the proportions of each ingredient.

The foundation, then, is butter and flour; the liquid, milk; the flavoring, parsley, thyme, bay-leaf, onion, turnip, and celery; the seasoning, cayenne, salt, and lemon juice. The milk is put on in a small, clean pan with the vegetables and herbs; allowed to simmer for a quarter of an hour and then strained. The butter is then put in a saucepan and allowed to melt. The flour, thoroughly sifted, is added to the butter and briskly stirred over the fire with a wooden spoon. At first it will form a stiff paste; but this will gradually liquefy and end by assuming a honeycombed appearance. Thereupon the milk is to be added gradually. With the first few drops the consistence of the butter and flour will change, becoming stiff like dough. Into this each successive addition of milk should be well stirred so that no lumps may form. The saucepan should be *withdrawn from over the fire every time the milk is added;* the sauce beaten and stirred till quite smooth and returned to the fire to thicken before any more milk is added. When all the milk is in and the sauce both well thickened and free from lumps, it may be allowed to boil, and kept boiling for five minutes or until, when drawn with the spoon from the sides of the saucepan, it falls apart in such a way as to leave spaces upon them quite blank and clean. If the sauce be properly made it should be perfectly smooth, so that no straining will be necessary. When seasoned it will be fit for use. Mr. Schloesser, in his recipe, tells of adding to his mixture a half-pint of claret, brandy, and a tea-cup of

bouillon. What would Grimod de la Reynière have said of this barbaric desecration of a béchamel?

Mr. Schloesser is a pleasant writer and enthusiastic in praise of his utensil. He calls it "Chaffinda," or, as he says, "my better half. Every bachelor has a wife of some sort. Mine is a chafing-dish."

A Novel Fit for Nation Readers

The Divine Fire

By MAY SINCLAIR

$1.50

A new and notable novel of the life and loves of a genius unfortunately born, who became a real poet. The character of the poet and the strangely assorted people he met are drawn with more than usual power. Humor and sincerity are also said to be features of this novel, which has peculiar attractions for people of culture.

NEW HISTORICAL BOOKS

TO BE PUBLISHED NOVEMBER 16TH. THE NEW VOLUME OF

Mr. James Ford Rhodes' History of the United States

Volume V. 1864-1866. *Cloth 8vo, $2.50 net (postage 23 cts.).*

This volume can be supplied singly uniform with either the older editions of the set (Harper's) or the new (Macmillan's)

Previously Issued:
Vol. I. 1850-1854
Vol. II. 1854-1860
Vol. III. 1860-1862
Vol. IV. 1862-1864

"The definite clearness of judgment and the right-minded fairness of criticism shown in each chapter support our earlier judgment that the whole book will be a trustworthy guide and a friendly companion in our study of the time as indispensable to those whose canons of political judgments may differ from the author's as to those who fully accord with him."—*The Nation.*

The set in five volumes. Cloth, new ed., $12.50 net

Professor Herbert L. Osgood's The American Colonies in the Seventeenth Century

"Prof. Osgood's long-awaited work . . . must be adjudged the most substantial and masterful contribution made to the study of American colonial history in recent years."—*The Evening Post, New York.*

"We await with eagerness the completion of Professor Osgood's work. . . . Every true student of American history should consider it an obligation to read this work of Professor Osgood's. Most of all, as we close, let us urge upon any who have it in mind to bring forth text-books on American history for school or college, that it is especially their duty to know from cover to cover this comprehensive and satisfying synthesis of historical investigation and criticism."—ST. GEORGE L. SIOUSSAT in *The Dial.*

Volumes I. and II. Cloth, 8vo, $5.00 net (postage 44c.).

Mr. James Bryce's The Holy Roman Empire

A new edition, enlarged and revised throughout, with a chronological table of events and three maps. "For instance," says the author in his preface, "the struggle of the Emperor Lewis IV. against Pope John XXII. and the careers of Arnold of Brescia and Cola di Rienzo have been somewhat more fully described. An entirely new chapter has been inserted dealing with the East Roman or Byzantine Empire, a topic inadequately handled in previous editions. A concluding chapter, sketching the constitution of the new German Empire and the forces which have given it strength and cohesion, has been appended. . . . And the convenience to a reader of finding a succinct account of the foundation and the characters of this modern representative—if one may call it so—of the mediæval Empire will, I hope be deemed to compensate for whatever loss of symmetry is involved in an extension of the treatise beyond its original limits."

Uniform with "The American Commonwealth." Cloth, cr. 8vo, $1.50 net (postage 17c.).

The Cambridge Modern History Vol. VIII. The French Revolution

"A royal volume—the best yet issued in the Cambridge Modern History—and the best record in the English language of the most hackneyed period in the annals of the human race."—*Pittsburg Gazette.*

"As a well-proportioned, trustworthy and reasonably vivid account of the main events from 1787 to 1800, the present volume is far and away the best comprehensive treatment at our disposal."—*The World To-day.*

Cloth, 8vo, $4.00 net.

Dr. Dexter's History of Education in the United States

By EDWIN GRANT DEXTER, Ph.D. *Professor of Education in the University of Illinois.*

"Primarily a work for consultation, a treasure house of fact, a book never to be far from one's hand when writing or thinking upon educational topics, it is nevertheless a remarkably interesting book . . . as sane in its point of view as it is delightful in its presentation of the facts."—*The Journal of Education*, Boston.

Cloth, 8vo, 619 pp. $2.00 net (postage 16c.).

Kayser & Monteser's Brief German Course
$1.20
THIS introductory German Course, comprising grammar, exercises, reading, and conversation, follows the recommendations of the Committee of Twelve of the Modern Language Association, and of the College Entrance Examination Board. The work provides; careful drill upon pronunciation; memorizing and frequent repetition of easy colloquial sentences; drill upon the rudiments of grammar; abundant easy sentences designed not only to fix in mind the forms and principles of grammar, but also to cultivate readiness in the reproduction of natural forms of expression; exercises in word formation leading to an acquisition of an adequate vocabulary; and the reading of graded and connected selections in prose and poetry.

A NEW NOVEL BY THE AUTHOR OF "DODO."
THE CHALLONERS By E. F. BENSON.
At all Booksellers.

Unwin's First Novel Library

In connection with this Series of Novels Mr. Unwin begs to announce that he is holding a Competition for a Prize of One Hundred Pounds (£100) for the best First Novel submitted to him according to the conditions set forth below.

(1) The competition is open to any author who has never had a novel published.
(2) On payment of £100 to the winner the novel will become the absolute property of Mr. Unwin.
(3) Mr. Unwin will be the sole judge of the Competition, and his decision will be final.
(4) Competing novels may be sent in at once and until March 31, 1905. The result will be announced as soon after that date as convenient.
(5) Competing novels must be accompanied by a letter stating that they are intended for the Competition in accordance with the conditions laid down.
(6) Mr. Unwin will retain the first right of treating with the author for publication of any competing unsuccessful novel.
(7) All MSS. submitted must be typ written. No novels of less than 70,000 words will be considered, and it is recommended that they should not exceed 100,000 words.
(8) All MSS. must be delivered free and be accompanied by a sufficient remittance to cover cost of return postage.

New Macmillan Publications

A NEW EDITION WITH MUCH NEW MATERIAL

Mr. Francis L. Wellman's The Art of Cross-Examination

A new edition with five additional chapters and considerable additions, *e. g.*, to the chapter on "Experts." *Bound in dark red cloth, gilt tops, 8vo, $2.50 net (postage 17c.)*

"Few more entertaining books on the subject have been written than this. But it is more than entertaining, it is valuable."—*Albany Law Journal.*

"The non-professional reader will find it quite as attractive as a new story by Conan Doyle."—*The Press*, Philadelphia.

A History of Columbia University

Published in Commemoration of the One Hundred and Fiftieth Anniversary of the founding of King's College in 1754. *With fifty full-page illustrations. Cloth, $2.50 net (postage 19c.)*

This book has been prepared under the direction of an editorial committee consisting of Professors BRANDER MATTHEWS, HARRY THURSTON PECK, and MUNROE SMITH, together with JOHN B. PINE, '77, and FREDERICK P. KEPPEL, '98. The volume contains about 500 pages and 50 full-page illustrations.

Mrs. Roger A. Pryor's Reminiscences of Peace and War

By the only Southern woman who was practically within the Confederate camp from first to last during the war.

"Seldom does one find a book so uniformly charming in matter and manner."—*Chicago Record-Herald.*

With six portraits. *Cloth, crown 8vo, $2.00 net (postage 21c.)*

Rev. Hugh Black's The Practice of Self-Culture

The author of "Friendship," etc., discusses the best ways of equipping the self for service.

Cloth, 12mo, $1.25 net (postage 10c.)

Pres. William De Witt Hyde's From Epicurus to Christ

A study of personality based on five principles: Pursuit of pleasure, self-control, subordination, proportion, and the Christian spirit of love. *Cloth, 12mo, $1.50 net (postage 11c.)*

Pres. King's Personal and Ideal Elements in Education

Deals with the function of the college (as distinct from school and university) to teach the fine art of living; with the nature of religion and modern religious education; and with the fight for character. *Cloth, 12mo, $1.50 net (postage 11c.)*

Mr. W. J. Ghent's Mass and Class

The author offers a fresh analysis and description of social classes; he rejects the definitions given by orthodox writers, and pungently criticises the dominant trading class. *Cloth, 12mo, $1.25 net (postage 10c.)*

Mr. Lafcadio Hearn's Japan: An Attempt at Interpretation

"Dealing as no other writer in English could deal with mainsprings of Japanese character. . . . as pure interpretation it is almost invaluable."—*Boston Advertiser.* *Cloth, 12mo, $2.00 net (postage 13c.)*

Mr. Clifton Johnson's Highways and Byways of the South

Uniform with "New England and its Neighbors," etc. The book covers the South, east of the Mississippi, with even more picturesque interest than the other volumes in this series. *Cloth, crown 8vo, $2.00 net (postage 15c.)*

Mr. Edward T. Devine's The Principles of Relief

"By far the most original and valuable book in its general field which has appeared in ten years."—HOMER FOLKS, Secretary State Charities Aid Assoc., Ex-Comm'r of Public Charities, New York City. *Cloth, $2.00 net (postage 12c.)*

Dr. Edward Everett Hale's Memories of a Hundred Years

A new edition with three new chapters on Dr. Hale's childhood, youth, and the great causes which have interested him most deeply. *In one volume, cloth, 8vo, $3.00 net (postage 22c.)*

Dr. Herbert Friedenwald's The Declaration of Independence

An original study of the origin and meaning of the fundamental document of American history; an interpretation and an analysis. *Blue cloth, gilt top, 12mo, $2.00 net (postage 10c.)*

Published by THE MACMILLAN COMPANY, 66 Fifth Ave., N. Y.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 3, 1904.

The Week.

With the current week ends the Presidential canvass, the least excited, noisy and demonstrative—we might almost say the least conversational—within the memory of man. This paradox—in view of the spectacular attributes of one of the candidates, as well as of the number and gravity of the issues at stake—has engaged the attention of the thoughtful, and awaits the light which the election may throw upon it. No single issue has asserted its preëminence, and no bugaboo has been maintainable since Judge Parker took the currency out of the debate. "The Street" has been absolutely unaffected by the political movement. Indeed, the chief interest of the hour has attached to State rather than to national fortunes. The feeble signs of life in the Republican machine corpse, evidenced by what has been going on in Wisconsin, Illinois, and Massachusetts; the revolt against corruption in Missouri—have saved the periodic function from being stale and featureless; and that way lies the hope of reform.

The remarkable enthusiasm at the Parker meeting at the Madison Square Garden on Monday night—so great that, for a wonder, it could not be rated as a "frost" in the headlines of the Republican organs—is but one sign more of a rising Democratic tide in this city and State. No one can be blind to it, whatever inference he may draw. New York, we may remark, has been more familiar with Mr. Roosevelt's career than any other portion of the Union, and is therefore in a position correctly to measure his value and usefulness. In this it does not need any assistance from Messrs. Hay and Root and other official apologists and eulogists. Judge Parker's speeches are certainly of the kind to win him votes wherever he goes, for he is direct, earnest, sincere, and weighty, and makes friends the instant he shows himself. In discussing the tariff on Friday, he was both lucid and forcible. His illustration should have brought home to his listeners the real nature of the burden which the tariff lays on the shoulder of consumers. If, he said, a collector went through the country urging that every man, woman, and child contribute according to his means to the coffers of the United States Steel Corporation, the proposal would be received with jeers. No argument could persuade people that "the good of the country" required from everybody even a small contribution toward the wealth of the Trust. And yet under the tariff these levies are forced upon the consumer indirectly.

While the commissioning of Gen. Leonard Wood and Collector Crum during a "constructive recess" of the Senate is not one of the great issues of the campaign, it is yet extremely interesting for the light it throws on Mr. Roosevelt's attitude toward the constitutional limitations of his power. The Parker Constitution Club, therefore, made a wise selection in devoting its third report to this subject. On what is primarily a legal question, the opinion of the eminent lawyers whose names are signed to the report should carry great weight. But, to the layman, the lesson of the whole transaction is very simple. The straightforward, shoulder-hitting Administration, in order to keep a few favored military and civil appointees in office, resorted to the most pitiful and hair-splitting of technicalities. The notion that, between twelve o'clock and twelve o'clock of a certain day there was a "recess of the Senate" within the meaning of the Constitution, as the Club's lawyers put it, "finds its parallel only in the arguments of the Scholiasts." A veteran legislator like Senator Hale called it "a strained construction of which I have never been able to find a father," while so adroit an advocate as Senator Spooner said, "I do not intend to give approval to the notion that there can be a constructive recess." The "chimera ruminating in a vacuum" belonged no more exclusively to the realm of metaphysics than Mr. Root's explanation that "there can be no end of a session until a time is reached when there is no session, and the time when there is no session is a recess." The question is not merely a nice point for the lawyers, bearing only on some appointments and the collectorship of one district. It has larger aspects. As the Constitution Club states, "he [the President] attempted to make a permanent appointment by means of a succession of temporary appointments, thus seeking to do indirectly what he was not permitted to do directly. Such a proceeding constituted a most serious and menacing departure from the Constitution."

For one who has had so much experience with Philippine affairs, Secretary Taft made a remarkably inexact statement in Brooklyn the other day. According to the newspaper report of his speech he said: "By taking Manila, Dewey took the Philippine Islands." But surely the Secretary ought to have known that the Court of Claims has passed upon this very question in the case of Warner, Barnes & Co. against the United States, in which the company sued for the repayment of certain duties levied between April 11, 1899, and November 15, 1901. When the case was argued, the whole contention of the War Department and of its officers who testified went to show that the duties levied were not collected in time of peace, or when the islands were under the actual control of the United States authorities. The Court of Claims held that, in the state of war existing in the Philippines, all things were done "as if the war had been a public one with a foreign nation." And it carefully explained that the treaty of peace merely gave the United States the right to take the islands and try to establish its sovereignty. Not until July 1, 1902, was this done, according to the Court of Claims, and then only by employing 126,468 soldiers and at a cost of 4,374 American lives. For Mr. Taft to give the impression to-day that the islands were ours from the moment that Dewey sailed into Manila Bay, is distinctly misleading.

"How would the Opposition's remedy of free trade in Trust-made articles hurt the Standard Oil Company?" asked Senator Beveridge in a campaign speech the other day. "There is no tariff on oil." It is true that the tariff law imposes no specific duties on oil, but Section 626 provides that in every case where a foreign country imposes a duty on petroleum and its products, the United States shall collect an equal duty on these same articles. Instead of there being no duty on oil, there are so many duties that it takes a sizable Government pamphlet to enumerate them. Russia's duty, for instance, is 1 ruble per pood, and is equivalent in our standards to $0.002852 per gallon. Allowing 8½ pounds to the gallon, the unit familiar to the consumer, the rates from the important foreign countries work out approximately as follows: Austro-Hungary, 15.6 cents; Finland, 1.7 cents; France, 6.6 cents; Germany, 5.5 cents; Greece, 29 cents; Italy, 35.7 cents; Netherlands, 0.8 cent; Portugal, 27.8 cents; Russia, 2.4 cents; Spain, 18.5 cents; Switzerland, 0.9 cent; Canada, 5.5 cents. Of course, in these cases we have practically delegated the power of fixing our tariff schedules to foreign Governments, but the duties are there; and so long as they exist it is idle to talk of free trade in oil.

Secretary Hay's presentation of the reasons for a second Hague conference should be of much help in making it a success. The Russian-British agreement for an international commission to in-

quire into the actual facts of the North Sea incident makes the hour of the invitation timely. Indeed, the war in the East had already done that, for even if Japan and Russia should be unwilling to meet the other nations at The Hague, the horrible slaughter in Mantchuria should make the rest of the world the more zealous in the cause of peace. There are many questions of international law to be settled, upon which there should easily be agreement. The rights and duties of neutrals, the exemption of private property at sea, not contraband of war—these are matters never more pressing than at this moment. The new distinction between absolute and conditional contraband of war, and the inviolability of the official and private correspondence of neutrals, are fresh issues brought to the front by the activity of Russia's cruisers. How great a step forward in the law of nations their satisfactory settlement and definition would be is apparent if we but consider the dangerous friction between Russia and England over the Red Sea seizures three months ago.

A Washington dispatch to an Administration newspaper states that "a disagreeable impression" has been made upon the State Department by the news that the courts in Venezuela have decided against the New York and Bermudez Asphalt Company. This was the case in which the company was sued for having financed a revolution against the constituted Government. We believe it is not denied that the proof was absolutely conclusive, being largely documentary, and furnished by a former employee of the company. But the fact that our Government is displeased at the decision, is not the most significant thing in the dispatch. It goes on to say that "the State Department has always reserved the *right to review the judicial proceedings* in this celebrated case, and has already more than once indicated plainly that it did not regard the step taken in the asphalt controversy as *legal*." There we have a fine illustration of Secretary Hay's announced purpose to treat our "sister republics on this continent" as equals. He proposes to interpret their laws for them. Their judicial proceedings are to be reviewed and overriden by him. He is to be their court of final appeal. The very statement of his position is enough to condemn it. It may be explained as a mere bit of that arrogant contempt for Spanish Americans which Mr. Hay has unfortunately too little concealed, but in any case it is an attitude at once unjustifiable and provocative.

Dr. Chandler, the anti-Addicks Republican who was nominated for Governor in Delaware, refuses to get off the ticket in the interest of "harmony" so that the State may be carried for Addicks and Roosevelt. He declares that he enlisted against Addicks until the end of the war, and that, no matter if others surrender, he will fight to the last. The nomination came to him, he explains, without his seeking, and was accepted on the distinct condition that it should stand until the votes were counted. So he declines to strike his flag to the piratical Addicks. To old-fashioned people this may seem an instance of unbending virtue; but the President's favorite doctrine of "the practical" and "the larger good" tells heavily against it. Impracticable Dr. Chandler should be made to understand that it is better for a dozen Delawares to be debauched by a dozen Addickses than for the party of purity and reform to fail to elect its President.

Gov. Garvin of Rhode Island has offered a reward for the conviction of bribers, $150 each for the first five, and $50 each for the rest. He will not, it is safe to say, bankrupt the State, not because Rhode Island will be free from bribery on November 8, but because the corrupters of that corrupt little commonwealth will, if we may judge the future by the past, be rich and powerful enough to escape punishment. The ring headed by Senator Nelson W. Aldrich has made the term popular government almost a mockery in that State; it buys and sells legislation and offices with an effrontery unsurpassed in Delaware under Addicks or in Montana under Clark. The condition of affairs was briefly described by Gov. Garvin in a speech at Olneyville last week. "Rhode Island people," he said, "are exploited by their Legislature. Their right to a just representation in the General Assembly, their right to an equal suffrage in the cities, their Constitutional right to have the three great departments of the State Government kept equal and apart, their right to a non-partisan judiciary, their right to a fair return from the granting of public franchises to private individuals, their right to the enactment of just laws without purchase—all these rights and many others are denied to the people of the State by the General Assembly." This year the Republicans are so nervous over the outcome that they are spending money with unusual liberality; and they have tried to strengthen the ticket by inducing Chief Justice John H. Stiness to run for Congress. The obvious purpose of this step is to divert attention from the disreputable ring to a respectable candidate. It is the old story of the wolf in sheep's clothing.

The death of Mr. Van Cott gives President Roosevelt what should be a welcome opportunity to put the local post-office on a sound business basis. In many respects its management has been disgraceful. We refer not merely to the political activities of the late postmaster, but to the fact that the New York post-office is years behind the great offices of Berlin and London. For this, Congress must, of course, share the responsibility, but every large business house in this city is aware that in efficiency and promptness of delivery the New York service is sadly lacking. The handling of newspaper mails is especially open to criticism, and repeated complaints bring no satisfaction. If Mr. Roosevelt feels as he used to feel about the need of efficiency in such an office, he will appoint a man of the type of the late Mr. Henry G. Pearson, whose bust stands near the entrance of the post-office building. What is needed is not a political leader, whether his tendency be in the direction of reform or otherwise, but a successful business man whose standing will of itself give assurance that he will properly conduct this great office without regard to the affairs of any political party, and with the sole desire to make the postal service in this city the best possible.

The subway opened last week adds to our habitable area territory at least ten times the size of Manhattan Island itself. The bearing of this upon social conditions can hardly be overestimated. Our tenement system at its worst has its basis in unchecked human greed, and only curbing legislation such as the new tenement law can stop it. But its peculiarity is that it comprehends all classes except the very rich, so that private dwellings have ceased to be built on Manhattan Island, less than 100 going up last year. With the new transit system, however, the man of moderate means will no longer be inevitably forced into five or six ridiculously high-priced and ill-ventilated rooms. At present, residential property within thirty minutes of the City Hall is valued at from $20,000 to $30,000 a lot; the new transit system, however, will ultimately bring into the same time limit an abundance of lots valued at $1,000, $2,000, and $3,000. Its effect is already illustrated in the movement of the Jewish population. Thousands of East Side families have moved up into the sections of Harlem penetrated by the new railroad. Great preparations are already under way to build up for their accommodation vast areas which have lain waste for years, but which are now brought within the hinterland of the subway. How a slight transit improvement impels the people from the flat to the one-family house is evident from the great growth of South Brooklyn since the trolleys crossed the bridge. Living conditions on Manhattan are not to be radically changed, for nearly all the vacant land is occupied and its great

growth in population will keep up land values. But the subway will enormously increase the residential area, and give the city elbow room.

"Peace with honor" is Mr. Balfour's phrase for the adjustment of the North Sea imbroglio, and only the most dauntless Chauvinists of the British press take any other view. Indeed, to lament with the *Standard* that Great Britain has not wrung a more summary satisfaction from Russia is to regret that war is averted, for the affair was of extreme difficulty. Probably it never could have been settled by direct negotiation. The point of honor was involved hopelessly. Russia could not have cashiered an admiral overnight, and yet English indignation would tolerate no delay. England could not have remained long in the anomalous position of impounding a friendly fleet. Something must have broken before even the preliminaries of an investigation and amends were effected. Precisely because the point of honor was definitely in question, the reference of this controversy to a commission appointed by the Hague Tribunal is of the highest historical moment. It extends the principle of deliberation and arbitration to a class of cases generally supposed to be too delicate to admit of such a disposition. Recall only that virtually all existing arbitration treaties have excepted matters of national honor from the compact, as if offences too outrageous to admit the intervention of an arbiter might arise; as if, in short, methods of peace were all very well for purposes of business, but degrading when more serious national issues were at stake. Fortunately, Mr. Balfour and the Tsar have taken no such short-sighted view. On what is the most delicate punctilio that could arise, they appeal to an impartial commission for the facts. Nothing could more effectually discredit the theory that arbitration will forever be but a halting and limited expedient.

The reflections of the London *Times* correspondent on the value of the Tibetan treaty fall as coldly as soda after wine. He reminds all concerned that the treaty was made by a provisional government, whose engagements the Tibetans may or may not honor; in the name of a deposed sovereign, the Grand Lama, whom they venerate. It is recalled that the chief signatory, the Tashi-Lama, was being treated as a heretic and usurper while Lhasa lay under General Macdonald's guns, that the position of the Amban will be untenable when the British withdraw. In short, the signatories of the Tibetan treaty are precisely like the young clerks who serve as dummy organizers of great stock companies, with the difference, however, that, in the case of Tibet, no principals may ever be found at all. The moral of the whole affair is that quite as satisfactory a treaty could have been drawn and signed at Gyangtse or Calcutta. The march to Lhasa has been unproductive even of prestige, unless Mr. Balfour is willing to go the whole way and establish a crown colony on the roof of the world. In other words, Great Britain has been at infinite pains and expense to execute a formal instrument with a nation incapable of furnishing a bond. In the business world such incompetent parties are provided with guardians or let alone. Bülow, when reproached with the numerous secret conventions into which Germany had entered, declared the Empire to be extraordinarily "treatyable." Obviously this is not the case with Tibet. The real animus of the Younghusband mission appears in the retention of the Chumbi valley. The treaty is merely a soothing application for the British conscience.

Morally, Premier Combes was defeated on Friday. The Chamber voted a platonic condemnation of espionage in the army—a resolution absolutely without point unless the accusations against Gen. André were believed. Against such an expression of opinion a majority of four, on a vote of confidence, is of little weight. It is too early to know whether there is any foundation for the charges that Gen. André uses the army for partisan purposes and conducts an odious system of spying upon his officers. The character of the man makes it seem unlikely that such practices, if they exist, have his countenance. But the readiness with which M. Combes's normal majority of about eighty has melted away, shows the essential weakness of his position. On all anti-clerical measures he is strong; on all others most vulnerable. No Government of recent years has rested on so narrow a base. Friday's mishap, then, will presumably fix the Premier in his resolve to concentrate upon the abolition of the Concordat—the only issue upon which he can surely rally the discordant elements of his composite majority.

Premier Combes's bill for the separation of Church and State in France is surprisingly moderate. It allows an interval for the parishes to provide for self-support, promises to the priests a pittance of 400 francs annually for four years after the separation, as well as pensions for the high dignitaries of the Church now in service. Nothing about the change will be abrupt except the abolishing of the embassy at the Vatican. Considered broadly, the measure seems almost conciliatory, and unexpectedly regardful of the historic relations between France and the Holy See. It shows a very different spirit from the wholesale proscription which M. Combes visited upon the recalcitrant religious orders. In judging a measure of this importance, several questions arise: Is the policy desirable in itself? Are the means taken to secure it fair and honorable? Is it expedient? On all scores except expediency, much is to be said for Premier Combes's project of separation. The ideal for all nations is a free Church in a free State, but it is politically doubtful if at the present time France would be better off with the Church free. With the Concordat abolished, the Pope is at liberty to send Ultramontane bishops who could fill the parishes of every Department with scheming, disloyal priests, of which a natural consequence would be the formation of a Clerical party that might become formidable, and in any case would present a constant embarrassment to the Republic compared with which the Clerical perils imagined by M. Combes are so many phantoms. Some inkling of this danger he clearly has, since his bill provides for the continuation of the Ministry of Cults, a portfolio which, after the complete separation of Church and State, would seem as superfluous as a sixth toe. Evidently the Premier contemplates some ill-defined jurisdiction over the Church through such a ministry.

The London *Times* has discovered an interesting letter written by Li Hung Chang, a few weeks before his death in 1901, to Yung-lu, at that time one of the most influential of the Empress-Dowager's advisers. The Russian Government was then urging China to agree to a convention making the *de facto* situation in Mantchuria permanent. Li Hung Chang, always pro-Russian, desired the acceptance of Russia's proposition, and advanced some reasons why the Empress-Dowager should agree, which now sound very much as if he had had an insight into the future. If, he said, Russia was left in possession of Mantchuria, no serious harm would ensue, for in that event friction would certainly arise between Russia and Japan on the frontiers of Korea, and an actual conflict would be inevitable. To his own country he assigned the ignoble part of siding with the victor. Should the Japanese win, the proper policy for the Chinese, in Li Hung Chang's opinion, would be to join them in driving the Russians out of Mantchuria. In the other event, China should win Russia's gratitude and receive back Mantchuria by giving Korea to the Czar, and by aiding in the complete overthrow of the Japanese. Thus he felt certain that, either way, China would regain Mantchuria—a belief hardly to be shared by unbiassed observers of the Russian tenacity in holding on to any territory once acquired. But it is interesting to note that the present war was foreseen in China as clearly as in Japan, and this makes the Russian blindness to impending events all the more astonishing.

MR. HAY ON PANAMA.

It was not necessary for Secretary Hay to come to New York to prove that his pen had not lost its cunning. One speech more could add little to his reputation as a man whose words, in Lady Gregory's phrase, "crystallize into epigrams as they touch the air." And it was not a literary treat that we had a right to ask of him—grateful as is the delicate play of his wit amid the rude bawling of the run of stump speakers—but a full and frank deliverance on matters of which he is especially competent to speak, and as to which his course (which is that of the President) has been sharply challenged. But we ask for facts and we get—phrases.

Now phrase-making has its perils. A clever verbal turn may excite immediate laughter, but if it sticks in the mind long enough to lead to reflection, the result may be laughter on the wrong side of the mouth. Thus, Mr. Hay on Wednesday week defined Mr. Roosevelt as "unsafe" only in the sense that a disinfectant is unsafe for a microbe. Excellent! Nothing could be happier, unless it suggested to the hearer to run over some of the microbes in the political world to which the Roosevelt formaldehyde has been applied with lethal effect. There was that deadly bacillus, *Quayicus Pennsylvaniensis;* but we remember that it simply waxed fatter the more of the Roosevelt disinfectant was poured upon it. Every one knows, too, how the said disinfectant acted rather as a restorative upon that venerable microbe, "Lou" Payn. And as for the most fatal of all the microscopic political wrigglers, Addicks, he is this day hailing Theodore Roosevelt as a friend and ally who is aiding the great Delaware corruptionist with what Addicks calls the "courage of his new convictions." Powerful disinfectant, this! The microbes themselves grin at it.

It was a natural supposition that Mr. Hay, speaking in Carnegie Hall, would pay some attention to the damaging revelations made by Senator Culberson in the same place a week ago. By them the scrupulous good faith, as well as the legality, of the Administration's course in Panama was roundly called in question. Had the head of the State Department no reply to make? It was John Hay the Secretary of State, not John Hay the literary artist, from whom we were entitled to demand a plain tale about all those devious proceedings. But we did not get it. He did not pass it by in entire silence. In that, his art failed him. It would have been better to ignore charges than to make a weak and inconclusive reply to them. And Mr. Hay's remarks upon the Panama business were far from going to the core.

He denies that President Roosevelt committed an act of war against Colombia, but his sole reason is that the peace was not broken. "Not a hostile shot was fired." But this, obviously, is to make the weakness of a victim the true measure of his assailant's virtue. Mr. Hay's definition of highway robbery would apparently be that the crime exists only when the assaulted traveller tries to beat off Dick Turpin. Equally short of meeting the case is the Secretary's account of what was actually done. He refers simply to "the notice given hostile forces on the Isthmus that they were not to fight on the line of the railroad, which it was our duty to keep open." As if that were the whole of it! Mr. Hay conceals the fact that the orders were to prevent Colombian troops from landing within fifty miles of the railroad; that Admiral Coghlan notified Gen. Reyes that his orders were to forbid the Colombians to land a force "anywhere within the territory of Panama." If this is not an act of war, what would be? If there was any warrant in law or treaty for such astounding orders, why has not somebody produced it? It seems impossible that the John Hay who made this evasion is the very same John Hay who wrote of another Government, in 'Castilian Days,' "There is a lack of principle in the higher walks of Government. It is not so much dishonesty as it is a total absence of conscience in political matters. . . . They have a brow of bronze when detected and exposed in a misrepresentation." It would have been almost better for the Secretary to drop into his cynical mood, and to explain his course in going with the President to do evil in the words of his own poem, "Una":

> "—— unhorsed I lay
> At the feet of the strong god, Circumstance."

To none of the new evidence going to show that the Administration had a guilty knowledge of the impending revolution in Panama, did Mr. Hay, though speaking on the defensive, deign to refer. Señor Duque, one of the Panama conspirators, has stated that he "knew" the revolution was to have the support of this Government. He says also that he called at the State Department more than a month before the revolution was brought off. Bunau-Varilla gave his word to the schemers in Panama that United States warships would appear in time to aid them—as they did. President Roosevelt himself wrote to Dr. Shaw on October 10, 1903, of a "proposition" made to him to "foment the secession of Panama," adding that, though he could not do that publicly, "privately, I freely say to you that I should be delighted if Panama made itself an independent State at this moment." Do not all these suspicious circumstances cry aloud for explanation? Could not Secretary Hay fairly be called upon to say something about them? Imagine the way in which he would have exercised his nimble wit and biting sarcasm at the expense of a Democrat caught in such a moral coil!

Panama has ruined many a reputation in France, and it promises to stand in history as the one great blot upon Mr. Hay's diplomacy. He early mishandled the situation, rejecting the proposal that alternative treaties be made with both Nicaragua and Colombia, before the final decision as to route was reached. That measure of common prudence would have averted all these subsequent troubles. But Mr. Hay clung blindly to the Nicaraguan canal, and would not even consider the Panama route — until the time came when, as Mr. Roosevelt wrote, the most competent engineers told the Administration that "we had better have no canal at all" than go to Nicaragua. Then it was too late for the diplomatic negotiations which Mr. Hay should have attended to years before; and the original blunder led on to one unhappy consequence after another, until the final wrong was done of attempting to make fraud and force do the work of patient reason. To defend all this is possible only in the spirit of what Mr. Hay, in the days when his ardor against oppression moved him to write the "Curse of Hungary," called the "weak worship" of the sword.

THE CONSENT OF THE GOVERNORS.

The theory that governments derive their just powers from the consent of the governed, ridiculous though it may appear to our enlightened age, was once held by a considerable number of Americans. Doubtless there yet survive among the lower classes a few victims of this ancient and formerly popular superstition. For the sake of these well-meaning but misguided folk, Secretary Taft last week offered to an audience in the backwoods of Brooklyn a new interpretation of the phrase "consent of the governed." Referring to a document issued July 4, 1776, sometimes known as "the Declaration of Independence," Mr. Taft asserted: "That Declaration, when it speaks of the consent of the governed, has reference to people having knowledge as to what are their own best interests."

Following the clue given us by Secretary Taft, we have examined with curious interest the musty document which for some inscrutable reason he thinks worthy of citation. To understand it fully without a knowledge of the circumstances under which it was drafted, is impossible; but on one or two points the signers of the so-called Declaration are reasonably explicit. They labored under the delusion that an unnamed "King of Great Britain," to whom they refer with amazing irreverence, was trying to reduce "these colonies"—thirteen are specified—to a condition of vassalage. From the tone of this Declaration it is evident that, although this King, like Secretary Taft, was the real

possessor of superior knowledge, the silly colonists, just like the wretched Filipinos of to-day, thought they knew what was best for themselves. Between the colonists and the King there was a striking difference of opinion, as shown in the following sentences from the Declaration:

"He has refused his assent to laws the most wholesome and necessary for the public good.

"He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained."

To a man of modern views the irritating thing about this Declaration is the impudent assumption of these colonists, thousands of miles away from the centre of light and authority, that they actually had knowledge as to what were their own best interests. In the very nature of the case such knowledge was impossible. They were scattered in small hamlets through a vast wilderness; they had scant means of communication; their schools were few and feeble. The King had by their own confession set over them able governors, who, like Gov. Wright in the Philippines, sent home word that everything was going well. And yet the Declaration of the colonists conveys a distinct impression of dissatisfaction. We shall be interested at some future time to follow the fortunes of these ignorant and ungrateful people, and to learn whether they ultimately received from a long-suffering King the punishment they so richly deserved.

In the meantime, we are glad to apply to one or two recent events the principle which Secretary Taft has enunciated so lucidly and vigorously. For example, some time ago a law authorized the payment of United States District Attorneys throughout the country by fixed salaries instead of fees. There were, however, such fat pickings in New York that an exception was made of this district; and Henry L. Burnett, the incumbent, receives, in addition to his regular salary, fees that in some years have amounted—so well-informed men are convinced—to at least $50,000. Here is indubitably an instance of extravagance and abuse. In order to ascertain how serious the matter might be, the *Evening Post* requested its Washington correspondent to ascertain how much the United States District Attorney for Southern New York has been receiving in addition to his proper salary. The very Assistant Secretary Taylor who has solemnly denied that there were "Administration orders forbidding the publication of information regarding Governmental expenditures," flatly refused this particular information. Attorney-General Moody was equally unwilling to make any disclosure. It is the money of the citizens that is being spent, but we plain people are too dull to know whether the expenditure is discreet or foolish; we must leave such questions to wiser heads, say, men like Beavers, Machen, and Heath, miracles of wisdom and probity.

Not always, however, are our gracious officials so unrelenting towards the erring. Some young Filipinos who are being educated in this country have, with the rashness of youth, expressed from the stump a desire for Philippine independence. What have the authorities at Washington done? Thrown the malcontents into prison, or returned them to the straw huts from which they came? No; the Washington dispatches show that the authorities have exhibited extraordinary magnanimity:

"It seems reasonably clear that the Administration could take these youths to task for participating in the Bryan campaign, but it is unlikely that this will be done during the present campaign."

There's the limit of forbearance. It has been said in extenuation that disciplining the boys would at once make martyrs of them, would advertise their sentiments more widely, and would neutralize the argument that Filipinos greatly prefer our rule. For our own part we impute higher motives than mere political expediency. Assistant Treasurer Taylor and Attorney-General Moody are probably unaware that an election is pending, but they know that the figures about extra payments to Mr. Burnett are not milk for babes like the general public, but meat for strong men like themselves. Moreover, they view the faults of the Filipino boys with detached impartiality. For this sublime tolerance, and for all other mercies let us be duly thankful, realizing that the essential thing is not the consent of the governed, but of the governors.

TAKING TO GIVE BACK.

"Does it matter," demanded Mr. Chamberlain indignantly the other day, when defending his proposal to levy protective duties, "if what I take in one hand I give back with the other?" That is protection in a nutshell. In other parts of his latest speech Mr. Chamberlain showed how well he had learned to parrot American protectionists. He reproduced with zest their contention that it is the foreigner who pays the tax; and, with an enthusiasm like their own, contradicted himself on the question of the effect of the tariff upon prices. English manufacturers simply could not compete with low-priced foreign goods; duties must be clapped on to protect them; yet the moment that was done, the goods would be sold to the dear English consumers at still lower prices. This is as amusing as it is familiar; but in no other particular did Mr. Chamberlain show more plainly that he had grasped the true theory of protection than in his account of it as a system of forcibly taking money from the people on the promise of voluntarily giving it back.

Economically, of course, this is the vicious assumption that fettered industry and commerce are better than free; that meddling legislators can improve on natural law. Governmentally and socially, it is paternalism in its worst form. The individual merchant or manufacturer does not know what is good for him, and would ruin his own business if left to go his own mad course. Hence a supernally wise Government steps in to "take" his money away from him by tariff taxation, comfortably assuring him the while that he will get it all back again. The bargaining nature of protection is of its very essence. When at its best, it involves the sort of striking of hands between the citizen and the Government which Mr. Chamberlain so innocently described. "Give me," says a protectionist Government, "all the money I ask in taxation, and trust me to take care of your profits."

But in this country the Republican party has pushed the taking and giving of protection far beyond these idyllic beginnings in England. Here and now, as a matter of actual fact, protection is a system of organized political corruption. Party managers go to the beneficiaries of the tariff and say with a meaning as yet undreamed of by Mr. Chamberlain, "What does it matter if we take money from you for the political campaign, provided we more than give it back to you in the shape of a guarantee that your law-swollen profits, your purchased privilege of taxing your fellow-citizens, shall be undisturbed?" This is the malign form of the protective *do ut des* in the United States. It is a sale outright of the law-making power. All the "frying of fat" out of protected manufacturers that has been done since Senator Plumb was frank enough to describe the process accurately, has gone upon the understanding that large subscriptions to a party fund carry with them the right to dictate the laws affecting the business of the subscribers.

Does any intelligent man doubt that this form of corruption is extensively employed to-day in order to promote the election of Mr. Roosevelt? A statement made in his behalf from Washington represents him as highly resentful of Judge Parker's charge that the Republican Committee is collecting large sums from Trusts and corporations dependent upon tariff favors. The President thinks that the character of the men conducting his campaign ought to be a sufficient answer to all such allegations. But a corrupt system cannot be made pure even in the cleanest hands. The angel Gabriel could not fry the fat without soiling his wings. And it is really not a question of character, but of fact. Is it or is it not true that Chairman Cortelyou or one of his agents has gone to protected manufacturers, to large cor-

porate interests, railroads, and Trusts, to ask for money to elect Mr. Roosevelt? If it is not true, it ought to be the easiest thing in the world to prove the charge a slander. Let the books be opened. Let Mr. Cortelyou deny categorically the statement that he has sought such contributions. Let him specify by name the manufacturing and other corporations upon which he has *not* made a request amounting to a demand. In that way he could speedily cover his accusers with confusion. But if the charge is true, what does it necessarily imply? Judge Parker was absolutely correct when he said that no corporation, as such, could make a campaign contribution except for dishonest purposes. It would be, in the nature of the case, a giving by the tens of thousands in the hope of getting again by the hundred thousand. It is, in effect, making merchandise of law; and is the last step in the perversion of justice as pictured by the great historian—first by force, then by fraud, finally by *money*.

This is the great shame and threat of protection as we know it. That the system is short-sighted, oppressive, outgrown economically and industrially, it is easy to show; but the feature of protection which to-day makes honest men eager to see it burnt up as a public iniquity, is its insolent intrenching itself in public corruption, its unblushing purchase and subjection of a great political party, and the effrontery with which, having despoiled, it enters upon possession of the Government as if it were but one more of its chattels. If protection is ever to be destroyed, it must be by men who clearly see and loathe its immorality, its monstrous social injustice, and whose hearts burn within them as they confront privilege buying its way to power and asking brutally, "What are you going to do about it?"

THE VOYAGING OF A FLEET.

It is easy enough to poke fun at the elaborate preparations made by the Russian Baltic fleet, its slowness in starting, and the deliberation of its voyaging. But the public should not forget that the development of modern navies has made cruising in fleets in war time a very different matter from what it was in Nelson's day. Then your battle squadron could cut loose and scour the seas for months without the need of returning to a dockyard or a machine shop. There was no necessity for docking at regular intervals in order to maintain the efficiency of the ships; and as for repairs, there were few that the crews could not make at sea or to leeward of some sheltering island. Marryat's boldest cruisers sailed as well under jury masts as under their own spars, and their crews were trained to make good any injuries except the worst below the water line. If a ship stayed afloat at all after a severe engagement, her captain counted on making some friendly port.

With the modern fighting machines it is a wholly different story. The skilled mechanic is of as great value as the bluejacket—if not greater. Aside from that, a war fleet which is bound for a distant battle-ground must have auxiliary vessels and guard-boats not dreamed of in the days of Hull and Lawrence. Particularly is this the case when, as happens to the Russian fleet, there is no certain base of operations near the scene of hostilities at which the ships can refit. And the stringent international law as to coaling in a neutral harbor is a still greater obstacle to prompt progress. A ship may remain in a neutral harbor long enough to take in sufficient coal to steam to its nearest port. But, obviously, Vladivostok is not the Russian harbor nearest to Vigo. Hence all the coal which Admiral Rojestvensky's ships will require must be supplied by merchant vessels, either at sea or outside the three-mile limit, unless direct trans-shipment should be permitted in some such harbor as Tangier. Colliers are said to be already expected at Manila to await orders where to join the fleet. Doubtless there are dozens of colliers now making for ports all along Rojestvensky's route to the Far East. Some idea of the amount of coal needed may be obtained from Admiral Sir Cyprian Bridge's estimate that the British China squadron needs in time of peace 46,000 tons of coal for a period of four and a half months' leisurely cruising. The London *Times* thinks that each battleship will require between 5,000 and 6,000 tons to reach its destination.

Next to colliers, the most important non-combatant auxiliary of the Baltic fleet is its repair ship, the *Kamtchatka*. Some of its cruisers are already reported disabled, and more are sure to be as the long journey goes on. The uncertainty as to the fleet's reaching Vladivostok and Port Arthur makes the *Kamtchatka's* presence all the more necessary. She is fitted with metal-turning and electro-technical machinery, with Wagrain smelting furnaces, a three-ton American hammer worked by compressed air, boring and cutting instruments, two steam cranes—in short, is a floating factory manned by the best workmen from private yards. During the war with Spain, the repair-boat *Vulcan* supplied thirty-one of our vessels with extra engine parts, material, and tools, repaired twenty-six others, and made innumerable minor repairs of guns and their equipments. England also has a *Vulcan* in addition to a *Hecla* and an *Assistance*.

According to the London *Times*, one of Rojestvensky's numerous auxiliaries is a hospital ship. If he has anything like the number of torpedo boats and destroyers assigned to him, it is safe to say that he has at least one "mother" ship from which they may draw supplies en route. A number of armed transports are also reported to be part of the Baltic fleet. If it includes a distilling ship, it would not be surprising, as these vessels have won permanent places for themselves in several navies besides our own, in which the *Rainbow* did good service. Even if the Russians have not yet come to a refrigerating vessel like the *Glacier* of the United States navy, they must have arranged for supply ships to meet their fleet en route. To protect the battleships there are the torpedo boats, destroyers, fast cruisers, and armed merchantmen which comprise what may be called the combatant auxiliaries.

Obviously, the modern war fleet is singularly complex and heterogeneous. Every vessel that cruised with Nelson was able to defend itself, and a powerful fleet of sailing warships, whatever its nationality, was able to keep together at a good speed in a remarkable way. With a fleet like Sampson's in 1898 and Rojestvensky's, the variations of speed between the various vessels are much greater. Side by side with a twenty-knot commerce destroyer there may be an eight-knot gunboat, repair ship, or collier. The presence in his squadron of one slow boat was Schley's excuse for his very leisurely progression from Cienfuegos to Santiago. In that case the services of the small vessel were purchased at entirely too high a price. As a writer in *Cassier's Magazine* recently pointed out, every such auxiliary adds to the responsibility of the commander-in-chief, and if it becomes a drag upon the fighting ships its value is very considerably lessened. If the armored cruisers and battleships could cut loose from all impedimenta and steam to the East at a uniform rate of fifteen knots for thirty days, their value would be enormously increased. This Rojestvensky could not do even if he abandoned his motley auxiliaries, because of the low speed of his battleships, limited coal capacity, and the fear of exposing himself to torpedo-boat attacks without his scouts to guard him. Hence it is a fact that in these days of ocean flyers and speedy freighters the war fleet bound for distant seas has made, proportionately, a much smaller gain in mobility and speed than suggests itself when we read of record trial trips of new cruisers or battleships.

THE AMERICAN LIBRARY ASSOCIATION AT ST. LOUIS.

ST LOUIS, October 22, 1904.

The twenty-sixth annual conference of the American Library Association held during the past week in connection with the Louisiana Purchase Exposition was in many respects a notable one. Though not international in name, it was more than national in scope, and the presence of many foreigners, most of them accredited delegates from their Governments or from uni-

versities or libraries, gave a lustre to the meeting which the mere *name* "International" could hardly have increased. Austria, Belgium, Chile, China, France, Germany, Great Britain, Guatemala, Holland, Honduras, Italy, Japan, Mexico, Norway, Peru, and Sweden were represented. Among the delegates were many well-known librarians, such as Dr. Guido Biagi, librarian of the Mediceo-Laurenziana in Florence, and editor of the *Rivista delle Biblioteche e degli Archivi*; Prof. Dr. R. Pietschmann, K. Dziatzko's successor in Göttingen; Prof. Dr. A. Wolfstieg, librarian of the Prussian House of Delegates; Dr. Aksel Andersson, vice-librarian of Upsala University Library. Belgium was represented by Senator H. La Fontaine, founder of the Institut International de Bibliographie at Brussels; the Library Association of Great Britain by Mr. L. Stanley Jast, chief librarian of Croydon Public Libraries. From Norway came the librarian of the Deichmanske Bibliothek in Christiania, Mr. Haakon Nyhuus. Dr. Biagi brought as a gift to the Association the first volume, recently issued, of the new edition of Muratori, and the Chilean delegate, Señor Bennett, several publications of the Chilean National Library and its director, Señor Montt. Circumstances had prevented the carrying out of the original intention to make this conference an international congress of librarians, but, in order to give official recognition to the Association's distinguished guests, they were all elected honorary vice-presidents of the Association.

Mr. Herbert Putnam, Librarian of Congress, in his presidential address, alluded to the two previous conferences which had been held in connection with international expositions, in Philadelphia in 1876, and in Chicago in 1893. "It was inevitable," he said, "that we should meet this year at St. Louis; and it was appropriate that our programme should deal with those larger phases of the library movement and those questions of elemental economy which, at our ordinary conferences, have to give way to discussion of practical detail; and that we should seek to include upon it statements of the progress and problems in other countries than our own." Foremost in interest were considerations of some large international undertakings, in progress or suggested. Senator La Fontaine told of the work of the Institut International de Bibliographie, and expressed his hope for increased international coöperation. Dr. H. H. Field, the originator and for many years the sole supporter of the Concilium Bibliographicum in Zurich, sent a communication describing the present condition of that institution. Dr. Cyrus Adler of the Smithsonian Institution, in charge of the American regional bureau for the International Catalogue of Scientific Literature, reported on this undertaking, as did Dr. J. D. Thompson on the Handbook of Learned Societies which he is compiling for the Carnegie Institution under the direction of the Library of Congress. Miss A. R. Hasse of the New York Public Library urged an international catalogue of public documents, emphasizing its value to international commerce. Mr. W. D. Johnston of the Library of Congress suggested the preparation of an annual survey of library literature; this suggestion was referred to the Council for consideration. Mr. Jast presented a proposition from the British Library Association for a common code of cataloguing rules for English and American libraries. Mr. W. C. Lane, Harvard's librarian, read an exhaustive paper on present tendencies in cataloguing. While international coöperation seemed to him doubtful, coöperation between libraries of the same country was not only feasible but necessary. A joint acquisition list for some of the larger libraries, like the one published by the Swedish libraries, would be of great value in promoting inter-library loans.

Nearest to the heart of Dr. E. C. Richardson, Librarian of Princeton University, and first vice-president of the Association, was apparently the question of an international catalogue of manuscripts. This he thought to be of great practical concern to librarians. Inquiries as to the whereabouts of certain manuscripts known to be in America are by no means infrequent. There are two or three large collections of Oriental manuscripts in this country; of Greek manuscripts America has but few, and these widely scattered and difficult of access. Dr. Richardson would have his catalogue as a basis for inter-library loans. In Europe the facilities and courtesies extended to American scholars have been very numerous; it is regrettable that return cannot be made in kind to European scholars travelling in this country.

Among the other papers read during the week, mention should be made of Mr. Nyhuus's account of "State-Supported Libraries in Norway," and his own work as adviser to the Ministry in library affairs; of Mr. Henry E. Bond's accounts of "Library Development in Great Britain" since 1897; of Mr. Jast's on "Library Extension," particularly by means of lectures, book talks, and library readings; of Professor Pietschmann's appreciation of Karl Dziatzko, the organizer and administrator of libraries, the consummate scholar, the generous, warm-hearted man. Mr. Arthur E. Bostwick of the New York Public Library presented the report of the committee on "The Relations between Libraries and the Book Trade," describing the activities of the committee, and embodying the recommendation that "a committee be appointed to continue the work that we have begun, with definite instructions to send information, along the lines followed by our bulletins of the past year, to all members of this Association, as well as to persons likely to become members." Determined efforts to increase the membership of the Association were recommended "as one of the most effective ways to promote library combination and mitigate the hardship of the net-price system."

The account of the Conference would be incomplete without mention of the formation of the Bibliographical Society of America, which was effected during the week with the following list of officers: William C. Lane, president; Herbert Putnam, first vice-president; Reuben G. Thwaites, second vice-president; C. Alexander Nelson, secretary; Carl B. Roden, treasurer. The Council of the Society met one afternoon and formulated plans for forthcoming publications. A. G. S. J.

AN OLD-TIME MISSISSIPPI PLANTATION.

VICKSBURG, October 17, 1904.

For personal reasons it would not be best to indicate the locality of this plantation more nearly than to say that it is not far distant from Indianola, which was made famous a year or two ago by the forced resignation of a worthy and capable colored woman who had for some years acceptably filled the office of postmaster. But the hoodlums at last prevailed, and so roused the race prejudice that merit counted for nothing; and, against the desire of the better class of whites, safety compelled the abandonment of her position. It is also not far from the scene of that most horrible tragedy, of a few months ago, in which two negroes were mutilated and tortured in every imaginable way before being smeared with oil and burned at the stake. A more typical place for the study of the negro problem at the South could not be selected.

This portion of Mississippi, stretching from Memphis to Vicksburg, corresponds closely in physical characteristics to that in Arkansas, on the west side of the river, above Helena. It is a portion of the delta deposit of the Mississippi, which is occasionally overflowed, and so enriched thereby that it constitutes one of the most fertile agricultural districts in the world. It is here about fifty miles wide, and, during the flood last year, when the levees broke below Memphis, the whole country, with the exception of a few low ridges utilized for building sites, was covered with water to a depth of from two to ten feet.

It is a serious question with the planters whether the levee system which aims to prevent these overflows is on the whole advantageous, since the overflow of the Mississippi, like that of the Nile, brings untold wealth to the soil, and for that reason the planters can well afford to suffer temporary loss at the rare intervals when floods occur. Furthermore, according to the planters, the levees so interrupt the natural course of the water that they cannot be continuously successful, and hence prepare the way for greater and greater catastrophes in the future. For example, in the natural course, the Mississippi in high water overflows below Memphis into numerous channels which wind indefinitely through the delta and eventually reach the Yazoo, and so find their way back to the main stream at Vicksburg. These tend to lessen the flood in the Middle Mississippi, and ordinarily are not dangerous to the sections through which they flow. But the levee system obstructs this overflow of the main river into them, prevents the relief which would accompany it, and so increases the danger to the banks and levees below. Moreover, as the levees are not built by the general Government, which could follow a consistent plan, but by the separate States, the efforts of these to secure self-protection is often ruinous to all parties. At Greenville, Miss., for instance, where the levees are twenty feet high, they are faced by a levee on the Arkansas side which is only a mile distant, thus narrowing the channel to that width, and causing a gorge of water in time of flood. It is not the planters who are asking for levees, but the politicians, who get the contracts for building them. The planters, however, pay

the bills, as the tax for them is levied on the cotton raised in the river counties, every bale of cotton paying one dollar levee tax.

For hundreds of miles through this region at this season the traveller sees nothing but cotton fields, literally white for the harvest. These are bordered, however, on both sides of the railroad by persistent lines of forests of tall oak, gum, and cypress trees. These forests indicate the still vast undeveloped resources of the country, for not half the available cotton land of this portion of the delta is yet cleared of the primitive growth of timber. A significant peculiarity of the cultivated areas is that they are dotted with cabins of uniform pattern, scattered through the fields. These are usually whitewashed, and without glass windows, being rarely larger than for two rooms. The small amount of money spent for the homes of the working people of the cotton belt in Mississippi is in striking contrast to that expended for homes in the North.

The plantation which interested us most, and where we were hospitably entertained for three days, is still in possession of the family of the original owner, whose son lives in the spacious old mansion and personally supervises everything about the place. The negroes on the place are largely the descendants of the slaves who were on it before the war; many of the original occupants being still alive and living in the old quarters. The house is surrounded by all manner of neatly kept outhouses, in which is stored everything necessary for the life and well-being of the community. In short, it is a world in itself, including a well-stocked commissary store, where the tenants can get the necessaries of life, including simple medicines, at better terms than at the stores in the village near by. The work of the house is all done by colored servants, but they leave the premises at night and return in the morning.

Fourteen hundred acres of the plantation are devoted to cotton. This is all cultivated by renters, who pay $7 an acre, and furnish their own teams and seed. There are thirty renters, which gives to each one an average of a little over forty acres apiece. The lots run from twenty to sixty acres. As the land readily yields a bale of cotton (500 pounds) and $8 or $10 worth of seed to the acre, and with good cultivation more, it will be seen that at present prices (ten cents a pound) a small colored family which can cultivate thirty acres has a fine chance to get ahead in the world. Living is cheap, so that there are places where a workman, with the aid of his family in cotton-picking time, can earn a net income of nearly a thousand dollars a year. The improvidence of the negroes is the only thing which prevents their rapidly rising to affluence. But, for one reason and another, in this part of Mississippi they have made no appreciable progress in accumulating property. It is so easy to obtain the necessaries of life that they are content to live from hand to mouth. More than anything else, they need to have preached to them the gospel of discontent. Negroes own but 4 per cent. of the taxable property of the State.

But the negroes have the field, and are in almost complete control of the industrial situation. White laborers are not in demand. So little confidence is there in the poor whites that one of respectable appearance might tramp the country through for work, and no one would hire him; whereas the most disreputable-looking negro would be set to work as soon as he offered himself. This is because of the confidence had in the natural disposition of the negro. He is docile, and, when necessity requires it, he will work without making trouble. The only drawback to the rapid development of this vast uncleared cotton area is the scarcity of labor. And in this lies the negroes' opportunity. This gives them a vantage ground which they are using with good effect for securing fair treatment by the whites. The persecution of the negroes in this region does not originate with the property owners; indeed, they look upon Gov. Vardaman and his followers as their worst enemies. The localities where the negroes are grossly abused are quickly forsaken by them, and the work of the fields goes undone. Two or three of the large planters in the region where the negroes spoken of above were burnt at the stake, have sold their estates and abandoned the locality because of the difficulty of getting help in the fields caused by this inhuman treatment.

The same is true in another region near by, where our driver gleefully pointed out the limb of a tree on which "three niggers were hung" recently. The cotton in that region is going unpicked from lack of help. On riding between two fields, one of which was nearly picked and the other untouched, our driver explained the fact by saying that the "nigger" had got his own field almost done, and the white man was attending upon the completion of it. While the negroes are quietly abandoning certain localities where they are unjustly treated, they are flocking wherever they receive fair treatment. On another plantation, where special efforts had been made to provide good schools, more tenants offered themselves than could be provided with land.

The hope of the negro at the South evidently lies, not in universal suffrage, but in the natural working of these great economical forces. So long as his civil rights are fairly well protected (and that can be done through the courts), the future of the negro is in his own hands. As an economic force, he is indispensable to the South, and indeed to the whole country. With freedom and urgent demand for his labor, he can win a position for himself if he has the proper moral qualities.

We have had occasion to see in many instances the deep and widespread influence of schools sustained by Northern benefactions. In one case we found a most efficient elderly lady from Maine, who had been thirty-five years engaged in these schools, and now had a hundred young negro girls under her care, whom she and her assistants were teaching, not only book learning, but all the elements of neat housekeeping. Such pupils, like those from Tuskegee, are in great demand, and go out to infuse higher ideals of life among their people. Their efforts all put together seem, however, like only a drop in the bucket. But when one comprehends the strength of the economic forces into which these elevating ideas are being introduced, he may well thank God and take courage. The negroes even of the Cotton Belt of Mississippi are going to be permeated by higher ideas, and so become far more efficient economically in the country. Compared with the hope arising from this general situation, that from unrestricted suffrage is of small account.

Nor should we fail to give due credit to the beneficent work of the public-school system of the State. Ninety-six per cent. of the taxes of Mississippi is paid by the whites, and only four per cent. by the negroes; yet the negroes receive more than half of that raised for school purposes. It is true that the present Governor has advocated a division of the funds according to the taxable value of the property owned by the two races; but in this he has little support, and the Constitution of the United States would stand in the way of the enforcement of any such plan. The public school system of the South is capable of doing far more for the negroes than all the educational efforts of Northern philanthropists are doing. Indeed, their work will be valuable chiefly as it incorporates itself with that of the Southern public-school system. These Northern schools are doing, however, incalculable good in furnishing teachers for the public schools, and in raising their standard of efficiency.

One cannot travel through this part of the South without having his sympathies stirred for the poor whites. As one meets them moving about over the highlands in their covered wagons, or sees them boiling syrup from the little patches of sorghum by the roadside, he can but see that their economic future is far more hopeless than that of the energetic and self-respecting colored population who work the cotton fields of the delta. But in all this one must take a long look into the future, and not occupy his thoughts too much with the imperfections of the present. Cotton is to remain king, and the Mississippi delta is to be the seat of its dominion. The people who predominantly occupy that seat of power are favored above almost all others. Cotton cannot be picked by machinery. The negroes must do it, and it is done to best advantage by families who are interested in the crop. Thus we have in the necessities of the case a most important agency giving prominence to the family, and counteracting the evils of the factory system, which, in many places, is abolishing to a great degree the significance both of the family and of the individual.

G. Frederick Wright.

BARON HUEBNER'S SOUVENIRS.—I.

Paris, October 10, 1904.

The second volume of Baron Hübner's 'Souvenirs,' which has just appeared, will certainly be as much read as the first. It begins on the 1st of January, 1857, and, as before, with the diplomatic reception at the Tuileries by the Emperor—a reception which was purely formal and had nothing extraordinary. We note nothing at this time but the death of Princess Lieven.

"She retained all her lucidity of mind, showed great serenity, and awaited death with impatience. . . . Her son, her nephew Benkendorff, and Monsieur Guizot were with her during the last night of her long life. She sent them away with a gesture and died a few moments afterwards. Politics interested her up to the very last. She sent to me for news, and wished to know where

the conference about Neuchâtel would be held."

In a letter to Count Buol, Hübner wrote:

"Last night, one of the persons who, half a century ago, made a great mark in the diplomatic world and on the great European stage, disappeared after a short illness. Princess Lieven died of a catarrhal fever. Her body, much worn, succumbed almost without a struggle. She preserved to the end the use of her faculties, her charm of mind, the grace of the grand manner which distinguished her in so high a degree. . . . She had witnessed the eighteenth century, she was the last representative of a great epoch, and the last depositary of the good traditions which are disappearing in this country."

I find a curious conversation with M. Piscatory, who was long the French Minister at Athens, one of the parliament men imprisoned on the day of the *Coup d'État* of December 2. Speaking of this *coup d'état*, Piscatory said that Napoleon would have made it, "'not with the former ministers of Louis Philippe, but with younger men wearing our color, if they would have stood by him seriously.' 'But,' said I, 'M. Molé's great idea was to create a vacuum round him.' 'Yes,' answered Piscatory, 'they created it so well that he could walk wherever he pleased.'" Piscatory was very far-seeing. He said:

"Nobody in the old parties desired seriously that the chief of the eldest branch should return to France. M. Berryer would be in despair if the Count de Chambord returned; M. Thiers does not care for a return of the Orléans. Nobody wishes to run the chances of new events. Nobody wants to compromise his situation as leader of a party; and, first of all, the Count de Chambord is one, and might be more patient."

Count Buol, Hübner's chief, was hostile to the French Government and to its general policy; he represented essentially the old tradition of Austria, looked upon Napoleon III. as an upstart Emperor, and felt that he favored the views of those who desired Austria to be expelled from Italy. Hübner held all the ideas of his chief, but with more moderation; his position made it necessary for him to be always on his guard, and to have relations with people whom he neither liked nor respected. He knew very well that the atmosphere of the Court was decidedly anti-Austrian, and that the politeness shown him was often a mere veil. His notes on diplomatic and political affairs have lost much of their interest, after the lapse of so many years and so many events which have, in a great measure, completely altered the political state of Europe. It is more interesting to meet with his remarks on the men and women who were notorious under the Second Empire. This is, for instance, what he says of Baron Haussmann:

"The physiognomy of Paris is changing day by day. M. Haussmann is the inspirer and the soul of all the contemporary public construction in Paris. There is nothing more interesting than to hear him explain with extreme lucidity his projects, the way they were conceived, the means which he employs to realize them. He is a man *hors ligne* in his sphere of action, and, to my mind, the greatest figure which the Second Empire has produced, so far. Constantly attacked by envious people, he has been able, thanks to the protection of the Emperor Napoleon, which never fails him, to make the capital more healthy, to trace great arteries, to create all the marvels, not always of exquisite taste, which are admired in the capital of France, and which Europe is anxious to imitate."

There are many curious details about the attempt made at the door of the Opéra on the life of Napoleon by Orsini and three other Italians. Hübner heard the first news at a dinner at Alphonse de Rothschild's. Bombs were thrown at the carriages which bore the Emperor, the Empress, and their suite; some bystanders were wounded. The Emperor and Empress went directly to their box; it was noticed that the Empress had marks of blood on her gown—the blood of the wounded horses. The next day Hübner talked with Count Bacciochi, the "jovial and amiable" introducer of the Ambassadors, who made him acquainted with what he calls the atmosphere of the Tuileries.

"The first impression there was that of immense joy—the joy of having escaped from a misfortune which would have put an end to the social and political fortune of the favorites of the present régime. Another sentiment has developed with extraordinary force, namely, indignation against England. This excess of anger can be explained only by a watchword which is certainly not given by Napoleon III. . . . The agitation comes from the palace of the Presidency of the Legislative Corps, of which Morny is the soul. He exploits the attempt in the interest of the Russian alliance, of which he is the fervent advocate."

At the diplomatic reception, where the Ambassadors offered their congratulations to the sovereign—

"the Empress told us with spirit and with a certain coquetry the details of the attempt. After the first explosion, which killed a horse, and thus hindered the other horses from proceeding, the two doors of the carriage were opened at the same time and sinister-looking men approached, evidently with the intention to finish their victims with their poniards. At that moment she thought herself lost. But policemen came forward and helped their Majesties to come out."

The passing to the door of the theatre, she continued, "was not very nice; the Emperor wished to retrace his steps to speak to the wounded, but I dragged him to the hall, saying, 'Not so foolish! Enough of that!'" Long afterwards a person who followed the sovereigns to their box told Hübner that "the Emperor seemed at that moment quite demoralized, while the Empress was admirable in her calm and intrepidity."

In the speech from the Throne, which opened the Legislative session, the Emperor asked for repressive laws. "He seemed to be under great emotion, and the Chamber to share it. People feel and say, 'What a mess (*gâchis*) if this man had been killed!'" The day after, there was a great ball at the Tuileries.

"I dance a quadrille," says Hübner, "with Princess Anna Murat, next with the Empress, and afterwards have a long talk with her. The order of the day is this: The army will save the Empire and the Napoleonic dynasty, even if Louis Napoleon be killed. One is so excited at the idea of seeing a handsome woman with a baby in her arms, seconded by a heroic army, saving France, that for the moment the Emperor, destined to be carried away by a bomb, seems almost to have become a *quantité négligeable*."

I cite this passage to show what illusions can be formed and how they are dispelled by events. Who could think then of Sedan and of the 4th of September? The anti-English sentiment on which Hübner dilates reached its climax in addresses sent to the Emperor by the colonels of the army. Hübner, who mentions them, adds:

"This proves only what I have maintained ever since the *Coup d'État*, that the Empire, notwithstanding contrary appearances, was the result of a military conspiracy, and can subsist only with the help and the good will of the army. The Emperor seems to understand how painful his situation is. He seems disconcerted, sad, almost overpowered. The Empress, on the contrary, enjoys her triumph of a heroine. She has risen and looks well."

There is certainly a connection between the sentiments expressed by the army and the Italian war. It has been thought that the war was hastened by the attempt of Orsini, who was an agent of the Italian *carbonari*, and who wrote a letter to Napoleon before ascending the scaffold. Napoleon was imbued with a desire to help the Italian cause; he was also desirous to give occupation to the army; he was anxious to remodel the map of Europe; and though he had said, on becoming Emperor, "L'Empire, c'est la paix," he entered first upon the Crimean war, and afterwards upon the Italian. Hübner says, in a note (written long after the journal) on the subject of the possible connection between Orsini's attempt and the Italian war:

"The Emperor of the French, placed at the highest summit of greatness, accepted on a footing of equality by the heads of the older dynasties, had forgotten the pledges made in his youth to those who dispose of the unknown and dark powers. Orsini's bombs came to remind him of it. A ray of light suddenly struck his mind. He must have understood that his former associates never forgot nor forgave, and that their implacable hatred would be appeased only when the renegade returned to the bosom of the sect."

We arrive now at the most important part of Hübner's memoirs—at the period which prepared the Italian war. The Crimean war had been only a sort of military *hors d'œuvre;* it had taken place out of what may be considered Europe proper; it had effected no permanent or great changes in Europe; it had left the Turks in Constantinople; it had added no strength to the power of the Sultan, nor really diminished the power and the prestige of Russia. It was not so with the Italian war, of which the importance was paramount in the second half of the last century, which accomplished great changes and paved the way for still greater ones.

Correspondence.

THE MAN IN THE STREET.

To the Editor of The Nation:

Sir: "W. C. L.'s" letter in the last issue of the *Nation*, raising the question, How can any sane man vote for Parker? and conversely, How can any sane man vote for Roosevelt? gives, I take it, the views of but one class of men on each side of the question. Brokers and college professors are doubtless an important part of the body politic, and, under an ideal form of government, should wield more influence than they now do in shaping public policy as determined by elections; but under our present system of counting noses at election time, it is the man in the street who decides all these questions for us.

This "man in the street"—whether it be a city street or a village street, it matters not—is a person who acts on certain vague feelings and instincts without much regard

for strict logic, historical perspective, or the principles of political science as taught in the books. Matters outside of the United States do not interest him much unless there be a war going on, when he devours all the harrowing details of destruction of life and property with the same interest that at home he follows the details of a prizefight or a football game. But on matters purely American he entertains one or two decided opinions.

Speaking about a little unpleasantness caused by one Shays in the early history of Massachusetts, that profound statesman and level-headed philosopher, never to be sufficiently admired by all true Americans, Mr. Thomas Jefferson, said:

"A little rebellion now and then is a good thing; . . . an observation of this truth should render honest republican governors so mild in their punishment of rebellions as not to discourage them too much. It is a medicine necessary for the sound health of government." "God forbid that we should ever be twenty years without such a rebellion—what signify a few lives lost in a century or two? The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants. It is its natural manure."

With the lapse of the one hundred and seventeen years since the above pious opinion was expressed, the average American citizen may have become less truculent and bloodthirsty, but it is pretty certain that at present he is not in favor of fertilizing the tree of liberty with any more human blood. He is undoubtedly a peculiar sort of person, but he does not enjoy having bricks heaved at peaceful citizens while riding on street cars, having workingmen assassinated because they are willing to work, or having hearses stoned because a Labor Union does not approve the funeral arrangements! How does the man in the street know that either political party is responsible for these riots, commotions, "rebellions," as Jefferson calls them? He does not, but the papers that support the rioters, in Chicago at least, are Hearst newspapers, that loudly proclaim their Democracy. "Ergo," says the man in the street. . . .

The same crude logic couples the fact that the government of most American cities is unspeakably rotten with the fact that the government of most large American cities is in the hands of the Democrats. "Ergo again," says the man in the street.

The things right under his nose are what interest the average citizen. In our large cities at least the Democratic party has often been singularly unfortunate in its professed champions. E. L. C. M.

Chicago, October 30, 1904.

PRESIDENTIAL ADVERTISING.

To the Editor of The Nation:

Sir: In current issues of a number of magazines and periodicals, whose circulations are enormous, there appears, among the advertising pages, a full page centred with the picture of President Roosevelt, and filled in with extracts from his utterances, together with favorable utterances from others concerning him and his policies.

Thus does the self-respecting, dignified Republican voter see his idol placed before him along with baby powders, corn plasters, and salad dressings at so much per page. Such an undignified bid for support is an insult to American manhood, a disgrace to our nation, and should cost the Republican nominee many, many votes.

Yours very truly, F. W. Parker.

Chicago, October 8, 1904.

[We print the above because it illustrates the minor motives which may govern men in casting a vote for President when great issues are involved. South of Mason and Dixon's line, Mr. Roosevelt's spontaneous civility to a half-white man of national distinction is denounced in terms like those applied by our correspondent to campaign methods which, after all, are an appeal to reason, and better than torchlight processions. And if we concede something to our correspondent's sensitive regard for appearances, we would ask whether the *réclame* of a personally conducted campaign is worse in Mr. Roosevelt than McKinley's offering a place in his Cabinet to the man who had paid his debts and made him President. The American public was not too nice to stomach that.—Ed. Nation.]

THE PRIMARY FUNCTION OF POETRY.

To the Editor of The Nation:

Sir: "Browning's characteristic poems do not give me pleasure of that sort which it is supposed to be the special function of poetry to give."

This quotation from Mr. Goldwin Smith, in your notice of his contribution to a recent number of the *American Historical Review*, contains a generally accepted fallacy, and reveals the rock upon which many a critic has foundered and made shipwreck of his craft. I refer to the stated supposition that it is the special function of poetry to give pleasure.

Not only does Mr. Goldwin Smith, but numberless critics beside, including many writers on rhetoric, arrive at conclusions from this false premise that in no wise explain the function of poetry. I think it may be said, with no attempt, or even desire, to derogate from the high esteem in which the eminent professor is justly held, that whoever argues that the primary function of poetry is to please, does not understand poetry. In making so sweeping an assertion, I am not unaware that perhaps three-fourths of the readers of poetry are animated, more or less, by this fallacy, which is as nonchalantly uttered and as stoutly maintained as if it were a truth, demonstrated beyond all possibility of dispute; whereas, ultimately, no view of poetry could be more belittling, if I might not use a stronger word. It were certainly far from flattering to the body of earnest-minded men who make up the poets, to say of them that they have given the best that was in them to the primary end of pleasing.

If the poets themselves are to be believed, the first and last aim of their work is, not to please, but to teach. In other words, the poet's business is to see and reveal. It is as the Holy Spirit dictating to the lonely seer on the isle of Patmos, "Write what thou seest." Only in so far as the poet heeds this injunction, obeying it as a good soldier obeys his captain's order, and gives a faithful transcript of the vision, does he fulfil his high and holy office. This without regard to whether his transcript please or displease.

I do not deny, however, that some sentiments, from being expressed in poetry, acquire a property of pleasing above that which they ordinarily possess; but this power of pleasing is incidental or secondary, like that which comes from the mating of sound to sense in the use of words. Do I seek to please men or God? This the poet's question always; and (I say it reverently) the question was not answered with more undoubting decisiveness by the great apostle who propounds it than by the men who wear and deserve the name of poets.

I know of no more conspicuous irony of human life than that, in view of the notable impulse given by the poets to every moral advance of the human race, they should still be looked upon by the beneficiaries of their labors as beings who passed lightly through the byways of life, furnishing pleasant entertainment to others by the pretty flowers chance-gathered by the roadside, instead of being looked upon, as indeed they are, as fellow-travellers who, contemplating this problem of human existence, saw it with clearer vision than we, and gave us the result of their sight or insight in the best and most heart-reaching words they could find.

The subject is indeed a wide one, and so, not to trespass unduly on your space, allow me to cite at random, and from the poets themselves, some views relative to the function of poetry. I would recommend, in this connection, that the whole of Lowell's Ode, beginning "In the old days of awe and keen-eyed wonder," be thoughtfully read. This Ode I look upon, and I think rightly, as the clearest, most comprehensive, most mightily worded exposition of the function of poetry to be found in the English language, certainly in any American author. And while I suppose Mr. Goldwin Smith, and those who hold with him, would dismiss this Ode as a highly figurative work of the imagination, it is, nevertheless, the literal statement of a literal fact.

"In the old days of awe and keen-eyed wonder,
The Poet's song with blood-warm truth was rife;
He saw the mysteries which circle under
The outward shell and skin of daily life.
Nothing to him were fleeting time and fashion—
His soul was led by the eternal law;
There was in him no hope of fame, no passion,
But with calm, godlike eyes he only saw.

. . . . . .

But now the Poet is an empty rhymer,
Who lies with idle elbow on the grass,
And fits his singing, like a cunning timer,
To all men's pride and fancies as they pass."

There is the picture of your pleasure purveyor.

"Not his the song which, in its metre holy,
Chimes with the music of the eternal stars,
Humbling the tyrant, lifting up the lowly,
And *ding sun through the soul's prison-bars.*"

The italicized clause in the last line tells what the true function of poetry is.

Once more. I cite from Byron this:

"When Athens' armies fell at Syracuse,
And fetter'd thousands bore the yoke of war,
Redemption rose up in the Attic muse,
Her voice their only ransom from afar."

In either of these two cases, it will be observed that the question of pleasure is not once asked, nor even thought of, but the far deeper question seems to have been insistently next these poets' hearts. Always the question is: "Has the light broken in your hearts? or, Have you felt the divine uplift?"

Lowell's Ode was written when he stood at the threshold of his career. It was here he gave us to understand what we might reasonably expect from him. It is the statement by the architect of the building he proposes to erect, the propounding of the theory by which he meant to work. Long years after the writing of this Ode, when "past my next mile-stone waits my seventieth year," it is not improbable that the man of gray hairs, and judgment cooled in the hard school of life, had discovered the shortcomings or the flaws in this youthful, hot-hearted ideal. Writing to his lifelong friend, George William Curtis, Lowell replies to the criticism that his poems (meaning, I presume, chiefly the 'Biglow Papers') had given, instead of the pleasure which, it is argued in some quarters, it is the first function of poetry to give, the exact opposite of pleasure, namely, pain. Deeply as Lowell the man deprecated the offence which he had given, yet, being a poet, in the true sense of the word, he *must*

"blurt ungrateful truths, if so they be.
That none may need to say them after me."

Hear him further: "I hate to speak; much more what makes the need." But being, as I said, a poet, the spirit of inevitable necessity was laid upon him, and, at the risk of offending and alienating even those of his own household, he had to speak.

Such, in brief, is my notion of what poetry is in its primary function—the making better of men's hearts, as it were by fire.

Of course, it is to be expected that this false premise of the pleasure-giving function of poetry, being foundational with the school of Mr. Goldwin Smith, will be found to vitiate most of the judgments summarily passed by this school on particular poets. Thus, when Mr. Smith says that Burns in a manner is not surpassed, he is merely juggling words, and tells us nothing about Burns or about poetry. Similarly, the mischief of this foundational fallacy crops out more glaringly in Mr. Smith's almost contemptuous dismissal of Tennyson. "Tennyson has been called a great teacher; but he has nothing definite to teach." Does Mr. Smith mean that the apostle Paul has nothing definite to teach in that great passage, "We walk by faith, and not by sight"? The laureate teaches the same:

"Strong Son of God! immortal Love,
Whom we, that have not seen thy face,
By faith, and faith alone, embrace,
Believing where we cannot prove."

And on through "In Memoriam" there is teaching of the most definite sort, if one has but the will to look for teaching instead of looking for pleasure. Think you Tennyson has nothing definite to teach when his verse teems with such thoughts as this—"Often a man's own stubborn pride is cap and bells for a fool"?—that there is nothing definite in the teaching that a man finds himself only when he loses himself and his will in the fathomless will of God?

"Thou seemest human and divine,
The highest, holiest manhood, thou.
Our wills are ours, we know not how;
Our wills are ours, to make them thine."

JAMES E. FRENCH.

CINCINNATI, October 25, 1904.

A MISQUOTATION.

TO THE EDITOR OF THE NATION:

SIR: Your critic has treated my 'Napoleon' so handsomely that I feel some diffidence in asking you to make a very trifling correction. He quotes me as writing, "it is safe to be predicted." I was much relieved on turning to the text to find that I may plea not guilty of such a barbarous expression, and that what I have written is: "it is safe to predict." Doubtless your compositor allowed his imagination to wander.

I am, yours faithfully,

R. M. JOHNSTON.

44 SHEPARD ST., CAMBRIDGE, MASS.,
October 30, 1904.

A HOUSE OF TWO CONTINENTS.

TO THE EDITOR OF THE NATION:

SIR: In the latest issue of your paper is printed a pleasantly worded reference to the volume on 'Library Practice' by Roebuck and Thorne, which is our publication for both London and New York. The writer of the notice says of the book that it "bears the imprint of Messrs. Putnam, *but* is English made and intended." The reviewer evidently writes under the impression that our publishing interests are exclusively American. It is the case, however, that since 1840 our house has had publishing interests in Great Britain, and during the past thirty years our books have borne the inprint of "New York and London." We are, in fact, at this time taking up through our London house the publication of a number of works by English authors, for some of which the interest will naturally be larger with the English than with the American public.

We are, yours respectfully,

G. P. PUTNAM'S SONS.

NEW YORK, October 31, 1904.

[No; our remarks had reference to the typography of this particular publication.—ED. NATION.]

THE NEW EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: For the first time in the twenty years that I have read the *Nation* I give way to the temptation of writing to the Editor, for I must express my satisfaction in finding my own views on the "New Education" so strongly and finely stated in an editorial of October 20. Take away the first part, explaining the situation in New York city, the remainder ought to be illuminated and hung in the private sanctum of every educator, and printed in leaflet form and presented to every "influential citizen and taxpayer." It is concise, clear cut, vitalized with conviction, and rendered contagious by a restrained but fine enthusiasm. It is the best short article on the subject that I have seen, and, being in the reference department of a library, I see many attempts. Coming from the *Nation*, I am hopeful that it may have influence with conservative people.

Very sincerely yours,

FRANCES B. TURNER.

GRAND RAPIDS, MICH., October 24, 1904.

Notes.

Harper & Bros. will publish directly 'Red Hunters and the Animal People,' stories by Charles A. Eastman, M.D. (himself a Sioux); 'London Mews,' verses about cats, by Catherine Janvier; 'How to Draw,' by Leon Burritt; 'The Land of Riddles (Russia)', by Dr. Hugo Ganz; and 'Phases of Modern Music,' by Lawrence Gilman.

Messrs. Putnam are preparing for the holidays "Les Classiques Françaises," little books, bound in leather, gilt-stamped, and giving texts in clear type from Feuillet, Mérimée, Sand, Sainte-Beuve, etc. Other announcements are 'The Coming Conquest of England,' a translation of August Niemann's 'Weltkrieg'; 'Breaking the Wilderness,' by Frederick S. Dellenbaugh; and 'The Garden of Tears,' poems by the late Guy Wetmore Carryl.

Macmillan's November list includes the fifth volume of James Ford Rhodes's 'History of the United States from the Compromise of 1850,' ending with President Johnson's checkmate by Congress; Clifton Johnson's 'Highways and Byways of the South'; 'Paris and its Story,' by Thomas Okey; 'From the Monarchy to the Republic in France,' by Miss Sophia H. MacLehose; 'The Napoleonic Empire in Southern Italy, and the Rise of the Secret Societies,' by R. M. Johnston, in two volumes; 'The Story of Ferrara,' by Ella Noyes; 'Recent Discoveries in the Roman Forum,' by St. Clair Baddeley; 'Sunny Sicily,' by Mrs. Alec Tweedie; 'British Water-Color Art,' by Marcus B. Huish; 'The Principles and Progress of English Poetry,' by Charles Mills Gayley and Clement C. Young; and 'The Distribution of Wealth,' by Thomas Nixon Carver of Harvard.

McClure, Phillips & Co. offer this month 'A Country Home for Everybody,' by E. P. Powell.

Funk & Wagnalls Co. will be the American publishers of E. D. Morel's 'King Leopold's Rule on the Congo' (London: Heinemann).

Hodder & Stoughton in London and John Lane in this city will bring out 'Theodore Watts-Dunton: Poet, Novelist, Critic,' edited by James Douglas, who has obtained leave to make selections not only from the critical essays but from the poems of his author. The volume will be illustrated.

'Moral Education,' by Prof. Edward Howard Griggs, is announced for early publication by B. W. Huebsch of this city.

Prof. William Knight's collection of 800 letters from William and Dorothy Wordsworth to their brother John is nearly ready to be issued by Ginn & Co.

Richard G. Badger, Boston, announces 'Cassia, and Other Verse,' by Edith M. Thomas; 'Contrasted Songs,' by Marian Longfellow, a niece of the poet; and a volume of verse by Hildegarde Hawthorne, granddaughter of the novelist.

For 'A Geometrical Political Economy,' by H. Cunynghame, "an elementary treatise on the method of explaining some of the theories of pure economic science by means of diagrams," the curious are referred to a promise of the Oxford University Press.

Robert Louis Stevenson's 'Edinburgh' has been reissued in a dignified little volume bound in dark blue cloth, printed in a very clear and round font, and illustrated by sixteen designs, chiefly from the pen and brush of T. Hamilton Crawford, the remainder being from old engravings—on the whole a harmonious and a decorative series (Scribners).

Alexander Jessup's 'The Best of Stevenson,' with a good portrait, bears the new imprint of H. M. Caldwell Co., Boston. The same firm, among a number of reissues,

make two taking little volumes out of De Quincey's Essays, with Charles Whibley's Introduction, and Thackeray's 'Four Georges,' introduced by George Meredith.

Mr. Mabie's 'Nature and Culture' within its decade has been handsomely treated with tinted illustrations of wood and shore and pen-and-ink head and tail-pieces in a way to please its admirers (Dodd, Mead & Co.).

The Century Co.'s "Thumb-Nail Series," with buff stamped leather cover, is reinforced by Irving's 'Old English Christmas' and Shakspere's "As You Like It" and "Romeo and Juliet," each with a portrait; companionable booklets, with an air of distinction.

Tolstoy's 'Plays: The Power of Darkness, The First Distiller, Fruits of Culture,' translated by Louise and Aylmer Maude, is now added to the revised edition of his works published by the Funk & Wagnalls Co. An appendix contains a valuable "Annotated List of the Works of Leo Tolstoy."

The fourth and concluding volume in M. Oppenheim's edition of Sir Arthur Helps's 'Spanish Conquest in America' is at last off the press (John Lane). The work is handsomely printed, learnedly edited, and has an itemized index of 70 pages. Though long in course of production, it was worth waiting for.

The fifteenth edition of Baedeker's Handbook of Paris and its Environs comes to us from Charles Scribner's Sons. Of interest is the list of suburban electric lines, which are rapidly multiplying, and this item at the very end: "In August, 1904, about 1,000 *Taxameter Cabs* (*Taxamètres: Voitures à Compteur*) were placed for hire on the streets of Paris," following the successful example of Berlin and other German cities. They are "provided with indicators clearly showing the fare due for each drive," and hence preventing dispute.

Mr. Francis L. Wellman's 'Art of Cross-Examination' (Macmillan) was reviewed in these columns at the time of its publication. The great demand for the book, which is as entertaining as it is instructive, has led the author to bring out a new and enlarged edition. He had added as much material as was contained in the original volume; five chapters are entirely new. The cross-examination of Miss Martinez by Mr. J. H. Choate, in her celebrated breach-of-promise case, tried in this city, is given at great length; it is not accessible, we believe, elsewhere. Valuable illustrations are also given of the use made of it in summing up. The chapters on "Fallacies of Testimony" and "Cross-examination to Probabilities" are new and interesting. A very curious case is that of Twichell, properly convicted of murder in Philadelphia, some years ago, though by utterly mistaken testimony. Having murdered his wife, he took her body into the yard and left it there, carefully unbolting the gate leading to the street, and leaving it ajar, so that it should appear that the house had been entered through it. In the morning, the maid-servant got up, went into the yard, stumbled over the dead body of her mistress, and in great terror rushed through the gate into the street and summoned the police. On the trial, she swore positively that she had unbolted the gate on the morning of the murder, this having been her habit on every other morning. This testimony convicted Twichell, he having been the only other person in the house; but it was an entire mistake. The case is a remarkable illustration of the fallibility of the most entirely honest testimony. The fallacy of *habit*, like that of *desire* and *bias*, is always at our elbow to prevent us from telling the exact truth. This chapter may be specially commended to the attention of those engaged in psychical research.

Dr. Curtis Hidden Page disclaims for his 'British Poets of the Nineteenth Century' (Benjamin H. Sanborn & Co.) the character of a new anthology for the period, on the ground of its narrow inclusiveness. It embraces, in fact, only "the fifteen chief poets of the century." Its aim is threefold: to furnish in one volume enough to satisfy the needs of a college student in such a course, to guide him in the concurrent use of a library, and, finally, to be helpful in other courses in English literature. No doubt it will be appreciated in all three aspects. The second is supported by classified reference lists discriminating among editions, and by indication of critical essays on the given author. The arrangement of pieces is chronological, and many long poems are printed entire. Criticism will of course begin with the list of fifteen, and for our own part we could wish either Mrs. Browning or William Morris passed over in favor of Edward FitzGerald—certainly not a creative poet, but in taste and in diction easily the superior of either of the two. The selections we do not quarrel with, but since we have Swinburne on Whitman, we should have liked Matthew Arnold on Emerson and his "voice oracular." We miss Clough's "Necessity" (" 'Tis common sense"); and in place of Landor's "Shakspere and Milton" we should have put his fine Miltonian "Will mortals never know each other's station Without the herald?"

Another anthology, in charming attire, is Anna Benneson McMahan's 'Florence in the Poetry of the Brownings' (Chicago: McClurg). The frontispiece shows Casa Guidi, and more than sixty other half-tones (after Alinari photographs in the main) exhibit statuary and painting, palaces and towers, bridges and gates, cloisters and villas, and scenery. This is all very well carried out, and the book makes a pretty gift or a tourist's vade-mecum. The print is elegant.

Calendars are already making their appearance. The 'Browning Calendar' of T. Y. Crowell & Co., edited by Constance M. Spender, is a thin, tasteful volume of daily verse from Robert Browning only, of whom an unusual portrait is made frontispiece. Since election day is close at hand, we select November 8 for a chance extract (*absit omen!*):

> "That low man seeks a little thing to do,
> Sees it and does it:
> This high man, with a great thing to pursue,
> Dies ere he knows it."

The 'Daheim-Kalender für das Deutsche Reich' for 1905 (Leipzig: Velhagen & Klasing; New York: Lemcke & Büchner) is of the old-fashioned Annual order, with essays, stories, and illustrations of excellent quality. Mentionable are Professor Heinemann's article on Schiller and his Lotte; Lieut. W. von Bremen's narrative of Napoleon's campaign "From Boulogne to Austerlitz"; Rosenberg's centenary notice of the great sculptor Rietschel, and Buss's survey of the reign of crinoline. All these are copiously illustrated in the best manner, adding numerous portraits to those of sovereigns in the preliminary genealogy of princely houses, and of the eminent dead commemorated in the Necrology. Not a few illustrations (as those relating to garden birds) are in color.

The *Geographical Journal* for October describes a journey of unusual interest in northern Argentina by Mr. F. O'Driscoll. Though the country is now sparsely settled by an ignorant and unprogressive people, there are abundant evidences that in prehistoric times an intelligent and industrious race lived here. Scattered through the valleys and on the mountain sides, and in one instance on the summit of a mountain 16,000 feet above the sea level, are the remains of extensive workings, including shafts, galleries, and water ditches. "The amount of work done by some people of the past was enormous." No reference is made to ruins of habitations, temples, or forts such as are found in the ancient mining regions of South Africa, and apparently none have been discovered. The mineral wealth is not exhausted, according to Mr. O'Driscoll. In the province of La Rioja "the headwaters of most of the streams are black, blue, green, or yellow in color, and so highly are they impregnated with the salts of copper, silver, and other metals that tired mules, without water for two or even three days, refuse to drink of them." Some regular mining work is being carried on here, and the Argentine Government is building the largest aerial railway in the world to connect the mines with the Government railway. The agricultural resources are still largely undeveloped.

'The New Japanese Civil Code, as Material for the Study of Comparative Jurisprudence,' is the title of a pamphlet, by Professor N. Hozumi of the Imperial University of Tokio, in which he summarizes the notable features of that code. Instead of adopting Prof. Boissonade's code (1880-1890), based upon the French civil code, the Japanese, after fifteen or twenty years of discussion and selection, completed a new body of law, which came into force on the 16th of July, 1898. Each of the great epochs of Japanese history—the introduction of Chinese civilization (701 A. D.), the establishment of feudalism (1232 A. D.), and the adoption, or rather the adaptation, of Western civilization (1868 A. D.), has been followed by codification. In the codes of 1898 we see the departure from "the Family of Chinese law," to which for nearly twelve hundred years that of Japan belonged, to "the Roman Family of law." The outstanding features of the new codes are publicity and the personality of the individual. Previous to the Restoration of 1868 there was no idea that publication was essential to law, and the criminal code was kept in strict secrecy, the laws being commands addressed to the magistrates, not to the people. The conception of making the statute a rule of conduct for the citizen was reached only after the introduction of Occidental jurisprudence. The Chinese maxim was, as it is yet, "Let the people abide by, but not be apprised of, the law." Now, the books of law are cheaply published for the use and benefit of all. The arrangement of the new code shows three stages in the evolution of the laws of succession, the latter being conceived successively as a mode of perpetuating the worship of ancestors, of succeeding to the status of de-

ceased persons, and as a mode of acquiring property. In old Japan there were no "rights," as neither the word nor the thing existed. In the new codes, the rules of duty have become also the rules of right. The chapters on House and Kinship, House-headship and Parental Power, Relationships, and Adoption, are very suggestive and informing.

At a recent meeting of the Paris Academy of Inscriptions, M. Clermont-Ganneau offered for study a small Isis statue sent by Maspero, the head of the Cairo Museum. The unique feature of this find consists in the fact that the back of the statuette is covered with a Semitic inscription stating that a certain Gersaphon had dedicated this Astarte image, thus implying the identity of the Egyptian goddess with the Phœnician.

Arrangements have finally been completed for connecting Iceland by cable with Denmark. The line is to run by way of the Faroe and Shetland Islands to a point on the west coast, from which it will be connected overland with Reykjavik. The concession is granted to the Great Northern Telegraph Company of Copenhagen, and is for twenty years from the time of connection, which must not be later than January 1, 1906. An annual subsidy of 80,000 kroner ($23,000) is to be paid from the Danish and Icelandic treasuries. Apart from its convenience to business men and tourists, this improvement will add greatly to the efficiency of the Danish meteorological bureau, as daily weather reports are to be sent to Copenhagen.

Mr. Jacques Reich's series of large-scale etchings of American statesmen has just been extended by one of Webster, which will take rank among the best of the metal-engraved portraits of this subject. The plate measures 13½x18 inches. The head is in a key that recalls "Black Dan"; there is excellent modelling in the right cheek particularly, and the eyes are carefully rendered, with a skilful suggestion of age. It is Webster nearing the end who is shown here—Webster of the 7th of March speech, in which capacity he still has plenty of admirers, and even more apologists. So our artist ought to find his patronage. Mr. Reich's address is 2 West 14th Street, New York.

—Another chapter of Dr. Andrew D. White's reminiscences stands out most prominently among the contents of the November *Century*. The special subject is his mission to Russia, under Presidents Harrison and Cleveland, 1892-1894. The criticisms of Russian men and policies are in effect extremely severe, though measured in utterance and entirely free from any mark of prejudice. Dr. White takes sharp issue even with the prevalent impression that, in spite of the general backwardness, Russia nevertheless produces great statesmen: "As a matter of fact, there has not been a statesman of the first class in Russia since Peter the Great, and none of the second class, unless Nesselrode and the first Emperor Nicholas are to be excepted." The atmosphere of autocracy destroys the possible greatness of Russia's statesmen, and whatever growth she has made during the past forty years has been in spite of them. Dr. White confesses to considerable surprise that President Harrison should have called him to office, since he had visited the White House a short time before for the express purpose of calling attention to shortcomings of the Administration in the management of the civil service. After the election of Cleveland he tendered his resignation and gave up his apartments, only to be again surprised by the earnest request of the new President that he would retain his post. One point in Russian policy he finds worthy of hearty commendation, and that is the care which surrounds the bestowal of citizenship, in comparison with our own looseness in giving it—not merely to men unfit to exercise it, but even to adventurers who come here just long enough to obtain it and then leave "in order to escape the duties both of their native and their adopted country, thus availing themselves of the privileges of both citizenships without one thought of the duties of either." Prof. Henry F. Osborn has a fascinating paper on "The Evolution of the Horse in America," based upon the explorations conducted by the American Museum, by means of the William C. Whitney fund.

—In the first number of volume iii. of the 'Memoirs of the Peabody Museum of American Archæology and Ethnology, Harvard University,' Mr. Edward H. Thompson gives a short, concise, and interesting description of three groups of ruins in middle Yucatan. He indulges in no exuberant language about size and architectural beauty, and no lament over the "ancient civilization" having passed away; above all, in no attempt to interpret the gaudy Indian wall-paintings, of which he gives copies in color. His ground-plans show an earnest endeavor to exhibit at least one of the ruined complexes in full, not limiting himself to giving the most striking edifices only: and yet he leaves us in doubt as to whether he has given all or not. It is exceedingly difficult to obtain a perfect survey of any complex of ruins in those densely wooded regions. Triangulation is impeded by tall vegetation and by the absence of sufficiently commanding points. A path has to be cut from ruin to ruin, and in this laborious and protracted work it is easy to overlook minor vestiges, the existence of which is as important as that of the larger. But Mr. Thompson has done much in that direction, and, as he will probably continue his labors, we may, sooner or later, hope at last for a complete plan of one or more of the ancient Yucatan settlements, conveying a complete idea of its extent, approximate density of population, and the several types of constructions embraced in it. Hitherto we have had merely diagrams of parts of each ruin, or sometimes of only one or a few isolated edifices of better preservation or particularly striking appearance. These give no proper idea of the part such buildings played in the economy of the whole group.

—Houghton, Mifflin & Co. publish 'Science and Immortality,' by William Osler, M.D., F.R.S., the fifth lecture delivered at Harvard University on the Ingersoll foundation. If the founder of this course desired to assist our faith in immortality, her wishes have not so far been met to any great extent. On the other hand, the individuality of the lecturers has been pronounced. Dr. Osler is no exception to the rule in this respect. He has been appointed to succeed Sir John Burdon Sanderson as Regius Professor of Medicine at Oxford University, and his distinctly scientific acquirements are probably superior to those of any of the Ingersoll lecturers who have said their good things before him. But, strangely enough, his lecture is not so remarkable for its scientific character as for its literary excellence and charm. It shows a mind remarkably well versed in the literature of its subject, ancient and modern. Indeed, if the presentation has a defect, it is that the quotations and allusions come too thick and fast. Dr. Osler's engagement with his subject is less that of anxious inquiry than that of genial curiosity. He describes three different attitudes towards immortality which he calls Laodicean, Gallionian, and Teresian. The Laodiceans are those who are practically indifferent, neither hot nor cold, but lukewarm. We moderns generally are, we are told, Laodiceans, and the more sweeping statement is made that "the desire for immortality seems never to have had a very strong hold upon mankind." Dr. Osler is less at pains than any of his predecessors to make terms with the conventional opinions of religious people. The Gallionians are those who, like Gallio, "care for none of these things," and "live wholly uninfluenced by a thought of the hereafter." As a scientific man, Dr. Osler takes his place with the Gallionians, but his mind, like Faraday's, has an unscientific, an emotional, annex in virtue of which he is one of the Teresians, those whose hearts, like St. Teresa's, have reasons with which their intellects are not acquainted. His science is wholly ignorant of immortality, but he is, nevertheless, of the opinion of Cicero, "who had rather be mistaken with Plato than be in the right with those who deny altogether the life after death."

—Prof. Ernst Freund's 'Police Power' (Chicago: Callaghan & Co.) is a valuable addition to recent law-books on this subject. Developed within the last fifty years, the "police power" as it stands to-day is one of the most interesting fields of controversy between the State and the individual. Under written constitutions it represents what is left to the State of its once universal arbitrary power in view of the modern constitutional guarantees of private right and liberty. Under it, for instance, the right of the State to regulate rates of fare and freight has been established, notwithstanding the constitutional principle that a charter is a contract. Under it health boards are vested with their great powers, license or local-option laws are upheld, nuisances are abated, and hours of labor are regulated. Mr. Freund's book is especially valuable because it discusses intelligently the great limitations placed upon the police power by modern adjudication—without which we should live under a tyranny fatal to industrial and individual freedom—namely, that of reasonableness. This reasonableness is often solely a question of degree. A degree of regulation which promotes the public good and is in the interest of justice is reasonable; a degree which confiscates property or destroys liberty is unreasonable. Mr. Freund points out that the "earlier attitude of the courts" (Munn vs. Illinois, 94 U. S., 113) was that if a condition existed for legislative action, the Legislature was the sole and exclusive judge to what degree its power should be exercised. The present doctrine of the Supreme Court is that a statute is frequently valid,

or the reverse, "according as the fact may be whether it is a reasonable or an unreasonable exercise of legislative power over the subject-matter involved, and in many cases questions of degree are the controlling ones by which to determine the validity, or the reverse, of legislative action" (Wisconsin M. and P. R. R. Co. vs. Jacobson, 179 U. S., 287). The difference represents the result of a great struggle for liberty and common right against legislative tyranny, none the less important to us because it was fought by corporations against a legislative movement urged on by popular clamor.

—This subject is more cursorily treated in Simeon E. Baldwin's 'American Railroad Law' (Boston: Little, Brown & Co.), a volume which aims at stating what is "distinctive" in our railroad law, and putting it in systematic order. The author has had much experience with his subject, both in teaching and in practice. The Fourteenth Amendment and the Interstate Commerce Act come in for a good deal of discussion. The author's method, which is a simple one, results in condensing railroad law into a volume of moderate compass. Where we have had occasion to examine it, it serves very well as an outline or guide to the subject. From the same publishers we have received a manual of the Bankruptcy Act of 1898, by John M. Gould and Arthur W. Blakeman. The act as amended is fully annotated and explained, the Federal and State decisions given, as also the general orders and forms established by the Supreme Court. As the authors say, the book combines the information furnished by both a digest and a textbook of bankruptcy law and practice.

—'A Yankee on the Yangtze,' by William Edgar Geil (A. C. Armstrong & Son), makes rather livelier reading than most books on China. The author was willing, for both economical and personal reasons, to travel *à la Chinoise*, and hence to suffer and enjoy the native rations. Being thus close to the people on deck and street, he was amply rewarded. Able to speak Chinese, and, what is equally important, to understand it when spoken, he circumvented the rascalities of the interpreters. He raises his voice, in unison with the great chorus of the informed and competent, in favor of the employment by the United States Government of trained and scholarly Americans for this service. By sad experience, we know also how often the truth is twisted and fact turned into fiction through that excessive politeness which, according to the Japanese proverb, becomes impoliteness. Mr. Geil's narrative is of a journey from Shanghai, through the Central Kingdom, to Burma. All along the route he met missionaries, most of them from English-speaking nations, and not a few of them in Chinese costume and coiffure. The local magistrates treated him handsomely. He reckons one hundred thousand native Protestant church members in active communion, half a million *regular* and *earnest* (his own italics), and another half-million irregular and casual inquirers. The Boxer troubles, well discussed by this time, have made three hundred million people think about Occidental civilization and religion. Half the population along the route smoked opium—"eleven out of ten," as the Chinese say. There is only one missionary opinion on the subject of opium. Shanghai statements as to the abundance or rarity of wild animals in China were found to be no more trustworthy than items of war news. He rested at mountain inns more than 8,000 feet above the sea level. He saw experimental graves, with hair, etc., of future (but living) occupants tried in temporary interment. With its hundred full-page pictures and continuously spirited narrative, this book gives probably the best contemporaneous account of the common people's daily life in China.

CONWAY'S AUTOBIOGRAPHY.

Autobiography, Memories, and Experiences of Moncure Daniel Conway. Boston: Houghton, Mifflin & Co. 1904.

There are two standards by which every autobiography may be judged: we may either look at the revelation it brings to us as to the personal qualities of the author, or, on the other hand, at the amount of collateral information it yields as to the rest of the human race. The first test is usually best applied by beginning at the first page and reading on for a while. To apply the second test, begin at the end of the closing volume and read the index. In the case of the work before us, it is by beginning at the end that one can best appreciate the book. It would be difficult to name any other biography which contains an index so extraordinary. It occupies twenty-five pages in double columns and very small type. There is scarcely a prominent literary or scientific name in England or in America which does not appear in it; and, on turning to the page mentioned in each case, one is sure to find something worth telling. It is safe to assert that neither the index to Boswell's Johnson nor that to Lockhart's Scott contains so many separate entries. Names of localities occur in almost as great a variety as that which attaches to persons; and the story told in England of the author and his wife as having left home for a journey and spent thirty successive nights in thirty different cities seems a modest statement as one looks through this volume. How much is brought back from each of these different cities is another question, but it is safe to say that for personal anecdotes the book is unequalled, and it is also true that Mr. Conway's perceptions are so keen and his literary handling at once so graphic and so well trained that there is not a dull page in the book. At any rate, it gains in constant interest from beginning to end. To these gifts is to be added a freedom from personal vanity and a conscientious desire to do justice to all.

It should also be pointed out that Mr. Conway, during his unique English career, combined, both by temperament and in the especial position which Providence gave him, certain very rare advantages for an autobiographer. His seeming inconsistencies prove points of strength. Himself the most radical of reformers, he was also the minister of a church; and this church ("South Place"), being absolutely unsectarian, left every one free to go to it and left its preacher equally free from all ordinary restrictions. The more heretical any contemporary was, the more canonical it was for Mr. Conway, during his English residence, to introduce him to his so-called pulpit. He himself escaped the social obstacles placed in England around a dissenter, although he embodied in himself the utmost exemplification of Emerson's phrase, "The soul of the soldiery of dissent." He could go to the theatre every evening, for instance, and, to do him justice, usually did. When the cause of an heretical wife, Mrs. Besant, against a high-church husband was to be tried before a Jewish judge, one was sure to find Mr. Conway there. He kept in touch with all the scientific men, and, what was most remarkable, with all the doctors of divinity. English editors valued him for his knowledge of things American, and American publishers prized him for what he knew, or might be assumed to know, about Europe; and the spice and variety of all these connections is manifested in these two great volumes.

But man is human, and one's temptations usually go along with one's opportunities, and here again come in some of the remarkable qualities of the author of this volume. Not only had he to all appearance no personal enemy on the face of the earth, for he was thoroughly kind and helpful to all within his reach, but his faults and limitations are as frankly shown in this book as are his merits. No man exhibits more unhesitatingly than he what the French phrase calls "les défauts de ses qualités." His most suspicious reader will not attribute to him in the most extreme case a deliberate falsehood, nor can his most charitable reader fail to suspect him, ere long, of a certain vivacity of imagination which may mislead him. This cannot but impair, at times, some of the many good stories of brilliant repartees with which he fills every page. Not forcing his heresies upon you or his independent judgments of character, he sometimes condemns with a verdict of guilty without prefacing his verdict with the evidence, as in the case of John Brown, on the ground of facts which have come to the critic's knowledge without his feeling called upon to state what they are (i., 302).

Mr. Conway's combination of literary or at least journalistic gifts is too well known to need endorsement. He has wonderful readiness both in bringing together information and in combining it; unbounded zeal in the one and apt gifts in the other. He may not be always impartial and may be frequently sensational, but he is always truthful, from his own point of view; never withholds recognition of a high aim of his own or needs to apologize for discrediting it in another. He is absolutely without malice and hypocrisy. Peculiar interest attaches to his later writings from the fact that he takes no pains to conform them to his earlier ones, and frankly calls attention to many points in which he stands alone even among reformers. He is an ardent American, and yet believes that two houses of Congress are one too many. He is more than half an Englishman while on English soil, and, though a heretic, believes to all intents and purposes in an Established Church; finding English dissenters, on the whole, as he declares, almost invariably narrower and less tolerant of heresies than those who adhere to the old dynasty (ii., 322). He has held almost a pioneer's position with respect to the higher education of English women, but is, after all, rather opposed to trusting them with the ballot (ii., 294). As a youth he has been hand in glove with a greater variety of radicals than any one of his

time; yet at the end of the book we see one who would merge almost all strife in the proclamation of universal peace. But this very combination helps him, after all, as an honest autobiographer. Grant a varied range of opinions and add the frankest disposition to communicate them to others, and we have one singularly fitted to fill the position of a reformatory Boswell. Yet his retractions sometimes strike rather painfully on the ear, as where he says (ii., 2) of his book entitled 'Testimonies concerning Slavery,' "So far as the war is concerned, the book by no means represents the conclusions reached by studying facts afterwards revealed."

It seems strange that the pursuits of a journalist should tend to make a man inaccurate in details, but the result is almost inevitable, as the profession now stands, from the speed with which men of that vocation have to work and the indifference of the public to yesterday's misinformation. A professed journalist's book, while crowded with bright thoughts and telling facts, is for the same reason quite apt to yield inaccuracies, often resulting, no doubt, from the very fact of their being written at a distance, or from the necessary absence of personal proof-reading. We note a few of these. Prof. Andrews Norton, father of the present professor, was not a clergyman, and would never allow himself to be called Reverend or Doctor (i., 159). It was not a student who invented a fable of the leading Unitarians entering heaven in a group, but Theodore Parker (i., 160). No doubt such errors of small detail may be accounted for by occasional absences of mind or person, and we mention them, not as being of great importance, but as the kind of drawback accompanying Mr. Conway's ever active and observing temperament. The only difficulty is that when such accidents occur in regard to the companions of a man's youth, the possibility that they may impair the personal testimony given in old age is enhanced. On the other hand, they are never here found committed or tolerated with unfair purpose, and in everything which implies that test Mr. Conway may always be found well acquitted.

The utter frankness of Mr. Conway's temperament leads to the bringing out of some especially interesting facts which have long awaited responsible evidence. It has often been said that the best literary secret ever kept in America was entirely in the hands of a woman, namely, the authorship of the books appearing with the name of Saxe Holm on the title-page. The secret was all the better maintained from the fact that its success suggested to several persons to claim this authorship to an extent that was naturally inconvenient. As a result, it is not uncommon to see the titles of these books in library catalogues marked even now with a query, in spite of the gradual convergence of public opinion as to the actual authorship upon the name of Mrs. Helen Jackson, then Mrs. Helen Hunt. Two persons, Mrs. Celia Burleigh and Mrs. Katharine Gray, even wrote and published letters claiming the authorship for personal friends of theirs. Mr. Conway now prints for the first time a letter from Mrs. Hunt distinctly avowing her authorship, and saying frankly, "I intend to deny it till I die. *Then* I wish it to be known" (ii., 429). She also mentions a male friend and companion author who read the first three or four of the Saxe Holm stories as they were written and could swear to the truth of her claim. As a matter of fact, Mrs. Jackson always claimed, as did Sir Walter Scott, that an author had the right to conceal the authorship of his own work by fibbing if he wished, and that it was at least worth while to give one conclusive proof that a woman could keep a secret.

Mr. Conway reprints a striking passage, either not previously printed or not generally known, in which Carlyle, after his very first interview with Emerson, sets down his estimate of him in these terms:

"Very *exotic;* of smaller dimensions, too, and differed much from me as a gymnosophist sitting idle on a flowery bank may do from a wearied worker and wrestler passing that way, with many of his bones broken. Good of him I could get none, except from his friendly looks and elevated, exotic, polite ways; and he would not let me sit silent for a minute. Solitary on that side, too, then? Be it so, if so it must be" (ii., 113).

Widely different from all this, as we now know, is the opinion expressed on Emerson by Carlyle in the later years of his life; and Mr. Conway, with his usual absolute impartiality, brings out both points of view. In all matters relating to his English life especially, his good nature can be compared only to Walter Savage Landor's impartiality in an opposite direction, when he gave it as his highest desideratum in London life to have "the privilege of hanging a Tory on every lamp-arm to the right and a Whig on every one to the left, the whole extent of Piccadilly."

AUBREY DE VERE.

Aubrey de Vere: A Memoir, Based on his Unpublished Diaries and Correspondence. By Wilfrid Ward, author of 'W. G. Ward and the Oxford Movement,' etc. Longmans, Green & Co. 1904.

Mr. Ward's biographies of his father and Cardinal Wiseman proved him a master workman, and, though his present subject is less positive and striking than either of the others, it is a very interesting one, and is treated with appropriate delicacy and intelligence. The book is not, we are assured, in the fullest sense a biography, The time prescribed for its publication made that impossible. The letters are mainly those selected by Mr. de Vere himself with a view to publication. They have two faults: they are inordinately long, and they have a plentiful lack of humor. If Cowper's were quite as long, they were much more humorous, and they wound in and out among light, pleasant matters, as Mr. de Vere's do but infrequently. A more serious deduction from Mr. Ward's book as a biography than those confessed is, that it is far less a memoir of Aubrey de Vere the poet than a memoir of Aubrey de Vere the Roman Catholic pietist. Of his poetry the mention is hardly more than incidental, and of critical estimate of it there is next to none. The poems quoted are generally so familiar that one is obliged to feel that De Vere's appeal to popular sympathies was within a narrow range. At the same time the twice-quoted judgment of his dear friend, Sara Coleridge, is one that is borne out at every turn: "I have lived among poets a great deal, and have known greater poets than he is, but a more entire poet, one more a poet in his whole mind and temperament, I never knew or met with." We get a similar impression of the validity of Mr. Ward's conclusion that De Vere was "a personality which for spiritual beauty, both of mind and character, and for the completeness in it of the poetic temperament, must be allowed to be one of very great interest."

The interest is obviously enhanced by the fact that Mr. de Vere's literary and religious thought and feeling attracted him to many leading minds. His intercourse with these contributes some of the most justifying pages of the book. We might weary of him were he not so often met in the company of Wordsworth, Tennyson, Sir Henry Taylor, Browning, Newman or some other of a score of men of whom we cannot read too much. His letters to and from them, his conversations with and impressions of them, are among the best things in this kind. And while Mr. Ward's interest in him is principally on account of his idealistic Roman Catholic apologetics, many who remain cold to these will glow with kindly warmth over the pages of literary correspondence, criticism, and reminiscence. His literary affiliations so made for breadth and sympathy that to the last he was a Broad Churchman in the inclusiveness of his friendships and appreciations. Even within the narrower ecclesiastical limits he could but hold his creed in a spirit of genial tolerance for those with whom he had some time walked in cordial fellowship. As Newmanite or Romanist, he must still think tenderly of Maurice and of Maurice's master, Coleridge. For him, as for Renan, the bells of the sunken city of Is made a sweet music.

There may be little in a name, but Mr. de Vere's baptismal name, Aubrey Thomas Hunt, has certainly a less poetical connotation than that for which it was changed on his father's accession to a baronetcy in 1831. The son was then seventeen years old. His mind matured rapidly, and his letters at this time would do credit to a trained intelligence. An early enthusiasm for Byron soon passed to a deeper for Wordsworth, of whose school he came to be a foremost representative, yet from the start rejecting Wordsworth's theory of poetic subject and diction, and never making himself liable to Walter Bagehot's characterization of Keble as "Wordsworth and water." His religious history was largely determined in its course by his reverence for great and good men, representing widely different schools of thought." "Persisting from the first in reverent worship of the greatest thoughts in each, he was untouched by their difference and even by their mutual opposition." His father destined him for the priesthood, and his own assent was cordial, but something held him back, and he never could make up his mind to take the fatal step. However, he went to Cambridge and Oxford and to Rome, as if he would prove all things and hold fast to the best. These protracted visits made impressions that were never wholly overworn.

It was Rome that triumphed in the end, but not till he had held out for some years against Newman's attraction to his new faith; not until after Manning's conversion, and not, apparently, much influenced by that. R. H. Hutton always complained that De Vere's Roman Church was not the actual

institution, but a creation of his own imagination; and the complaint impresses us as just. One gets from this story a fresh conviction of the plasticity of religious systems to the stress of individual needs, men finding in one system or another that which they import, the echo of their private wish or whim. Mr. De Vere's religious mind was much the same through all his course. He did not use his intellect for the discovery of truth, but for the ingenious recommendation of those things which had for him a poetical attraction. His outward life afforded an agreeable symbol of the continuity of his spiritual experience. It was associated with beautiful surroundings and a pleasant home. Death found him in the room which he had occupied when a boy.

Mr. Ward regrets that De Vere's acquaintance with Wordsworth, which began in 1841, adds so little to our important knowledge of the elder poet, whose foibles are more emphasized than his exhibitions of genius. "He talks in a manner very peculiar. As for duration, it is from the rising of the sun to the going down of the same." It took him fifteen years to discover his daughter's affection for Mr. Quillinan, and several more for him to adjust his mind to the discovery and consent to the marriage. He was very glad to meet any one "so capable of appreciating his poetry" as De Vere. He called Sydney Smith "a miserable old man." After praising his wife's many virtues, he went on gravely and emphatically, "And it was, perhaps, her greatest quality that she never molested me in my affection for other women." De Vere could not repress his smile, and Wordsworth went on combatively, "If she *had*, Mr. de Vere, let me tell you, it would have been in the highest degree offensive to me." In a less "personal talk" he said, "New thoughts, however deep, are not the staple of poetry, but old thoughts presented with immortal freshness and a kind of inspired felicity of diction." Wordsworth's worst line, in De Vere's opinion, "is that in which he calls our great Mahometan Poet, 'Holiest of Men.'" By "our great Mahometan Poet" Milton is intended. Milton has a peculiarly irritating effect on the High Churchman and the Romanist. Avignon was a poisoned place for Faber because of a visit that Milton made there in 1638.

In London, where he made occasional visits, De Vere met Whewell, Hallam, Macaulay, Milman, Tennyson, Taylor, and many other celebrities. Of Macaulay we read:

> "His mind is evidently a very *robust* one; it has also ardor enough to fuse together into new combinations the mass of strange and disorderly knowledge with which his great memory litters him. But I could perceive in it no trace of originality, depth, breadth, elevation, subtlety, comprehensiveness, spirituality—in one word, none of the attributes of greatness."

Carlyle interested him, but very painfully: "It seems to me as if he had begun by believing what he now only repeats by heart, and once loved the virtues of which he continues to hate the opposite vices." Of Mrs. Browning he says: "I wish she had less ambition, or rather more of a nobler sort, that of writing like a woman of genius—as she is—not like a man." Browning judged very kindly his "bowing down in the house of Rimmon," saying, "I am never tired of sunrises." "Moonrises" would have been more apt. Sir James Stephen was less complacent, and struck out from the shoulder in his characteristic fashion. De Vere's friendship with Sir Henry Taylor was of the closest kind, and their correspondence abounds in admirable criticism and in valuable comment upon persons and affairs. Of Tennyson there are many glimpses, some of them uncommonly significant. One of them is through a cloud of tobacco smoke in the small hours of the night, the poet "crooning his magnificent elegies." This one goes much deeper:

> "Tennyson, when he showed me his 'In Memoriam' in MS., used to mark with his fingers some three or four stanzas apart from the rest, and say, 'There! do you not see the substance of the poem is in these stanzas? The rest only dilute it and spoil *its shape*.' Accordingly, he would cancel them though just as beautiful as those he left."

De Vere's temper was more social than recluse. Least of all had he any sympathy with "ascetic detachment" from one's family and friends. Young Herbert Vaughan, afterwards Cardinal Archbishop of Westminster, had arrived at this altitude when De Vere burst out indignantly, "I really believe that if some one told you that your father, mother, and brothers had been burned to death in the next room, you would simply ring for the servant to clear away the ashes." Not only was he social and domestic, but he had much public spirit and humanity. He threw himself with great ardor and efficiency into the sea of troubles caused by the Irish famine. He followed up his philanthropic efforts with a book on 'English Misrule and Irish Misdeeds,' which was both "much admired and severely handled." Characteristic answers are given from Mill and Carlyle. Mill would rely less on emigration, more on improved land-tenures. Carlyle would have it understood that "the millions of our multitudinous populations are, and must remain, *slaves*, whom it is the cruellest injustice to call or treat by any other name." Our civil war found De Vere perfectly comprehending, with Mill and Bright, that "those who fought against secession fought against slavery," and he poured out his sympathy to Charles Eliot Norton, for more than thirty years a valued correspondent. His doubts of Fenian methods did not prevent his recognition of the wrongs at which the Fenians blindly struck, and he urged on Gladstone the disestablishment of the Irish Church, but would have had its funds used for religious purposes, to the advantage of both Catholics and Protestants. Here Gladstone disappointed him, and more as time went on and De Vere's sympathies gravitated very naturally to the landlord class, of which he was a lifelong pensioner. He could see nothing but "Jacobinism" in the politics of Parnell and his friends. In a letter of July 27, 1882 (p. 346), we have an elaborate estimate of Gladstone which is the more interesting because it contrasts so sharply with Lord Acton's famous estimate in one of his letters to Mrs. Drew. But Lord Acton's Catholicism was as different from De Vere's as his feelings about Gladstone.

As De Vere grew older, seventy, eighty, eighty-eight, he became more and more "subdued to settled quiet." He had long since given up the hope of poetic fame, a hope that had been very dear to him. "I wonder how people feel," he wrote to Sir Henry Taylor, "who write with hope." He smilingly averred that his poems "could never be forgotten, because they had never been remembered." But, though never popular, they made many friends, and such as might well comfort a man's heart. Mr. Ward takes over from Mr. Edmund Gosse a delightful account of De Vere's appearance in 1897, when he was eighty-three years old: "He had an ecclesiastical air, like that of some highly cultivated, imaginative old *abbé*. He possessed a sort of distinguished innocence, a maidenly vivacious brightness, very charming and surprising." Mr. Ellis Yarnall's 'Wordsworth and the Coleridges' was one of the last books that appealed to him. He died January 21, 1902, having been in good health on his eighty-eighth birthday, eleven days before.

THE ATTIC CULT OF DIONYSUS.

Le Culte de Dionysos en Attique. Par M. Paul Foucart. Paris: C. Klincksieck. 1904.

In this essay M. Paul Foucart introduces order and light into a very obscure and complicated subject. Dionysus appears in Greek myth in a strange and, on the whole, exotic character. He is generally represented as coming from the East; he is a deity who is born and dies; according to some legends he was torn in pieces by the Titans and his remains were collected and buried by Apollo. His tomb was shown at Delphi with the inscription, "Here lies Dionysus, son of Semele." Five different deities bore his name, originating at different periods in Crete, in Egypt, in Thrace, and in Thebes respectively. In the "Bacchæ" of Euripides he advances from Asia Minor, and makes conquests of the opponents of his ritual; but he is a native Greek product, born in Thebes, and destined to regain honor in his own country by his miracles and his judgment on the unbelieving Pentheus.

Amidst this confusion of myth and character, to search for a clue by the aid of the poets or the artists leads to nothing certain, for each of these treats the myths according to his own convenience or the exigencies of his art, and is guided by no system or theology. There is, in fact, no theology, and the poet serenely mingles and confounds the most diverse legends without feeling called to offer any reconciliation. In these fluctuations the only safe anchor to tie to is that of ritual. Ritual is fixed by tradition and stereotyped formulæ, repeated year after year; it is intended to embody the experiences and adventures of the deity. The portrayal of these will place the worshipper *en rapport* with the deity, will enable him to imitate and repeat the experience and to place himself under his control and inspiration, to appeal for his favor and protection. This is the object, for example, of the Thracian orgies on the mountain-tops, pictured so beautifully in the "Bacchæ." In these the mænad tries to attain that state of trance or ecstasy, that possession by the deity, which is the aim of the fakirs and howling dervishes of the Orient. The mænad, when possessed by the deity, borrows his power and works his miracles; in like manner, the shouting de-

votee of the camp meeting expects miracles of divine grace to descend upon him.

Now the permanence of ceremonial rites, the fixity of their forms, possessed a certain magic efficacy, which was imperilled by the slightest deviation. They were retained, therefore, unaltered, century after century, even when their original signification became forgotten or misunderstood. To analyze them, to trace out obscure hints, to disengage their various threads and sources, is the process from which a fruitful and solid result may be expected; and in pursuing this process M. Foucart has not hestitated to avail himself of recent discoveries in Egypt and Crete. The close relations between Egypt and the Ægean coasts and islands can no longer be denied; they extended even to Mycenæ and Eleusis. In the tombs of these regions have been found repeated specimens of statues, pottery, and scarabæi, bearing cartouches of the 12th, the 13th, and the 18th dynasties. Were these objects simply bric-à-brac and curiosities, collected by the buried chieftains? The supposition is absurd. Doubtless they were considered (as they were in Egypt) as amulets possessing a protective force. A statuette of Isis was found in one of the earliest tombs of the necropolis of Eleusis; and this fact points to the chief thesis of M. Foucart's essay, viz., that the Dionysus worshipped at Eleusis, and associated with Demeter, formed with that goddess a pair identical originally with Isis and Osiris, and that their cult was introduced into Attica from Egypt about the 15th century B. C. So felicitous is his reasoning, so fortified by the various strands of history, of tradition, and of archæology, that it gives something of the pleasure that is afforded by a very neat and clear mathematical demonstration. It causes a solid little island to emerge out of the vague and watery waste of mythological speculation and interpretation. For this reason a brief sketch of his arguments and method as applied to a single case may be interesting, in spite of some technicalities.

The Attic festival of the Anthesteria was a singular combination of our Mardi Gras and "All Saints' Day." The celebration of the most important day (the 12th) was accompanied by some extraordinary and mysterious observances, and these took place in the ancient temple of "Dionysus of the Marshes." On this day alone was the temple opened, which during the rest of the year remained absolutely closed, enshrining the body of the deceased Dionysus. The ceremonies were performed by the wife of the Archon Basileus, aided by fourteen ladies (called *gerairai*) and by a priestly delegate from Eleusis. These fourteen officials made sacrifice to Dionysus at fourteen altars, each depositing on her own altar a relic of the deity, and repeating certain formulæ at the dictation of the functionary from Eleusis. These relics were next conveyed to the Queen-Archon, whose duty it was to readjust them and to restore to life again the body thus collected. This final function she discharged in the *cella*, whither none might follow her, by a ritual in which no one participated. The deity restored to life and arrayed in festal garb is next conveyed to the "Boucolion," where the ceremony of a "Sacred Marriage" is transacted with the Queen-Archon. The wedding night ended, the statue of the deity is once more conveyed to the "Temple of the Marshes," where it is dismembered, the fragments replaced in the respective coffers, to repose in the temple, which remains closed till Anthesterion 12th of the next year. In this ritual, the Queen-Archon personifies and plays the rôle of Demeter herself, who, according to the legend, collected and restored to life the fragments of Dionysus after his mutilation by the Titans.

Now the whole aspect of this tradition and ritual is, as we have said, exotic. The conception of a deity subject to death is foreign to the Greek mind; with Homer the deities are "the immortals." Whence, too, arise the twice seven altars, and the bizarre legend of mutilation and resuscitation? On Greek soil, these offer a riddle which has no solution. The key to this riddle is offered satisfactorily and in detail by the Egyptian observances of the month Choiak. Plutarch records that the body of Osiris was concealed by Isis, but was found by Typhon and cut into fourteen pieces, which he scattered and hid in various places throughout Egypt. These precious relics were found by Isis, after long search, adjusted together, and restored to life by magic incantations. Such a miracle was quite in accord with Egyptian sentiment and belief, and the story of the miracle is enacted and represented in the ritual of Tentyris for the great festival of Osiris in the month Choiak. The Egyptian list enumerates the fourteen divine members, the reunion of which constitutes the body of the deity. Each of these relics was enshrined in a special sanctuary and guarded by a special amulet from the attacks of enemies. The union of these members, the restoration of the deity to life (the resuscitation of the deity), and his marriage to Isis constitute the chief features of the great festival of the month Choiak. Here we find the prototype and the explanation of the fourteen altars at the Temple of the Marshes, with their fourteen acolytes, and of the ceremony of the sacred marriage. The figures which are meaningless in the Greek story are accounted for in Egypt; the union of Isis-Demeter to Dionysus is a type and commemoration of the institution of marriage for mankind. The ceremony on the 12th of Anthesterion is a duplicate in miniature of the great feast of Osiris in the month Choiak. The general functions and sphere of each deity are the same in each country; the details are somewhat modified or accentuated in Greece.

A coincidence so complete and striking between the indications afforded by early tradition, as reported by Apollodorus, Herodotus, Diodorus, and Plutarch, by the details of ritual, and by the most recent developments of archæology, amounts almost to demonstration. So far as proof is possible in such matters, we have it here; and we may conclude that the Eleusinian cult of Dionysus and Demeter was introduced into Attica either directly by Egyptian colonists, or indirectly by way of Crete.

There are many minute points which corroborate M. Foucart's conclusion as to the Dionysus who was worshipped in Eleusis and at the ancient Shrine of the Marshes. When, however, Dionysus is mentioned as an Attic deity in the classic period, it is the god of tragedy that naturally comes to mind, the patron deity of the Attic theatre who had his temple close by the great Dionysiac theatre and was called Dionysus of Eleutheræ. In the palmy days of Athens his prestige vastly exceeded that of the venerable Shrine in the Marshes. He became in Athens a rival of Apollo, and the ancients ascribed to him the invention of the dramatic art. But in fact the obscure deity of the little deme of Eleutheræ was at first a colorless personage, without history or marked attributes. His introduction to the city by Pisistratus, and his association with the dramatic representations, were the beginning of his fame and his vogue. His fortune was made by the great tragedians and comedians of the Attic stage: his lustre was borrowed from the splendor of their poetry; he was, in a way, their creation. His birth, so to speak, dates from the institution by Pisistratus of the city "Dionysia" and from the representations which reacted on his prestige. From that date he begins to appropriate to himself the companionship of the Muses and the honor of Apollo. The guilds of actors and the poets adopt him as their patron saint, and he eclipses almost totally the venerable name and shrine of "Dionysus in the Marshes."

The Correspondence of William Cowper. Arranged in chronological order, with annotations. By Thomas Wright. 4 vols. Dodd, Mead & Co. 1904.

The mantle of the late Alexander Grosart, that exuberant and indefatigable editor, seems in the way to fall upon the more slender shoulders of Mr. Thomas Wright. Mr. Wright is already known as the author of 'Go; or, How to Succeed in Life'; of the memoirs of several literary characters, toward whom he has been drawn by the perilous attraction of their intellectual unlikeness to himself, and of other spacious works. In the four handsome volumes of his edition of 'The Correspondence of Cowper,' however, he shows himself an antiquarian and editor of real ability. He does, indeed, occasionally give way to his bent for pregnant phrase, as where he tersely speaks of "the beautiful, cultured, idealizing, vivacious, and papilionaceous Lady Austen." Sometimes he is extravagant in his judgments, as where he says of Newton that, "a poet, a wit, and a man of warm heart, he was precisely the companion for the poetical, witty, and affectionate Cowper," and that "Newton and his wife were a second Pliny and Calpurnia." The morbid influence of Newton upon the author of "The Task" has doubtless been exaggerated; yet there are few readers to-day, we imagine, who can be brought to share so amiable a view of his overwarm personality, or agree that he was "precisely the companion" for so sensitive and refined a spirit as Cowper. Yet, despite such faults, and there are many of them, Mr. Wright has succeeded in producing the best edition of Cowper's letters that we have.

Of the incontestable merits of his edition, Mr. Wright, who is quite competent and *très content de lui*, may be allowed to speak in person:

"Of entirely new letters, then, many will be found in these pages, including the three earliest known and a fine series to Mrs. Throckmorton. Seventy-two letters of Cowper to Teedon are referred to in Teedon's *Diary*, and I have the satisfaction of

being able to say that not a single item of this series has escaped my net.

"My annotations should be helpful."

The first paragraph of this promise is entirely made good. Of the 1,041 letters in the collection, 105, and those among the best, were wholly unpublished. The chronological order, now for the first time introduced into the mass of Cowper's correspondence, is seen to be productive, both of biographical illumination and of the reader's pleasure. There are also copious chronological tables of the chief events in the poet's life; and there is an elaborate table in six columns, giving the date of each letter, the name of the person to whom it was addressed, the first words of it, the *locus* of its first publication, and its place in the present edition. In short, for a serious reader, already well informed about Cowper and capable of forming his own judgments, Mr. Wright's edition is nearly all that could be desired.

Unfortunately, his annotation is scarcely contrived to be so helpful as he anticipates. He knows his Olney thoroughly, and his local antiquarianism is never at fault, but his instinct for the significant and helpful fact is dull. To take but a single example: with the first letter of the important new series to Mrs. Throckmorton we have this note depending from the heading: "Wife of Mr. John Throckmorton, who, on the death of Sir Robert Throckmorton in 1791, succeeded to the baronetcy." How much more helpful Mr. Wright would have been to the average reader had he vouchsafed the information that the Throckmortons were Catholics, and in many points of culture and temperament significant friends for Cowper (against the fervid exhortations of Newton) to win. In the elucidation of the literary allusions which Cowper sometimes employs, Mr. Wright is all to seek.

It is perhaps ungracious to carp at minor defects in a work so full of excellent entertainment and instruction, but in an edition of a writer so perfectly classic as Cowper such slight blemishes are particularly annoying; and it may be said of carping as Cowper himself writes quite soberly to Bull of "scratching," that "it is a good exercise, promotes the circulation, and elicits the humors."

How agreeable the new letters are may be seen from this to Lady Throckmorton:

THE LODGE, Feb. 19, 1791.

DEAR MRS. FROG:

I will be very good to you and will send you a letter, though you delay so long to answer my last, and to tell me who was the author of the fine verses I sent you lately, and how much you admire them.

I was in hope that by this time you would have won your ten guineas at commerce, and have flown upon the wings of good fortune back to Weston; methinks you are a long time about it, but if you have not won so much, I hope at least that you have taken care not to lose it; as for me I grow rich, and have at this three guineas before me which my poetry, such is its power of attraction, has drawn into my desk from the distance of three miles and a half. I question if Orpheus ever performed such a feat in his life. It is Mr. Wrighte's subscription money to my Homer, which he sent me the other day by the hands of Joe Rye, by whom he told me also that he should have paid me much sooner had he not feared to offend my delicacy. Now I wish him to know that my delicacy is never offended by the receipt of money: on the contrary, I esteem the want of money, commonly called Poverty, the most indelicate thing in the world; and so did the ancient Romans, who therefore always annex to the word *paupertas* an epithet expressing their abhorrence of it, such, for instance, as *squalida*, or *sordida*, or some such reproachful appellation.

But it was not with an intention to say this or any part of this at present, [*sic* in Wright] I meant only to relate to you a pretty little story of Tom, for I know it will do your heart good to hear it. You will remember, perhaps, if you have not forgotten in the hurry of other matters, that you lately sent a gown to be made at Weston. Nannie Morley carried it to the nursery, and being seated there, said—"Tom," or "Master Gifford," rather, "this is your aunt's gown." Which he no sooner heard, than walking up to it and taking a fold of it, he kissed it. I made the doctor swear that he would not tell this anecdote, because I resolved to have the pleasure of telling it to you myself.

Give my best love to Mr. Frog, and my compliment to Messrs. Cruisé and Pitcairne when you see them, and believe me sincerely, yours, WM. COWPER.

Tom and Tit are both in good health. Mrs. W. sends her best respects. Remember me to William.

It must be said that, as we look through this complete chronologically arranged collection of Cowper's correspondence, we doubt a little the validity of what Mr. Wright takes to be the universal acknowledgment that Cowper is "the greatest of English letter-writers." For easy grace, perfect lack of self-consciousness, and lightness of wit he is certainly unsurpassed. Yet in point and finish, in virile broadness and intellectual variety, he must yield to Gray, just as his letters miss the tang of eccentric individuality that delights us in FitzGerald's, and make the gentle poet of Olney seem a little pale beside the Laird of Littlegrange. If Cowper *be* the greatest of English letter-writers, it is because he was the most sympathetic of correspondents. In none other is the mutuality of letter-writing so strong, and there is no other body of letters in English so little egoistical, so fulfilled of the personalities of the persons addressed.

The League of the Ho-De-No-Sau-Nee or Iroquois. By Lewis H. Morgan. A new edition, with additional matter, edited and annotated by Herbert M. Lloyd. New York: Dodd, Mead & Co. 1904. With two maps, two full-page colored illustrations, many others, and a portrait of the author.

When, in 1846, Lewis H. Morgan read before the New York Historical Society his paper on the "Constitutional Government of the Six Nations," he little thought how far this first glance at the social life and organization of an Indian community would lead him. The results of practical study of tribes that were virtually his neighbors, however, opened a perspective to his inquisitive mind which became so fascinating that the very next year an amplification of his essay appeared under the title of 'Letters on the Iroquois, by Skenandoah,' which in turn became, four years later, enlarged to the important book, 'The League of the Ho-do-no-sau-nee or Iroquois,' that will stand for ever as a model of ethnographic description of peoples only a part of whose life has come under actual observation. It is gratifying to record that the value of the model has been fully recognized, on this side of the Atlantic at least; the many studies of Indian customs and Indian life, past as well as present, since the 'League of the Iroquois' appeared, having followed the lines traced in so masterly a fashion by Mr. Morgan.

He was the first to show the value of close personal inspection of Indian life by an honest attempt to enter into Indian thought—the only way to raise American ethnology above the level of servile addiction to traditional methods and conceptions borrowed from other continents. He was the first, for instance, to point out the radical differences in social organization that separate American Indian society from the Eastern. He came to this but gradually. In the 'Letters on the Iroquois' he had not yet a clear idea of the Indian clans or *gentes*, calling them "tribes." In the 'League,' the nature of the "gens" is fully portrayed, with its ethnologic bearings upon American topics especially, since it is on this continent that the gentile system maintains its widest spread and can be studied as a system still in vigor. The gentile organization among the Iroquois as presented by Morgan appeared almost an anomaly. His explanation of it, as the result of a system of consanguinity, was looked upon, in Europe and in England, as a species of heresy, or, at best, as innocent hallucination. If, even at present, there is still a certain reluctance, on the other side of the Atlantic, to concede to the American clans their full importance in the life and culture of the tribes they constitute or constituted, it is due mostly to the total absence of practical acquaintance with the Indian, and to a lack of desire to approach him close enough for practical study.

Protracted observation of and penetration into Indian nature led Morgan to the discoveries first fully set forth in the 'League.' But he was not oblivious of his duty to inquire whether he had not, perhaps, had predecessors in the field. This led him to seek for documentary information, and he often acknowledged, orally as well as in his writings, the confirmation met with in Lafitau, Charlevoix, and other Jesuit writers and in early English narratives, among which he had a certain predilection for mentioning the quaint work of James Adair, although he was by no means blind to its uncouth eccentricities. The perusal of these and similar sources induced Morgan to undertake the monumental task of investigating the systems of consanguinity of the human family in general, a task which, supported by the Smithsonian Institution, he carried out as far as his resources permitted at the time. In the results of these labors, displayed in his most compendious work, 'Systems of Consanguinity and Affinity of the Human Family' (1871), he succeeded, to say the least, in proving the prevalence of gentile organization among the aborigines of America.

Morgan was well aware that the feature of clanship was not common to all Indians. He fully recognized its absence among Prairie Indians, in part. His explanation of it leads us to another work of his, of lesser compass though not less important, but comparatively little known. The 'Indian Migrations' appeared more than a year before the 'Systems of Consanguinity,' as a pair of essays in the *North American Review*. They were reprinted in the 'Indian Miscellany' in 1877. In these two essays Morgan, perhaps for the first time, clearly and forcibly illustrates the indispensability of connecting physical geography with eth-

nographic studies. 'Ancient Society' and 'Houses and House Life of the American Aborigines' were his last productions of magnitude. In both of these, the influence of the 'League' is apparent; his exhaustive work on the Iroquois was the starting-point and the basis for all subsequent labors.

The 'League' had a limited issue, and for many years remained unattainable. By republishing it, in a form and dress making of the reprint very nearly a facsimile of the original, Mr. Herbert M. Lloyd has conferred a lasting benefit on earnest students of American ethnology. He has placed within their reach a book of far wider scope than its modest compass seems to indicate, and offering points of comparison with Indian clusters too often artificially isolated from the remainder of the aborigines of America, being fancifully placed at a level so high as to warrant such a separation. The 'League of the Iroquois' remains invaluable for its fund of material for contrasting many features in Indian society, past and present, all over the two Americas, and for their explanation on the basis of practical fact. Mr. Lloyd's expert labors were so much appreciated that the first edition was disposed of as soon as it left the press. The work now becomes procurable by the general bookbuyer.

How to Identify Old China. By Mrs. Willoughby Hodgson. London: George Bell & Sons; New York: Macmillan.

We have this year to add to the important, and in a sense exhaustive, books on English pottery and porcelain of William Burton and M. L. Solon a small handbook which bears a curiously general title for its very limited subject. Neither title nor preface suggests the fact that it is limited to English ware, nor, on the other hand, reveals the curiously liberal significance which the author gives to the word "china." What do we mean by china? We mean porcelain, assuredly, in every case, except where children and serving-maids speak in the most careless fashion of the dishes and plates which are in the cupboard. This book, however, deals with pottery as well as with porcelain, and includes Wedgwood and various Staffordshire wares which make no pretence at being translucent or delicate in their make, such as the salt-glaze ware of the Astbury pottery and the Elers pottery, which are indeed stoneware, and not very delicately modelled or very minute in finish.

So much it is necessary to say by way of calling attention to the somewhat amateurish tone of the book under consideration; but if the statements and qualifications of the text be compared with the wares in question, the general tone will be found just and appreciative, and the statements trustworthy. As for identification of old pieces, the prospect held out is no more to be taken seriously than similar ones in other titles of the day. The chapter "To Help the Amateur," contains a few obvious hints, but leaves the reader in doubt as to the use of "the microscope" in this pursuit. The illustrations alone may suffice to help in this important matter of identification. There are forty half-tone plates, each one showing from two to seven pieces of the ware; or, if the group of Nantgarw be taken as an example, there are thirteen pieces in the picture, even if we count a cup and saucer as one piece. Plate XIV., indeed, gives the whole interior of a cabinet full of Bristol china with an indefinitely great number of pieces, but that hardly counts, as the illustrations are too small to be useful to the student, and as the plate can only be taken as showing the great variety of forms discoverable in the porcelain of that one factory. It will be seen that the supply of illustrations is abundant for an inexpensive publication, and we are not conscious of making serious objection to the book in remarking that it will not help anybody very much to identify doubtful pieces, for where is the book that can really be of help in this particular? Experience, the experience of one's own mistakes, added to the keen eye and quick judgment of the born collector, are the qualifications to keep one from error in this pursuit.

FICTION FIT FOR NATION READERS

The Divine Fire

By MAY SINCLAIR. $1.50

A new and notable novel of the life and loves of a London genius, unfortunately born, who became a real poet.

PROVIDENCE JOURNAL: "Rare artistic power. . . . It is not in the narration of events, but in the analysis of the man's soul, that Miss Sinclair excels. Experiences, which might easily be made vulgar, are described with equal delicacy and power. . . . But the novel as a whole is conspicuous by its promise as well as by its achievement; and **persons who still bring brains to the reading of fiction will find it, with all its faults, an intellectual pleasure.**"

Fergy the Guide

and his moral and instructive lies about beasts, birds and fishes, by H. C. CANFIELD. Illustrated by ALBERT D. BLASHFIELD. $1.50.

EVENING POST: "Fergy is a wholesouled, thoroughgoing and spontaneous liar, with originality and a real love for his art, . . . **a liar who must rank as an artist** . . . his language is as direct and as unforced as his inventions are moral and instructive, . . . The marginal illustrations by Albert D. Blashfield, informed by a thorough appreciation of Fergy's humor, add not a little to the enjoyment."

TIMES' REVIEW: **"An extraordinarily good book to read aloud to people who know how to laugh."**

Henry Holt and Company

29 West 23d Street, New York.

PRACTICAL PHYSIOLOGICAL CHEMISTRY

By J. A. MILROY, M.D., Demonstrator of Physiology, Queen's College, Belfast, and T. H. MILROY, M.D. 8vo. With Plates and Illustrations. $1.60 *net*. By mail, $1.74.

This book is intended to serve as a guide to students of Practical Physiological Chemistry. All matter which does not bear directly upon the practical work has been excluded, only that amount of theoretical explanation being given which has seemed to the authors essential for the proper understanding of test or process. The volume is interleaved throughout and contains a number of tables, illustrations of apparatus, and other plates, some of which are in color.

LONGMANS, GREEN & CO.
93 Fifth Avenue, New York.

STANDARD AUTHORS IN SETS

Balzac, Brontë, Bulwer, Carlyle, Cooper, Dickens, Dumas, De Foe, Eliot, Fielding, Gibbon, Guizot, Hawthorne, Hugo, Irving, Macaulay, Poe, Reade, Ruskin, Scott, Smollett, Shakespeare, Thackeray, Tolstoi.

THOMAS Y. CROWELL & CO. New York

THE UNIVERSITY OF CHICAGO PRESS

NEW BOOKS

Religion and the Higher Life

By WILLIAM RAINEY HARPER, President of the University of Chicago.

A collection of addresses, more or less informal, delivered by the author to companies of young men and women. The topics are the practical questions of the religious life that the youth of both sexes are all compelled to consider whether they will or not. The author says in his preface "I have in this way discharged, in a measure, a responsibility which has weighed upon me more heavily than any other connected with the office which I have been called to administer." Some of the more important topics are as follows:

Fellowship and Its Obligation—Service.
Our Intellectual Difficulties.
Religious Belief among College Students.
Bible Study and the Religious Life.

12mo, cloth, $1.25; postpaid, $1.40.

For publication during the first days of November.

Studies in General Physiology

By JACQUES LOEB, Professor of Physiology in the University of California.

These volumes contain the results of Professor Loeb's researches in the general problems of life-phenomena, embracing the author's publications in journal articles and monographs, often now inaccessible, published during the last twenty years. The two volumes constitute the only complete and orderly account of the author's important researches in this field, with occasional notes and revisions. The leading topics which are treated are animal heliotropism and geotropism, instinct and will in animals, heteromorphosis, the limits of divisibility of living matter, regeneration, artificial parthenogenesis, the physiological effects of ions, the effect of salt solutions on the muscles, and the transformation and regeneration of organs. The experiments are presented in a way that is perfectly intelligible to laymen, although the researches appeal primarily to scientists.

In two Parts bound separately.

Part I, 430 pp., Part II, 400 pp., royal 8vo, cloth, with numerous illustrations.

For publication in December. Send for descriptive circular.

OF INTEREST TO STUDENTS AND LIBRARIANS

A History of Matrimonial Institutions

By GEORGE ELLIOTT HOWARD, Professor of History in the University of Nebraska.

The Outlook has said of this work: "This is the most substantial work on its subject yet produced in our country. Scholarly, scientific, thorough, it is an inductive study of the first importance to every student of the primary social question—the question of the family."

The Quarterly Journal of Economics has said: "In the three volumes of this monumental work the learned author has provided the first adequate treatment of the history of human marriage. . . . The volumes bear on every page the mark of wide and painstaking scholarship."

Three volumes, 8vo, art, buckram, *net*, $10.00; postpaid, $10.72.

The Code of Hammurabi King of Babylonia (About 2250 B.C.)

Edited by ROBERT FRANCIS HARPER, Professor of the Semitic Languages and Literatures in the University of Chicago.

The *World To-day* has said of this work: "From every point of view the Hammurabi code is the most interesting find which has been made in Western Asia for many years, and the excellent edition now available will be welcomed by the scholarly public."

The Outlook has said: "Students of Assyrian owe a great debt to Prof. Harper for this learned and carefully edited text of this ancient and interesting code."

Large 8vo, gilt top, cloth, *net*, $4.00; postpaid, $4.28.

The Bible and Bacon
The Development of Prose
Raleigh, Burton and Browne
The Earlier Puritanism
The Later Puritanism
Milton Before the Civil Wars
The Maturity of Milton
The Age of Dryden

The Inferno of Dante

Translated, with notes, into English verse.

By MARVIN R. VINCENT, D.D., LL.D.

$1.50 net. (Postage 15c.)

A translation into the English ten-syllable line, without rhyme. It is at the same time an accurate and almost literal rendering of the original text without sacrificing the just claims of the laws of rhythm and accent of English verse.

"Every page he writes, from the modest preface outlining his missionary labors to the two long chapters of fetish tales at the end, is full of information and *more exciting than most romances.*"—*New York Sun.*

NEW POEMS BY DR. VAN DYKE

Music and Other Poems

By HENRY VAN DYKE

"A true singer of Nature and Life."—*Outlook.*

HENRY VAN DYKE, has produced a mature volume of serious poetry—a distinct advance in technical skill over his former volumes and wider in its sympathies and finer in its imagination. He is one of the very few men in this country who are writing poetry of distinction in form and profound in its inspiration. He confirms his position as a leader among American poets by the Odes to "Music" and "God of the Open Air," by the sonnet "Patria," and by the lyrics "Light Between the Trees" and "A Mile with Me." These are poetry of a high rank and moreover are inspiring to the reader.

$1.00 net. (Postage 10 cents.)

The Italian Poets Since Dante

By the Hon. WILLIAM EVERETT, LL.D.

12mo, $1.50 net. (Postage 15 cents.)

Beginning with Petrarch, he considers Ariosto, Tasso, Alfieri, Leopardi and others, including not only the leading figures but lesser lights, such as Parini and Monti. Copious extracts in felicitous translation are a feature of the book.

Fetichism in West Africa

FORTY YEARS' OBSERVATION OF NATIVE CUSTOMS AND SUPERSTITIONS

By the Rev. ROBERT HAMILL NASSAU, M.D., S.T.D.

With 12 full-page illustrations. $2.50 net. (Postage 17 cents.)

GAINSBOROUGH And His Place in English Art

By SIR WALTER ARMSTRONG

With 48 full-page illustrations in half-tone and 4 in photogravure. $3.50 net.

HISTORY of ANDREW JACKSON

Pioneer, Patriot, Soldier, Politician, President

By AUGUSTUS C. BUELL

Author of "Paul Jones," now in its Eighth Edition

Two volumes. Illustrated, $4.00 net. (Expressage extra.)

The most casual reading of his work is sufficient to show what pains he took to sift all the evidence on disputed points, and to secure accuracy at every step. But no one is likely to rest content with a casual reading, for the quality which chiefly distinguishes the volumes is that of enthralling interest.

COREA: The Hermit Nation

By WILLIAM ELLIOT GRIFFIS

THOMAS Y. CROWELL & CO. New York

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent postpaid, on receipt of 75 cents.

The True Henry Clay

By JOSEPH M. ROGERS

With 24 illustrations, most of them from photographs made especially for the work.

Cloth, $2.00, net
Half morocco, $5.00, net
Postage, 14 cents extra

Is the most recent addition to the "True Biographies" which have won popularity by their presentation of great Americans in an intimate and yet dignified manner. Mr. Rogers was born and reared in the Clay country, and had access to Clay's personal papers in the possession of Clay's family and friends.

Love's Labour's Lost

By HORACE HOWARD FURNESS

The Variorum Edition of Shakespeare's Plays

The new volume in this most scholarly of all editions.

Large 8vo. Cloth. Gilt top, $4.00 net. Half morocco. Gilt top, $5.00 net. Postage extra.

Modern Industrial Progress

By C. H. COCHRANE

Covers the whole field of industrial progress.

Over 400 illustrations. 12mo. Decorated Cloth, $3.00, net. Postage extra.

A Dictionary of the Drama

By W. DAVENPORT ADAMS

A guide to the plays, playwrights, players, and play-houses of the United Kingdom and America, from the earliest times to the present.

To be complete in two 8vo volumes of over 600 pages each. Vol. I. now ready. $3.00, net, per vol.

Ivan the Terrible

By K. WALISZEWSKI.

Translated from the French by Lady Mary Loyd. 8vo. Cloth. $3.50 net.

MONSIEUR WALISZEWSKI'S latest contribution to the history of the mighty empire of the Tsars is perhaps more valuable than any of its predecessors. Much that may have appeared obscure in the history of Peter the Great and his successors is explained by the light—albeit an occasionally terrifying and lurid light—here cast on the labors, the aspirations, the bitter disappointments, of the great Founder of the Russian Power.

Baccarat A Novel

By FRANK DANBY, author of "Pigs in Clover"

The story of a young Frenchwoman—a wife—who is left at a Continental watering-place by her husband, and while there is brought by the gambling-table to a critical pass.

With six illustrations in color, $1.50

The Nation.

NEW YORK, THURSDAY, NOVEMBER 10, 1904.

The Week.

Tradition has been broken: an accidental President has won a second term by popular suffrage; and the event is all the more remarkable because Mr Roosevelt was a Vice-President in spite of himself. This is the reward of having a positive character, a qualification usually the last to be considered in making Vice-Presidential nominations. It is also the reward of intervening actively and managerially in the conduct of the campaign, with all the advantages of the ins over the outs. And if this be objected to on the score of taste, it must be admitted to have been condoned by the vast majority of Northern voters, along with the Panama iniquity and all Mr. Roosevelt's defections from his civil-service-reform professions. His complete subserviency to partisanship has knit his party together, to such a degree that whereas he threw his official weight against Mr. Folk in Missouri, he received the electoral vote of that State while Folk apparently was elected; and whereas Mr. Roosevelt has made his bed with the most bigoted protectionists, in Massachusetts he was the popular choice though the Democratic champion of reciprocity revolt was handsomely made Governor. In other words, the two, and only two, cheering local manifestations of independence—of the duty of a State to look after its own concerns and not to be drawn off by a concurrent Federal party contest—add nothing to the laurels of the victorious President.

The multiplicity of issues enormously favored the party and the Administration on trial. The Opposition sought to force the tariff to the front, but it can hardly be said that the Republican defence was anything but languidly concerned with that topic—hardly more than the Democrats with the currency. But, over and above this—above the attack on imperialism and on what (in default of a better term) we may call Mr. Roosevelt's Cæsarism—the predominant issue for the block of Southern States on which Mr. Parker's fortunes depended was Mr. Roosevelt's assumed propaganda against caste and disfranchisement. The result was the most pronounced sectional alignment at the polls since the civil war, and Mr. Parker's entire following after the engagement is seen to be the stronghold of race pride and race injustice. This is, after all, the greatest lesson of Tuesday's election. The North has rebuked—indirectly, it is true, but with sledge-hammer emphasis—the childish attempt to degrade Mr. Roosevelt socially for one of the simplest, most natural, and most commendable acts of his life, at his own table, in his own house. No one can estimate proportionately the influence of the South's behavior in magnifying defeat by reviving the old anti-slavery sentiment of the North, but it was real, and let who will read the moral of it.

Senator Fairbanks solemnly "deplored" in Indiana the "personal charges" which Judge Parker had been making against the managers of the Republican campaign. Such personalities were shocking to the Senator. Then, to illustrate his own scrupulous consideration for the feelings of political opponents, he gently reminded the Democrats that they were bent on disgracing the nation, ruining business, and driving every workingman into the poor-house. But neither he nor any Republican can deny the existence of that "vicious circle" of which Judge Parker has spoken so pungently. "Undue protection that riches may be unfairly acquired; contribution of riches so acquired that undue protection may be continued and extended"—that return of corruption upon itself can no more be doubted or explained away than the circling of the Pleiades. It is the serpent of protection twined about the Republican party with its tail in its mouth. Everybody knows it. There is no concealment. The very Republican newspapers which grew black in the face denouncing the charges made against Mr. Cortelyou, admitted that, "naturally, great industrial enterprises and others which see that an administration of the nation's affairs by the party which formally declares that protection is robbery would force them into bankruptcy, *have contributed to the Republican campaign fund.*" The President himself, in the letter forced from him by Judge Parker, admits that "contributions" have been made to his campaign fund by corporations. Less cautious than Mr. Root, he does not limit the admission carefully to "the managers of corporations." And because no one can produce a written agreement pledging the contributing corporation a lien upon Government privileges, Mr. Roosevelt asserts that there is no impropriety in such gifts of money, and that to imply it is to slander the most high-minded President that ever lived—as if the mere acceptance of money from a Trust is not all the guarantee the Trust needs. The President was absolutely silent about the strongest part of Judge Parker's charge, namely, that the "stand-patters" were pouring money into the Republican campaign fund in order that their tariff favors might be perpetuated and enlarged. That has always been the true gravamen of the accusation.

The President practically confessed that the famous Bureau of Corporations was a humbug. He denied that Mr. Cortelyou had "any knowledge" about corporations "gained while in any official position." And Mr. Root, amplifying the confession in a later speech, declared that "neither the Department nor Mr. Cortelyou nor the President had any information or secret of any corporation" that was not "common to all the world." Indeed! Then what a miserable imposition the Bureau of Corporations has been from the beginning! It was to have been the instrument, in the hands of a determined President, for "crushing" every "bad" Trust. It has been triumphantly adduced again and again as proof of the honest purpose of Mr. Roosevelt and the Republican party to save the people from oppression by the Trusts. By the terms of the law creating the Bureau, enacted as long ago as February 14, 1903, the Commissioner of Corporations was to have "power and authority" to make "diligent investigation" into the organization and conduct of corporations, and to "gather such information and data as will enable the President" to recommend to Congress laws to "regulate" them. A year and nine months pass, and Mr. Root calmly explains that nothing has been done. Why not? Why did not the Commissioner exercise the power conferred upon him by the statute to "subpœna and compel the attendance and testimony of witnesses and the production of documentary evidence"? Plainly, it is now admitted, because nothing of the sort was ever intended; and the Bureau of Corporations was a sham and deception from the first.

Mr. Cleveland's speech at Newark served the excellent purpose of again reminding men whose memories are short that tariff reform is the historic cause for which the Democratic party has fought. Voters who have reached their majority since 1896 may have been misled by President Roosevelt's round assertion in his letter of acceptance that the high-tariff policy should now be "accepted as definitely established." The Democratic platform of 1884 attacked the tariff and promised revision; and in fulfilment of that promise President Cleveland wrote his famous tariff message. In 1888 and again in 1892, when the Democrats carried the day, the tariff was the dominant issue. In 1896 and 1900 the fear of free silver thrust this question for the moment into the background. But while the tariff re-

mains what it is, an unjust burden on the consumer, a bulwark of monopoly, and the most potent cause of political corruption in America, some political party—if not the Democratic, some other—will maintain John Bright's thesis that "the efforts of all honest men should be directed to prevent the beginning of such a mischief, and to destroy it where unhappily it has been permitted to take root." If men should hold their peace about the iniquity of the tariff, the stones would cry out.

One of the meanest Republican performances of the late campaign was a deliberate personal attack upon Mr. Carl Schurz in a widely distributed "appeal to the Germans" with many well-known signatures attached. Most of the men who actually signed it, we prefer to believe, did so as most people sign appeals and petitions—at the solicitation of friends and without stopping to read, and were ashamed to find that they had inadvertently appended their names to the statement that Mr. Schurz has "changed his politics as often as his residence," and that he "only had to pocket the reward held out to him for his temporary fidelity to a cause or a party." We say inadvertently appended, for no men realize better than some of the signers we could name, Mr. Schurz's unswerving devotion to principle, no matter what it costs him in abuse and misrepresentation. We are glad to learn from the *Staats-Zeitung* that a large number of the alleged signers of the appeal deny having put their names to it, that others have written their apologies to Mr. Schurz, and that still others are keenly mortified at the position in which they have been placed by their own carelessness.

There can no longer be any doubt whether President Roosevelt is truly "Labor's Friend." The fact is certified by T. J. Shaffer, president of the Amalgamated Association of Iron Workers. He declared in the *Labor World* that it was "the duty of the working classes to support their friends"; and Codlin was the friend, not Short. Shaffer adds, in order to show how true a friend of labor the President is: "I firmly believe that President Roosevelt intends to knock on the head every illegal combination of capital there is in this country." As proof of the entire disinterestedness of this endorsement, it is merely necessary to remark that Mr. T. J. Shaffer is an applicant for appointment by the President as Commissioner of Labor.

At last we have an official explanation of Gov. Odell's object in becoming State chairman. He said last week that he had "assumed these great responsibilities" solely to put down electoral frauds in New York city. "It was for this reason and no other." But what a splendid chance he had to add that, immediately after the election, he would resign the chairmanship, and, after January 1, retire to private life. Such a statement by him would at once have removed the load under which the Republican party in this State was staggering, and would have been worth many votes for Mr. Higgins. What frightens people is that Odell proposes to remain at the head of the Republican machine, and to manage it with the same tyranny and self-seeking that have made "Odellism" an offence to thousands of Republicans. They dread it more than they do a Democratic victory in this State. This he knows perfectly well. Yet his personal organ, the Newburgh *News*, goes on calling Republicans who dislike the Governor "traitors," and intimates that his hand will be still heavier upon them in the future. The fact that he succeeded in carrying New York though Higgins lagged far behind the national ticket, confirms the threat.

Any one who has deplored the failure of the House of Representatives to assert itself will find pleasant reading in the spirited correspondence which has recently taken place between Attorney-General Moody and Congressman Augustus P. Gardner of Massachusetts. The trouble arose over the postmastership at Haverhill. The place is in Mr. Gardner's district, and he had made a selection for it, when suddenly he learned that Mr. Moody, who lives in Haverhill, had recommended to the President the retention of the present postmaster. This the Congressman very promptly resented. He had yielded to the Attorney-General early in the summer in the selection of delegates to the National Convention, but insisted on his prerogative now. "It is not a parallel case in Massachusetts," he said, "with those other States where the Senators select the postmasters." Precedent as well as natural right was on his side. "I am also informed," he wrote a little later, "that when the Hingham post-office became vacant some years ago, the necessary recommendation was made by the local Congressman, albeit the Hon. John D. Long, at that time Secretary of the Navy, was a resident of Hingham." Mr. Moody's share in the exchange of letters is just 13 lines out of 250, but it is to be recorded that he got the appointment. Saying nothing of the likelihood that the Federal fabric will come tumbling about our heads, the Congressman's plight is pathetic enough. "Even after I have given out the facts," he says, "I shall suffer a tremendous loss of strength among my friends, as human nature is so constituted that it seldom believes what a politician says." Thus it would appear that skepticism, in Massachusetts, broadens down from Lodge to his son-in-law, irreverently known as "Gussie" Gardner.

The Supreme Court, Mr. Justice White dissenting, has upheld the Wisconsin Anti-Boycott law. The case was an uncommonly clear and satisfactory one, because the conspiracy was purely commercial, no issue of labor and capital being involved. The Milwaukee *Journal* having raised its advertising rates, two rival papers refused to print the notices of advertisers in the *Journal* except at its rates, meanwhile promising a handsome rebate to *Journal* advertisers who should refuse to continue on the new basis. In other words, inducements were offered to make the patrons of a rival newspaper resist its increase of rates. The defence naturally was freedom of contract. It was held that every step in the transaction was lawful. The defendants had a right to charge what they chose for advertising service, and the public, naturally, a right to profit by such competitive rate-cutting. On this matter Mr. Justice Holmes, for the court, held that freedom of contract did not extend to including provisions clearly malicious and injurious, while on the point of the innocence of acts which lead to a wrongful result he read the following very interesting opinion:

> "No conduct has such an absolute privilege as to justify all possible schemes of which it may be a part. The most innocent and constitutionally protected of acts or omissions may be made a step in a criminal plot, and, if it is a step in a plot, neither its innocence nor the Constitution is sufficient to prevent the punishment of the plot by law."

Some of the Alabama hotheads are reported to be trying to induce the Legislature of that State to withdraw its annual appropriation for the maintenance of Tuskegee Institute, on the ground that Mr. Booker T. Washington has been dabbling in politics. So far as we are able to observe, Mr. Washington's political activity has been limited to giving extremely good advice when he was asked for it. If, however, it is meant by the charge that the best-known colored citizen of the South has declined to accept as final the suffrage conditions of his race to-day, we presume he must plead guilty. But, singularly enough, the one allegation which has been made against him by men of his own color has been his failure to be more active on behalf of their political rights. As a matter of fact, Mr. Washington realizes, with the wisdom that has marked his entire career, that he is primarily the head of a great school—one of the greatest in the United States, and that his first duty is to it. Even the leadership of his people, to which his natural abilities call him, is secondary to his duties as principal. For Alabama to deprive his school of

its appropriation, at the behest of its Heflins, would be a grave step backward, which could only injure the State and the entire South by causing a widespread feeling of resentment among all who believe in education as a solvent of the problems of our democracy. Fortunately, the Legislature does not meet again for at least two years, by which time the hotheads should have cooled off.

How this city's expenditures have swollen since consolidation is evident from the new $110,000,000 budget, now officially adopted. In its first year, Greater New York cost $77,559,232. In seven years departmental expenditures have gone up nearly $32,500,000. This increase, however, cannot of itself be set down as proof of extravagance. Our best administrators are frequently more expensive, in actual outlay, than our worst. Thus, Mayor Low's last budget exceeded Van Wyck's last by some $8,000,000. Mayor McClellan, on the other hand, has taken a firm stand for economy. He has increased the budget only $3,880,000—probably just about enough, with the enlarged population, to keep the city going as it is. The increase, it is estimated, will be covered by larger valuations for purposes of taxation, and a substantial growth in the general fund, so that there will be no material change in the tax rate. Probably departmental estimates were never more ruthlessly cut down. Proposals for wholesale salary increases have not been tolerated. Building Superintendent Hopper, who planned to reform his bureau by raising everybody's salary, has received no consideration. Tenement Commissioner Crain, whose department has also been generally criticised, gets precisely what he had this year. Commissioner Woodbury said that he could not properly do his work unless he had $1,113,000 more; he gets $245,000. Commissioner McAdoo, in order to carry out his plans for enlarging the police force, demanded an increase of nearly $2,000,000; he must do the best he can with a quarter of that amount. And so all along the line. Under Mayor McClellan the departments will not undertake much new work. Indeed, the only large increases are in departments where the Board of Estimate has now little discretion. The two main items are nearly $2,000,000 for interest on the city debt, and $1,084,000 for the Board of Education, mainly to equip and man the twenty-six new schools and additions now under way. Here again we see how one Administration influences the financial policy of its successor, for most of these sorely needed schools were authorized under Mayor Low.

Like the fabled sword victim, who, until the pinch of snuff was administered, could not believe his head was off, our New York public has waited for oxygen percentages before it felt it was being half-suffocated in the subway. An examination of the air in many stations shows that, except at City Hall, the percentage of oxygen is so low as to be prejudicial to health. This on the platforms; in the trains the situation is correspondingly worse. In short, science comes to explain the dull feeling in transit and the depression afterwards. Assurances that the trains act like a piston are palpably false. In the London Tube, where the train fits the tunnel within a foot or so, that is the case; in our large four-track gallery a train presenting a "piston" surface of less than a quarter of the section merely stirs the air about. The true figure is not a piston, but a churn, and passing expresses and locals no more draw in fresh air than a dasher, however vigorously worked, draws in additional cream. Forced ventilation should immediately be introduced at all the subway stations.

A report of the British Consul at Panama speaks of "the virtual economic annexation of Panama" by the Americans. He shows how our first interpretation of the treaty took over not only the canal strip, but all of the cities of Panama and Colon except "two small patches wedged in at the two extremities of the American zone." And the rigid and precipitous application of Dingley duties as against foreign countries was calculated not merely to give American exporters a great advantage, but to ruin the trade beyond the border. It is no wonder that the real Panamanians protested against the complete surrender of their rights by their pro-tempore Minister at Washington, the discredited Bunau-Varilla.

Before going to the country, Premier Giolitti broke the long-standing alliance with the Socialists—the *connubio*, as the Italians love to call it ironically; and though he has been reëlected with all his ministers, the sources of his majority in the new Parliament are not yet apparent. The Extreme Left, whose strength has been reduced, by estimate, from some ninety to about seventy seats, will unquestionably be in Opposition, and the Government will have to make up this loss from the relatively conservative groups of the Right. That is, a majority already sufficiently composite must take on still another incongruous element, or fail altogether—a fact which explains the curious spectacle of a Radical Government endorsing in various constituencies now a Socialist, now a Liberal, or even a Conservative or Clerical candidate. By such preliminary manipulation, Giolitti, who is a master of the electoral game, has hoped to bring together to Montecitorio the constituent parts of a new ministerial coalition. Will his overtures to the Right alienate his stanch supporters among the Parliamentary Socialists, or will they by fidelity to him show that they have wholly lost their character as a collectivist party? Will Giolitti's old enemies of the Right welcome either his usurping their ideas or his bid for their votes? Are we to expect reaction in Italy through the return of the Church to politics, or merely a halt in the Liberal and Socialistic movement of the past three years? These are some of the problems that make Italy in transition one of the most interesting nations in the world. And the answer will hardly come even with the complete electoral returns next week. It lies somewhere between Turati, greatest of Parliamentary socialists, and Sonnino, adept in conservative politics, and Giolitti, in spite of the verbal contradiction, finest of Radical opportunists.

We read only after weeks the story of the assault on Port Arthur by which, in the last days of August, Nogi got his foothold below the Liaotie semi-circle. The story of warfare holds no more sensational page. For many days the battle swayed over ground netted with wire and planted with mines. At night the searchlights guided the cannonading. Estimates of the losses are the merest speculation; but one learns of Japanese regiments that brought back only a tenth from the charge, of single unsuccessful attacks that cost fifteen hundred lives, of daily losses of a hundred men in stationary protected positions. Quarter was neither asked nor given on either side; no truce was accorded for the removal of the wounded or the burial of the dead, and pestilence in the beleaguering camp added to these horrors. In the end, after a sacrifice of lives which must be reckoned by thousands, the Japanese were reduced to regular siege operations by parallels; and in six weeks' time they have apparently failed to make the mile that separates them from the western forts, though meanwhile the garrison must have lost substantially in men and supplies. On strictly military grounds, it is hard to justify this slaughter. Oyama's northern armies have been crippled for want of the troops diverted to the Kwantung peninsula. A force of forty thousand men could have invested Port Arthur and reduced it by gradual siege operations. Indeed, the value of that fortress is chiefly naval. The only reason for pressing the siege would be a serious attempt to send the Baltic squadron around. The strategy of Tokio finds its sole justification in the tremendous moral effect that the fall of Port Arthur would have upon the populace of Russia and the chancelleries of the world. That effect Nogi will probably have bought too dearly.

ROOSEVELT AND FOLK.

Wellington complained that he had been, in his public life, "much exposed to authors." President Roosevelt has been exposed to his intimate friends. His kitchen Cabinet has been as grotesque in its way as Jackson's. The confidants whom he has had about him, deep in his secrets and bursting with information about his plans, policies, and preferences, are an extraordinary collection. They embrace complacent little Mugfords of journalism; Boswells with all the toadying and gush but without the skill; divines in search of information and religious convictions; foreigners only half-naturalized and less than half-baked; swashbuckling writers and happy-thought publicists—the list is as long as it is miscellaneous. These nondescript professional "friends of the President" have done him harm, not simply because it is a reflection upon any man to have such parasites and flatterers always at his ear, but because they are forever getting him into trouble and compelling him to repudiate them even while they fawn upon him. For example, take the attitude of President Roosevelt respecting Mr. Folk's candidacy for the Governorship of Missouri.

There was a recent intimation made by *Collier's Weekly* that Mr. Roosevelt, in spite of his professed admiration for Mr. Folk as the most conspicuous and determined enemy of political corruptionists, was allowing it to be known that he hoped for Folk's defeat. A little investigation on our own account has put us in possession of the facts. It appears to be another case in which the President has been "in the hands of his friends," to his own disadvantage, and, we should think, to their mortification. The mischief originated with Mr. William Allen White of Kansas. Discretion not being his forte, he let it be known, in his capacity as mouthpiece of the White House, that Mr. Roosevelt was heartily for Folk and hoped that many Republicans would quietly vote for him. This was but natural, in Mr. White's mind. Was not the President, on his own confession, the most resolute foe of grafters? Had he not inspired at least one magazine article showing how, in the post-office scandals, he had defied the New York Senators and party pressure in order to get his clutches on the rascals? The fact that the New York Senators denied interfering did not discompose Mr. White of Kansas; and knowing how bitter was Mr. Roosevelt's hatred of boodlers, he went up and down asserting that of course the President was for Folk, that he could not but be, since to suppose that he desired the success of the Missouri corruptionists in their efforts to overthrow Mr. Folk was an insult. It was absurd to say that Mr. Roosevelt was not in sympathy with the anti-graft campaign in the West, which has le so many honest men to subscribe to the campaign fund at once of Mr. Deneen in Illinois and Mr. Folk in Missouri.

So much for one friend of the President's. But another promptly arrived upon the scene. He told Mr. Roosevelt that White's splashing around in that way was making Republicans angry. Was the President a party man or was he not? Could he maintain that its monopoly of virtue ended with Presidential candidates, and that a Republican nominee for Governor was not, *ipso facto*, superior to his opponent? This view appealed to the President, and he authorized friend No. 2 to write a letter declaring that friend No. 1 had misrepresented him.

But, alas, friend No. 2 proceeded to do exactly the same thing—so the President asserted later. In excess of zeal he made his letter too strong. He was not content with arguing that it was preposterous to imagine that Mr. Roosevelt would not favor the election of any regularly nominated Republican, however bad, over any Democrat, however good, but asserted in so many words that the President thought Walbridge "a better man than Folk." The letter was extensively "shown" in Missouri, and in an evil hour was shown also to certain independent voters, who indignantly took the matter to the White House. There followed "a scene"—in fact, we understand, several scenes, enough to make a comic opera. Finally, friend No. 2 was ordered to recant. Accordingly, he wrote letter No. 2. His first had been "misunderstood." When he had said that Mr. Roosevelt thought Walbridge a better man than Folk, he had meant "purely in his capacity as a political candidate," etc., etc.

If the whole incident provokes laughter, it is a laughter which teaches certain truths. Government, said Burke, is an affair of go-betweens. Then they ought to be very carefully chosen. Mr. Roosevelt's have not sufficiently observed the difference between going between and "butting in." Yet, after each incident of the kind, the kitchen Cabinet remains as before. Its reorganization would appear to be one of the President's most urgent duties. Another one is a rebuke of Ambassador Choate for having called Mr. Roosevelt "the chief of Independents." Mr. Roosevelt's political independence is solely for consumption between elections. In actual voting he is always for "keeping up the organization," even when, as in the present instance, it would mean filling boodlers with joy at the defeat of their implacable foe, and setting back the cause of reform throughout the whole country.

THE CASE OF MR. BUNN.

Thanks to the activity of the Pennsylvania Civil Service Reform Association, there has been unearthed one of the most genial attempts to assess Federal office-holders in many years. For its unconscious humor, for its frank and unblushing avowal that officials of the United States have no higher duty than to work for the "organization," and for its complete exposure of Philadelphia machine methods, the circular sent out by Jacob G. Bunn, lately finance clerk of the Philadelphia post-office, must long remain a classic in the literature of civil-service reform. Bunn's own head has fallen. An investigation by Civil Service Commissioner Cooley brought out so many violations of the law that his decapitation was a matter of course. But his name will long survive even the memory of his official career. Bunn on Illicit Campaign Contributions should rank hereafter with some of the highest legal authorities on torts.

Bunn himself, with the modesty ever becoming in an author, would share his laurels with others. At the inquisition into his methods he insisted, but in vain, that his name had been signed without his knowledge or his consent to the literary achievement which has brought him sudden fame. The documents for which he was so cruelly deprived of his lucrative Federal office lie before us. They seem to exhibit the same desire to be business-like and thorough in campaign-time which has been so marked a characteristic of Mr. Cortelyou's management. Mr. Bunn and his associates also want to get out the vote and collect all the campaign money in sight. So they sent word to office-holders and others:

> "☞Bring in at next meeting Written List of Office Holders, wanted for Election Day. Use some discretion and do not expect to have excused the entire Police Force, Fire Department, and Clerical and Mechanical Force of the city. Public interests make such a proposition impossible. Election Day is not a holiday, but a working day for the Organization to get busily-forgetful and disinterested citizens to vote. Do not wait until Election Day—see that your particular Division is thoroughly canvassed. Use every means from now to Election Day to arouse and enthuse Republican voters. It is remarkable that it is necessary to remind citizens of their duty to vote for ROOSEVELT AND FAIRBANKS."

In order that no guilty officeholder should escape and no spurious contributor pass himself off as a real, live recipient of a Federal salary, the following "Note" appeared:

> "Please send by return mail a photograph of yourself. If not recent and up-to-date, kindly sit for same immediately and forward a prepared proof, to be used for half-tone work. We want every Councilman, School Director, and Member of Ward Committee."

With this appeal went two elaborate blanks which reflect infinite credit upon the great Mr. Bunn. Upon them were to be entered full details as to the names, addresses, and employments of all Federal and municipal office-holding and non-office-holding voters in the ward. In

the case of the office-holders there are such significant headings as "salary per day" and "salary per year," "date of appointment," and "upon whose recommendation." In the case of the Republicans who do not hold office, there is deep significance in the demand that the names of the "present judge," the majority and minority inspectors and clerks at the polling-place of each voter be appended. Any one familiar with Philadelphia political methods will appreciate the convenience of having this information at hand.

Naturally, Bunn *et al.* were the best men to fix what proportion of his salary each office-holder should dedicate to the machine. They were particularly anxious to be square about it. In their own words:

"In order that some equitable basis may be recognized from those who desire to contribute voluntarily to the support of the Republican Organization in the 28th Ward, the suggestion has been made that all those receiving $1,000 and over contribute one per cent., under $1,000 one-half of one per cent., all per-diem men one day's pay, but no contribution solicited under $2.00. This money is only payable to the member of the Finance Committee from your Division, from whom you will get a regular printed form of receipt, and in addition, to prevent gross injustice being done contributors, a plan has been adopted by which the Financial Secretary, JACOB G. BUNN, who resides at 2418 North 30th St., will verify the amount of every contribution by mail with every individual contributor."

Mr. Bunn also announced that "the members of the finance committee will positively solicit no contribution from police officers"—doubtless because other arrangements had been made. On the other hand, Mr. Bunn knew the value of precise information. Hence he added the following queries to the blanks pertaining to office-holders:

"As an Organization Worker, what use is he? ..... If no use, what hustler in your Division would you recommend for his place? ..... As a voluntary Contributor, are his contributions the amount suggested?..... ..... Does he contribute *appreciatively, begrudgingly, defiantly,* or ignore the Organization altogether? Let us have the facts. ....."

Mr. Bunn explained the necessity for this by pointing out that "particularly those who sought the support of the Republican organization, were successfully recommended, and now are fearful to be known as a Republican, dodge every responsibility under the bugaboo of civil service."

Naturally, Mr. Bunn and his fellow-authors, William J. Binder, president, and Harvey L. Frantz, treasurer, wanted to hear no more of such ingratitude. They were anxious, too, that in creating the North Philadelphia Business Men's League, no "Fakes, Bluffs, or Hot Air Contingents" be proposed for membership. What must be their opinion now of the leader of their own party of moral ideas, when, in the hour of apparent victory, he undid all their hard work, and ruthlessly cut short so promising a literary career as that of Jacob G. Bunn?

TRUSTS AND THEIR PROSECUTORS.

"Our opponents," said Judge Parker at Hartford on Thursday, "have the effrontery to claim that they alone have shown any desire to oppose the Trusts. Their claim is as false as it is flagrant." Mr. Roosevelt himself had helped to circulate the misrepresentation. In his letter of acceptance the President spoke of the action of the Attorney-General in enforcing the anti-Trust laws and interstate commerce laws, as having "for the *first* time opened a chance for the national Government to deal intelligently and adequately with the question arising from the growth of the Trusts." He added that "these laws are *now* being administered with entire efficiency." Admitting that the increase in numbers and power of the Trusts was due largely to official neglect of duty, he made the bald assertion that "such stricture upon the failure of the officials of the national Government to do their duty in this matter is certainly not wholly undeserved as far as the Administration preceding Mr. McKinley's is concerned, but it has no application at all to Republican administrations."

This slur upon the Cleveland Administration cannot be sustained by the facts, and is so obviously capable of refutation as to make it astonishing that the able editors of the President's letter allowed it to stand. Moreover, Mr. Roosevelt's language conveys the impression to the average reader that his Administration alone has sallied forth, bent on crushing the "octopuses." The Republican campaign committee freely advertised a misinformed editorial which appeared in the *World* in March last, and which contained, among other errors, the statement that Theodore Roosevelt was the first President and Attorney-General Knox the first attorney-general to enforce and test the anti-Trust law. In giving this editorial their endorsement, the Republicans thus made it appear that President McKinley and his Attorney-General entirely neglected their sworn duty.

The records show that the very first President to attempt to enforce the anti-Trust law was a Republican President, but his name was Harrison, not Roosevelt. His Attorney-General, Mr. W. H. H. Miller, sued the Sugar Trust, but was defeated in both the lower courts. When President Cleveland succeeded Mr. Harrison, the litigation was still pending, and Mr. Richard Olney saw to it that the Republican lawyer, Mr. S. F. Philips, a former solicitor-general of the United States, in charge of the Government's case, argued it before the Supreme Court. This he did, only to meet defeat, largely on the ground that mere concentration of ownership in an agricultural, manufacturing, or mining industry was not under Federal control. The famous Trans-Missouri case was also brought to a hearing in the Circuit Court during the Harrison Administration, but the Government's bill of appeal, prosecuted later by Attorney-General Olney, only met the same fate at the hands of the Circuit Court of Appeals.

It was Mr. Olney's successor, Attorney-General Harmon, who did the most important anti-Trust work, and who obtained a brilliant personal victory in the Trans-Missouri case over a number of distinguished New York and Chicago lawyers. The result was a decision for the United States upon all points, but the judgment was delayed by the Supreme Court until a few days after the inauguration of Mr. McKinley. Not content with this activity, Mr. Harmon directed a similar suit against the Joint Traffic Association, which was also successful after Mr. McKinley came into office. To Mr. Harmon also belongs the great credit of having set in motion the Addyston Pipe Trust case, out of which came the first decision that the anti-Trust law applied to a manufacturing combination. This had seemed highly improbable of achievement after the Sugar Trust case.

As in the two other cases, the decision against the Pipe Trust was handed down under Attorney-General McKenna, who instituted several other unsuccessful proceedings. Under Attorney-General Griggs, affirmances in the Addyston Pipe and Joint Traffic cases was secured, but, so far as we are informed, Mr. Griggs did not institute any new proceedings. What the present Administration has done is simply to follow in the footsteps of its predecessors and apply the decisions to newly discovered facts. These facts are not new. They have been brought out in Congress; and in the press by Mr. Edward B. Whitney, who was a member of the Department of Justice under Mr. Cleveland. But they have been deliberately overlooked, precisely as it has been convenient to ignore the vain attempts of the Cleveland Administration to obtain from a Republican Congress an amendment to the anti-Trust act which would strengthen the Government's hands, with money enough to enforce the law.

THE CANADIAN ELECTIONS.

No very clear issue was settled at the Canadian voting booths on Thursday. Sir Wilfrid Laurier went before the country on his record, which includes chiefly the negotiation of the Grand Trunk extension to the Pacific, a demand for diplomatic autonomy for the Dominion, the application of the preferential duties to South Africa, and a promise, not pressed of late, to revise the tariff. In opposition to these pledges and achievements, the Conservatives demanded a more drastic protective policy, criticised the mixed contract with the Grand Trunk, urging Government

ownership of the line; and made much of charges of corruption and of the Dundonald affair.

The defeat of the Conservatives was expected; actually, they have suffered a rout. A slight reduction in the Liberal majority in Quebec is made up by a clean sweep in Nova Scotia. Manitoba and the Northwest generally—very doubtful provinces politically—have declared strongly for Sir Wilfrid Laurier. The Opposition leader, Mr. R. L. Borden, was defeated, meeting the fate of his predecessor, Sir Charles Tupper, four years ago. Sir Wilfrid Laurier returns with an increased majority—probably seventy or so, in a House of 214.

It seems to have been a waste of time for the Opposition to attack as they did the Grand Trunk contract; that agreement, with its various provisions for the advancing of Government credit, leases, refunding, and the like, was simply too complicated to be understood by the average elector, who apparently voted for the immediate good of a transcontinental railway and trusted his Government for the means. Much was made out of the tiff of the Commanding General, Lord Dundonald, with the Minister of Militia. But any effect of the exposure of the latter's partisan interference with the service was nullified by Dundonald's too clearly manifested scorn for his colonial superiors. Imperial reciprocity hardly figured in the contest. In fact, the Liberals were safely and platonically on record in its favor, and could point to the denunciation of the German trade treaty and the British and South African preferentials as their work. Savage demands for higher tariffs rung hollow in view of the great industrial prosperity of the Dominion. Indeed, the Liberals, with their bounties to iron, lead, and fisheries, could hardly be outbid in devotion to the mercantile theory. So, in default of real issues, the Conservatives rested their case on the assertion that they were somehow more patriotic, more imperially minded, than the Liberals. To a shrewd and hustling people more eager for trade advantages than for sounding names, there seemed to be no good reason for turning out an efficient premier, or for engaging in tariff fights in behalf of a mere formula which the mother country may or may not adopt.

This eminently practical turn of the Canadian voter had been illustrated a few days earlier in Premier Bond's extraordinary victory in Newfoundland. Representing a policy of independence for the colony, reciprocity with the United States, and in general the autonomous development of the industries of the island, he carried the constituencies five to one. His opponent advanced chiefly the imperialistic argument of union with the Dominion. In all British America, then, Imperialism as such has been either rebuked or ignored. Thus does a proper self-interest treat Brummagem dreams of an empire leagued against the world for some commercial Armageddon.

For the United States this double victory of the Liberals may be of the highest importance. It means the extension of an opportunity. Premier Bond's name stands with that of Secretaries Blaine and Hay on a reciprocity treaty which would build up an export trade in foodstuffs and agricultural and mining machinery, while lowering the price of fish to the American consumer. Sir Wilfrid Laurier has always been in favor of an equitable readjustment of tariffs between the United States and Canada. It is known that he would be glad to reassemble the Joint High Commission to consider this and other matters outstanding between Ottawa and Washington. The Republicans of Massachusetts and Minnesota agree in demanding the removal of trade obstructions; with thousands of voters for Dingleyism the conviction lurks that it is absurd to pay the price of conquest over-seas and to scour the globe for trade, when we front for three thousand miles what should be our greatest market in the future and our greatest purveyor. We need Canada's timber and minerals and live stock and fish and grain; she needs in a thousand instances our manufactures, both fundamental and secondary. Already New England seeks that outlet for her shoes, cottons, watches, and finer products generally, while she wants on better terms the coal and the nickel of the Dominion. All along the border the case is the same—a trade potentially great and mutually profitable hampered by the most ingeniously harmful restrictions of the Dingley tariff.

Why, it may be asked, should our Northwestern millers be forbidden to grind Canadian wheat except under bond; why should every newspaper pay double toll on its raw material, wood pulp? Why should we eat dearer fish that they may be caught or smuggled by American fishermen? On the other hand, why should the wheat-growers of the Assiniboine at once pay duty on their reapers and be shut out of the nearest market; why should Canada stumblingly and at great cost duplicate those manufactures for which we have unique material advantages and the dearly won experience of years? If a shoemaker and a market gardener live side by side, and the man of cabbages undertook to make shoes for his family, and the cordwainer attempted to grow his own vegetables in window-boxes, the neighbors would call them both fools until a reciprocity treaty was negotiated across the fence. Why, then, do two great nations live on such unneighborly terms?

Because, instead of sensible advisers, they have thousands of interested persons in council: manufacturers who fear that their dole may cease, politicians who abhor the prospect of a party which, granting no unfair favors, can extort no excessive contributions; timid people who will accept any injustice rather than upset trade conditions; ambitious schemers of the Lodge type, with their little groups of tolerated smugglers to oblige, their phrases to maintain. Of such are the enemy. But against them the very situation fights, and the expectancy of Canada and Newfoundland must some day be interpreted, not with the Lodges as a hostile advance upon our markets, but as a fair appeal for a normal understanding on all trade matters—for tariffs drawn, not by politicians for the benefit of a handful of party protégés, but by statesmen for the mutual advantage of two great nations.

THE GENERAL ELECTIONS IN ITALY.

FLORENCE, October 19-22, 1904.

The royal decree dissolving the late Parliament and convoking the electoral colleges for November 6, with re-balloting on the 13th, appeared yesterday evening in the *Official Gazette*, prefaced by the ministerial report to his Majesty, in which are stated the reasons that have induced them to advise this immediate appeal to the country, instead of awaiting the legal termination of the Twenty-first Legislature, inaugurated on the 16th of June, 1900. The "report" contains a brief sketch of the measures proposed and carried during the late session, and also unfolds the entire Ministerial programme for the future. This is an unusual course, almost "without precedent," say the malcontents. Unusual it is, both in Italy and in England. Mr. Gladstone used to "enumerate to the Queen the pros and cons for dissolution," and then enter on his "oratorical crusades," addressing meetings outside of as well as within his own constituency; and this custom has been followed almost invariably in Italy. But Signor Giolitti is disinclined to "star the country." It is doubtful whether he will address his own electors, nor will his ex-colleagues visit other colleges save those which they lately represented, or, if uncertain of reëlection, such others as may offer them a second string to their bow.

Up to the 20th of September it was believed that the elections would not take place earlier than next spring, as there were many important measures to be discussed during the winter session; nor for another week did any sign appear that the general strike in Milan, or the partial strikes in other cities, had made any impression on the imperturbable minister—at least any that would influence his conduct. It seemed a safe policy to let the agitation die out of its own accord, allow the reactionaries time in which to calm their terror by the reflection that, if many windows had been smashed, few heads had been broken, that therefore the decision not to call out the military had been wise and humane; give the proletaries leisure to repent their hasty strike, and to take note of the impotence of the demagogues who had promised them the immediate downfall, if not the dismissal, of the "bloodthirsty Min-

istry," and who in reality counted so much less than nothing that they had not even succeeded in the reconvocation of the Chambers. The good-humored, calm, but keen parliamentarian Speaker, Biancheri, in whose hands lay the power to reconvene, coolly told the delegates of the "Extremists" that he saw no reason or motive for summoning members to Rome before the time fixed when Parliament rose (*i. e.*, November 25). But the revolutionary Socialists, both in their private meetings and when united with the Republicans in the plenary assembly of the Extreme Left (radical, republican, socialistic "Popular Union"), insisted on violent measures and the revival of the obstructionist tactics which in 1899 triumphed over Pelloux's coercion bill, prevented the modification of the rules of parliamentary procedure, and finally overthrew the Ministry which had passed the coercion bill, by royal decree. Though the Radicals and evolutionary Socialists rejected this proposal, it was certain that the revolutionists *would* obstruct, and, as John Bright once observed, a costermonger and a donkey can upset an express train by crossing the rails at its approach. Again, the agitation of the railroad employees; the novel "obstruction" of the custom-house servants; the desperate unrest of the populations of the Puglie, who affirm that the renewed Austro-Hungarian commercial treaty confirms their ruin, excluding their wines from the favored-nation clause—made it clear to all that the House could not in November calmly discuss the grand question of the future operation of the railways by the State or by private companies, or the measures that must be taken to redress the grievances of the Puglie.

Hence, as a warning and a necessary precaution, the Government called to the colors the category of 1888—*i. e.*, all the males born in that year who at twenty-four years of age hoped to remain at home save in case of war. They may have received the summons with curses deep and low on the strikes and their instigators, but the timid propertied classes were reassured, and almost forgave the minister for his neutrality in September, receiving the announcement as a sure and certain sign that the general elections were decided on. These were unanimously desired by all but such Deputies as fear for their seats; but the inscrutable premier, who does not always share his counsels with his colleagues, and never with outsiders, kept all on tenterhooks until the eve of the 18th instant, and even then, having the decree and the report printed in the prison printing-house, did not allow a single copy to be issued in Rome until all the prefects in the country had been furnished with the revises. Finally a copy reached the Chamber of Deputies, but their library and reading-rooms are still in such disorder that they called on the famous journalist Deputy Cirmeni to read it aloud to the assembled members present at Montecitorio.

The document in itself is, of course, a replica of ministerial programmes in general, but in some respects it is worthy of note. The quiet sarcasm of the portions that relate to the "abuse of liberty by the greatest agitators for liberty in the absolute," made more than one demagogue wince—nay, writhe; while the mild reminder to "the propertied classes that even they need higher education in the doctrine of liberty, seeing that they have not yet comprehended that, under a liberal régime, they should not and must not await everything from the Government, but must take, as citizens, more vigorous action for the protection of their own legitimate interests," is language so new as to sound in their ears like a foreign tongue. They expected the Premier to cry *Peccavi* for not having called out the troops during the general strike, and to pledge his word that on future occasions he would defend their life and property as in the May days of 1898, when the great cities were all in a stage of siege and the civilians arrested were tried by military tribunals. But the ministerial programme reaffirms the intention of the Government to adhere to liberal ideas, and to act conformably as hitherto to secure liberty within the limits of law and order, which exclude alike reaction and demagogy.

"Faith in liberal policy cannot be shaken by the violence of a small minority which the entire nation has condemned. The late disorders have proved that the revolutionary element fears liberty, which deprives them of their *raison d'être*, of all prestige; hence [during the general strike], they suppressed all liberty, including that of the press. Liberty is necessary for the welfare and progress of the working classes, in both city and country, and it is to be hoped that they will learn to understand where their own interests lie, and find sufficient dignity to refuse to submit to interested tyranny which comes from below. . . . This liberal policy finds its adversaries in the two extreme parties [clerical Conservatives and revolutionary Socialists], but late events must have proved to them that any sudden disturbance of order brings on the scene the criminal classes, the worst elements of society, whose excesses they are powerless to prevent, thus rendering themselves responsible for the crimes committed."

In order to control more efficiently these criminal classes, the Government will demand an increase of the police force (in Italy, we may observe, it is the quality rather than the quantity that is deficient). Hereon follows the announcement that staggered many even of the ministerialists: namely, of the intention of the Government to propose State operation of all the railroads now worked by private companies whose contracts terminate on the 15th of June, 1905. Never till this moment has any friend or foe been able to get a clue to Signor Giolitti's ideas on this burning question, discussed during an entire session in 1876, when the Liberals came to power, and the State won the day; and debated with yet greater heat in 1884, when Depretis, in opposition to the entire Liberal party and many ultra-Conservatives, carried his "private-operation policy," and secured the passage of the "fatal conventions" which led to the worst railway system existing—to the oppression of the railway servants, to their overwork and diminished wages, consequently to constantly increasing disorders and strikes, to the threatened and almost effected general strike of 1901. State-operated railways, say the advocates of this system, will avoid the consequences of the excessive greed of private shareholders, and permit the Government to organize and discipline the railway servants, redress their grievances, and at the same time enact such laws as shall make strikes in their ranks illegal, as in the postal and telegraphic services—this with the universal approbation of the country, whereas at present all severe regulations introduced are dissented from, owing to their apparent favoritism of the interests of one class of the "haves," the shareholders of the railway companies.

The "private-service" champions, on the other hand, fear that State operation will endanger the finances, which are now only just convalescent, subject to relapse at any moment. They say at least the companies risk their own private capital, and all the losses incurred by disasters, disorders, monetary crises, fall on them; they act as a buffer, a defence, to the credit of the State. They point to the vehement and successful opposition of Minister Rouvier, in such a rich and financially solid country as France, to State operation of several large railways, as an example worthy of imitation, and wish that the Government had remained neutral until the whole subject had been fairly thrashed out on the floor of both Chambers. That it is a capital card on which to appeal to the country is certain, as, while experts ponder and weigh the pros and cons, the know-nothing laity desire and applaud State rule, as abolishing the detested "conventions" and not less hated shareholders. Sonnino, whose technical value and financial capacity are admitted on all hands since his restoration of public credit at its last gasp in 1893, and who has always inclined to State operation, refuses the challenge thrown by the ministerial *Tribuna* to give his opinion on this part of the programme, observing, in his admirably edited and widely circulated *Giornale d'Italia*, that for four years he has awaited the discussion of the question; asks in what the operation is to consist, and what are the financial and technical lines on which this improvised determination rests, and reserves his verdict until the debate in the Chambers shall have taken place.

Next follow, in the Government programme, promises and pledges of social, educational, and industrial reforms, reform of the incidence of taxation, of labor contracts, etc.; but as these promises are accompanied by the frank and most absolute affirmation that the army and navy budget cannot be reduced by a farthing, Didymus asks, "Where are the funds to come from?" The conversion of the 5 per cents is as yet a desideratum, nor do prolonged wars and rumors of war facilitate its advent. True, consols are above par, and Italian paper is on a par with gold; but the southern provinces are in an awful plight, the poor Pugliesi exasperated, since fate adds insult to injury precisely in this year when, as they lose their best market, the vintage is so abundant that they have not sufficient casks or receptacles to receive the must. Their pitiful condition necessitates assistance.

The electoral agitation is already great, but the confusion of parties and fractions of parties is Babylonic. The "Popular Party Union" is avowedly dissolved, the elements resolved into their integral parts; and that this would be the case was evident from the second day of the general strike in Milan, and especially after the extreme Left, at the intimation of the "popular dictatorship," held a meeting to propose the resolutions for the plenary meeting to be held in Rome on the 21st of September. It became evident at once not

only that the three parties could never again agree to agree, but that the split between the evolutionary and revolutionary Socialists was on the verge of a rupture. Very insolent were the articles of Ferri in the *Avanti*, albeit not as coarse or violent as those of Labriola, Mocchi, and other of the strike organizers in the *Avanti-guardia*. Claudio Treves, in the *Tempo*, the daily organ of the evolutionists in Milan, gave a Roland for an Oliver, but it was the first number of Turati's *Critica Sociale* that came out after the strikes which gave the death-blow to the already dying alliance. The result on the elections is evident. Whereas ever since their origin as a party they have fought out their battles in private and presented a united front at the civic and political elections, now in each college the revolutionists present their candidate, and likewise the evolutionists. Both fractions, too, have broken up the alliance with Republicans and Radicals, though the former, in their desire to "overthrow existing institutions," incline to the revolutionary Socialists, and with them approved the prolonged strike at Milan and the five days' suspension of every newspaper in the city, including their own. The Radicals, who joined the popular side in order to prevent coercion, "the gag," and military government, have retaken their old position of "his Majesty's Opposition." Comparing the number of the political with that of the civic voters, it results that, despite the veto, clericals vote generally and freely, and this year it is an open secret that, though the Pope will maintain the *non expedit*, he does not object to and instead favors Catholics going to the urn in support of the candidates who adhere to the Church and to religious education in the schools, and are opposed to divorce. In Milan the Catholic League is openly allied with the ultra-Conservatives, who there more than elsewhere are organized and active, and assuredly not ministerialists. The same is true of Venetia, though there parties are less rigorously organized and less vigorous in action.

When we come to what is called the ministerial party, we are at a loss to define it. True it is that Giolitti had an enormous majority when Parliament rose in June, but it was entirely heterogenous. Ultra and moderate Conservatives, portions of the Centres—some in order to avoid a general election, others out of deference to Luzzatti, others because the extreme Left had begun to oppose him—voted in his favor, but will all these remain faithful to him in case he returns to power? He has summoned the prefects one by one to Rome, and they have received their instructions as to the candidates they are to befriend, those they are to oppose; but the general public seem to be in a refractory mood, and it is not at all certain that the electors as a whole will follow the ministerial guidance. All that is clear, therefore, is that, besides such of his late adherents as may remain faithful to him, Giolitti will have the Radicals in block openly on his side, and, measure for measure, the evolutionary Socialists, some of the moderate Conservatives, while the waverers (and they are numerous) will wait to see how the wind blows. On the other hand, he will find the ultra-Conservatives and revolutionary Socialists in fierce and compact opposition. But it is too soon to form the faintest conception of how the elections will go.

J. W. M.

THE LABOR WAR IN AUSTRALIA.

SYDNEY, October 10, 1904.

In less than a decade a complete change has taken place on the face of Australian politics. Mr. Godkin's essay on the Australian democracy is barely seven years old, and it is wonderfully true to the spirit as well as to the facts of Australian public life, but it is already out of date. A new factor has come into unexpected prominence, or rather a somewhat old factor has assumed new proportions and altered all the conditions. In New South Wales the Labor party is ten or twelve years old, and for the greater part of that time it has held the balance of power. For five years it kept a free-trade Ministry in office, and extracted from it a system of taxation conceived to be in the interests of the workingmen. Unable to wring from it other measures it had still more at heart, it turned out the Ministry and placed and kept the protectionists in office for another five years' term. The growth of the Labor party in the other States has been slower, but more striking. In Queensland, eleven years ago, it consisted of a single member; at the general elections held the other day it swelled to thirty-four members in a House of seventy-two. Hardly five years old in West Australia, it has there just defeated the Ministry and taken its place on the Government benches. In South Australia the Ministry and the Opposition have coalesced to keep the Labor party out of office, which they do by just one vote; and in the Commonwealth a hybrid Ministry of free traders and protectionists is maintaining a precarious existence with the same object. In sorely tried Victoria (a standing example of the ruin a protectionist policy may work) a heroic effort of the saner portion of the population was needed to defeat the Labor party and fling out the Ministry it supported. A similar victory has just been won in New South Wales. Over the whole of Australia it is felt that all other political struggles are being reduced to a single conflict—that between labor and the rest of the community. It is everywhere perceived, and two premiers have said, that, alike in the States and the Commonwealth, there is room for only two parties—the Labor party and whatever other party stands for industrial freedom.

Five possible situations may result: (1.) The Labor party may be undifferentiated, as (till the other day) in New Zealand, where a Ministry formed in the ordinary course and without a Labor mandate has been converted by the strong wills of two or three individuals into a Labor Ministry. (2.) The Labor party may support the Ministry, but remain independent of it and out of office, as lately in the Commonwealth and in New South Wales. (3.) It may fuse itself with the Ministry, as now in Queensland, control its policy, and accept office. (4.) It may independently assume office, as now in West Australia and lately in the Commonwealth. (5.) Defeated, it becomes the Parliamentary Opposition, as now in the Commonwealth and in New South Wales, and its leader is officially recognized by the speaker as the titular leader of the Opposition. These are notable advances to have been made in a few years. The fable of the old Roman senator is threatening to prove a literal fact. If Australia is not exactly being governed by its belly (the unskilled laborers), it is being largely governed by its hands and feet (the skilled artisans). What are their claims and what their qualifications for the task they have deliberately assumed?

First, it is contended that the political Labor party is not coextensive with the laboring class. It certainly is not. Of the 423,000 hand-workers in New South Wales only 60,000 are brigaded into unions. Nor do unionist artisans always vote at the crack of the Labor whip. At the recent general elections in New South Wales, thousands of laboring men and women voted against the labor candidates. Almost a year ago the electors of the same State were called on to vote in connection with one of those referendums by which a colonial ministry escapes from its difficulties. The question was, Should the first chamber be reduced in numbers, and, if so, in what proportion? Though a reduction was imperative in the interests of economy (for the more legislators there are, the more public works are constructed), the Labor party strenuously opposed any reduction, and it succeeded in fixing a limit below which no reduction could be voted for. None the less, reduction was carried by an immense majority, and it was manifest from the numbers polling that a large proportion of the laboring class must have voted against the wishes of the labor leaders.

It is, moreover, estimated that the laboring class does not produce more than a quarter of the wealth annually produced in Australia. Of this quarter it may perhaps be said that two-thirds is, in a manner, the production of the captains of industry—the capitalists who personally direct industrial production. Employers continually complain that the men are not worth the wages the unions compel them to pay. They are lazy, handless, and without resource, sometimes dishonest, and often wholly incompetent. Without incessant supervision and a constant infusion of energy on the part of the employers, their labor would be futile.

Lastly, the Labor party owes its ideals, not to itself, but to thinkers and publicists. Edward Bellamy, Laurence Gronlund, and Henry George purveyed the Socialist policy which New Zealand and the Australian States are carrying out. It was initiated in New Zealand by a commercial traveller, who afterwards became a newspaper proprietor. It was continued by the ex-engine-driver who succeeded him in the premiership. An old Highland shepherd devised a scheme of land purchases and land tenures that embodied the nationalization of the land. But by far the most important of the socialistic measures—industrial arbitration—was shaped and carried into law in New Zealand by the son of a newspaper proprietor who was a bit of an Oxonian, and it was developed and expanded in New South Wales by a cultured Oxonian who is one of the few instructed men in Australian public life.

As in all else, the colonies here repeat the history of older countries. Grant Allen remarked that the Radical leaders have usually been men of family and education. So have the Socialist leaders. Lassalle arrogantly claimed that he was "equipped with all the culture of his century" (what did

he know of science?), and Louis Blanc might have made a similar boast. In North Lanarkshire, the other day, the Labor candidate was a well-known publicist who collects old editions of Lucretius and first editions of Fichte. And it is noticeable that as soon as the Australian labor leaders acquire the necessary leisure, they set themselves to remove their deficiencies, read incessantly, and steadily improve as public speakers. Renan, indeed, believed that the interests of culture were safer in the hands of Caliban than in those of Prospero or his degenerate successors, and it can be affirmed as a fact that Government officers in the colonies are both more liberally and more courteously used by uneducated legislators and ministers than by those with a tincture of cultivation. A professor in the University of Melbourne is leaving his position because he cannot get his pay from a retrenching middle-class Government, while a member of the late Labor Ministry in the Commonwealth has just founded a scholarship for poetry in the same university.

The policy of the Labor party throughout Australia is undisguised. It may be summed up in the motto of the Queensland Labor party: "Socialism in our time." The phrase was born of antagonism to the policy of the Fabian Socialists. That highly cultivated body entered on its propaganda with the belief that an organized system of State Socialism could be brought into existence in a few years. A brief contact with the realities of English politics soon punctured the illusion. A longer and closer contact with the realities of Australian politics has rather strengthened the belief in the minds of Australian labor leaders, and with some reason. The very large extent to which the Australasian colonies are socialistic is well known, but two or three recent developments may be mentioned. The Government of New Zealand has just opened a coal mine, the immediate effect of which is stated to have been that one-third of the miners in two adjacent coalfields have been thrown out of employment. The same progressive Government has added a fire-insurance department to its life-insurance department; it had twice or thrice vainly attempted to make fire insurance in the Government department universal and compulsory. And the same Government now owns hotels in tourist districts, and "personally conducts" all railway refreshment rooms. There was thus already a broad basis on which to rear a system of State Socialism. To it the Labor party in Australia proposes to add all natural monopolies. Both in the Commonwealth and in New South Wales it has tried to make the iron manufacture an exclusive privilege of the State. It also claims for the State the monopoly of the tobacco manufacture. The programme of the Labor party in New Zealand, founded only within the last few weeks, is more thoroughgoing. It demands the nationalization of all mineral wealth, and the establishment of woollen and flour mills, clothing and boot factories. Such proposals seem formidable, or would be if there were the least danger of their being carried into effect. But no subversive changes like those which scare the middle classes in the revolutionary Socialism of France or Germany, need be looked for in Australia. The labor leaders in all the States are cool-headed men, who will not be betrayed into any extravagance. Some of them are Irish, but the Celtic fervor has either burnt down in them or is sternly repressed. The Labor leader in the Commonwealth, while admitting that Socialism is the foundation of the Labor platform, intimated that those who expected extreme measures from him would be disappointed, and during his brief term of office he certainly gave no indication of favoring an advanced policy. The Labor Ministry in West Australia is already disappointing its followers by its unexpected moderation.

The stability of the semi-socialist system built up by successive colonial governments depends mainly on two factors—foreign loans and high protective duties. The State purchases of private lands are being effected by means of loans raised in England. The substitution of the State for commercial companies as the holders of land mortgages (and in all the colonies land is mortgaged to the hilt) has been made practicable by the same means. The execution of public works, which are extensive in proportion to the socialistic trend of the Ministry of the day, rests on the same basis. Let the British bondholder grow alarmed at the monstrous indebtedness these colonies are piling up, and the colonial socialistic activity on these lines necessarily comes to an end. This is exactly what is happening. The motherland obstinately refuses to continue lending to her prodigal sons at the antipodes except on usurious terms. The consequences are already visible. In most of the Australian States public works are almost at a standstill, and the repurchase of lands is being very slowly made. In the more prosperous colonies the boom that has been maintained for many years by the copious and continuous influx of foreign gold, shows signs of breaking. Should it break, the mass of colonial Socialism will tumble down like a child's house of cards, which in reality the whole thing is. Among other features of the structure, the extravagant old-age pension system—which New Zealand has just discovered, as Victoria two years ago discovered, and as New South Wales will yet discover, to be a sink of corruption—will prove to be an intolerable burden. State industrial arbitration stands or falls with protective duties. J. C.

Correspondence.

CASTE AND CONSCIENCE AT THE SOUTH.

To the Editor of The Nation:

Sir: The columns of your paper have furnished with painful frequency accounts of harsh treatment of the negro by Southern whites, and of the friction between the races. I take the liberty of calling your attention to the enclosed clippings from the Charleston *News and Courier* of October 21, and the editorial comments thereon of that day and of the 26th inst., which give another side of the question, and furnish an instance of the respect and high regard in which a negro was held by his white neighbors, on account both of his character and of his personal influence, exerted to bring about and maintain kindly relations between the races. I hope you will reprint the enclosed clippings for the benefit of your readers.

I do not desire to present an argument on this matter, but allow me briefly to say, in passing, that such instances of pronounced cordiality are not common, that they are less frequent now than ever before, that race feeling is more accentuated now than ever before. President Roosevelt, by the course he has pursued in reference to the negro, has thwarted the efforts of those who wished to cultivate and establish between the races relations of justice and kindness, and also to bring about among the whites the recognition of their responsibility, as the superior race, for the education and improvement of the negro. President Roosevelt, by his disregard of the judgment and wishes of those who were in position to understand conditions in the South, and his abandonment of his position while on the Civil Service Commission, that merit should be the test of qualification for office, has made it well-nigh impossible to labor for the improvement of the negro as a citizen, and more difficult for him to secure that fairness of treatment which is desirable both for his own sake and also as a habit of mind and of conduct for the whites.

The solution of the negro question is one that requires patience and wisdom. It cannot be forced by the people of the North—first, because the whites of the South will not submit to dictation on matters affecting them and their rights; and, secondly, because the North does not understand the question, nor do they appreciate what this question means to the whites of the South. The very civilization of the South is involved, and the sooner it is recognized by the North that education and moral character shall rule—which means that the Anglo-Saxon shall rule and predominate in moral, political, and educational government, and will never permit social equality with the negro in any manner—the sooner will the negro receive justice in treatment, and the constantly increasing liberality and generosity in acquiring educational advantages which will elevate his character and make him a better and more useful citizen. If, however, the North follows the lead of Mr. Roosevelt and persists in its determination to give the negro position which in a way places him above the superior race and engenders and intensifies the natural prejudice between the races, the longer will be the delay in securing for the negro those opportunities for improvement and elevation which can only come by slow development and by a gradual evolution.

Very truly, Richard I. Manning.

Sumter, S. C., October 24, 1904.

[Our space does not permit us to reprint the extracts sent us by our correspondent. On October 20, the Circuit Court at Lancaster, S. C., "adjourned out of respect to the memory of Bishop Isom C. Clinton, whose burial takes place here to-morrow." Bishop Clinton was a colored man, born a slave, and, as our correspondent informs us, was "a consistent Republican," though why he had any business to be Republican or Democrat in a disfranchising community passes our understanding. The Court's adjournment we must regard

as "in a manner" an act of social equality; as it could have done no more for a white man; but we have before had occasion to remark that, for social purposes, the only good negro, in the eyes of the vast majority of Southern white people, is a dead negro. To him they are ready to pay tribute for his private virtues and civic usefulness. All the "education and moral character" he might have amassed could, while he was alive, have no recognized share in "ruling" and "predominating" the community. It could not entitle him to the meanest public office, to send his children to a mixed school, or to ride with other decently dressed and behaved persons in a mixed car—a paradox which our Southern brethren might escape if they could comprehend Beaumarchais's apophthegm, "L'amitié [social equality] s'accorde, l'estime s'exige"—that is, you are under compulsion to esteem a fellow-being according to his worth, but neither this nor rendering him exact and equal justice compels you to take him into your set.

Another clipping reports the condemnation of lynching in Judge R. C. Watts's address to the grand jury of Lancaster County. It is one of many signs that the awakening Southern conscience is to make itself felt first effectively through the judiciary. We welcome them all, and notice such as we can.—Ed. Nation.]

THE FUNCTION OF POETRY.

To the Editor of The Nation:

Sir: Reading to-day the letter in this week's *Nation* from Mr. James E. French makes me wish to say two things:

First, that I read, with what I do not exaggerate in calling perfect delight, Professor Goldwin Smith's article in the October *American Historical Review*, from which Mr. French quotes one passage for animadversion. There is, *me judice*, no other living man who could have given us an article on its theme equalling it either in its luminous condensation, the soundness of its many judgments, or especially in the perfection of its English. It reminds one of that wonderful masterpiece by the same hand, 'The United Kingdom.'

Second, it occurs to me that Mr. French's criticism would have been better placed if he had first inquired or told us what Professor Smith meant by his phrase, "pleasure of that sort which it is supposed to be the special function of poetry to give." There are varieties of pleasure given by poetry. How is it that this critic determined that Professor Smith did not have in mind the precise pleasure which his critic evidently regards as the chief function of poetry to give? For my part, I do not suppose, as does Mr. French, that Professor Smith would "dismiss" Lowell's Ode "as a highly figurative work of imagination," which gave him no pleasure. On the contrary, I have no doubt that he would agree heartily with what Lowell writes in Mr. French's quotation. Does Mr. French really think Professor Smith admires the poet described by Lowell in the last four lines quoted by him? Mr. French's phrase—pleasure-purveyor—is to no purpose. It defines nothing. Are not all real poets pleasure-purveyors, Milton and Dante even?

While we are without knowledge of the meaning, except its obvious and natural one, of the particular phrase of Professor Smith's now criticised, I should like to add my small voice in support of his apparent estimate of Browning's poetry. Nothing can be better, as it seems to me, than his farther characterization of Browning, thus: "He is a philosopher in verse with Browning societies to interpret his philosophy"; only, I must add, no interpreter has yet seemed to make philosophy or sense out of much that he has written.

D. H. Chamberlain.

University Station, Charlottesville, Va., November 4, 1904.

UNSCRUPULOUS BOOK AGENTS.

To the Editor of The Nation:

Sir: I am informed that certain persons have called on my friends and members of various societies to which I have the honor of belonging, and, under the pretence of being my secretary, have solicited subscriptions to books with the editing of which I have been legitimately associated. I have authorized no one—man, woman, or child—to use my name for any such purpose.

In order to gain entrance to houses otherwise inaccessible, unscrupulous book agents have actually sent up my name, audaciously impersonating myself until "the lady of the house" appeared and discovered the trick. In one case that came to my ears the clever, shrewd salesman actually persuaded the wealthy friend on whom he thus forced himself under false pretences to subscribe for one of his books!

The matter has its amusing side, but is nevertheless extremely annoying; for a person is thus put in a false position. A plain statement of these facts seems to be my only defence. Nathan Haskell Dole.

Glen Road, Jamaica Plain, Boston, November 3, 1904.

EMERSON AND CHRISTIAN SCIENCE.

To the Editor of The Nation:

Sir: In the book reviews of your issue of October 27 I find the following statement: "Neither the Emersonians nor the Eddyites will be pleased with Mr. More's finding Emerson responsible for Christian Science and similar vagaries, but it is certain that the Eddyites have often found the Emerson scripture to their purpose."

This needs a little clearing up lest it might give your readers a wrong impression of the attitude of Christian Scientists. They, like most other religionists and philosophers, have a very high regard for the noble works and sayings of Emerson; and while it may be true that Emerson has contributed toward the general progress leading up to the discovery of Christian Science, yet there is nothing in common between his premises and those of Mrs. Eddy.

I am sure you will pardon me for entering a kindly protest against the use of the word "Eddyites." Christian Science is not an ism of Mrs. Eddy's. All Christian Scientists have demonstrated the truth of their faith sufficiently to make it their very own; therefore, the use of that term as a definition is entirely incorrect, and it could have no other use than the epithetical, and I am sure that the good editor of the *Nation* would not be found guilty of calling names.

Yours sincerely, Alfred Farlow.

Boston, November 3, 1904.

A CORRECTION CORRECTED.

To the Editor of The Nation:

Sir: Your reviewer of Mr. Conway's 'Autobiography' makes a note of Mr. Conway's story about the first remarks of certain leading Unitarians on entering another world, and says it was not a student who invented the remarks, but Theodore Parker. It was not Theodore Parker, it was Dr. Frederic Henry Hedge. So he told me at my own table when I attributed them to another person. My wife confirms my recollection. At the same time he told me that his daughter had invented one for him. He had complained a good deal about the fire in the parlor grate, which had a way of going out. "I know," said his daughter, "what *you* will say when you arrive in the next world. It will be, 'I'm glad to be somewhere at last where the fire *doesn't go out.*'" One of the best of the remarks omitted from Mr. Conway's enumeration was that attributed to Dr. Hedge's father-in-law, Dr. Pierce of Brookline, who was very proud of his walking: "Just seventy-five (?) minutes from earth! Walked all the way!" John W. Chadwick.

Brooklyn, November 3, 1904.

Notes.

Dr. Benjamin Rand, author of the 'Life, Letters, and Philosophical Regimen of the Third Earl of Shaftesbury,' will shortly have ready for academic and public use a very comprehensive 'Bibliography of Philosophy.' It will embrace bibliographies of the History of Philosophy, Systematic Philosophy, Logic, Æsthetics, Philosophy of Religion, Ethics, and Psychology. The "History of Philosophy" contains the roll of great names from Thales to Spencer, their works, and the works upon them. The other bibliographies include the general and various special topics comprised in their respective subjects. The work has now been in the Oxford University Press for more than three years, and will appear as the third volume of the 'Dictionary of Philosophy and Psychology,' edited by Prof. J. M. Baldwin and other scholars, and also in separate form. We may add that Dr. Rand has sounded several of the larger libraries and universities regarding a pet project of his in a privately printed leaflet entitled 'A Philosophical Library for the American Continent.'

Houghton, Mifflin & Co. will publish immediately 'The Russo-Japanese Conflict: Its Causes and Issues,' by K. Asakawa, Ph.D., a graduate of Dartmouth College, and now a member of its faculty.

'Mrs. Maybrick's Own Story; Her Fifteen Years of English Prison Life,' will be issued in December by Funk & Wagnalls Co. The book has been written wholly by Mrs. Maybrick, except the legal digest and other matter in the appendix.

Little, Brown & Co., Boston, have nearly

ready 'The Younger American Poets,' by Miss Jessie B. Rittenhouse.

Noticeable already are the outpouring series of small volumes, some Lilliputian like the new Vest-Pocket issue of Messrs. Putnam, which measures 4½x1¾ inches, and gives us, printed lengthwise, FitzGerald's Omar, and bits from Burns, Goldsmith, Browning, Tennyson, etc. Those to whom the size recommends itself will want the catalogue. Not very much thicker, but broader, for the side pocket, are the familiar "Ariel Booklets" of the same firm, now growing into a century of volumes with Miss Edgeworth's 'Castle Rackrent,' Fouqué's 'Undine,' Swift's 'Voyage to Lilliput,' King James's 'Counterblaste,' etc., each in this case a complete whole. The author's portrait is a feature of these reprints. Still larger, yet rightly described as "Handy Volume Classics," are those published by T. Y. Crowell & Co., sometimes mere copies, as in the case of Gowan's whimsical 'The Hundred Best Poems,' sometimes with a little apparatus, as where Prof. Brander Matthews contributes Introductions to Sheridan's Comedies and to Robert Bell's 'Songs from the Dramatists,' with some addenda, and Mr. Mabie introduces Addison's Essays, Mr. Charles Welsh, Chesterfield's Letters, etc.

We noticed at some length last January the elegant limited edition of Bunyan's 'Pilgrim Progress,' with twenty-five illustrations by Cruikshank, mostly engraved for the first time from his drawings. The same text and cuts have now been popularized in a plain form by the Oxford University Press (H. Frowde), and so far as the text is concerned, this is a boon. The rather mediocre designs have suffered somewhat in the less costly printing. Since our former notice we have seen a copy of the rare print (never published) of Christian in the Valley of the Shadow of Death. It is much finer as well as larger than its replica here, one of the two or three fairly ambitious designs in the series.

The Rev. H. C. Beeching's careful transcript of Milton's Poetical Works from the earliest printed copies of the several poems is another Oxford reissue of moderate cost and substantial excellence.

Kingsley's 'The Heroes' reappears in a somewhat elegant form with six color-plates and seventy half-tone illustrations by T. H. Robinson (London: Nister; New York: Dutton). We like Mr. Robinson best in some of his chapter vignettes. His idealism is rather naïve and his figure drawing amateurish. His Theseus is anything but heroic, and the consistent half-nude representation of him, while all nymphs are full-clad, leads to strange situations, as in the scene with Medea at p. 270, in color, "printed in Bavaria."

Elliot Stock, London, sends us the eighteenth issue of his 'Book-Prices Current,' still under the careful direction of Mr. J. H. Slater. It records the prices of books sold at auction in London from October, 1903, to July, 1904, to the number of 6,276 items, with the usual index. Exceptional fulness has been given to the titles of a notable batch of economic works such as seldom come under the hammer *en bloc*, and there is a full account of the original MS. of Book I. of 'Paradise Lost,' probably the printer's copy, which was withdrawn from the sale when the bidding fell short of £5,000, and was afterwards disposed of privately to Mr. Pierpont Morgan. The highest prices here recorded were for manuscripts: one, a Latin-Flemish, "with English influence," curiously illuminated, fetched £2,500, or one-sixth of the total net product of the Sneyd collection, "though it could easily be placed on the palm of the hand." The season proved depressing for books of ordinary character. The fresh seven-volume limited edition of FitzGerald's Writings and Letters was thrown back at £2 to £3, in each of several instances. Dickens, Thackeray and Tennyson were in but moderate request. The Walter Pater cult made a modest beginning. A unique copy of 1545, not heretofore known, of Erasmus's Precepts of Cato in English, brought £40. A copy of Vellutello's Petrarch (Venice, Giolito, 1548) went for £1 15s. on December 11, 1903, while one of 1547 brought on July 28, 1904, £12. What is odd is, that the annotation for each is the same, and implies the possibility of a turnover for one and the same work between the sales mentioned—if the printer's date has been erroneously changed. This appears probable from the fact that Giolito published two editions of this commentary in 1547; we can discover no record of another in 1548.

The First Book of Bacon's 'Advancement of Learning' (Ginn & Co.) has received from Prof. Albert S. Cook the scrupulous treatment which this editor commonly bestows on English classics. An intelligent reader may indeed complain that the text is over-annotated, although he may share Professor Cook's none too high estimate of "the average student" when it comes to interpreting even a piece of "compelling and artistic prose." The editor's deliberate valuation of Bacon's style is interesting in comparison with Sainte-Beuve's criticism ("un heureux, abondant et un peu confus écrivain") in 'Portraits Littéraires,' ii. 453; his involved, though brief, comment on Bacon's character should be confronted with Kuno Fischer's more convincing solution of the same enigma. An excerpt from Fischer might well have been included among the introductory "Opinions concerning Bacon." However, the amount of help for the student whom the editor "had in mind" is little short of astonishing; one wonders whether such student will be more free to shift for himself in the Second Book, when it appears. Every one interested in philosophy should welcome the entry of competent English scholarship in a field that professors of English are prone to neglect.

In the year 1566, one William Adlington produced a version of the Golden Ass of Apuleius, dating his preface 'From Universitie Colledge, Oxforde.' Nothing further is known of him, not even that he proceeded to a degree; but his book, for its vigorous Elizabethan English, has long been to the elect "a right pleasant pastime and delectable matter," as he would himself have said. Between 1566 and 1639 it went through six editions, was repeated from the last in the series called the Tudor Translations, and now appears, printed from the first edition, in the noble garb of the Chiswick Press of London (New York: Privately printed for the Scott-Thaw Co.). In this form it is a tall folio, the paper and type alike beautiful, but with a somewhat Brummagem frontispiece. Only two hundred copies are reserved for these United States; whether there be more than two hundred citizens to whom a *custos morum* could conscientiously recommend a perusal, is a question on which he might consult with himself as long as did the translator before he ventured to dedicate his work to the Earl of Sussex. For, truly, the "jesting and sportfull manner of the booke" (to preserve his polite euphemisms) makes it "unfitte to be offred to any man of gravitie and wisedome." And yet he concluded that the effect thereof might tend "to a good and vertuous morall"—in the which pious hope we have given it mention here.

Quite an epidemic of philosophic autobiographies has marked the present year, and it might have been expected that the story of the Aberdonian weaver who rose to be professor of logic and finally Lord Rector in the university of his native city, would not have been the least notable of the series. We have found, however, Alexander Bain's 'Autobiography' (Longmans, Green & Co.) somewhat disappointing, and in no wise comparable in point of interest with Herbert Spencer's. One cannot, indeed, withhold a certain measure of admiration from the strenuous work and iron determination to which Bain owed his success, but beyond this there is little of interest or instruction to be gathered from his narrative. The general reader will hardly be conciliated by the jejune style in which long series of dry details are frigidly set forth, and will scarcely accept the author's contention that the historic value of his copious reminiscences of the minutiæ of teaching and administration in a small Scotch university sixty or seventy years ago deserved such conscientious chronicling. The technical philosopher will not greatly value the bare, precise notes on the composition of Bain's works. And even the psychologist will only record without gratitude the stern self-restraint which has suppressed nearly all items of human and personal interest, and will long for a little more *abandon* and self-revelation carried nearer to the verge of indiscretion. Bain's attitude towards himself is doubtless highly dignified, but what, after all, is the value of autobiography if it hardly differs in tone and content from an official biography? The latter would at least have thrown more light on the many public-spirited things Bain did, and better have reminded philosophers of the debt they owe to one who was the founder, and for many years the sole financial supporter, of *Mind*.

'Presidential Problems,' by Grover Cleveland (The Century Company), is a reprint of two addresses and two magazine articles, thoroughly revised by the author. They may be regarded as mainly a justification of his administration, and as such possess a permanent historical interest apart from the fact that they involve questions of lasting moment, likely to recur in some new form at any time. There is the "Independence of the Executive," the "Relation of the Federal Administration to Labor Disorders" (the Chicago strike of 1894), the "Bond Issues," and the "Venezuela Boundary Controversy"—none of them matters now directly before the public, but all topics presenting legal or constitutional questions of the first importance. They have been so repeatedly canvassed in these columns and the press generally that it is not possible to expect the reprint to arouse much controversy. As a literary per-

formance, they are open to the charge, at times, of ponderosity. "Le style, c'est l'homme," and Mr. Cleveland's style is not light, and is apt to be labored. But this was always so; the value of what he said and did lay in matter, not manner. We are sorry to see that he still thinks so meanly of those who criticised his "vigorous assertion of the Monroe Doctrine," as to be willing to assert that those who most emphatically reprehended it were "the timid ones who feared personal financial loss," or else speculators and those engaged in "living by their wits." This hallucination is what might be called one of the "idols" of the Stump, and raises a smile when it is brought forward in the forum of history.

Just in time for those who wish to prepare themselves for the performance of "Parsifal" in English now beginning at the New York Theatre, the Oliver Ditson Company has issued a 'Guide to Parsifal,' by Richard Aldrich, the judicious and reliable musical critic of the New York *Times*. He does not claim any special originality for his little book—indeed, it would be difficult to say anything new about that much-discussed music drama; but his seventy-page monograph may be found useful by those who have not time enough to peruse Kufferath's exhaustive work on the same subject. After giving some introductory information regarding Wagner's development and his style, Mr. Aldrich discusses the origins of "Parsifal," and then relates the strange story and analyzes the music, with its leading motives. There are also eight full-page illustrations of scenes in the drama. As regards the musical status of Wagner's last work, Mr. Aldrich says: "In thematic invention the 'Ring' dramas and 'Die Meistersinger' may surpass it; in spontaneity it stands below 'Tristan'; but the poetical beauty and subtlety of the 'Parsifal' music, the expressive power with which it interprets all the characters, emotions, sufferings, aspirations, that are embodied in the drama, are surpassed in none other of Wagner's works. In none of them is the key to the understanding of all to be sought so continually in the music." The leading motives are given in musical type, and a list of works treating of "Parsifal" is appended.

Among several additions to the bibliographies put forth continuously by the Library of Congress we may single out Mr. Lee Phillips's Check-List of Large-Scale Maps Published by Foreign Governments (Great Britain excepted) and to be found in our national collection.

Students of Spanish history will welcome an enterprise undertaken by D. Eduardo Ibarra y Rodriguez, professor of history in the University of Saragossa, under the title of "Coleccion de Documentos para el estudio de la historia de Aragon." Of this the first volume has appeared, containing documents illustrating the reign of Ramiro I., from 1034 to 1063 (Saragossa: Cecilio Gasca). There are a hundred and fifty of these, nearly all inedited, throwing much light on the laws and customs of the period, and bearing testimony to the zeal of the editor in gathering them from all sources and accompanying them with elaborate indexes of persons and place-names. Succeeding volumes are promised, containing documents of the eleventh to the fourteenth century, and finally a glossary, which cannot fail to be of great interest. The language of the documents is a transitional Latin, illustrating one stage in the development of the modern speech; and the contrast between it and the Latin of a letter from St. Odilo of Cluny to Paterno, abbot of S. Juan de la Peña (p. 215), indicates how monastic traditions were striving to retain classical forms while popular speech was developing a virtually new tongue.

The early achievements of the United States navy in geographical research are the subject of an interesting address by Rear-Admiral Chester to the recent Geographic Congress, now published in the *National Geographic Magazine* for October. The explorers were Wilkes, Perry, Kane, and many others of less note, and though the New World was the chief field for exploration, yet one expedition, that of Lieut. Lynch, was sent to the Dead Sea. To Commander Maury, however, as Humboldt has placed on record, "the world is indebted for founding a new department of science, that of the Physical Geography of the Sea." In prosecuting the researches which he began, our naval officers have "sounded minutely nearly 300,000 square miles of water, and made deep-sea soundings over little less than a million square miles." But this has not been simply in the interests of pure science, for "hardly a wire lies on the bed of the Atlantic or of the Pacific Oceans that has not been prearranged" by their surveys. Among the other contents of this number are Commander Peary's presidential address, in which he advocated having "some broad national project of geographical investigation, of general interest and coördinated plan, on a continuing basis," and Dr. A. Penck's report on recent progress in the execution of a map of the world on the uniform scale of sixteen miles to the inch. Among the resolutions adopted by the Congress was one proposing to our Government the preparation of such a map of America, similar to those of Asia, China, and Africa now being constructed by the French, German, and British Governments.

The Inventories of the Manuscript Collections of the Italian libraries have reached a twelfth volume, which is occupied, like several of its predecessors, with the MSS. of the Central National Library in Florence.

A hiatus in H. Stein's Manual of General Bibliography has been supplied by Giustino Colaneri of the Casanatensian Library in Rome, who has compiled a 'Bibliographia Araldica e Genealogica d'Italia' containing upwards of 2,000 entries. The arrangement is alphabetical by authors. Count Ferruccio Pasini-Frassoni prefaces the work with an article on Heraldry in Italy.

A central committee for commemorating the hundredth anniversary of Schiller's death, formed by coöperation of the American Institute of Germanics and the Schwabenverein of Chicago, is arranging an extensive Schiller celebration to be held in Chicago in May, 1905, and has established prizes of $75 each, open to competition throughout the United States, for two prologues in verse, to be recited during the days of the festival, one in German, the other in English, neither of which shall require more than seven minutes for expressive recitation. All poems offered in competition for either of these prizes must be in the hands of the corresponding secretary of the committee on the Schiller Commemoration, 617 Foster Street, Evanston, Ill., on or before Wednesday, March 1, 1905. The poems are to be sent under an assumed name and be accompanied by a sealed envelope containing the name and address of the author. The right to publish the accepted prologues must be given to the programme committee for the Schiller Commemoration.

—The letters of Thomas Jefferson to his son-in-law, John W. Eppes, published in the November *Scribner's*, furnish some interesting illustrations of the antagonism between New England and the more Southern States. Mr. Eppes himself was very anxious that his son Francis should be educated wholly within the limits of Virginia, in order to secure "that open, manly character which Virginians possess and in which the most liberal and enlightened of the Eastern people are deplorably deficient." He had never yet known a public man from that section who could march directly to his object; and improper considerations of one kind or another were continually leading them into actions which would tinge the face of a Virginian with shame. Jefferson expressed his entire concurrence with these feelings, and suggested the education of his grandson at Columbia, South Carolina, where Thomas Cooper (an Oxford graduate and a man of great learning and ability) had "more science in his single head than all the colleges of New England, New Jersey, and I may add Virginia, put together." Mr. Jefferson wrote to Dr. Cooper for information, and thereby unearthed a little more of the same spirit. Dr. Maxey, the principal of the Columbia School, was dead, and Dr. Cooper was anxious as to the succession: "If they send for a person from New England, as the fashion is, I shall be strongly inclined to resign. I greatly dislike this combination of character, which promises little better than a mixture of cunning, sciolism, canting and bigotry." In October, 1817, Jefferson writes: "I fear this army and navy fever, and especially the latter, is a disease which must take its course and wear itself out. I doubt the possibility of resisting it." Capt. Mahan draws near the conclusion of his history of the war of 1812, and one naturally finds here and there in his remarks an attitude somewhat different from that of Jefferson as to the navy. If only a powerful navy had been built up in preceding years, England's claim to the right of impressment could have been battered out of existence, and thus safety would have been secured to those seamen who might possibly have been impressed down to the time when peaceful negotiation disposed of the claim forever. It is so much more manly to wash your enemy's claim out of existence in his blood than to let him nurse it unused until it dies a natural death.

—The *Atlantic* has a forcible article on recent attempts to improve the style of the English Bible, from the pen of J. H. Gardiner. Of course Mr. Gardiner offers no objections to such changes as are necessary to correct errors of meaning on the part of King James's translators, or to avoid possible misapprehension growing out of specific alterations in English idiom or in the meaning of English words; but with the craze which has come over a certain class of Bible students to bring the

English of the Bible right down to date, he takes emphatic and well-grounded issue. Arthur Symons discusses adversely the question whether Sir Walter Scott was a poet. The test of popular impression, which was as favorable to Scott in the rôle of poet as in that of novelist, he accepts in the latter case, but rejects in the former. The poems of Scott and Byron sold as only novels have sold before or since, largely because they were so like novels. The skill in story-telling carried the day with the public, rather regardless of the poetic form than because of it, and the author himself proved that the same class of stories could be better done in prose. But, on the whole, "it is well, perhaps, that there should be a poet for boys, and for those grown-up people who are most like boys; for those, that is, to whom poetry appeals by something in it which is not the poetry." Aside from literary articles the contribution of most importance in this number is Mr. Alleyne Ireland's study of the United States in the Philippines. Mr. Ireland, of course, writes as an Imperialist, out of sympathy with those to whom political independence is anything more than a mere matter of expediency under certain conditions; but for that very reason his searching criticism of our own incompetency in managing the Philippines is the more significant.

—As perpetual motion to the over-imaginative mechanician, so is the problem of the habitation of the planets to the imaginative student of the heavenly bodies. Camille Flammarion threshes over the old straw again in the November *Harper's*. The probability of signals from our near neighbors, the Martians, which has kept some of us up watching of clear nights, is ruled out. They are presumably æons in advance of us in mental development; and if signalling to us ever occurred to them, it is more likely to have been before we were here to be signalled to—perhaps in the fresh young days of the dinosaurs and iguanodons. We are brought nearer the surface of our own sphere in a paper by Mr. Howells, "In Folkestone Out of Season," and another by George Hibbard, describing "Winter on the Great Lakes," both thoroughly readable and well illustrated. Prof. John Bassett Moore contributes a paper on "Non-intervention and the Monroe Doctrine," reaching the conclusion (among others) that the term "Monroe Doctrine" has developed gradually into a convenient title by which to denote merely the principle of the limitation of European power and influence in the Western hemisphere. Students of history will remember that the tree as planted by Monroe had a vigorous branch supposed to shelter the infant republics to the south of us against any harmful development of the power and influence of the United States; but this branch has been deemed, alas! too low for the passage of the tall-masted vessels waiting to get through the inter-oceanic canal.

—'Argumentation and Debate,' by Craven Laycock and Robert Leighton Scales (Macmillan), is the title of an original handbook for teachers and students. As the authors say in their preface, it deals with a peculiar art. Argument is usually made one of the divisions of rhetoric; with debate added, we have the presentation of an issue, and must master the art of dealing with it on both sides. For argumentation and its principles, then, the authors draw on formal logic, rhetoric, and the legal rules governing pleading and proof. The book deals first with the principles applicable alike to spoken and to written discussion; secondly, with those peculiar to oral debate. It is full of excellent illustrations drawn from historical sources, and we have been much struck with the freshness which the authors have succeeded by this means in giving to their discussions of the matters involved. The revival of the study of rhetoric in the English-speaking world is an encouraging sign in modern education, and in one respect rhetoric, as now taught, has certain potential advantages which in the ancient world it did not possess. Science has so rationalized everything that whereas the ancients aimed solely at persuasion, often quite independently of truth, we can deal with rhetoric both as a formal art and as a means to rational conviction. The difference will be noticed at once by any one who takes the trouble to examine such a manual as this in the light of what a critic like Boissier has to say about the classical schools of rhetoric, and their utter indifference to fact. With what we know about true methods of inquiry and what the ancients knew about persuasion, the enthusiast may well hope in time for a glorious future for our authors' "peculiar art."

—B. E. Hammond's 'Outlines of Comparative Politics' (London: Rivingtons) is a contribution to the natural history of government. The author declares in his preface that "until about twenty years ago it was impossible for any one to say with certainty whether knowledge of the laws governing political phenomena could be derived from the evidence of history." This doubt was resolved in his mind by the lectures of Professors Seeley and Henry Sidgwick. The task of the one corresponded with that of Cuvier, of the other with that of Darwin. For the last fifteen years Mr. Hammond has been giving instruction in "the classification of states and their governments," and his present volume is a text-book on this subject, founded on two courses of lectures by Sir John Seeley, published in 1896 under the title of an 'Introduction to Political Science.' It does not deal with the evolution of forms of government. The author's system covers all tribes, states, and governments (and even more than this, for we have two or three pages about such distantly connected matters as mediæval fiefs and Tammany Hall), and is perhaps to be properly described as a rather loose one. To comprehend it thoroughly we need another text-book on evolution. We have a suspicion that, at bottom, it is an eclectic system, which is based partly on the names given in practice to particular units (tribe, city, fief, nation), partly on names given to forms of government (oligarchy, tyranny, democracy), and partly on a theory of development not entirely elucidated. The result is that we do not make out clearly that much is added to our knowledge of the subject. Seeley, as a writer on government, was full of suggestion; but was he a Cuvier in this branch of knowledge? If this hand-book is the answer to the question, it is at any rate an incomplete one.

—Regarded merely as a specimen of the art of bookmaking, Prof. A. E. Taylor's 'Elements of Metaphysics' (London: Methuen) marks a great advance on his earlier work, 'The Problem of Conduct,' for the interminable discursiveness of which there are now substituted clear argumentation, orderly divisions into chapters and sections, an adequate syllabus of contents, and an index. In style and tone, also, there is a great improvement, and philosophers of all schools may read his present book with pleasure and without offence. As regards doctrine the case is more complicated. In his first book Professor Taylor had shown himself an enthusiastic disciple of Mr. F. H. Bradley, delighting to run amok among the moral ideals of a more bourgeois "idealism," and Bradleyan he is still at core, even though his more dogmatic temper has never risen to that height of satirical skepticism which forms his master's profoundest suggestion and subtlest fascination. But he is also sensitive (perhaps too much so for consistency) to the new movements which are in the air; and so at times he commits himself, more deeply than he usually seems to realize, to the naturalist and the pragmatist forms of empiricism. His use of the latter is indeed somewhat shamefaced and furtive, but it forms the freshest and most valuable part of his book. Not that as yet he ventures to apply the pragmatic method to metaphysics, but he concedes to it the whole field of science. And once a thinker has realized that all the rules of science are ultimately practical (p. 284), he will not long be able to resist the inference that either the same must hold of metaphysics or that the old notion of metaphysics is impossible. It will be interesting, therefore, to watch Professor Taylor's future developments, especially in view of the battle-royal recently initiated by Mr. Bradley's anathematizing of the new "heresies" in the July *Mind*. Regarded lastly as a textbook, Professor Taylor's work, though not devoid of merit, cannot be praised without reservation. An adequate textbook of metaphysics is indeed almost inconceivable, but it would certainly be more critical and judicial and contain a less scrappy and one-sided bibliography than Professor Taylor's. Many of his chapters, however, form lucid paraphrases which should serve as excellent commentaries on that notable but somewhat wantonly difficult work, Mr. Bradley's 'Appearance and Reality.'

CORBETT'S ENGLAND IN THE MEDITERRANEAN.

England in the Mediterranean, 1603-1713. By Julian S. Corbett. 2 vols. Longmans, Green & Co. 1904.

In this work Mr. Corbett accomplishes two ends. He carries forward the series of volumes on naval history which he began with 'Drake and the Tudor Navy' and continued with 'The Successors of Drake,' while at the same time he drives home lessons of current significance. Not long ago a commander in the British navy observed to us that England could well have afforded to pay Mahan a million sterling for not writing 'The Influence of Sea Power,' so greatly has that book prompted the increase of armaments. Whether Mr. Corbett's belief in the pivotal importance of

the Mediterranean will lead Great Britain to expend more money still on Gibraltar, Malta, and Cyprus, remains to be seen, but there can be no doubt that here the experience of the seventeenth and eighteenth centuries is made to bear upon modern policies. The theme is a good one in itself without any thought of political applications. In the author's eyes it is made considerably better by the fact that his story of Stuart times is a lamp "that will light up much that is dark in later ages, that will even touch Nelson with a new radiance, and perhaps reveal more clearly why it is that our Mediterranean fleet stands to-day in the eyes of Europe as the symbol and measure of British power."

In point of form, the text recalls the Ford Lectures which Mr. Corbett has recently delivered at Oxford; and lectures delivered at Greenwich have also been made use of. We call attention to the style because it has the force and directness that are the marks of good public speaking. Professor Maitland, in his striking appreciation of Stubbs, alludes to the Bishop's statutory lectures at Oxford as possessing a little of the diffuseness which is inseparable from such oral utterances. Doubtless there is danger on this side, but Mr. Corbett has been successful in avoiding it. Some of his passages (for example, the account of Ward and the Barbary pirates) are more picturesque than the writing of most naval historians, yet his thought is not thin nor his manner prolix. We imagine that many scholars would find it an excellent discipline to cast the fruits of their researches into the form of lectures before giving them to the world in print. At any rate, more books would be read if the giants of learning would condescend to employ a few elementary tricks of the rhetorician.

With regard to the substance of these volumes, one question immediately arises, and it is sure to remain the leading issue in the reader's mind when he has closed the last chapter: Is Mr. Corbett led by the historical fascination of the Mediterranean to accord it more importance than it possesses under modern conditions, or even than it possessed for England during the days of Cromwell, of William III., and of Marlborough? Miss Alice Gardner calls Rome "the centre of the world"; for Mr. Corbett the Mediterranean still retains much of the vital significance which belonged to it in centuries when, to use his own phrase, it was "the heart of the world." One can define his position most exactly by reference to his scale of relative values. These two volumes are designed to carry forward the main thread of English naval development from the point where he dropped it in closing his 'Successors of Drake,' namely, at the end of the Elizabethan period. In the popular mind, British seamanship during the Stuart period is bound up with wars against Holland, and colonial expansion. Mr. Corbett cuts completely adrift from this traditional view, for, though acknowledging the prominence of both these motives, he is unwilling to agree that either should be made the central one. To their exclusion he selects as the dominating force of naval history in the seventeenth century the rise of a policy which contemplated the firm establishment of English power in the Mediterranean.

It is obvious that such a radical change in perspective involves a large number of readjustments, and no one appreciates the fact more than Mr. Corbett. After exalting England's entry into the Mediterranean above all other lines of naval progress, he continues:

"It is from the standpoint of the struggle with Holland and our colonial expansion that naval historians, and indeed others, have almost universally depicted the time, and it should be no matter of surprise if, viewed from the Mediterranean, it assumes an aspect in some points so startling in its novelty as to arouse a suspicion of mirage. Events which seemed but the most trifling episodes appear as links in a mighty chain, reputations that stood high sink low, and others almost forgotten lift their heads, while judgments that have long passed into commonplace seem on all sides to demand revision."

Considered, then, under its most interesting aspect, this work is less a narrative than an argument. Every one who reads it will either be convinced and put in possession of a new historical faith, or, if unconvinced, must consider that Mr. Corbett has only discovered a paradox when he places the Mediterranean issue in front of Anglo-Dutch rivalry and the part of the British navy in the colonial movement.

At the opening of the seventeenth century, when England first began to look toward the Mediterranean as a field for maritime operations, the galley had already given place to the galleon in the armament of the Atlantic nations. It was indeed this transformation of naval conditions which placed the Mediterranean seaboard at the mercy of any northern invader who, by superior skill, could master the new methods of navigation, and through superior resources could launch a stronger fleet from its own ports. That is to say, the introduction of the galleon destroyed the protection which the Mediterranean races had enjoyed when warships were propelled by rowers and no northern fleet could safely cruise in waters so far removed from home. The brilliant achievements of the Elizabethans had shown that English admirals could carry their flag wherever the wind would fill their sails—a discovery which altered the face of European politics; and in the reign of James I. two of the Mediterranean Powers began to imitate their methods and their organization. When the Barbary corsairs become the pupils of an English adventurer like Ward and a Dutch adventurer like Danzer, when the Duke of Osuna, Admiral of Spain, frankly remodels his fleet on English lines, and when Venice, through her ambassador in London, enlists the services of English ships (1617), revolutionary forces are seen to be affecting the basis of Mediterranean politics. It was soon to be proved that the states of the south were as vulnerable as they had been in the days of Saracen and Norman.

The potential strength of the English navy could not, however, be developed under such rulers as James I. and Charles I. While Mr. Corbett sketches their policy in its bearing on the Mediterranean, he does not discover any sign of genuine national effort until he reaches Cromwell. The new navy of the Commonwealth, built under the influence of the "New Model" army and having colonels for its admirals, gave England for the first time a force at sea which was always in commission. The business instinct of Roundhead leaders could not endure that the nation should be represented at sea by the disjointed and ill-managed fleet which the Stuarts had found sufficient for their purposes. The three "Generals of the Sea," Col. Edward Popham, Col. Richard Deane, and Col. Robert Blake, brought to their new element the same spirit and the same precision which had carried the cause of the Parliament to triumph by land.

"Thus it was," says Mr. Corbett, "that the definite and final appearance of England as a naval Power in the Mediterranean coincided exactly with the final change in her naval system; and thus too it was that, when the nations of Europe were looking askance, but as yet with no great anxiety, at the new military state, they were suddenly awakened to the disturbing fact that it had a navy no less formidable than the army at which every one was gaping."

The four leaders of English policy who stand out in Mr. Corbett's pages are Cromwell, Charles II., William III., and Marlborough. Of these Cromwell was drawn to the Mediterranean by instinct rather than reason, and Charles II. by a touch of the native, inborn cleverness which in his case was so uniformly associated with moral weakness. Each of the others had a conscious plan for the attainment of Mediterranean ascendency, and saw how "the British frontier could be carried unassailably up to the borders of the old Mediterranean states, which had been wont to give the law to Europe."

It is Cromwell who forms the best link between the Elizabethans and William of Orange. Without realizing fully that control of the western Mediterranean would be his best asset in European diplomacy, he adopted a new strategy in fighting Spain. Aiming like the Elizabethans at the destruction of Spanish trade with America, he chose the Mediterranean and not the Atlantic as the field of operations. The Elizabethans had done nothing in the Mediterranean; Cromwell saw its importance, but suffered himself to be drawn into anti-papal schemes which prevented him from establishing English supremacy within the Straits. William III. grasped the situation in its entirety, and never suffered himself to be deflected from a line of action in which control of the Inland Sea was a prime factor. Blake's famous cruise of 1654-55, which forms the central episode in Cromwell's Mediterranean policy, receives from Mr. Corbett full and generous recognition; for if he strips away the legends which have gathered about it, he agrees "that the old mythical view is the true one. Those legendary achievements are but the index of the place which the cruise held in men's minds at the time, the echo of its deep moral effect; and they mark for us more clearly than the most exact chronicle the opening of men's eyes to the true meaning of Mediterranean power to England."

Mr. Corbett says that when once we grasp the meaning of Mediterranean policy, many historical judgments will need revision. The most striking illustration of this statement is furnished by the account, as here given, of Charles II.'s attitude toward Tangier. According to general impression, Tangier was a home of pestilence which could not compare with Dunkirk in strategic importance, and was of little or no value to England. Mr. Corbett, on the contrary, brings the history of this fortress into line with England's other attempts to secure a foothold in the Mediterranean,

and lays much stress upon the importance of the experiment. Something, at any rate, can be said in its favor. Whatever political idealism Charles II. possessed—apart from his desire to restore the supremacy of the crown—centred in his ambition to build up for England a Mediterranean power. "I remember," says Bishop Burnet, "when I knew the court first, it [Tangier] was talked of at a mighty rate as the foundation of a new empire; and he would have been a very hardy man that would have ventured to have spoke lightly of it." Mr. Corbett also recalls the fact that of the four royal advisers who favored the Portuguese alliance and the sale of Dunkirk (Clarendon, Southampton, Sandwich, and Monk), two had been moderate Cavaliers and two moderate Roundheads. "The failure of the policy to secure the immediate and wide results that were pardonably expected from it, soon came to obscure its true intention, and, instead of being regarded as a loyal effort to take up the bow of Cromwell, it has survived as the emblem of the Stuart fatuity."

But if Mr. Corbett defends Cromwell from the charge of having left behind him a legacy of hatred and is willing to credit Charles II. with greatness of conception, his chief praise is reserved for William III. and Marlborough. Prior to 1688 the fleets of the two northern sea Powers, England and Holland, had never been brought together for concerted action in southern waters; and even after this date it took five years of fruitless warfare in the Low Countries to show William that his best chance of defeating Louis XIV. was to control the Mediterranean. During the twenty years from 1693 to the Peace of Utrecht, public opinion in England was rapidly being educated to recognize the necessity of keeping a strong fleet within the Straits, and Rooke's capture of Gibraltar may be said to have stereotyped the convictions of the nation. At the time of the Utrecht negotiations, when every effort was being made by the Dutch to get an even share of Gibraltar and Port Mahon, and Harley was sent over to settle the deadlock, he took with him the following instructions: "That no extremity should make her Majesty depart from insisting to have the Asiento for her own subjects and to keep Gibraltar and Port Mahon." This mood in its ultimate form is traceable to William III., and in its immediate form to Marlborough.

No language in Mr. Corbett's vocabulary is too eulogistic to be heaped upon the man who, as part of one plan, conceived the Blenheim campaign and the capture of Toulon. The movements on the Danube succeeded, whereas, through the fault of allies, the expedition against Toulon failed; but, during the war of the Spanish succession, enough experience was gained by British fleets in the Mediterranean to show that the Duke's strategy was perfectly sound. "We shrink," says Mr. Corbett, "from believing that one human mind can have wrought so much. Yet the truth is no less. To the unsurpassed richness of his military renown we must add the greatest achievement that British naval power can show."

Besides the memoranda of William III., the dispatches of Marlborough, and the instructions of Harley, there is documentary evidence which shows that England entered the eighteenth century with fixed designs on the Mediterranean. Among writings of this kind the earliest and most striking is an anonymous tract of 1706, to be found in the second volume of the Harleian Miscellany. It is entitled, 'An Inquiry into the Causes of Our Naval Miscarriages,' and one of the author's chief aims is to show how France can be crippled by the presence of a superior English fleet in the Mediterranean. His principal point, however, is that England should have a permanent station in the Belearic Islands. By holding Port Mahon, he says, "We might have made it a magazine and station for ships to command the Mediterranean, and protect our straits trade, and should thereby have been in a condition by a naval power (without incurring any danger from standing armies) to hold the balance of Europe in our hands, which, as it is our natural province, is England's greatest security and glory." We cite this passage because the writer's view is identical with the thesis of Mr. Corbett's work.

The advantage of developing a single motive is that thereby one gains a power of impact which is not unlikely to sweep all obstacles before it, and imbed a fresh conviction in the receptive mind. The disadvantage is that, by ignoring the existence of other forces and tendencies besides the one described, a false impression is conveyed of what actually occurred. To develop a single idea or line of policy, giving it clear priority over everything else, is to neglect the presence of mutual reaction and create a false impression of simplicity. Mr. Corbett is highly successful in emphasizing the value of his dogma, and for the purpose of the Ford Lectures his style of treatment is open to no exception. But his tendency is to prove too much, and, considered as a book, his plea would have been better had he taken more account of parallel or conflicting movements. This oversight is particularly noticeable in the case of the colonial movement which, radiating from England in the seventeenth century, has done so much to shift the basis of world politics. For Mr. Corbett, "The Midland Sea remains still, perhaps more than ever, the keyboard of Europe," and in his forecast of the future there seems to be little ground for apprehending any serious change of this condition. It is doubtless true that we are too much inclined to regard the Mediterranean, and its concerns as a dead issue, connected with the Roman Empire and the Middle Ages. Mr. Corbett therefore renders a service by insisting on its strategic importance. But whether this most attractive of all seas has the current value which he assigns to it, is a question of political philosophy that each one must settle for himself.

RECENT FICTION.

Traffics and Discoveries. By Rudyard Kipling. Charles Scribner's Sons.

The Masquerader. By Katharine Cecil Thurston. Harper & Bros.

The Common Lot. By Robert Herrick. Macmillan.

It has not been difficult to infer from much of Mr. Kipling's recent writing, both in prose and in verse, that things happened in the course of the South African war which displeased him. His fiery patriotic pride was chilled and his vanity as an author deeply wounded. He had done so well by the British soldier, and the British soldier seized his first great opportunity to make him a shabby return. In that portion of the British Empire where Mr. Kipling's youth was spent, the spectacle of a comparatively small band of Englishmen controlling millions of Asiatics caught his imagination and inspired him with a passionate admiration for the courage and competence and splendid disinterestedness of the men who stood at guard, who in the last resort would be called on to hold India for the Empire. A persistent implication of his Indian tales is that, in a generally imperfect world, the British army made a unit of perfection, badly paid, often badly used by superior powers, but fit for its duty and invincible. Reluctant and even critical readers accepted for the time his enthusiastic view. Then came the South African war. Many millions of British subjects parted with their illusions during its progress, but the better sort bore disappointment decently, mutely. Not so Mr. Kipling. The first blunders excited him. What small amount of discretion and good taste had ever been his forsook him. He never even tried to emulate models of his own creation, men who did not cry out when they were hurt, men who faced life gallantly, not shrieking about spilt milk or weeping over shattered idols. He deserted the colors and began to throw stones at the standard-bearers in the moment of peril. His next step—a step fatal to his power and continued credit as a story-teller—was to take himself for an inspired censor of his country's army and navy and almost every department of administration, including the personnel, from chiefs to office boys.

The censure that found expression in magazine tales reappears in his latest volume, entitled 'Traffics and Discoveries.' Leaving out of consideration the childish scoffs and jeers at some of the objects of his former respectful devotion, the work is very bad; some of it is fortunately incomprehensible. The opening story, "The Captive," is the only readable contribution, and that is coarse in expression and false in characterization, for no "gun-running Yankee" ever had within himself the standard for the sort of criticism put into the mouth of Mr. Zigler. In several tales where the self-imposed censorship is extended to the navy, Mr. Kipling is literally possessed by a person named Pyecroft. Pyecroft is a drunken, blasphemous, licentious petty officer, who talks incessantly in an illiterate jargon. He is, from every point of view, an offensive beast, and the seven seas will have gone dry before Mr. Kipling's literary reputation can recover from his apparently delighted wallowing in such society. The gist of several of the tales dominated by Pyecroft we have not been able to extract. Perhaps there is none. Perhaps it is all Pyecroft for Pyecroft's sake, and Mr. Kipling may hold that Pyecroft is synonymous with Art, and thus stand ready with an elaborate defence.

Sixty-five pages of the volume are occupied with "The Army of a Dream," an effort in constructive criticism. In the eighteenth century, Henry Fielding, an English novelist, magistrate, and gentleman, wrote "An En-

quiry into the Causes of the Late Increase of Robbers, etc." His criticism and suggestions formed a basis for legislation which made the streets of London safe resorts for honest people, and the 'Enquiry' has to-day an honorable place in the body of English literature. "The Army of a Dream" is of no use to-day, and will be forgotten to-morrow.

Of the several tales written in moments of detachment from national affairs and the charms of Pyecroft, one is a fable, in which a millwheel, a cat, and a rat exchange reminiscences of the Saxon period, and quote the Doomsday Book. It is an elaborate and strained proclamation of Mr. Kipling's joy in the achievements of applied science. Two of the stories touch profound mysteries and a power that science has not yet been able to use, much less explain. The subject of "Wireless" is suggested by the name. The narrator is waiting in a druggist's shop for the purpose of assisting at some experiments in wireless telegraphy going on in an adjoining room, where an electrician is performing with a long-range installation. The druggist goes out with a young woman named Fanny Brand, leaving the narrator to keep the shop. The druggist is a consumptive who, returning from a walk in the cold rain, has a hemorrhage, then takes a strange drink concocted by the narrator, writes a love letter, and falls asleep. While asleep, he speaks and writes selections from the poetry of Keats, or rather he tries hard and gets so far as a few correct lines from "The Eve of St. Agnes," and presumably a garbled version of two lines in the "Ode to a Nightingale," which for the benefit of possibly bewildered readers it is well to quote correctly:

> "Charm'd magic casements, opening on the foam
> Of perilous seas, in faery lands forlorn."

The druggist, it turns out, has never read Keats, and Mr. Kipling's assumption is that like conditions produce like results—that is, that a consumptive associated even remotely with the medical profession and in love with a girl named Fanny Brand (Keats's Fanny was Brown), may, in a state of physical exhaustion, become a vehicle through which the spirit of Keats shall imperfectly recite his own verse. There is nothing in Mr. Kipling's rendering of the phenomenal incident that compels the reader to accept his assumption, and we doubt whether his positive assertion can force many to agree with a judgment pronounced while the druggist is in the throes of composition: "Remember that in all the millions permitted [millions of verses] there are no more than five—five little lines of which one can say: These are the pure magic. These are the clear vision. The rest is only poetry." Three of the lines are from Coleridge's "Kubla Khan," and two those from the "Nightingale" garbled by the druggist.

"They," another excursion beyond the closed gates of death, is the only tale in the volume that appeals agreeably to a literary sensitiveness. The meaning either of the whole incident or of some detail, which has been much discussed, does not seem to us to matter at all. The picture of the beautiful blind women welcoming spirit children to her lovely, lonely home is exquisitely rendered, with the utmost delicacy, tenderness, and grace. From D'Annunzio's 'Virgins of the Rocks,' and from no other story, have we received such an impression of beauty, of perfect harmony of scene, incident, and personality. The impression is strong enough at the end to survive the violent intrusion of Mrs. Madehurst and the superfluous description of the chase for a nurse in a motor car. Mr. Kipling is, we think, wrong in supposing that such incidents could lend reality to a subject that depends for acceptance or rejection on the force of impression made on the imagination. Conviction in such a case is not reached by an array of reasons or external facts.

In the volume under consideration (No. xxii. of Scribner's edition) each tale is preceded by verses, some of which throw light on the tale, while some deepen mystification.

When Stevenson wrote his story of Jekyll and Hyde, he conceived the idea of a man who should repeatedly give way to the baser side of his nature, the lapses from decency becoming more frequent and less regretted till at last the will of Jekyll was completely enslaved to the will of Hyde, his lower self. The torture for the urbane and benevolent Jekyll lay in this, that his intellect remained free, could foresee the fatal end, and must, nevertheless, follow his faithless will—the will of Hyde. Stevenson portrayed the fall of Jekyll symbolically. The author of 'The Masquerader' uses a rather similar idea, but without symbolism. She imagines two persons, one possessing both intellect and will in an unusual degree, the other an intellect keen enough, when it is allowed to work, and a will that has gradually become hopelessly enslaved to the morphia habit. These two men are so alike outwardly that the valet of the more prosperous one is as easily deceived as the charwoman of the other.
